

Manukau Bus Station

December 2016 | Issue 4

Welcome to the fourth project update newsletter on the construction of Manukau Bus Station.

Project overview

The construction of the 23-bay Manukau Bus Station is a critical component in delivering South Auckland's new network as part of the more integrated public transport network for all of Auckland. The new station will provide a key regional bus destination and form part of a public transport hub in Manukau.

Construction update

As we prepare to shut down the site for the year on 22 December 2016, we can reflect on good progress against the project timeline and the completion of some important works:

- Piling testing and asbestos removal works are now complete.
- Utility works including watermain relocation, gas relocation, sewer main installation and new stormwater installation have also been completed at the Davies Ave end of the site.
- Construction works will soon start on the foundations for the canopy between the Manukau train station/MIT building.

Our contractor NZ Strong will carry out the following works when construction resumes on 9 January 2017:

- Complete installation of sand drains on the southern side of the site (90% complete).
- Excavation for the ground beams and services for the Bus Station building.
- Relocation of the preload material from the north to the south side of the site.

Safety measures in place

To ensure pedestrian safety:

- The site has now been fully fenced off, with signs in place to guide pedestrians around the area.
- The speed limit on Davies Avenue was reduced to 30km/h in November and will be reduced at various times in early 2017.
- Our contractor will attempt to minimise disruption to pedestrians through the duration of construction.
- **Please note that the site will shut down at 12.00pm (midday) on 22 December and work will restart at 7.00am on 9 January 2017.**

Putney Way Upgrade

Putney Way, between Davies Avenue and Osterley Way, will be upgraded between the new bus station and Manukau city centre.

This project is part of a broader initiative led by the city's regeneration agency Panuku Development Auckland to transform Manukau on a similar scale to the award-winning regeneration of Wynyard Quarter on Auckland's waterfront.

The Putney Way work will include widening of footpaths, creating public waiting areas, improving street lighting, and installing street furniture and bike racks. The upgrade will mean a better, accessible and people-friendly path of travel between MIT, the new bus station, Putney Way residences and businesses, and Westfield.

These works will be delivered within the existing timelines for the Manukau Bus Station project.
