(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lawson Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 30 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Lawson Way has a mean operating speed in the range of <31km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Weymouth Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Lawson Way has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 1.94. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 41km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 41km/h as the safe and appropriate speed for Lawson Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lax Crescent (Leigh)

The speed limit on Lax Crescent, Leigh has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lax Crescent connects to Wonderview Road to the east. This road provides access to residential properties and is approximately 0.36km in length.</p> <p>Lax Crescent is classified as an Access road under the one network road classification (ONRC). Lax Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lax Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as rural towns using MegaMaps tool. The IRR defines rural towns as "rural town with mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present."
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 90 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Lax Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Wonderview Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Lax Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.26. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lax Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Layard Street (Avondale)

The speed limit on Layard Street, Avondale has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Layard Street connects to Rosebank Road to the north and St Jude Street to the south. This road provides access to residential properties and is approximately 0.44km in length.</p> <p>Layard Street is classified as an Access road under the one network road classification (ONRC). Layard Street is a two-way, Divided - non-traversable OR One way road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Layard Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Divided - non-traversable OR One way</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 745 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Layard Street has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Rosebank Road: 50km/h (no proposed change)</li> <li>• St Jude Street: 50km/h (no proposed change)</li> <li>• Crayford Street West: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Layard Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.22. For urban areas this corresponds to an IRR band of **Low**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Layard Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Leamington Road (Mount Eden)

The speed limit on Leamington Road, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Leamington Road connects to Bellevue Road to the north and Valley Road to the south. This road provides access to residential properties and is approximately 0.23km in length.</p> <p>Leamington Road is classified as a Access road under the one network road classification (ONRC). Leamington Road is a two-way, Divided-non traversable OR one way road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Leamington Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Divided-non traversable OR one way</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 364 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Leamington Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Bellevue Road: 50km/h (proposed 30km/h)</li> <li>Valley Road: 50km/h (proposed 30km/h)</li> <li>Kamahi Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Leamington Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is **1.51**. For urban areas this corresponds to an IRR band of **Low**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Leamington Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Leaver Place (Weymouth)

The speed limit on Leaver Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Leaver Place connects to Damian Way to the north and Ipukarea Street to the south. This road provides access to residential properties and is approximately 0.23km in length.</p> <p>Leaver Place is classified as an Access road under the one network road classification (ONRC). Leaver Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Leaver Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Leaver Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Damian Way: 50km/h (proposed 30km/h)</li> <li>Ipukarea Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Leaver Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Leaver Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Leeson Place (Mangere)

The speed limit on Leeson Place, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Leeson Place connects to Duggan Avenue to the west. This road provides access to residential properties and is approximately 0.85km in length.</p> <p>Leeson Place is classified as an Access road under the one network road classification (ONRC). Leeson Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Leeson Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 301 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Leeson Place has a mean operating speed in the range of <30km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Duggan Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Leeson Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Leeson Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lemon Grove Lane (Greenhithe)

The speed limit on Lemon Grove Lane, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lemon Grove Lane connects to Kyle Road to the west. This road provides access to residential properties and is approximately 0.23km in length.</p> <p>Lemon Grove Lane is classified as a Secondary Collector road under the one network road classification (ONRC). Lemon Grove Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lemon Grove Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Lemon Grove Lane has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kyle Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Lemon Grove Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lemon Grove Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Leonards Place (Otarā)

The speed limit on Leonards Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Leonards Place connects to Blampied Road to the east. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Leonards Place is classified as an Access road under the one network road classification (ONRC). Leonards Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Leonards Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 655 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Leonards Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Blampied Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Leonards Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Leonards Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Les Marston Place (Pukekohe)

The speed limit on Les Marston Place, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Les Marston Place connects to Princes Street West to the north. This road provides access to residential properties and is approximately 0.19km in length.</p> <p>Les Marston Place is classified as an Access road under the one network road classification (ONRC). Les Marston Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Les Marston Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 90 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Les Marston Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Princes Street West: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Les Marston Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Les Marston Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lester Lane (Otara)

The speed limit on Lester Lane, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lester Lane connects to Johnstones Road to the south. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Lester Lane is classified as an Access road under the one network road classification (ONRC). Lester Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lester Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 10+ per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 90 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Lester Lane has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Johnstones Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Lester Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lester Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lichfield Road (Parnell)

The speed limit on Lichfield Road, Parnell has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lichfield Road connects to Saint Stephens Avenue to the west and Takutai Street to the south. This road provides access to residential properties and is approximately 0.38km in length.</p> <p>Lichfield Road is classified as a Secondary Collector road under the one network road classification (ONRC). Lichfield Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lichfield Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Lichfield Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Saint Stephens Avenue between Gladstone Road and the northern end of Saint Stephens Avenue: 50km/h (proposed 30km/h)</li> <li>Takutai Street: 50km/h (proposed 30km/h)</li> <li>Glanville Terrace: 50km/h (proposed 30km/h)</li> <li>Logan Terrace: 50km/h (proposed 30km/h)</li> <li>Waitoa Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Lichfield Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.18. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lichfield Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lilac Grove (Hillsborough)

The speed limit on Lilac Grove, Hillsborough has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lilac Grove connects to Frederick Street to the north. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Lilac Grove is classified as an Access road under the one network road classification (ONRC). Lilac Grove is a two-way, Two lane undivided. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Lilac Grove has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Frederick Street: 50km/h (proposed 3 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Lilac Grove has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lilac Grove, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lilburn Crescent (Massey)

The speed limit on Lilburn Crescent, Massey has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lilburn Crescent connects to Timandra Place to the north and Keegan Drive to the east. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Lilburn Crescent is classified as an Access road under the one network road classification (ONRC). Lilburn Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lilburn Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 320 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Lilburn Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Timandra Place: 50km/h (proposed 30km/h)</li> <li>Keegan Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Lilburn Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lilburn Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lincoln Road (Manurewa East)

The speed limit on Lincoln Road, Manurewa East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lincoln Road connects to Mcannalley Street to the north and Myers Road to the south. This road provides access to residential properties and is approximately 0.32km in length.</p> <p>Lincoln Road is classified as an Access road under the one network road classification (ONRC). Lincoln Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lincoln Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 343 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Lincoln Road has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Mcannalley Street: 50km/h (proposed 30km/h)</li> <li>• Myers Road: 50km/h (proposed 30km/h)</li> <li>• Camberley Court: 50km/h (proposed 30km/h)</li> <li>• McDougall Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Lincoln Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lincoln Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lindis Place (Mangere Bridge)

The speed limit on Lindis Place, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lindis Place connects to Muir Avenue to the north. This road provides access to residential properties and is approximately 0.20km in length.</p> <p>Lindis Place is classified as a Access road under the one network road classification (ONRC). Lindis Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lindis Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 220 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Lindis Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Muir Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Lindis Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lindis Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lismore Way (Oteha)

The speed limit on Lismore Way, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lismore Way connects to Medallion Drive to the west. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Lismore Way is classified as a Secondary Collector road under the one network road classification (ONRC). Lismore Way is a two-way, Two lane undivided road. There are partial pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lismore Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Lismore Way has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Medallion Drive: 50km/h (proposed 30km/h)</li> <li>Masons Road: 50km/h (proposed 30km/h)</li> <li>Allegro Way: 50km/h (proposed 30km/h)</li> <li>Lancia Way: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Lismore Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lismore Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lisnoe Avenue (Mount Eden)

The speed limit on Lisnoe Avenue, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lisnoe Avenue connects to Dominion Road to the west and Alderley Road to the east. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Lisnoe Avenue is classified as a Access road under the one network road classification (ONRC). Lisnoe Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lisnoe Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 416 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Lisnoe Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Dominion Road: 50km/h (no proposed change)</li> <li>• Alderley Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Lisnoe Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lisnoe Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lister Street (Point Chevalier)

The speed limit on Lister Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lister Street connects to Dignan Street to the north. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Lister Street is classified as an Access road under the one network road classification (ONRC). Lister Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lister Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 150 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Lister Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Dignan Street: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Lister Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.18. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lister Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Logan Terrace (Parnell)

The speed limit on Logan Terrace, Parnell has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Logan Terrace connects to Lichfield Road to the west. This road provides access to residential properties and is approximately 0.18km in length.</p> <p>Logan Terrace is classified as an Access road under the one network road classification (ONRC). Logan Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Logan Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 300 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Logan Terrace has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Lichfield Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Logan Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Logan Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Longburn Road (Henderson)

The speed limit on Longburn Road, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Longburn Road connects to Rathgar Road to the west and Pomaria Road to the south. This road provides access to residential properties and is approximately 0.56km in length.</p> <p>Longburn Road is classified as a Secondary Collector road under the one network road classification (ONRC). Longburn Road is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Longburn Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1196 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Longburn Road has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Rathgar Road: 50km/h (proposed 30km/h)</li> <li>• Pomaria Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Longburn Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Longburn Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lorenzo Way (Flat Bush)

The speed limit on Lorenzo Way, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lorenzo Way connects to Janway Avenue to the north and Stancombe Road to the south. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Lorenzo Way is classified as an Access road under the one network road classification (ONRC). Lorenzo Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lorenzo Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Lorenzo Way has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Janway Avenue: 50km/h (proposed 30km/h)</li> <li>Stancombe Road: 60km/h (no proposed change)</li> <li>Kestev Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Lorenzo Way has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lorenzo Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Louvain Place (Greenhithe)

The speed limit on Louvain Place, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Louvain Place connects to Orwell Road to the west. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Louvain Place is classified as an Access road under the one network road classification (ONRC). Louvain Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Louvain Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Louvain Place has a mean operating speed in the range of 30-34km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Orwell Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Louvain Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Louvain Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lovelock Avenue (Mount Eden)

The speed limit on Lovelock Avenue, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lovelock Avenue connects to Esplanade Road to the west and Mount Eden Road to the east. This road provides access to residential properties and is approximately 0.22km in length.</p> <p>Lovelock Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Lovelock Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lovelock Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1248 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Lovelock Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Esplanade Road: 50km/h (proposed 30km/h)</li> <li>Mount Eden Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Lovelock Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.94. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lovelock Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Luanda Drive (Ranui)

The speed limit on Luanda Drive, Ranui, between Waitemata Drive roundabout and Swanson Road, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Luanda Drive connects to Glen Road to the east and Swanson Road to the south. This road provides access to residential properties and is approximately 0.77km in length.</p> <p>Luanda Drive is classified as a Primary Collector road under the one network road classification (ONRC). Luanda Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records seven crashes between 2016 and 2020: one serious crash, one minor crash, five non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Luanda Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1051 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Luanda Drive has a mean operating speed in the range of 35-39km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Glen Road: 50km/h (proposed 30km/h)</li> <li>Swanson Road: 50km/h (no proposed change)</li> <li>Waitemata Drive between Luanda Drive and the northern end of Waitemata Drive: 50km/h (proposed 30km/h)</li> <li>Arodella Crescent: 50km/h (proposed 30km/h)</li> <li>Hamblyn Place: 50km/h (proposed 30km/h)</li> <li>Armada Drive: 50km/h (proposed 30km/h)</li> <li>Ulrich Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Luanda Drive has the following information:

- o Collective Risk band of **Low Medium**, and a Personal Risk band of **High**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Luanda Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while Luanda Drive is classified as a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lucas Place (Weymouth)

The speed limit on Lucas Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lucas Place connects to Blanes Road to the north. This road provides access to residential properties and is approximately 0.30km in length.</p> <p>Lucas Place is classified as an Access road under the one network road classification (ONRC). Lucas Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lucas Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 572 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Lucas Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Blanes Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Lucas Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lucas Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ludlow Place (Pukekohe)

The speed limit on Ludlow Place, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ludlow Place connects to Premila Drive to the north. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Ludlow Place is classified as an Access road under the one network road classification (ONRC). Ludlow Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ludlow Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ludlow Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Premila Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Ludlow Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ludlow Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lynch Street (Point Chevalier)

The speed limit on Lynch Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lynch Street connects to Oliver Street to the north and Dignan Street to the south. This road provides access to residential properties and is approximately 0.16km in length.</p> <p>Lynch Street is classified as an Access road under the one network road classification (ONRC). Lynch Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lynch Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Lynch Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Oliver Street: 50 km/h (proposed 30 km/h)</li> <li>Dignan Street: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Lynch Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.34. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lynch Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lyndhurst Road (Te Atatu South)

The speed limit on Lyndhurst Road, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lyndhurst Road connects to Te Atatu Road to the west and Tirooa Avenue to the east. This road provides access to residential properties and is approximately 0.41 km in length.</p> <p>Lyndhurst Road is classified as a secondary collector road under the one network road classification (ONRC). Lyndhurst Road is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injuries. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1686 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Lyndhurst Road has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Te Atatu Road: 50 km/h</li> <li>• Merville Avenue: 50 km/h (proposed 30 km/h)</li> <li>• Merchant Avenue: 50 km/h (proposed 30 km/h)</li> <li>• Tiroroa Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Lyndhurst Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**
- The Infrastructure Risk Rating Score is 2.30 For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Lyndhurst Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lynwood Road (Kelston)

The speed limit on Lynwood Road, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lynwood Road connects to Nikau Street to the north and Great North Road to the east. This road provides access to residential properties and is approximately 1.10km in length.</p> <p>Lynwood Road is classified as a Secondary Collector road under the one network road classification (ONRC). Lynwood Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records eight crashes between 2016 and 2020: one minor crash, seven non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lynwood Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1920 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Lynwood Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Nikau Street: 50km/h (proposed 30km/h)</li> <li>Great North Road : 50km/h (no proposed change)</li> <li>Kelwyn Road: 50km/h (proposed 30km/h)</li> <li>Rimu Street: 50km/h (proposed 30km/h)</li> <li>Miro Street: 50km/h (proposed 30km/h)</li> <li>Evergreen Rise: 50km/h (proposed 30km/h)</li> <li>Kohekohe Street: 50km/h (proposed 30km/h)</li> <li>Rickards Place: 50km/h (proposed 30km/h)</li> <li>Riverview Road: 50km/h (proposed 30km/h)</li> <li>Rewa Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Lynwood Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lynwood Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lytton Street (Devonport)

The speed limit on Lytton Street, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lytton Street connects to Abbotsford Terrace to the south. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Lytton Street is classified as an Access road under the one network road classification (ONRC). Lytton Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lytton Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 132 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Lytton Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Abbotsford Terrace: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Lytton Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lytton Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Macky Avenue (Mangere East)

The speed limit on Macky Avenue, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Macky Avenue connects to Blake Road to the east. This road provides access to residential properties and is approximately 0.88km in length.</p> <p>Macky Avenue is classified as an Access road under the one network road classification (ONRC). Macky Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Macky Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1075 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Macky Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Blake Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Macky Avenue has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Macky Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Magma Crescent (Stonefields)

The speed limit on Magma Crescent, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Magma Crescent connects to Ngahue Drive to the west. This road provides access to residential properties and is approximately 0.73km in length.</p> <p>Magma Crescent is classified as an Access road under the one network road classification (ONRC). Magma Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Magma Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 200 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Magma Crescent has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Ngahue Drive: 50km/h (no proposed change)</li> <li>• Flint Way: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Magma Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Magma Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Magnolia Place (Flat Bush)

The speed limit on Magnolia Place, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Magnolia Place connects to Erica Road to the west. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Magnolia Place is classified as an Access road under the one network road classification (ONRC). Magnolia Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Magnolia Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 124 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Magnolia Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Erica Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Magnolia Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.20. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Magnolia Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mahoney Drive (Albany)

The speed limit on Mahoney Drive, Albany has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mahoney Drive connects to Vinewood Drive to the east. This road provides access to residential properties and is approximately 0.32km in length.</p> <p>Mahoney Drive is classified as a Access road under the one network road classification (ONRC). Mahoney Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mahoney Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Mahoney Drive has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Vinewood Drive: 50km/h (proposed 30km/h)</li> <li>Cuthill Close: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Mahoney Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Mahoney Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Maidstone Place (Oteha)

The speed limit on Maidstone Place, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Maidstone Place connects to Spencer Road to the south. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Maidstone Place is classified as a Access road under the one network road classification (ONRC). Maidstone Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Maidstone Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Maidstone Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Spencer Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Maidstone Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Maidstone Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mail Avenue (Weymouth)

The speed limit on Mail Avenue, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mail Avenue connects to Estuary Road to the north and Greers Road to the south. This road provides access to residential properties and is approximately 0.22km in length.</p> <p>Mail Avenue is classified as an Access road under the one network road classification (ONRC). Mail Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mail Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 353 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Mail Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Estuary Road: 50km/h (proposed 30km/h)</li> <li>• Greers Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Mail Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Mail Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Maioha Road (Pukekohe)

The speed limit on Maioha Road, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Maioha Road connects to Ryder Place to the west and Jutland Road to the east. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Maioha Road is classified as an Access road under the one network road classification (ONRC). Maioha Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Maioha Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 30 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Maioha Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ryder Place: 50km/h (proposed 30km/h)</li> <li>Jutland Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Maioha Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Maioha Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Maleme Avenue (Belmont)

The speed limit on Maleme Avenue, Belmont has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Maleme Avenue connects to Westwell Road to the north. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Maleme Avenue is classified as an Access road under the one network road classification (ONRC). Maleme Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Maleme Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 127 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Maleme Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Westwell Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Maleme Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Maleme Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mangere Town Square (Mangere)

The speed limit on Mangere Town Square, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mangere Town Square connects to Orly Avenue to the west. This road provides access to residential properties and is approximately 0.80km in length.</p> <p>Mangere Town Square is classified as an Access road under the one network road classification (ONRC). Mangere Town Square is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records eight crashes between 2016 and 2020: three minor and five non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mangere Town Square were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as commercial big box using MegaMaps tool. The IRR defines commercial big box as " <i>Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 582 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Mangere Town Square has a mean operating speed in the range of <30km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Orly Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Mangere Town Square has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 1.78. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Mangere Town Square, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mangos Place (Pakuranga)

The speed limit on Mangos Place, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mangos Place connects to Edgewater Drive to the north. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Mangos Place is classified as a Access road under the one network road classification (ONRC). Mangos Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mangos Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 150 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Mangos Place has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Edgewater Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Mangos Place has the following information:

- o Collective Risk band of **Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.20. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Mangos Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Manuka Street (Orewa)

The speed limit on Manuka Street, Orewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Manuka Street connects to Elizabeth Street to the east. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Manuka Street is classified as an Access road under the one network road classification (ONRC). Manuka Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Manuka Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 97 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Manuka Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Elizabeth Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Manuka Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Manuka Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Maplesden Drive (Clendon Park)

The speed limit on Maplesden Drive, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Maplesden Drive connects to Burundi Avenue to the north and Finlayson Avenue to the west. This road provides access to residential properties and is approximately 0.77km in length.</p> <p>Maplesden Drive is classified as a Secondary Collector road under the one network road classification (ONRC). Maplesden Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records eleven crashes between 2016 and 2020: one serious crash, three minor crashes, seven non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Maplesden Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2028 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Maplesden Drive has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Burundi Avenue: 50km/h (proposed 30km/h)</li> <li>Finlayson Avenue: 50km/h (proposed 30km/h)</li> <li>Dungarvon Place: 50km/h (proposed 30km/h)</li> <li>Barneys Farm Road: 50km/h (proposed 30km/h)</li> <li>De Bloge Place: 50km/h (proposed 30km/h)</li> <li>Kennington Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Maplesden Drive has the following information:

- Collective Risk band of **Medium**, and a Personal Risk band of **High**.
- The Infrastructure Risk Rating Score is 2.19. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Maplesden Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Maranui Avenue (Point Chevalier)

The speed limit on Maranui Avenue, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Maranui Avenue connects to Walker Road to the south. This road provides access to residential properties and is approximately 0.27km in length.</p> <p>Maranui Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Maranui Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor crash, one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Maranui Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2080 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Maranui Avenue has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Walker Road: 50 km/h (proposed 30 km/h)</li> <li>• Wainoni Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Maranui Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.04. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Maranui Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Marbella Crescent (Oteha)

The speed limit on Marbella Crescent, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Marbella Crescent connects to Nimstedt Avenue to the south. This road provides access to residential properties and is approximately 0.20km in length.</p> <p>Marbella Crescent is classified as a Secondary Collector road under the one network road classification (ONRC). Marbella Crescent is a two-way, Two lane undivided road. There are partial pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Marbella Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Marbella Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Nimstedt Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Marbella Crescent has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Marbella Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Margaret Henry Crescent (Oteha)

The speed limit on Margaret Henry Crescent, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Margaret Henry Crescent connects to Ponderosa Drive to the north. This road provides access to residential properties and is approximately 1.93km in length.</p> <p>Margaret Henry Crescent is classified as an Access road under the one network road classification (ONRC). Margaret Henry Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Margaret Henry Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Margaret Henry Crescent has a mean operating speed in the range of <30km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Ponderosa Drive: 50km/h (proposed 30km/h)</li> <li>• Northcross Drive: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Margaret Henry Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Margaret Henry Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Marire Place (Pukekohe)

The speed limit on Marire Place, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Marire Place connects to Huamanu Street to the south. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Marire Place is classified as an Access road under the one network road classification (ONRC). Marire Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records to zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Marire Place were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Marire Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Huamanu Street: 50 km/h (proposed 30 km/h)</li> <li>Te Manaki Street: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Marire Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Marire Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mark Edgar Place (Weymouth)

The speed limit on Mark Edgar Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mark Edgar Place connects to Nicholas Gibbons Drive to the west. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Mark Edgar Place is classified as an Access road under the one network road classification (ONRC). Mark Edgar Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mark Edgar Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 440 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Mark Edgar Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Nicholas Gibbons Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Mark Edgar Place has the following information:

- o Collective Risk band of **Medium-High**, and a Personal Risk band of **High**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Mark Edgar Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Martha Lane (Weymouth)

The speed limit on Martha Lane, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Martha Lane connects to Taitimu Drive to the west. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Martha Lane is classified as an Access road under the one network road classification (ONRC). Martha Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Martha Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 958 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Martha Lane has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Taitimu Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Martha Lane has the following information:

- o Collective Risk band of **Medium-High**, and a Personal Risk band of **High**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Martha Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Martin Place (Kelston)

The speed limit on Martin Place, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Martin Place connects to Brains Road to the south. This road provides access to residential properties and is approximately 0.17km in length.</p> <p>Martin Place is classified as an Access road under the one network road classification (ONRC). Martin Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Martin Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 225 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Martin Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Brains Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Martin Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Martin Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mary Forgham Drive (Greenhithe)

The speed limit on Mary Forgham Drive, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mary Forgham Drive connects to William Gamble Drive to the north. This road provides access to residential properties and is approximately 0.17km in length.</p> <p>Mary Forgham Drive is classified as a Secondary Collector road under the one network road classification (ONRC). Mary Forgham Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mary Forgham Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Mary Forgham Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>William Gamble Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Mary Forgham Drive has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Mary Forgham Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Maryann Place (Greenhithe)

The speed limit on Maryann Place, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Maryann Place connects to Orwell Road to the east. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Maryann Place is classified as an Access road under the one network road classification (ONRC). Maryann Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Maryann Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 3 to &lt;5 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Maryann Place has a mean operating speed in the range of 30-34km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Orwell Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Maryann Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Maryann Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Maryland Street (Point Chevalier)

The speed limit on Maryland Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Maryland Street connects to Walker Road to the north. This road provides access to residential properties and is approximately 0.26km in length.</p> <p>Maryland Street is classified as a Secondary Collector road under the one network road classification (ONRC). Maryland Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Maryland Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1768 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Maryland Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Walker Road: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Maryland Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.97. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Maryland Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mascot Avenue (Mangere)

The speed limit on Mascot Avenue, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mascot Avenue connects to Court Town Close to the north and Massey Road to the south. This road provides access to residential properties and is approximately 1.07km in length.</p> <p>Mascot Avenue is classified as a Primary Collector road under the one network road classification (ONRC). Mascot Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records seventeen crashes between 2016 and 2020: one serious crash, two minor crashes, fourteen non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mascot Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4052 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Mascot Avenue has a mean operating speed in the range of 34-39km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Bader Road: 50km/h (no proposed change)</li> <li>• Massey Road: 50km/h (no proposed change)</li> <li>• Court Town Close: 50km/h (no proposed change)</li> <li>• Canning Crescent: 50km/h (proposed 30km/h)</li> <li>• Friesian Drive: 50km/h (proposed 30km/h)</li> <li>• Heyford Close: 50km/h (proposed 30km/h)</li> <li>• Kemble Close: 50km/h (proposed 30km/h)</li> <li>• Forbury Place: 50km/h (proposed 30km/h)</li> <li>• Waddon Place: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Mascot Avenue has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 1.94. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Mascot Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Mascot Avenue is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Masons Road (Oteha)

The speed limit on Masons Road, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Masons Road connects to Lagonda Rise to the north and Lavender Garden Lane to the east. This road provides access to residential properties and is approximately 0.63km in length.</p> <p>Masons Road is classified as a Secondary Collector road under the one network road classification (ONRC). Masons Road is a two-way, Two lane undivided road. There are partial pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Masons Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 32 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Masons Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Lagonda Rise: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Masons Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.22. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Masons Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mataitai Way (Karakā)

The speed limit on Mataitai Way, Karakā has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mataitai Way connects to Patakātuna Drive to the north and Te Ipukai Drive to the south. This road provides access to residential properties and is approximately 0.17km in length.</p> <p>Mataitai Way is classified as an Access road under the one network road classification (ONRC). Mataitai Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mataitai Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Mataitai Way has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Patakatuna Drive: 50km/h (proposed 30km/h)</li> <li>• Te Ipukai Drive: 50km/h (proposed 30km/h)</li> <li>• Umuti Lane: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Mataitai Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.04. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Mataitai Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Matamata Place (Otara)

The speed limit on Matamata Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Matamata Place connects to Valder Avenue to the south. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Matamata Place is classified as an Access road under the one network road classification (ONRC). Matamata Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Matamata Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 686 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Matamata Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Valder Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Matamata Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Matamata Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mataroa Road (Mt Wellington)

The speed limit on Mataroa Road, Mt Wellington has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mataroa Road connects to Panama Road to the north. This road provides access to residential properties and is approximately 0.33km in length.</p> <p>Mataroa Road is classified as a Access road under the one network road classification (ONRC). Mataroa Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mataroa Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Mataroa Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Panama Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Mataroa Road has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Mataroa Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Matikao Place (Pukekohe)

The speed limit on Matikao Place, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Matikao Place connects to Taikaranga Street to the north and Belmont Road to the south. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Matikao Place is classified as an Access road under the one network road classification (ONRC). Matikao Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Matikao Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Matikao Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Taikaranga Street: 50km/h (proposed 30km/h)</li> <li>Belmont Road: 50km/h (proposed 30km/h)</li> <li>Kare Ariki Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Matikao Place has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Matikao Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Matilda Place (Weymouth)

The speed limit on Matilda Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Matilda Place connects to Settlers Cove to the north. This road provides access to residential properties and is approximately 0.16km in length.</p> <p>Matilda Place is classified as an Access road under the one network road classification (ONRC). Matilda Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Matilda Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1092 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Matilda Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Settlers Cove: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Matilda Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.60. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Matilda Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mattson Road (Pakuranga)

The speed limit on Mattson Road, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mattson Road connects to Ti Rakau Drive to the north. This road provides access to residential properties and is approximately 0.28 km in length.</p> <p>Mattson Road is classified as a secondary collector road under the one network road classification (ONRC). Mattson Road is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2184 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Mattson Road has a mean operating speed in the range of &lt;30 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ti Rakau Drive: 60 km/h (no proposed changes)</li> <li>Aurea Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Mattson Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Medium**
- The Infrastructure Risk Rating Score is 2.30 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Mattson Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Matua Place (Clendon Park)

The speed limit on Matua Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Matua Place connects to Finlayson Avenue to the east. This road provides access to residential properties and is approximately 0.04km in length.</p> <p>Matua Place is classified as an Access road under the one network road classification (ONRC). Matua Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Matua Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 130 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Matua Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Finlayson Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Matua Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.69. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Matua Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Maunder Place (Kelston)

The speed limit on Maunder Place, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Maunder Place connects to Kohekohe Street to the south. This road provides access to residential properties and is approximately 0.48km in length.</p> <p>Maunder Place is classified as an Access road under the one network road classification (ONRC). Maunder Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Maunder Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 367 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Maunder Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kohekohe Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Maunder Place has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Maunder Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Maurice Borich Place (Henderson)

The speed limit on Maurice Borich Place, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Maurice Borich Place connects to Rathgar Road to the east and Splendour Close to the north. This road provides access to residential properties and is approximately 0.23km in length.</p> <p>Maurice Borich Place is classified as an Access road under the one network road classification (ONRC). Maurice Borich Place is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Maurice Borich Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 349 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Maurice Borich Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Rathgar Road: 50km/h (proposed 30km/h)</li> <li>• Splendour Close: 50km/h (proposed 30km/h)</li> <li>• Welcome Place: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Maurice Borich Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Maurice Borich Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mawney Road (Henderson)

The speed limit on Mawney Road, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mawney Road connects to Larnoch Road to the south and Mildmay Road to the east. This road provides access to residential properties and is approximately 0.25km in length.</p> <p>Mawney Road is classified as an Access road under the one network road classification (ONRC). Mawney Road is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mawney Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 221 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Mawney Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Larnoch Road: 50km/h (proposed 30km/h)</li> <li>Mildmay Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Mawney Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Mawney Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – May Potter Close (Oteha)

The speed limit on May Potter Close, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	May Potter Close connects to Fernhill Way to the south. This road provides access to residential properties and is approximately 0.08km in length.  May Potter Close is classified as an Access road under the one network road classification (ONRC). May Potter Close is a two-way, Two lane undivided road. There are no pedestrian amenities, on-street parking and cyclist amenities along this road.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for May Potter Close were estimated using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 20 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of May Potter Close has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Fernhill Way: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps May Potter Close has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for May Potter Close, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Maybelle Place (Kelston)

The speed limit on Maybelle Place, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Maybelle Place connects to Tamariki Avenue to the east. This road provides access to residential properties and is approximately 0.47km in length.</p> <p>Maybelle Place is classified as an Access road under the one network road classification (ONRC). Maybelle Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Maybelle Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 743 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Maybelle Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tamariki Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Maybelle Place has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Maybelle Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mayer Place (Ranui)

The speed limit on Mayer Place, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mayer Place connects to Ulrich Drive to the west. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Mayer Place is classified as an Access road under the one network road classification (ONRC). Mayer Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mayer Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 370 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Mayer Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Urlich Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Mayer Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Mayer Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Maypark Crescent (Flat Bush)

The speed limit on Maypark Crescent, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Maypark Crescent connects to Middlefield Drive to the north and Erica Road to the west. This road provides access to residential properties and is approximately 0.23km in length.</p> <p>Maypark Crescent is classified as an Access road under the one network road classification (ONRC). Maypark Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Maypark Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 124 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Maypark Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Middlefield Drive: 50km/h (proposed 30km/h)</li> <li>Erica Road: 50km/h (proposed 30km/h)</li> <li>Baverstock Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Maypark Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.20. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Maypark Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mcannalley Street (Manurewa East)

The speed limit on Mcannalley Street, Manurewa East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mcannalley Street connects to Scotts Road to the east and Great South Road to the west. This road provides access to residential properties and is approximately 0.79km in length.</p> <p>Mcannalley Street is classified as a Secondary Collector road under the one network road classification (ONRC). Mcannalley Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records eight crashes between 2016 and 2020: one serious crash, seven non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mcannalley Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2197 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Mcannalley Street has a mean operating speed in the range of 35-39km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Scotts Road: 50km/h (proposed 30km/h)</li> <li>• Great South Road: 50km/h (no proposed change)</li> <li>• Lincoln Road: 50km/h (proposed 30km/h)</li> <li>• Fleming Street: 50km/h (proposed 30km/h)</li> <li>• Ellen Street: 50km/h (proposed 30km/h)</li> <li>• Browning Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Mcannalley Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.22. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Mcannalley Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – McDougall Street (Manurewa East)

The speed limit on McDougall Street, Manurewa East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>McDougall Street connects to Lincoln Road to the west and Myers Road to the south. This road provides access to residential properties and is approximately 0.38km in length.</p> <p>McDougall Street is classified as an Access road under the one network road classification (ONRC). McDougall Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: four non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for McDougall Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 343 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of McDougall Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Lincoln Road: 50km/h (proposed 30km/h)</li> <li>Myers Road: 50km/h (proposed 30km/h)</li> <li>Bowen Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps McDougall Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for McDougall Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – McGreal Place (Weymouth)

The speed limit on McGreal Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>McGreal Place connects to Taitimu Drive to the south. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>McGreal Place is classified as an Access road under the one network road classification (ONRC). McGreal Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for McGreal Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 958 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of McGreal Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Taitimu Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps McGreal Place has the following information:

- o Collective Risk band of **Medium-High**, and a Personal Risk band of **High**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for McGreal Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mcllroy Avenue (Hillsborough)

The speed limit on Mcllroy Avenue, Hillsborough has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mcllroy Avenue connects to Carlton Street to the west. This road provides access to residential properties and is approximately 0.17km in length.</p> <p>Mcllroy Avenue is classified as an Access road under the one network road classification (ONRC). Mcllroy Avenue is a two-way, Two lane undivided. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Mcllroy Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Carlton Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Mcllroy Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for McIlroy Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – McInnes Road (Weymouth)

The speed limit on McInnes Road, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>McInnes Road connects to Hazards Road to the east and Beach Road to the west. This road provides access to residential properties and is approximately 0.49km in length.</p> <p>McInnes Road is classified as an Access road under the one network road classification (ONRC). McInnes Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for McInnes Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 478 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of McInnes Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Hazards Road: 50km/h (proposed 30km/h)</li> <li>• Beach Road: 50km/h (proposed 30km/h)</li> <li>• Ocean View Road: 50km/h (proposed 30km/h)</li> <li>• Lane Road: 50km/h (proposed 30km/h)</li> <li>• Weymouth Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps McInnes Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for McInnes Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mclennan Road (Mt Wellington)

The speed limit on Mclennan Road, Mt Wellington has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mclennan Road connects to Panama Road to the north and Panama Road to the south. This road provides access to residential properties and is approximately 0.29km in length.</p> <p>Mclennan Road is classified as an Access road under the one network road classification (ONRC). Mclennan Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mclennan Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Mclennan Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Panama Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Mclennan Road has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for McLennan Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – McLeod Road (Weymouth)

The speed limit on McLeod Road, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>McLeod Road connects to Greers Road to the east and Domain Road to the west. This road provides access to residential properties and is approximately 0.54km in length.</p> <p>McLeod Road is classified as an Access road under the one network road classification (ONRC). McLeod Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor crash, one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for McLeod Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 478 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of McLeod Road has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Greers Road: 50km/h (proposed 30km/h)</li> <li>• Domain Road: 50km/h (proposed 30km/h)</li> <li>• Weymouth Road: 50km/h (proposed 30km/h)</li> <li>• Suwyn Place: 50km/h (proposed 30km/h)</li> <li>• Lane Road: 50km/h (proposed 30km/h)</li> <li>• Beach Road : 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps McLeod Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for McLeod Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – McLeod Road (Te Atatu South)

The speed limit on McLeod Road, Te Atatu South, between Te Atatu Road and the eastern end of McLeod Road has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>McLeod Road connects to Great North Road to the south. This road provides access to residential properties and is approximately 0.89 km in length.</p> <p>McLeod Road is classified as a primary collector road under the one network road classification (ONRC). McLeod Road is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records eleven crashes between 2016 and 2020: three minor and eight non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4311 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of McLeod Road has a mean operating speed in the range of 35-39 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Riverglade Parkway: 50 km/h (proposed 30 km/h)</li> <li>Finlow Drive: 50 km/h (proposed 30 km/h)</li> <li>Glynnbrooke Street: 50 km/h (proposed 30 km/h)</li> <li>Bodi Place: 50 km/h (proposed 30 km/h)</li> <li>Fowey Avenue: 50 km/h (proposed 30 km/h)</li> <li>Te Atatu Road: 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps McLeod Road has the following information:

- Collective Risk band of **Low Medium**, and a Personal Risk band of **Medium**
- The Infrastructure Risk Rating Score is 1.70 For urban areas this corresponds to an IRR band of **Low Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for McLeod Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that McLeod Road is a Primary Collector Road, that is not the intended function for this section of McLeod Road.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – McMillan Place (Mellons Bay)

The speed limit on McMillan Place, Mellons Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>McMillan Place connects to Paiseley Street to the south. This road provides access to residential properties and is approximately 0.22km in length.</p> <p>McMillan Place is classified as an Access road under the one network road classification (ONRC). McMillan Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for McMillan Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane(3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1032 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of McMillan Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Paisley Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps McMillan Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low-Medium**.
- o The Infrastructure Risk Rating Score is 1.81. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for McMillan Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mellons Bay Road (Mellons Bay)

The speed limit on Mellons Bay Road, Mellons Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mellons Bay Road connects to Ridge Road to the west. This road provides access to residential properties and is approximately 1.15km in length.</p> <p>Mellons Bay Road is classified as a Primary collector road under the one network road classification (ONRC). Mellons Bay Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records thirteen crashes between 2016 and 2020: two serious crashes, three minor crashes, eight non-injury crashes. This Resulted in two Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mellons Bay Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3861 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Mellons Bay Road has a mean operating speed in the range of 35-39km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Picton Street: 50km/h (no proposed change)</li> <li>• Cheriton Road: 50km/h (proposed 30km/h)</li> <li>• Paisley Street: 50km/h (proposed 30km/h)</li> <li>• Beach Road: 50km/h (no proposed change)</li> <li>• Seymour Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Mellons Bay Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low-Medium**.
- o The Infrastructure Risk Rating Score is 2.35. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Mellons Bay Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Mellons Bay Road is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Melody Belle Street (Karaka)

The speed limit on Melody Belle Street, Karaka has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Melody Belle Street connects to Hayfield Way to the east and Ockhams Street to the west. This road provides access to residential properties and is approximately 0.20km in length.</p> <p>Melody Belle Street is classified as an Access road under the one network road classification (ONRC). Melody Belle Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Melody Belle Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Melody Belle Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Hayfield Way: 50km/h (proposed 30km/h)</li> <li>Ockhams Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Melody Belle Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.04. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Melody Belle Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Melody Lane (Otahuhu)

The speed limit on Melody Lane, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Melody Lane connects to Harmony Avenue to the east. This road provides access to residential properties and is approximately 0.31km in length.</p> <p>Melody Lane is classified as an Access road under the one network road classification (ONRC). Melody Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Melody Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 369 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Melody Lane has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Harmony Avenue: 50km/h (no proposed change)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Melody Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Melody Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Merani Street (Narrow Neck)

The speed limit on Merani Street, Narrow Neck has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Merani Street connects to Montgomery Avenue to the north and Old Lake Road to the south. This road provides access to residential properties and is approximately 0.58km in length.</p> <p>Merani Street is classified as an Access road under the one network road classification (ONRC). Merani Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two minor crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Merani Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 205 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Merani Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Montgomery Avenue: 50km/h (proposed 30km/h)</li> <li>Old Lake Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Merani Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.34. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Merani Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Merchant Avenue (Te Atatu South)**

The speed limit on Merchant Avenue, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Merchant Avenue connects to Jaemont Avenue to the north and Lyndhurst Road to the south. This road provides access to residential properties and is approximately 0.24 km in length.</p> <p>Merchant Avenue is classified as a secondary collector road under the one network road classification (ONRC). Merchant Avenue is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor injury. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1920 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Merchant Avenue has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Jaemont Avenue: 50 km/h (proposed 30 km/h)</li> <li>• Lyndhurst Road: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Merchant Avenue has the following information:

- o Collective Risk band of **Low Medium**, and a Personal Risk band of **Medium**
- o The Infrastructure Risk Rating Score is 2.30 For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Merchant Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Meridian Court (Oteha)

The speed limit on Meridian Court, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Meridian Court connects to Medallion Drive to the east. This road provides access to residential properties and is approximately 0.59km in length.</p> <p>Meridian Court is classified as an Access road under the one network road classification (ONRC). Meridian Court is a two-way, Two lane undivided road. There are partial pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Meridian Court were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 5985 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Meridian Court has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Medallion Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Meridian Court has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.30. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Meridian Court, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Merlot Lane (Pukekohe)

The speed limit on Merlot Lane, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Merlot Lane connects to Puriri Road to the east. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Merlot Lane is classified as an Access road under the one network road classification (ONRC). Merlot Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Merlot Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Merlot Lane has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Puriri Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Merlot Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Merlot Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Merville Avenue (Te Atatu South)

The speed limit on Merville Avenue, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Merville Avenue connects to Lyndhurst Road to the south. This road provides access to residential properties and is approximately 0.17 km in length.</p> <p>Merville Avenue is classified as an access road under the one network road classification (ONRC). Merville Avenue is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 233 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Merville Avenue has a mean operating speed in the range of &lt;30 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Lyndhurst Road: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Merville Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.15 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Merville Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Middlefield Drive (Flat Bush)

The speed limit on Middlefield Drive, Flat Bush, between Cyril French Drive and Baverstock Road, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Middlefield Drive connects to Kilkenny Drive to the north and Baverstock Road to the south. This road provides access to residential properties and is approximately 0.19km in length.</p> <p>Middlefield Drive is classified as a Primary Collector road under the one network road classification (ONRC). Middlefield Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Middlefield Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 5756 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Middlefield Drive has a mean operating speed in the range of 30-34km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kilkenny Drive: 50km/h (no proposed change)</li> <li>• Baverstock Road: 50km/h (proposed 30km/h)</li> <li>• Heyington Way: 50km/h (no proposed change)</li> <li>• Kaseng Place: 50km/h (no proposed change)</li> <li>• Point View Drive: 50km/h (no proposed change)</li> <li>• Dunloy Place: 50km/h (no proposed change)</li> <li>• Gilford Place: 50km/h (no proposed change)</li> <li>• Glastry Close: 50km/h (no proposed change)</li> <li>• Rialto Court: 50km/h (no proposed change)</li> <li>• Willowbank Court: 50km/h (no proposed change)</li> <li>• Gracechurch Drive: 50km/h (no proposed change)</li> <li>• Barcaldine Road: 50km/h (no proposed change)</li> <li>• Maybole Drive: 50km/h (no proposed change)</li> <li>• Cyril French Drive: 50km/h (proposed 30km/h)</li> <li>• Bronwylan Drive: 50km/h (proposed 30km/h)</li> <li>• Pikao Place: 50km/h (no proposed change)</li> <li>• Amon Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Middlefield Drive has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.48. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Middlefield Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Middlefield Drive is a Primary Collector Road, that is not the intended function of this section of Middlefield Drive.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mildmay Road (Henderson)

The speed limit on Mildmay Road, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mildmay Road connects to Mawney Road to the west and Harrington Road to the north. This road provides access to residential properties and is approximately 0.44km in length.</p> <p>Mildmay Road is classified as an Access road under the one network road classification (ONRC). Mildmay Road is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records five crashes between 2016 and 2020: one minor crash, four non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mildmay Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 217 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Mildmay Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Mawney Road: 50km/h (proposed 30km/h)</li> <li>Harrington Road: 50km/h (proposed 30km/h)</li> <li>Larissa Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Mildmay Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Mildmay Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Millennial Way (Orewa)

The speed limit on Millennial Way, Orewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Millennial Way connects to West Hoe Heights to the south. This road provides access to residential properties and is approximately 0.24km in length.  Millennial Way is classified as an Access road under the one network road classification (ONRC). Millennial Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Millennial Way were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 3 to &lt;5 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 75 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Millennial Way has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>West Hoe Heights: 50km/h (no proposed change)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Millennial Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Millennial Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Miller Street (Point Chevalier)

The speed limit on Miller Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Miller Street connects to Berridge Avenue to the west and Point Cheavlier Road to the east. This road provides access to residential properties and is approximately 0.49km in length.</p> <p>Miller Street is classified as a Secondary Collector road under the one network road classification (ONRC). Miller Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Miller Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Miller Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Berridge Avenue: 50 km/h (proposed 30 km/h)</li> <li>Studholme Street: 50 km/h (proposed 30 km/h)</li> <li>Point Chevalier Road: 50 km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Miller Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Miller Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Miro Street (Kelston)

The speed limit on Miro Street, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Miro Street connects to Taroa Lane to the east and Lynwood Road to the west. This road provides access to residential properties and is approximately 0.57km in length.</p> <p>Miro Street is classified as a Secondary Collector road under the one network road classification (ONRC). Miro Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Miro Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 420 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Miro Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Taroa Lane: 50km/h (proposed 30km/h)</li> <li>• Lynwood Road: 50km/h (proposed 30km/h)</li> <li>• Nikau Street: 50km/h (proposed 30km/h)</li> <li>• Koromiko Street: 50km/h (proposed 30km/h)</li> <li>• Hinekohu Street: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Miro Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Miro Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Miromiro Street (Greenhithe)

The speed limit on Miromiro Street, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Miromiro Street connects to Kyle Road to the south. This road provides access to residential properties and is approximately 0.16km in length.</p> <p>Miromiro Street is classified as a Secondary Collector road under the one network road classification (ONRC). Miromiro Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Miromiro Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Miromiro Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kyle Road: 50km/h (proposed 30km/h)</li> <li>Kunzea Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Miromiro Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.18. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Miromiro Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mitchell Street (Blockhouse Bay)

The speed limit on Mitchell Street, Blockhouse Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mitchell Street connects to Connaught Street to the north and Connell Street to the south. This road provides access to residential properties and is approximately 0.35km in length.</p> <p>Mitchell Street is classified as a Secondary Collector road under the one network road classification (ONRC). Mitchell Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mitchell Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 494 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Mitchell Street has a mean operating speed in the range of 35-39km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Connell Street: 50km/h (proposed 30km/h)</li> <li>• Connaught Street: 50km/h (proposed 30km/h)</li> <li>• Mitchell Street: 50km/h (proposed 30km/h)</li> <li>• Barton Street: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Mitchell Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Mitchell Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Moko Lane (Greenhithe)

The speed limit on Moko Lane, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Moko Lane connects to Admirals Court Drive to the south. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Moko Lane is classified as an Access road under the one network road classification (ONRC). Moko Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Moko Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 297 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Moko Lane has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Admirals Court Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Moko Lane has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Moko Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Moloney Terrace (Pukekohe)

The speed limit on Moloney Terrace, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Moloney Terrace connects to Victoria Street West to the south. This road provides access to residential properties and is approximately 0.34km in length.</p> <p>Moloney Terrace is classified as an Access road under the one network road classification (ONRC). Moloney Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Moloney Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 220 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Moloney Terrace has a mean operating speed in the range of <30km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Victoria Street West: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Moloney Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Moloney Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Monkton Close (Greenhithe)

The speed limit on Monkton Close, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Monkton Close connects to Te Wharau Drive to the south. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Monkton Close is classified as an Access road under the one network road classification (ONRC). Monkton Close is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Monkton Close were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Monkton Close has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Te Wharau Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Monkton Close has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Monkton Close, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Monterey Avenue (Otahuhu)

The speed limit on Monterey Avenue, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Monterey Avenue connects to Fairburn Road to the north. This road provides access to residential properties and is approximately 0.22km in length.</p> <p>Monterey Avenue is classified as an Access road under the one network road classification (ONRC). Monterey Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Monterey Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 330 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Monterey Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Fairburn Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Monterey Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Monterey Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Montgomery Avenue (Belmont)

The speed limit on Montgomery Avenue, Belmont has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Montgomery Avenue connects to Seacliffe Avenue to the east and Lake Road to the west. This road provides access to residential properties and is approximately 0.56km in length.</p> <p>Montgomery Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Montgomery Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Montgomery Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1777 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Montgomery Avenue has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Seacliffe Avenue: 50km/h (proposed 30km/h)</li> <li>Lake Road: 50km/h (no proposed change)</li> <li>Alamein Avenue: 50km/h (proposed 30km/h)</li> <li>Wicklow Road: 50km/h (proposed 30km/h)</li> <li>Merani Street: 50km/h (proposed 30km/h)</li> <li>Hamana Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Montgomery Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Montgomery Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Montessor Place (Mellons Bay)

The speed limit on Montessor Place, Mellons Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Montessor Place connects to Castleton Drive to the south. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Montessor Place is classified as an Access road under the one network road classification (ONRC). Montessor Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Montessor Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1032 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Montessoro Place has a mean operating speed in the range of <30km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Castleton Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Montessoro Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low-Medium**.
- o The Infrastructure Risk Rating Score is 1.81. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Montessoro Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Montrose Street (Point Chevalier)

The speed limit on Montrose Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Montrose Street connects to Point Chevalier to the east. This road provides access to residential properties and is approximately 0.34km in length.</p> <p>Montrose Street is classified as an Access road under the one network road classification (ONRC). Montrose Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Montrose Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Montrose Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Point Chevalier Road: 50 km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Montrose Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.58. For urban areas this corresponds to an IRR band of **Low**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Montrose Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Moselle Avenue (Henderson)

The speed limit on Moselle Avenue, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Moselle Avenue connects to Lincoln Road to the west and Waipareira Avenue to the east. This road provides access to residential properties and is approximately 0.39km in length.</p> <p>Moselle Avenue is classified as a Primary Collector road under the one network road classification (ONRC). Moselle Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: one minor crash, two non-injury crashes. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Moselle Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using MegaMaps tool. The IRR defines Commercial big box as " <i>Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4680 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"
(k) Setting of Speed Limits Rule 2017	The requirements of the Setting of Speed Limits Rule 2017 are met as shown in Table 3
(l) WK Traffic Note 37-Revision 2	The requirements of WK Traffic Note 37-Revision2 are met as shown in Table 3

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Moselle Avenue has a mean operating speed in the range of <30km/h.  According to MegaMaps, the average pick-up and drop-off operating speeds are 22.7km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Lincoln Road: 50km/h (no proposed change)</li> <li>Waipareira Avenue: 50km/h (proposed variable 30 km/h and 50km/h)</li> </ul>
Auckland Transport Vision Zero	The proposed speed limit for this section of Waipareira Avenue will align with Auckland Transports Vision Zero approach

In addition to the factors outlined in Table 1, further relevant information was sought to meet the requirements of WK Traffic Note 37-Revision 2 and the Setting of Speed Limits Rule 2017 as summarised in Table 3 below.

Table 3: Required Information

Required Information	Data & Source
With reference to WK Traffic Note 37-Revision 2, a road controlling authority may set a 40km/h	The requirements of condition "b" are met as follows:

<p>variable speed limit in a school zone under the following conditions:</p> <p>(a) <i>There is school-related pedestrian or cycle activity on the road outside the school, which exceeds approximately 50 children crossing the road or entering or leaving vehicles at the roadside, and the traffic on the road outside the school meets at least one of the following conditions:</i></p> <p>(i) <i>The mean speed of free-running vehicles is greater than 45km/h (measured when the 40km/h variable speed limit is not operating); or</i></p> <p>(ii) <i>The 85<sup>th</sup> percentile speed of free-running vehicles is greater than 50km/h (measured when the 40km/h variable speed limit is not operating); or</i></p> <p>(iii) <i>There have been pedestrian, cycle or speed-related crashes near the school in the previous five years; or</i></p> <p>(iv) <i>The school-related activity in condition 5(a) occurs on a main traffic route; or</i></p> <p>(b) <i>There is school-related pedestrians or cycle activity on the road outside the school, with children crossing the road or entering or leaving vehicles at the roadside and safe and appropriate traffic engineering measures are installed so that the mean operating speeds of free-running vehicles on the road outside the school does not exceed 40km/h when the 40km/h variable speed limit is operating</i></p>	<p>A 2021 Annual Survey Report for ACG Sunderland found that in total there were 63 schoolchildren walking on the road outside the school around the schools pick up and drop off hours.</p> <p>Furthermore, according to MegaMaps, the average pick-up and drop-off operating speeds are 22.7km/h.</p>
<p>With reference to the Setting of Speed Limits Rule 2017, a variable speed limit may apply when:</p> <p>(a) <i>The speed limit needs to vary in order to be safe and appropriate; and</i></p> <p>(b) <i>It is necessary to address or manage one or more of the following situations or environments</i></p> <p>(i) <i>Different numbers and types of road users or different traffic movements; or</i></p>	<p>The requirements of condition "a" are met due to the observed activity on the road in front of the school around pick-up and drop-off hours, as specified above. It has been determined that since the walking activity around the school is largely concentrated around pick-up and drop-off hours, a variable speed limit would be suitable.</p> <p>The requirements of condition "b (ii)" are met due to the type of road users during the hours of operation of the proposed variable speed zone being primarily schoolchildren, which is not the</p>

(ii)	The effects of changing traffic volumes, including to ease congestion; or	case outside of the hours of operation for the proposed variable speed zone.
(iii)	For emergency or temporary traffic management; or	
(iv)	A crash risk posed by turning or crossing traffic; or	
(v)	Changing environmental conditions	

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Moselle Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 1.97. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = Variable 30km/h and 50km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Moselle Avenue, according to MegaMaps, the average pick up and drop off operating speeds, i.e. the operating speeds at times of heightened school-related activity, are less than 30km/h.

As outlined in Table 3, an assessment has been undertaken to determine if the warrant is met for a 40km/h variable speed school zone.

While the conditions required for a variable 40km/h speeds limit are met, Waka Kotahi have indicated that variable 30km/h speed limits would be appropriate if the operating speeds during the times of variable speed limit operation were less than 30km/h and they are notified of the proposal. Waka Kotahi will be notified of this proposal for a variable 30km/h speed limit prior to public consultation.

Due to the existing pick up and drop off operating speeds we have determined a variable 30km/h speed limit during school drop off and pick up times to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Motions Road (Westmere)**

The speed limit on Motions Road, Westmere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Motions Road connects to Old Mill Road to the north and Great North Road to the south. This road provides access to residential properties and is approximately 0.67 km in length.</p> <p>Motions Road is classified as an arterial road under the one network road classification (ONRC). Motions Road is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: six non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4842 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Motions Road has a mean operating speed in the range of 30-34 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Old Mill Road: 50 km/h (proposed 30 km/h)</li> <li>• Great North Road: 50 km/h</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Motions Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**
- The Infrastructure Risk Rating Score is 1.58 For urban areas this corresponds to an IRR band of **Low**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Motions Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mozeley Avenue (Devonport)

The speed limit on Mozeley Avenue, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mozeley Avenue connects to Lake Road to the east and Jim Titchener Parade to the west. This road provides access to residential properties and is approximately 0.57km in length.</p> <p>Mozeley Avenue is classified as a Primary Collector road under the one network road classification (ONRC). Mozeley Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mozeley Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2172 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Mozeley Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Lake Road: 50 km/h (no proposed change)</li> <li>Jim Titchener Parade: 50 km/h (no proposed change)</li> <li>Victoria Road between Albert Road and northern end of Victoria Road: 50 km/h (proposed 30 km/h)</li> <li>Cowper Street: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Mozeley Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Mozeley Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Mozeley Avenue is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Muir Avenue (Mangere Bridge)

The speed limit on Muir Avenue, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Muir Avenue connects to Wallace Road to the east and Ambury Road to the south. This road provides access to residential properties and is approximately 1.04km in length.</p> <p>Muir Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Muir Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: one minor crash, three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Muir Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4116 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Muir Avenue has a mean operating speed in the range of 35-39km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Wallace Road: 50km/h (no proposed change)</li> <li>• Ambury Road: 50km/h (proposed 30km/h)</li> <li>• Andes Avenue: 50km/h (proposed 30km/h)</li> <li>• Witla Court: 50km/h (proposed 30km/h)</li> <li>• Yorkton Rise: 50km/h (proposed 30km/h)</li> <li>• Ashcroft Avenue: 50km/h (proposed 30km/h)</li> <li>• Seaforth Avenue: 50km/h (proposed 30km/h)</li> <li>• Dalry Place: 50km/h (proposed 30km/h)</li> <li>• Lindis Place: 50km/h (proposed 30km/h)</li> <li>• Sullivan Avenue: 50km/h (proposed 30km/h)</li> <li>• House Avenue: 50km/h (proposed 30km/h)</li> <li>• Ambury Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Muir Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.

- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Muir Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mural Place (Greenhithe)

The speed limit on Mural Place, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mural Place connects to Kyle Road to the north. This road provides access to residential properties and is approximately 0.26km in length.</p> <p>Mural Place is classified as a Secondary Collector road under the one network road classification (ONRC). Mural Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mural Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Mural Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Kyle Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Mural Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Mural Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Muripara Avenue (Point Chevalier)

The speed limit on Muripara Avenue, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Muripara Avenue connects to Target Street to the north and Walker Road to the south. This road provides access to residential properties and is approximately 0.27km in length.</p> <p>Muripara Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Muripara Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Muripara Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Muripara Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Target Street: 50 km/h (proposed 30 km/h)</li> <li>Walker Road: 50 km/h (proposed 30 km/h)</li> <li>Shaftesbury Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Muripara Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Muripara Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Myers Road (Manurewa East)

The speed limit on Myers Road, Manurewa East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Myers Road connects to Scotts Road to the east and Great South Road to the west. This road provides access to residential properties and is approximately 0.68km in length.</p> <p>Myers Road is classified as a Secondary Collector road under the one network road classification (ONRC). Myers Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records five crashes between 2016 and 2020: five non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Myers Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2575 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Myers Road has a mean operating speed in the range of 40-44km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Scotts Road: 50km/h (proposed 30km/h)</li> <li>• Great South Road: 50km/h (no proposed change)</li> <li>• Ferguson Street: 50km/h (proposed 30km/h)</li> <li>• Greenmeadows Avenue : 50km/h (proposed 30km/h)</li> <li>• Sterling Avenue: 50km/h (proposed 30km/h)</li> <li>• Lincoln Road: 50km/h (proposed 30km/h)</li> <li>• McDougall Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Myers Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Myers Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Myna Place (Weymouth)

The speed limit on Myna Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Myna Place connects to Silver Creek Road to the east. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Myna Place is classified as an Access road under the one network road classification (ONRC). Myna Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Myna Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 330 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Myna Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Silver Creek Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Myna Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Myna Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Nadine Place (Mangere Bridge)

The speed limit on Nadine Place, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nadine Place connects to Seaforth Avenue to the west. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Nadine Place is classified as a Access road under the one network road classification (ONRC). Nadine Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Nadine Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Nadine Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Seaforth Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Nadine Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Nadine Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Nairn Place (Otara)

The speed limit on Nairn Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nairn Place connects to Tyrone Street to the north. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Nairn Place is classified as an Access road under the one network road classification (ONRC). Nairn Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Nairn Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5 to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 322 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Nairn Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Tyrone Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Nairn Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Nairn Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Nelson Street (Otahuhu)

The speed limit on Nelson Street, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nelson Street connects to Tamaki Avenue to the east and Great South Road to the west. This road provides access to residential properties and is approximately 0.40km in length.</p> <p>Nelson Street is classified as an Access road under the one network road classification (ONRC). Nelson Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Nelson Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 280 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Nelson Street has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tamaki Avenue: 50km/h (proposed 30km/h)</li> <li>Great southRoad: 50km/h (no proposed change)</li> <li>Sturges Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Nelson Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Nelson Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Nephrite Lane (Henderson)

The speed limit on Nephrite Lane, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nephrite Lane connects to Stephen Avenue to the west. This road provides access to residential properties and is approximately 0.19km in length.</p> <p>Nephrite Lane is classified as an Access road under the one network road classification (ONRC). Nephrite Lane is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Nephrite Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 150 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Nephrite Lane has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Stephen Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Nephrite Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.22. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Nephrite Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Netherlands Avenue (Kelston)

The speed limit on Netherlands Avenue, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Netherlands Avenue connects to Archibald Road to the east and Cartwright Road to the west. This road provides access to residential properties and is approximately 0.30km in length.</p> <p>Netherlands Avenue is classified as a Primary Collector road under the one network road classification (ONRC). Netherlands Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Netherlands Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1594 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Netherlands Avenue has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Archibald Road: 50km/h (proposed 30km/h)</li> <li>Cartwright Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Netherlands Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.81. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Netherlands Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Netherlands Avenue is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Neville Street (Point Chevalier)

The speed limit on Neville Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Neville Street connects to Target Street to the north and Walker Road to the south. This road provides access to residential properties and is approximately 0.27km in length.</p> <p>Neville Street is classified as a Secondary Collector road under the one network road classification (ONRC). Neville Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Neville Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Neville Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Target Street: 50 km/h (proposed 30 km/h)</li> <li>• Walker Road: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Neville Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Neville Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Nevis Place (Mangere)

The speed limit on Nevis Place, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nevis Place connects to Friesian Drive to the north. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Nevis Place is classified as an Access road under the one network road classification (ONRC). Nevis Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Nevis Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Nevis Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Friesian Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Nevis Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Nevis Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Newbegin Place (Weymouth)

The speed limit on Newbegin Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Newbegin Place connects to Footwide Place to the south and Settlers Cove to the south. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Newbegin Place is classified as an Access road under the one network road classification (ONRC). Newbegin Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Newbegin Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1092 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Newbegin Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Footwide Place: 50km/h (proposed 30km/h)</li> <li>• Settlers Cove: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Newbegin Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.60. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Newbegin Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Newell Street (Point Chevalier)

The speed limit on Newell Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Newell Street connects to Walford Road to the west. This road provides access to residential properties and is approximately 0.25km in length.</p> <p>Newell Street is classified as an Access road under the one network road classification (ONRC). Newell Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Newell Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 300 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Newell Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Walford Street: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Newell Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.66. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Newell Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Newland Grove (Henderson)

The speed limit on Newland Grove, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Newland Grove connects to Rathgar Road to the east. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Newland Grove is classified as an Access road under the one network road classification (ONRC). Newland Grove is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Newland Grove were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 170 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Newland Grove has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Rathgar Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Newland Grove has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Newland Grove, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ngaio Street (Otahuhu)

The speed limit on Ngaio Street, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ngaio Street connects to Church Street to the east and Great South Road to the west. This road provides access to residential properties and is approximately 0.33km in length.</p> <p>Ngaio Street is classified as a Secondary Collector road under the one network road classification (ONRC). Ngaio Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ngaio Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 522 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ngaio Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Church Street between Princes Street and Ngaio Street: 50km/h (proposed 30km/h)</li> <li>Great south Road: 50km/h (no proposed change)</li> <li>Sturges Avenue: 50km/h (proposed 30km/h)</li> <li>Tamaki Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ngaio Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ngaio Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ngatira Place (Clendon Park)

The speed limit on Ngatira Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

#### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ngatira Place connects to Finlayson Avenue to the west. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Ngatira Place is classified as an Access road under the one network road classification (ONRC). Ngatira Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ngatira Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 180 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ngatira Place has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Finlayson Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Ngatira Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ngatira Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Nicholas Gibbons Drive (Weymouth)

The speed limit on Nicholas Gibbons Drive, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nicholas Gibbons Drive connects to Etherton Drive to the east and Ebanjane Way to the south. This road provides access to residential properties and is approximately 0.57km in length.</p> <p>Nicholas Gibbons Drive is classified as an Access road under the one network road classification (ONRC). Nicholas Gibbons Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records five crashes between 2016 and 2020: two minor crashes, three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Nicholas Gibbons Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 440 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Nicholas Gibbons Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Etherton Drive: 50km/h (proposed 30km/h)</li> <li>Ebanjane Way: 50km/h (proposed 30km/h)</li> <li>Mark Edgar Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Nicholas Gibbons Drive has the following information:

- Collective Risk band of **Medium-High**, and a Personal Risk band of **High**.
- The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Nicholas Gibbons Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Nicola Place (Mangere)

The speed limit on Nicola Place, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

#### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Nicola Place connects to Friesian Drive to the west. This road provides access to residential properties and is approximately 0.19km in length.  Nicola Place is classified as an Access road under the one network road classification (ONRC). Nicola Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Nicola Place were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 220 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Nicola Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Friesian Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Nicola Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Nicola Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Nikau Street (Kelston)

The speed limit on Nikau Street, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nikau Street connects to Lynwood Road to the west and Great North Road to the south. This road provides access to residential properties and is approximately 0.59km in length.</p> <p>Nikau Street is classified as a Primary Collector road under the one network road classification (ONRC). Nikau Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records nine crashes between 2016 and 2020: four minor crashes, five non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Nikau Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1329 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Nikau Street has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Lynwood Road: 50km/h (proposed 30km/h)</li> <li>Great North Road : 50km/h (no proposed change)</li> <li>Rimu Street: 50km/h (proposed 30km/h)</li> <li>Miro Street: 50km/h (proposed 30km/h)</li> <li>Koromiko Street: 50km/h (proposed 30km/h)</li> <li>Kuaka Place: 50km/h (proposed 30km/h)</li> <li>Queen Mary Avenue: 50km/h (proposed 30km/h)</li> <li>Kelston Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Nikau Street has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Nikau Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Nikau Street is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Nile Road (Kelston)

The speed limit on Nile Road, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nile Road connects to Tamariki Avenue to the north and Vanguard Road to the east. This road provides access to residential properties and is approximately 0.45km in length.</p> <p>Nile Road is classified as a Secondary Collector road under the one network road classification (ONRC). Nile Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Nile Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 535 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Nile Road has a mean operating speed in the range of 30-34km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Vanguard Road: 50km/h (proposed 30km/h)</li> <li>• Vanguard Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Nile Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Nile Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Nimstedt Avenue (Oteha)

The speed limit on Nimstedt Avenue, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nimstedt Avenue connects to Sunvista Avenue to the north and Fields Parade to the west. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Nimstedt Avenue is classified as an Access road under the one network road classification (ONRC). Nimstedt Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Nimstedt Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 592 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Nimstedt Avenue has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Sunvista Avenue: 50km/h (proposed 30km/h)</li> <li>Fields Parade: 50km/h (proposed 30km/h)</li> <li>Gleanor Avenue: 50km/h (proposed 30km/h)</li> <li>Marbella Crescent: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Nimstedt Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.69. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Nimstedt Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Nixon Avenue (Otahuhu)

The speed limit on Nixon Avenue, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

#### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nixon Avenue connects to Church Street to the east and Great South Road to the west. This road provides access to residential properties and is approximately 0.46km in length.</p> <p>Nixon Avenue is classified as an Access road under the one network road classification (ONRC). Nixon Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records five crashes between 2016 and 2020: one minor crash, four non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Nixon Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 280 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Nixon Avenue has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Church Street between Princes Street and Ngaio Street: 50km/h (proposed 30km/h)</li> <li>• Great southRoad: 50km/h (no proposed change)</li> <li>• Sturges Avenue: 50km/h (proposed 30km/h)</li> <li>• Tamaki Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Nixon Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Nixon Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Nola Crescent (Otaru)

The speed limit on Nola Crescent, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nola Crescent connects to Cobham Crescent to the north. This road provides access to residential properties and is approximately 0.34km in length.</p> <p>Nola Crescent is classified as an Access road under the one network road classification (ONRC). Nola Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Nola Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 197 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Nola Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Cobham Crescent: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Nola Crescent has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Nola Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Normandy Place (Henderson)

The speed limit on Normandy Place, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Normandy Place connects to Glen Norman Avenue to the west. This road provides access to residential properties and is approximately 0.23km in length.</p> <p>Normandy Place is classified as an Access road under the one network road classification (ONRC). Normandy Place is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Normandy Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 97 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Normandy Place has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Glen Norman Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Normandy Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Normandy Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Northbrook Close (Greenhithe)

The speed limit on Northbrook Close, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Northbrook Close connects to Kyle Road to the west. This road provides access to residential properties and is approximately 0.25km in length.</p> <p>Northbrook Close is classified as a Secondary Collector road under the one network road classification (ONRC). Northbrook Close is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Northbrook Close were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Northbrook Close has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kyle Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Northbrook Close has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Northbrook Close, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Northcross Drive (Oteha)

The speed limit on Northcross Drive, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Northcross Drive connects to East Coast Road to the east and Ponderosa Drive to the south. This road provides access to residential properties and is approximately 1.93km in length.</p> <p>Northcross Drive is classified as an Access road under the one network road classification (ONRC). Northcross Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Northcross Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Northcross Drive has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• East Coast Road: 50km/h (no proposed change)</li> <li>• Ponderosa Drive: 50km/h (proposed 30km/h)</li> <li>• Margaret Henry Crescent: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Northcross Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Northcross Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Norton Place (Mangere)

The speed limit on Norton Place, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Norton Place connects to Staverton Crescent to the south. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Norton Place is classified as an Access road under the one network road classification (ONRC). Norton Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Norton Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 811 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Norton Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Staverton Crescent: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Norton Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Norton Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Norval Road (Henderson)

The speed limit on Norval Road, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Norval Road connects to Pinedale Place to the north and Lincoln Road to the east. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Norval Road is classified as an Access road under the one network road classification (ONRC). Norval Road is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor crash, one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Norval Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 948 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Norval Road has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Pinedale Place: 50km/h (proposed 30km/h)</li> <li>• Lincoln Road: 50km/h (no proposed change)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Norval Road has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Norval Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Nukumea Common (Orewa)

The speed limit on Nukumea Common, Orewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nukumea Common connects to Centreway Road to the east. This road provides access to residential properties and is approximately 0.37km in length.</p> <p>Nukumea Common is classified as a Secondary Collector road under the one network road classification (ONRC). Nukumea Common is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Nukumea Common were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 310 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Nukumea Common has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Centreway Road between Puriri Avenue and West Hoe Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Nukumea Common has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.09. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Nukumea Common, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Oakhaven Place (Ranui)

The speed limit on Oakhaven Place, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Oakhaven Place connects to Glen Road to the north. This road provides access to residential properties and is approximately 0.04km in length.</p> <p>Oakhaven Place is classified as an Access road under the one network road classification (ONRC). Oakhaven Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Oakhaven Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 10+ per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Oakhaven Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Glen Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Oakhaven Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Oakhaven Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Oakville Avenue (Flat Bush)

The speed limit on Oakville Avenue, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Oakville Avenue connects to Coachman Drive to the north and Baverstock Road to the south. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Oakville Avenue is classified as an Access road under the one network road classification (ONRC). Oakville Avenue is a two-way, Divided - traversable road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Oakville Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Divided - traversable</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 312 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Oakville Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Coachman Drive: 50km/h (proposed 30km/h)</li> <li>Baverstock Road: 50km/h (proposed 30km/h)</li> <li>Bridgefield Crescent: 50km/h (proposed 30km/h)</li> <li>Stonebrook Lane: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Oakville Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.35. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Oakville Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ocean View Road (Weymouth)

The speed limit on Ocean View Road, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ocean View Road connects to McInnes Road to the north and Roys Road to the south. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Ocean View Road is classified as an Access road under the one network road classification (ONRC). Ocean View Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ocean View Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 478 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ocean View Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• McInnes Road: 50km/h (proposed 30km/h)</li> <li>• Roys Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Ocean View Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ocean View Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ocean View Terrace (Orewa)

The speed limit on Ocean View Terrace, Orewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ocean View Terrace connects to Panorama Heights to the east. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Ocean View Terrace is classified as an Access road under the one network road classification (ONRC). Ocean View Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ocean View Terrace were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 15 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ocean View Terrace has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Panorama Heights: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ocean View Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ocean View Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Oceania Place (Mellons Bay)

The speed limit on Oceania Place, Mellons Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Oceania Place connects to Seymour Road to the west. This road provides access to residential properties and is approximately 0.21km in length.</p> <p>Oceania Place is classified as an Access road under the one network road classification (ONRC). Oceania Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Oceania Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Oceania Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Seymour Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Oceania Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Oceania Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ockhams Street (Karaka)

The speed limit on Ockhams Street, Karaka has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ockhams Street connects to Tumu Road to the north and Hayfield Way to the south. This road provides access to residential properties and is approximately 0.42km in length.</p> <p>Ockhams Street is classified as an Access road under the one network road classification (ONRC). Ockhams Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ockhams Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ockhams Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tumu Road: 50km/h (proposed 30km/h)</li> <li>Hayfield Way: 50km/h (proposed 30km/h)</li> <li>Gingernut Place: 50km/h (proposed 30km/h)</li> <li>Melody Belle Street: 50km/h (proposed 30km/h)</li> <li>Vespa Road: 50km/h (proposed 30km/h)</li> <li>Toporoa Street: 50km/h (proposed 30km/h)</li> <li>Songline Road: 50km/h (proposed 30km/h)</li> <li>Cloud Way: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ockhams Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.04. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ockhams Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – O’connor Street (Otara)

The speed limit on Oconnor Street, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Oconnor Street connects to Bairds Road to the north and Waimate Street to the south. This road provides access to residential properties and is approximately 0.38km in length.</p> <p>Oconnor Street is classified as a Secondary Collector road under the one network road classification (ONRC). Oconnor Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA’s Crash Analysis System (CAS) records four crashes between 2016 and 2020: four non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Oconnor Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”.

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1383 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Oconnor Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Bairds Road: 50km/h (proposed 30km/h)</li> <li>• Waimate Street: 50km/h (proposed 30km/h)</li> <li>• Flat Bush Road: 50km/h (proposed 30km/h)</li> <li>• Kurt Lane: 50km/h (proposed 30km/h)</li> <li>• Sandbrook Avenue: 50km/h (proposed 30km/h)</li> <li>• Vickerman Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Oconnor Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.58. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Oconnor Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Old Mill Road (Westmere)

The speed limit on Old Mill Road, Westmere, between Garnet Road and Motions Road, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Old Mill Road connects to Bullock Track to the east and Motions Road to the south. This road provides access to residential properties and is approximately 0.69 km in length.</p> <p>Old Mill Road is classified as a primary collector road under the one network road classification (ONRC). Old Mill Road is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: three minor and three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 10074 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Old Mill Road has a mean operating speed in the range of 30-34 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Motions Road: 50 km/h (proposed 30 km/h)</li> <li>Garnet Road: 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Old Mill Road has the following information:

- Collective Risk band of **Medium**, and a Personal Risk band of **Medium**
- The Infrastructure Risk Rating Score is 2.00 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Old Mill Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Oliver Street (Point Chevalier)

The speed limit on Oliver Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Oliver Street connects to Point Chevalier Road to the west. This road provides access to residential properties and is approximately 0.38km in length.</p> <p>Oliver Street is classified as a Secondary Collector road under the one network road classification (ONRC). Oliver Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Oliver Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 728 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Oliver Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Point Chevalier Road: 50 km/h (proposed 30 km/h)</li> <li>• Walford Road: 50 km/h (proposed 30 km/h)</li> <li>• Bungalow Avenue: 50 km/h (proposed 30 km/h)</li> <li>• Lynch Street: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Oliver Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.18. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Oliver Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Olivia Road (Pukekohe)

The speed limit on Olivia Road, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Olivia Road connects to Rainsford Road to the north and Perla Road to the south. This road provides access to residential properties and is approximately 0.18km in length.</p> <p>Olivia Road is classified as a Access road under the one network road classification (ONRC). Olivia Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Olivia Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Olivia Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Rainsford Road: 50km/h (proposed 30km/h)</li> <li>Perla Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Olivia Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.34. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Olivia Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Orewa Heights Crescent (Orewa)

The speed limit on Orewa Heights Crescent, Orewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Orewa Heights Crescent connects to West Hoe Heights to the south. This road provides access to residential properties and is approximately 0.16km in length.</p> <p>Orewa Heights Crescent is classified as an Access road under the one network road classification (ONRC). Orewa Heights Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Orewa Heights Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 97 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Orewa Heights Crescent has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>West Hoe Heights: 50km/h (no proposed change)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Orewa Heights Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.20. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests km/h as the safe and appropriate speed for Orewa Heights Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Orly Avenue (Mangere)

The speed limit on Orly Avenue, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Orly Avenue connects to Bader Road to the north and Thomas Road to the south. This road provides access to residential properties and is approximately 0.63km in length.</p> <p>Orly Avenue is classified as a Primary Collector road under the one network road classification (ONRC). Orly Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records eighteen crashes between 2016 and 2020: one serious crash, three minor crashes, fourteen non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Orly Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8927 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Orly Avenue has a mean operating speed in the range of 37.9km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Bader Road: 50km/h (no proposed change)</li> <li>Thomas Road: 50km/h (proposed 30km/h)</li> <li>Cape Road: 50km/h (proposed 30km/h)</li> <li>Killington Crescent: 50km/h (proposed 30km/h)</li> <li>Staverton Crescent: 50km/h (proposed 30km/h)</li> <li>Waddon Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Orly Avenue has the following information:

- Collective Risk band of **Medium**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 2.67. For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Orly Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Orly Avenue is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Oroua Place (Otara)

The speed limit on Oroua Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Oroua Place connects to Pearl Baker Drive to the south. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Oroua Place is classified as an Access road under the one network road classification (ONRC). Oroua Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Oroua Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Oroua Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Pearl Baker Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Oroua Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Oroua Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Orwell Road (Greenhithe)

The speed limit on Orwell Road, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Orwell Road connects to Kyle Road to the north and Greenhithe Road to the south. This road provides access to residential properties and is approximately 0.38km in length.</p> <p>Orwell Road is classified as an Access road under the one network road classification (ONRC). Orwell Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Orwell Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Orwell Road has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kyle Road: 50km/h (proposed 30km/h)</li> <li>Te Wharau Drive: 50km/h (proposed 30km/h)</li> <li>Louvain Place: 50km/h (proposed 30km/h)</li> <li>Greenhithe Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Orwell Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Orwell Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Osprey Street (Pakuranga)

The speed limit on Osprey Street, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Osprey Street connects to Tiraumea Drive to the south. This road provides access to residential properties and is approximately 0.15 km in length.</p> <p>Osprey Street is classified as an access road under the one network road classification (ONRC). Osprey Street is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 180 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Osprey Street has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Tiraumea Drive: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Osprey Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.15 For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Osprey Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Oswald Close (Flat Bush)

The speed limit on Oswald Close, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Oswald Close connects to Cyril French Drive to the north and Karson Place to the north. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Oswald Close is classified as an Access road under the one network road classification (ONRC). Oswald Close is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Oswald Close were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 228 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Oswald Close has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Cyril French Drive: 50km/h (proposed 30km/h)</li> <li>Karson Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Oswald Close has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Oswald Close, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Overend Court (Pukekohe)

The speed limit on Overend Court, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Overend Court connects to Green Lane to the west. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Overend Court is classified as an Access road under the one network road classification (ONRC). Overend Court is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Overend Court were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 120 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Overend Court has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Green Lane: 50km/h (no proposed change)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Overend Court has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Overend Court, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Owens Road (Devonport)

The speed limit on Owens Road, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Owens Road connects to Lake Road to the east and Victoria Road to the west. This road provides access to residential properties and is approximately 0.22km in length.</p> <p>Owens Road is classified as a Secondary Collector road under the one network road classification (ONRC). Owens Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Owens Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 619 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Owens Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Lake Road: 50 km/h (no proposed change)</li> <li>Victoria Road between Albert Road and northern end of Victoria Road: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Owens Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Owens Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review School – Raewyn Place (Pakuranga)

The speed limit on Raewyn Place, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Raewyn Place connects to Edgewater Drive to the north. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Raewyn Place is classified as a Access road under the one network road classification (ONRC). Raewyn Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Raewyn Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Raewyn Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Edgewater Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Raewyn Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Raewyn Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Rainsford Road (Pukekohe)

The speed limit on Rainsford Road, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rainsford Road connects to Taepu Road to the west. This road provides access to residential properties and is approximately 0.20km in length.</p> <p>Rainsford Road is classified as an Access road under the one network road classification (ONRC). Rainsford Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rainsford Road were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Rainsford Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Taepu Road: 50 km/h (proposed 30 km/h)</li> <li>• Parton Road: 50 km/h (proposed 30 km/h)</li> <li>• Olivia Road: 50 km/h (proposed 30 km/h)</li> <li>• Tuuhura Road: 50 km/h (proposed 30 km/h)</li> <li>• Perla Road: 50 km/h (proposed 30 km/h)</li> <li>• Victoria Street West: 50 km/h (no proposed change)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Rainsford Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.34. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Rainsford Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Raki Street (Pukekohe)

The speed limit on Raki Street, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Raki Street connects to Huamanu Street to the north and Hemopo Street to the south. This road provides access to residential properties and is approximately 0.25km in length.</p> <p>Raki Street is classified as an Access road under the one network road classification (ONRC). Raki Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Raki Street were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Raki Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Huamanu Street: 50 km/h (proposed 30 km/h)</li> <li>Hemopo Street: 50 km/h (proposed 30 km/h)</li> <li>Tawhiti Road: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Raki Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Raki Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Rama Road (Point Chevalier)

The speed limit on Rama Road, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rama Road connects to Walker Road to the north and Smale Street to the south. This road provides access to residential properties and is approximately 0.27km in length.</p> <p>Rama Road is classified as an Access road under the one network road classification (ONRC). Rama Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rama Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 312 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Rama Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Walker Road: 50 km/h (proposed 30 km/h)</li> <li>Smale Street: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Rama Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Rama Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ramesh Place (Pukekohe)

The speed limit on Ramesh Place, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ramesh Place connects to Ranchod Terrace to the east. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Ramesh Place is classified as an Access road under the one network road classification (ONRC). Ramesh Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ramesh Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 110 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ramesh Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ranchod Terrace: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ramesh Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ramesh Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ranchod Terrace (Pukekohe)

The speed limit on Ranchod Terrace, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ranchod Terrace connects to Ward Street to the north. This road provides access to residential properties and is approximately 0.25km in length.</p> <p>Ranchod Terrace is classified as an Access road under the one network road classification (ONRC). Ranchod Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ranchod Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 110 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ranchod Terrace has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Ward Street: 50km/h (no proposed change)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Ranchod Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ranchod Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Raoriki Road (Pukekohe)

The speed limit on Raoriki Road, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Raoriki Road connects to Jutland Road to the west. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Raoriki Road is classified as an Access road under the one network road classification (ONRC). Raoriki Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Raoriki Road were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Raoriki Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Jutland Road: 50 km/h (proposed 30 km/h)</li> <li>Whakapono Road: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Raoriki Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Raoriki Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Rathgar Road (Henderson)

The speed limit on Rathgar Road, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rathgar Road connects to Universal Drive to the north and Swanson Road to the south. This road provides access to residential properties and is approximately 1.62km in length.</p> <p>Rathgar Road is classified as an Arterial road under the one network road classification (ONRC). Rathgar Road is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records twenty five crashes between 2016 and 2020: two serious crashes, nine minor crashes, fourteen non-injury crashes. This resulted in two Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rathgar Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8034 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Rathgar Road has a mean operating speed in the range of 40-44km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Universal Drive: 50km/h (no proposed change)</li> <li>• Swanson Road: 50km/h (no proposed change)</li> <li>• Ti Nana Crescent: 50km/h (proposed 30km/h)</li> <li>• Edwards Avenue: 50km/h (proposed 30km/h)</li> <li>• Maurice Borich Place: 50km/h (proposed 30km/h)</li> <li>• Larnoch Road: 50km/h (proposed 30km/h)</li> <li>• Pomaria Road: 50km/h (proposed 30km/h)</li> <li>• Larissa Avenue: 50km/h (proposed 30km/h)</li> <li>• Harrington Road: 50km/h (proposed 30km/h)</li> <li>• Newland Grove: 50km/h (proposed 30km/h)</li> <li>• Longburn Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Rathgar Road has the following information:

- o Collective Risk band of **Medium**, and a Personal Risk band of **Medium**.

- o The Infrastructure Risk Rating Score is 2.13. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Rathgar Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Rathgar Road is an Arterial Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ravine Lane (Oteha)

The speed limit on Ravine Lane, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ravine Lane connects to John Jennings Drive to the east. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Ravine Lane is classified as an Access road under the one network road classification (ONRC). Ravine Lane is a two-way, Two lane undivided road. There are no pedestrian amenities and. There are no pedestrian amenities, on-street parking and cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ravine Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 314 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ravine Lane has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>John Jennings Drive: 50km/h (proposed 30km/h)</li> <li>Andersons Road: 50km/h (proposed 30km/h)</li> <li>Canyon Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ravine Lane has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ravine Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Raymond Street (Point Chevalier)

The speed limit on Raymond Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Raymond Street connects to Point Chevalier Road to the east. This road provides access to residential properties and is approximately 0.27km in length.</p> <p>Raymond Street is classified as a Secondary Collector road under the one network road classification (ONRC). Raymond Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Raymond Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 832 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Raymond Street has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Point Chevalier Road: 50 km/h (proposed 30 km/h)</li> <li>• Harbour View Road: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Raymond Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Raymond Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Rebecca Rise (Weymouth)

The speed limit on Rebecca Rise, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rebecca Rise connects to Taitimu Drive to the north. This road provides access to residential properties and is approximately 0.18km in length.</p> <p>Rebecca Rise is classified as an Access road under the one network road classification (ONRC). Rebecca Rise is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rebecca Rise were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 958 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Rebecca Rise has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Taitimu Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Rebecca Rise has the following information:

- o Collective Risk band of **Medium-High**, and a Personal Risk band of **High**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Rebecca Rise, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Redcoat Place (Cockle Bay)**

The speed limit on Redcoat Place, Cockle Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Redcoat Place connects to Advene Road to the south. This road provides access to residential properties and is approximately 0.06 km in length.</p> <p>Redcoat Place is classified as an access road under the one network road classification (ONRC). Redcoat Place is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 291 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Redcoat Place has a mean operating speed in the range of <30 km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Advene Road: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Redcoat Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.17 For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Redcoat Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Reipae Street (Stonefields)

The speed limit on Reipae Street, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Reipae Street connects to Tihi Street to the west and Tauoma Crescent to the east. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Reipae Street is classified as an Access road under the one network road classification (ONRC). Reipae Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Reipae Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 450 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Reipae Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tihi Street: 50km/h (proposed 30km/h)</li> <li>Tauoma Crescent: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Reipae Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.69. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Reipae Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Reno Way (Flat Bush)

The speed limit on Reno Way, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Reno Way connects to Kestev Drive to the north. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Reno Way is classified as an Access road under the one network road classification (ONRC). Reno Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Reno Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 6 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1534 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Reno Way has a mean operating speed in the range of <31km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kestev Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Reno Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 41km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 41km/h as the safe and appropriate speed for Reno Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Reremanu Place (Weymouth)

The speed limit on Reremanu Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Reremanu Place connects to Waimahia Avenue to the north. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Reremanu Place is classified as an Access road under the one network road classification (ONRC). Reremanu Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Reremanu Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 190 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Reremanu Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Waimahia Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Reremanu Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Reremanu Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Rerewai Place (Kelston)

The speed limit on Rerewai Place, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rerewai Place connects to Sabulite Road between Butterworth Drive and the northern end to the west. This road provides access to residential properties and is approximately 0.36km in length.</p> <p>Rerewai Place is classified as an Access road under the one network road classification (ONRC). Rerewai Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rerewai Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 235 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Rerewai Place has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Sabulite Road between Butterworth Drive and the northern end: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Rerewai Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Rerewai Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Revell Court (Pukekohe)

The speed limit on Revell Court, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Revell Court connects to Cooper Street to the east. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Revell Court is classified as an Access road under the one network road classification (ONRC). Revell Court is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Revell Court were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 197 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Revell Court has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Cooper Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Revell Court has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Revell Court, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Rewa Rewa Lane (Orewa)

The speed limit on Rewa Rewa Lane, Orewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rewa Rewa Lane connects to Puriri Boulevard to the north. This road provides access to residential properties and is approximately 0.01km in length.</p> <p>Rewa Rewa Lane is classified as an Access road under the one network road classification (ONRC). Rewa Rewa Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rewa Rewa Lane were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 20 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Rewa Rewa Lane has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Puriri Boulevard: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Rewa Rewa Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Rewa Rewa Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Rewa Street (Kelston)

The speed limit on Rewa Street, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rewa Street connects to Hinekohu Street to the east and Lynwood Road to the west. This road provides access to residential properties and is approximately 0.19km in length.</p> <p>Rewa Street is classified as a Secondary Collector road under the one network road classification (ONRC). Rewa Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rewa Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1920 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Rewa Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Hinekohu Street: 50km/h (proposed 30km/h)</li> <li>Lynwood Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Rewa Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.33. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Rewa Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Reydon Place (Cockle Bay)**

The speed limit on Reydon Place, Cockle Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Reydon Place connects to Sandspit Road to the south. This road provides access to residential properties and is approximately 0.15 km in length.  Reydon Place is classified as an access road under the one network road classification (ONRC). Reydon Place is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Road Name were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 170 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Reydon Place has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Sandspit Road: 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Reydon Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.15 For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Reydon Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Reyland Close (Weymouth)

The speed limit on Reyland Close, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Reyland Close connects to Etherton Drive to the south. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Reyland Close is classified as an Access road under the one network road classification (ONRC). Reyland Close is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Reyland Close were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Reyland Close has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Etherton Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Reyland Close has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Reyland Close, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Rickards Place (Kelston)

The speed limit on Rickards Place, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rickards Place connects to Lynwood Road to the west. This road provides access to residential properties and is approximately 0.17km in length.</p> <p>Rickards Place is classified as an Access road under the one network road classification (ONRC). Rickards Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rickards Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 232 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Rickards Place has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Lynwood Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Rickards Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Rickards Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Rimu Street (Kelston)

The speed limit on Rimu Street, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rimu Street connects to Rata Street to the east and to the west. This road provides access to residential properties and is approximately 1.05km in length.</p> <p>Rimu Street is classified as a Primary Collector road under the one network road classification (ONRC). Rimu St is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records twenty five crashes between 2016 and 2020: seven minor crashes, eighteen non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rimu Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8948 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Rimu Street has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Rata Street: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Rimu Street has the following information:

- Collective Risk band of **Medium**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 2.13. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Rimu Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Rimu Street is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Riverglade Parkway (Te Atatu South)**

The speed limit on Riverglade Parkway, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Riverglade Parkway connects to McLeod Road to the north. This road provides access to residential properties and is approximately 0.41 km in length.</p> <p>Riverglade Parkway is classified as an access road under the one network road classification (ONRC). Riverglade Parkway is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 90 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Riverglade Parkway has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>McLeod Road: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Riverglade Parkway has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.00 For urban areas this corresponds to an IRR band of **Low Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Riverglade Parkway, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Riverina Avenue (Pakuranga)

The speed limit on Riverina Avenue, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Riverina Avenue connects to Edgewater Drive to the east. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Riverina Avenue is classified as a Access road under the one network road classification (ONRC). Riverina Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Riverina Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 130 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Riverina Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Edgewater Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Riverina Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.20. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Riverina Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Riverview Road (Kelston)

The speed limit on Riverview Road, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Riverview Road connects to Lynwood Road to the east. This road provides access to residential properties and is approximately 0.21km in length.</p> <p>Riverview Road is classified as an Access road under the one network road classification (ONRC). Riverview Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Riverview Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 320 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Riverview Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Lynwood Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Riverview Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.66. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Riverview Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Roanoke Way (Albany)

The speed limit on Roanoke Way, Albany has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Roanoke Way connects to Vinewood Drive to the south. This road provides access to residential properties and is approximately 0.50km in length.</p> <p>Roanoke Way is classified as a Access road under the one network road classification (ONRC). Roanoke Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Roanoke Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Roanoke Way has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Harkin Close: 50km/h (proposed 30km/h)</li> <li>• Crewe Close: 50km/h (proposed 30km/h)</li> <li>• Vinewood Drive: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Roanoke Way has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Roanoke Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Robert Ross Place (Clendon Park)

The speed limit on Robert Ross Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Robert Ross Place connects to Robert Skelton Place to the north and Roscommon Road to the east. This road provides access to residential properties and is approximately 0.40km in length.</p> <p>Robert Ross Place is classified as a Secondary Collector road under the one network road classification (ONRC). Robert Ross Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Robert Ross Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1045 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Robert Ross Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Robert Skelton Place: 50km/h (no proposed change)</li> <li>Roscommon Road: 60km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Robert Ross Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.62. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Robert Ross Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Robert Sale Rise (Stonefields)**

The speed limit on Robert Sale Rise, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Robert Sale Rise connects to Barbarich Drive to the west and Searle Street to the east. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Robert Sale Rise is classified as an Access road under the one network road classification (ONRC). Robert Sale Rise is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Robert Sale Rise were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 172 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Robert Sale Rise has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Barbarich Drive: 50km/h (proposed 30km/h)</li> <li>Searle Street: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Robert Sale Rise has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Robert Sale Rise, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Robert Skelton Place (Clendon Park)

The speed limit on Robert Skelton Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Robert Skelton Place connects to Robert Ross Place to the south. This road provides access to residential properties and is approximately 0.44km in length.</p> <p>Robert Skelton Place is classified as a Secondary Collector road under the one network road classification (ONRC). Robert Skelton Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Robert Skelton Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1045 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Robert Skelton Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Robert Ross Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Robert Skelton Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.62. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Robert Skelton Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Roberts Road (Te Atatu South)**

The speed limit on Roberts Road, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Roberts Road connects to Te Atatu Road to the west. This road provides access to residential properties and is approximately 0.99 km in length.</p> <p>Roberts Road is classified as a primary collector road under the one network road classification (ONRC). Roberts Road is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: six non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4227 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Roberts Road has a mean operating speed in the range of 35-39 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Ayrton Road: 50 km/h (proposed 30 km/h)</li> <li>• Cornwall Street: 50 km/h (proposed 30 km/h)</li> <li>• Poto Street: 50 km/h (proposed 30 km/h)</li> <li>• Glynbrooke Street: 50 km/h (proposed 30 km/h)</li> <li>• Te Atatu Road: 50 km/h</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Roberts Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.05 For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Roberts Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Roberts Road is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Rodney Street (Otahuhu)

The speed limit on Rodney Street, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rodney Street connects to Fairburn Road to the south. This road provides access to residential properties and is approximately 0.21km in length.</p> <p>Rodney Street is classified as an Access road under the one network road classification (ONRC). Rodney Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rodney Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 330 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Rodney Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Fairburn Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Rodney Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.92. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Rodney Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ronaki Road (Otahuhu)

The speed limit on Ronaki Road, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ronaki Road connects to Clement Street to the east and Church Street to the west. This road provides access to residential properties and is approximately 0.82km in length.</p> <p>Ronaki Road is classified as an Access road under the one network road classification (ONRC). Ronaki Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ronaki Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 228 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ronaki Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Clement Street: 50km/h (proposed 30km/h)</li> <li>• Church Street between Princes Street and Ngaio Street: 50km/h (proposed 30km/h)</li> <li>• Petrie Place: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Ronaki Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ronaki Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Roseburn Place (Pakuranga)

The speed limit on Roseburn Place, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Roseburn Place connects to Ti Rakau Drive to the north. This road provides access to residential properties and is approximately 0.16 km in length.</p> <p>Roseburn Place is classified as an access road under the one network road classification (ONRC). Roseburn Place is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 190 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Roseburn Place has a mean operating speed in the range of &lt;30 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ti Rakau Drive: 60 km/h (no proposed changes)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Roseburn Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**
- The Infrastructure Risk Rating Score is 2.15 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Roseburn Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Rosetta Court (Shelly Park)**

The speed limit on Rosetta Court, Shelly Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rosetta Court connects to Sunnyview Avenue to the north. This road provides access to residential properties and is approximately 0.04 km in length.</p> <p>Rosetta Court is classified as an access road under the one network road classification (ONRC). Rosetta Court is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 80 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Rosetta Court has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Sunnyview Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Rosetta Court has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.33 For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Rosetta Court, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Roslyn Terrace (Devonport)

The speed limit on Roslyn Terrace, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Roslyn Terrace connects to Patuone Place to the north and Calliope Road to the south. This road provides access to residential properties and is approximately 0.34km in length.</p> <p>Roslyn Terrace is classified as an Access road under the one network road classification (ONRC). Roslyn Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Roslyn Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 388 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Roslyn Terrace has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Patuone Place: 50km/h (proposed 30km/h)</li> <li>Calliope Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Roslyn Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Roslyn Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ross Avenue (Otarā)

The speed limit on Ross Avenue, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ross Avenue connects to Everitt Road to the east. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Ross Avenue is classified as an Access road under the one network road classification (ONRC). Ross Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ross Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ross Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Everitt Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Ross Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ross Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Rota Place (Parnell)

The speed limit on Rota Place, Parnell has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rota Place connects to Bridgewater Road to the north. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Rota Place is classified as an Access road under the one network road classification (ONRC). Rota Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rota Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Rota Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Bridgewater Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Rota Place has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **High**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Rota Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Roys Road (Weymouth)

The speed limit on Roys Road, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Roys Road connects to Beihlers Road to the east and Ocean View Road to the north. This road provides access to residential properties and is approximately 0.45km in length.</p> <p>Roys Road is classified as an Access road under the one network road classification (ONRC). Roys Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Roys Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 478 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Roys Road has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Beihlers Road: 50km/h (proposed 30km/h)</li> <li>• Ocean View Road: 50km/h (proposed 30km/h)</li> <li>• Weymouth Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Roys Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Roys Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Royton Avenue (Mangere East)

The speed limit on Royton Avenue, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Royton Avenue connects to Yates Road to the north and Buckland Road to the south. This road provides access to residential properties and is approximately 0.45km in length.</p> <p>Royton Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Royton Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: two minor crashes, two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Royton Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2553 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Royton Avenue has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Yates Road: 50km/h (proposed 30km/h)</li> <li>Buckland Road: 50km/h (no proposed change)</li> <li>Chalfont Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Royton Avenue has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 2.30. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Royton Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Rukumoana Place (Clendon Park)

The speed limit on Rukumoana Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rukumoana Place connects to Burundi Avenue to the south. This road provides access to residential properties and is approximately 0.16km in length.</p> <p>Rukumoana Place is classified as an Access road under the one network road classification (ONRC). Rukumoana Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rukumoana Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 190 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Rukumoana Place has a mean operating speed in the range of <30km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Burundi Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Rukumoana Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Rukumoana Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Runa Place (Mt Wellington)

The speed limit on Runa Place, Mt Wellington has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Runa Place connects to Panama Road to the east. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Runa Place is classified as an Access road under the one network road classification (ONRC). Runa Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Runa Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 150 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Runa Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Panama Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Runa Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Runa Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Rural View Terrace (Pukekohe)

The speed limit on Rural View Terrace, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rural View Terrace connects to Adams Road South to the west. This road provides access to residential properties and is approximately 0.37km in length.</p> <p>Rural View Terrace is classified as an Access road under the one network road classification (ONRC). Rural View Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rural View Terrace were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 30 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Rural View Terrace has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Adams Road South: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Rural View Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Rural View Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Rush Place (Mangere)

The speed limit on Rush Place, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rush Place connects to Ashgrove Road to the east. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Rush Place is classified as an Access road under the one network road classification (ONRC). Rush Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rush Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 140 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Rush Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ashgrove Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Rush Place has the following information:

- Collective Risk band of **Medium**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Rush Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Russell Street (Stanley Point)

The speed limit on Russell Street, Stanley Point has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Russell Street connects to Waterview Road to the north and Calliope Road to the south. This road provides access to residential properties and is approximately 0.36km in length.</p> <p>Russell Street is classified as an Access road under the one network road classification (ONRC). Russell Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Russell Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 280 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Russell Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Waterview Road: 50 km/h (proposed 30 km/h)</li> <li>• Calliope Road: 50 km/h (no proposed change)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Russell Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Russell Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Rutland Road (Stanley Point)

The speed limit on Rutland Road, Stanley Point, between William Bond Street and Cautley Street, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rutland Road connects to Kiwi Road to the east and William Bond Street to the west. This road provides access to residential properties and is approximately 0.30km in length.</p> <p>Rutland Road is classified as a Secondary Collector road under the one network road classification (ONRC). Rutland Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rutland Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 277 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Rutland Road has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kiwi Road: 50 km/h (no proposed change)</li> <li>William Bond Street: 50 km/h (proposed 30 km/h)</li> <li>Cautley Street: 50 km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Rutland Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Rutland Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ryder Place (Pukekohe)

The speed limit on Ryder Place, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ryder Place connects to Victoria Street West to the south and Park Chester Road to the north. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Ryder Place is classified as an Access road under the one network road classification (ONRC). Ryder Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ryder Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 30 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ryder Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Victoria Street West: 50km/h (proposed 30km/h)</li> <li>• Park Chester Road: 50km/h (proposed 30km/h)</li> <li>• Maioha Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Ryder Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ryder Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sabulite Road (Kelston)

The speed limit on Sabulite Road, Kelston, between Butterworth Drive and the northern end of Sabulite Road, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sabulite Road connects to Rerewai Place to the north and Great North Road to the south. This road provides access to residential properties and is approximately 0.53km in length.</p> <p>Sabulite Road is classified as an Arterial road under the one network road classification (ONRC). Sabulite Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records nine crashes between 2016 and 2020: one serious crash, one minor crash, seven non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sabulite Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3930 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Sabulite Road has a mean operating speed in the range of 35-39km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Rerewai Place: 50km/h (proposed 30km/h)</li> <li>Great North Road: 50km/h (no proposed change)</li> <li>Glenview Road: 50km/h (no proposed change)</li> <li>Butterworth Drive: 50km/h (no proposed change)</li> <li>St Leonards Road: 50km/h (no proposed change)</li> <li>St Leonards Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Sabulite Road has the following information:

- Collective Risk band of **Medium**, and a Personal Risk band of **High**.
- The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Sabulite Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Sabulite Road is an Arterial Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Saint Stephens Avenue (Parnell)

The speed limit on Saint Stephens Avenue, Parnell, between Gladstone Road and the northern end of Saint Stephens Avenue, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Saint Stephens Avenue connects to Judge Street to the north and Parnell Road to the south. This road provides access to residential properties and is approximately 0.82km in length.</p> <p>Saint Stephens Avenue is classified as a Primary Collector road under the one network road classification (ONRC). Saint Stephens Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Saint Stephens Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 5290 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Saint Stephens Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Judge Street: 50km/h (proposed 30km/h)</li> <li>• Parnell Road: 50km/h (no proposed change)</li> <li>• Brighton Road: 50km/h (no proposed change)</li> <li>• Corunna Avenue: 50km/h (no proposed change)</li> <li>• Burrows Avenue: 50km/h (no proposed change)</li> <li>• Gladstone Road: 50km/h (no proposed change)</li> <li>• Takutai Street: 50km/h (proposed 30km/h)</li> <li>• Lichfield Road: 50km/h (proposed 30km/h)</li> <li>• Canterbury Place: 50km/h (no proposed change)</li> <li>• Awatea Road: 50km/h (proposed 30km/h)</li> <li>• Bridgewater Road: 50km/h (proposed 30km/h)</li> <li>• Crescent Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Saint Stephens Avenue has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Low-Medium**.

- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Saint Stephens Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Saint Stephens Avenue is a Primary Collector Road, that is not the intended function of this section of Saint Stephens Avenue.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Samara Place (Clendon Park)

The speed limit on Samara Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Samara Place connects to Palmer Road to the south. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Samara Place is classified as an Access road under the one network road classification (ONRC). Samara Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Samara Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 440 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Samara Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Palmer Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Samara Place has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **High**.
- The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Samara Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sample Road (Albany)

The speed limit on Sample Road, Albany has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sample Road connects to Bass Road to the west. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Sample Road is classified as a Access road under the one network road classification (ONRC). Sample Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sample Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Sample Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Bass Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Sample Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sample Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Samuel Cross Place (Greenhithe)

The speed limit on Samuel Cross Place, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Samuel Cross Place connects to Te Wharau Drive to the south. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Samuel Cross Place is classified as an Access road under the one network road classification (ONRC). Samuel Cross Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Samuel Cross Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Samuel Cross Place has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Te Wharau Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Samuel Cross Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Samuel Cross Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Samuel Place (Stonefields)

The speed limit on Samuel Place, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Samuel Place connects to Guyon Street to the east. This road provides access to residential properties and is approximately 0.04km in length.</p> <p>Samuel Place is classified as an Access road under the one network road classification (ONRC). Samuel Place is a two-way, Two lane undivided road. There are partial pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Samuel Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Samuel Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Guyon Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Samuel Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Samuel Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sandbrook Avenue (Otago)

The speed limit on Sandbrook Avenue, Otago has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sandbrook Avenue connects to Bairds Road to the north and Oconnor Street to the south. This road provides access to residential properties and is approximately 0.39km in length.</p> <p>Sandbrook Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Sandbrook Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sandbrook Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1008 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Sandbrook Avenue has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Bairds Road: 50km/h (proposed 30km/h)</li> <li>Oconnor Street: 50km/h (proposed 30km/h)</li> <li>Herald Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Sandbrook Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.84. For urban areas this corresponds to an IRR band of **High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sandbrook Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sandra Avenue (Otara)

The speed limit on Sandra Avenue, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sandra Avenue connects to Ivon Road to the north. This road provides access to residential properties and is approximately 0.35km in length.</p> <p>Sandra Avenue is classified as an Access road under the one network road classification (ONRC). Sandra Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sandra Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 197 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Sandra Avenue has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Ivon Road: 50km/h (proposed 30km/h)</li> <li>• Capstick Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Sandra Avenue has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sandra Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Savage Street (Westmere)

The speed limit on Savage Street, Westmere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Savage Street connects to Old Mill Road to the south. This road provides access to residential properties and is approximately 0.13 km in length.</p> <p>Savage Street is classified as an access road under the one network road classification (ONRC). Savage Street is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"

Commented [CS(1)]: Column c

Commented [CS(2)]: Column e

Commented [CS(3)]: Column c

Commented [CS(4)]: Column e

Commented [CS(5)]: Column c

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 150 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Savage Street has a mean operating speed in the range of &lt;30 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Old Mill Road: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Savage Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**
- The Infrastructure Risk Rating Score is 2.41 For urban areas this corresponds to an IRR band of **Medium High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

## Speed Limit Review – Scanlen Terrace (Kelston)

The speed limit on Scanlen Terrace, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Scanlen Terrace connects to Archibald Road to the east. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Scanlen Terrace is classified as an Access road under the one network road classification (ONRC). Scanlen Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Scanlen Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Savage Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 191 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Scanlen Terrace has a mean operating speed in the range of <30km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Archibald Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Scanlen Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Scanlen Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – School Road (Belmont)

The speed limit on School Road, Belmont has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>School Road connects to Lake Road to the west. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>School Road is classified as an Access road under the one network road classification (ONRC). School Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for School Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 132 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of School Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Lake Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps School Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for School Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Scoria Crescent (Stonefields)

The speed limit on Scoria Crescent, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Scoria Crescent connects to Stonemason Avenue to the west. This road provides access to residential properties and is approximately 0.34km in length.</p> <p>Scoria Crescent is classified as an Access road under the one network road classification (ONRC). Scoria Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Scoria Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Scoria Crescent has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Stonemason Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Scoria Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Scoria Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Scotts Road (Manurewa East)

The speed limit on Scotts Road, Manurewa East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Scotts Road connects to Alfriston Road to the north and Myers Road to the south. This road provides access to residential properties and is approximately 0.61km in length.</p> <p>Scotts Road is classified as a Secondary Collector road under the one network road classification (ONRC). Scotts Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: one serious crash, four minor crashes, one non-injury crash. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Scotts Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2252 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Scotts Road has a mean operating speed in the range of 45-49km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Alfriston Road: 50km/h (no proposed change)</li> <li>Myers Road: 50km/h (proposed 30km/h)</li> <li>Ellen Street: 50km/h (proposed 30km/h)</li> <li>Mccannalley Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Scotts Road has the following information:

- o Collective Risk band of **Medium**, and a Personal Risk band of **High**.
- o The Infrastructure Risk Rating Score is 1.70. For urban areas this corresponds to an IRR band of **Low Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Scotts Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sea View Road (Leigh)

The speed limit on Sea View Road, Leigh has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Sea View Road connects to Seatoun Avenue to the east. This road provides access to residential properties and is approximately 0.24km in length.  Sea View Road is classified as an Access road under the one network road classification (ONRC). Sea View Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Sea View Road were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as rural towns using MegaMaps tool. The IRR defines rural towns as "rural town with mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present."
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 3 to &lt;5 per km</li><li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 124 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Sea View Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Seatoun Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Sea View Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.76. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sea View Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Seacliffe Avenue (Belmont)

The speed limit on Seacliffe Avenue, Belmont has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Seacliffe Avenue connects to Winscombe Street to the north and Hamana Street to the south. This road provides access to residential properties and is approximately 0.78km in length.</p> <p>Seacliffe Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Seacliffe Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: one minor crash, three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Seacliffe Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4390 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Seacliffe Avenue has a mean operating speed in the range of 35-39km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Winscombe Street: 50km/h (proposed 30km/h)</li> <li>Hamana Street: 50km/h (proposed 30km/h)</li> <li>Montgomery Avenue: 50km/h (proposed 30km/h)</li> <li>Williamson Avenue: 50km/h (proposed 30km/h)</li> <li>Westwell Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Seacliffe Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low-Medium**.
- The Infrastructure Risk Rating Score is 1.70. For urban areas this corresponds to an IRR band of **Low-Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Seacliffe Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Seacomb Road (Point Chevalier)

The speed limit on Seacomb Road, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Seacomb Road connects to Walford Road to the west. This road provides access to residential properties and is approximately 0.19km in length.</p> <p>Seacomb Road is classified as an Access road under the one network road classification (ONRC). Seacomb Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Seacomb Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 300 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Seacombe Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Walford Street: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Seacombe Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Seacombe Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Seaforth Avenue (Mangere Bridge)

The speed limit on Seaforth Avenue, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Seaforth Avenue connects to Kiwi Esplanade to the north and Muir Avenue to the south. This road provides access to residential properties and is approximately 0.35km in length.</p> <p>Seaforth Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Seaforth Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Seaforth Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 343 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Seaforth Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kiwi Esplanade: 50km/h (proposed 30km/h)</li> <li>Muir Avenue: 50km/h (proposed 30km/h)</li> <li>Nadine Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Seaforth Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Seaforth Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sealand Place (Mangere Bridge)

The speed limit on Sealand Place, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sealand Place connects to Kiwi Esplanade to the north. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Sealand Place is classified as a Access road under the one network road classification (ONRC). Sealand Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sealand Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Sealand Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kiwi Esplanade: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Sealand Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sealand Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Searle Street (Stonefields)

The speed limit on Searle Street, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Searle Street connects to Tephra Boulevard to the south and College Road to the north. This road provides access to residential properties and is approximately 0.70km in length.</p> <p>Searle Street is classified as a Secondary Collector road under the one network road classification (ONRC). Searle Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor crash, one non-injury crash. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Searle Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 800 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Searle Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tephra Boulevard: 50km/h (proposed 30km/h)</li> <li>Emilia Nixon Lane: 50km/h (proposed 30km/h)</li> <li>Robert Sale Rise: 50km/h (proposed 30km/h)</li> <li>Burden Lane: 50km/h (proposed 30km/h)</li> <li>Tihi Street: 50km/h (proposed 30km/h)</li> <li>Styak Street: 50km/h (proposed 30km/h)</li> <li>Stonemason Avenue: 50km/h (proposed 30km/h)</li> <li>Singleton Avenue: 50km/h (proposed 30km/h)</li> <li>Brian Slater Way: 50km/h (proposed 30km/h)</li> <li>Barbarich Drive: 50km/h (proposed 30km/h)</li> <li>College Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Searle Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.

- The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Searle Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Seatoun Avenue (Leigh)

The speed limit on Seatoun Avenue, Leigh has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Seatoun Avenue connects to Pakiri Road to the north and Hauraki Road to the south. This road provides access to residential properties and is approximately 0.28km in length.</p> <p>Seatoun Avenue is classified as an Arterial road under the one network road classification (ONRC). Seatoun Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Seatoun Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as rural towns using MegaMaps tool. The IRR defines rural towns as "rural town with mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present."
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 815 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Seatoun Avenue has a mean operating speed in the range of 35-39km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Pakiri Road between Seatoun Avenue and 240 metres west of Seatoun Avenue: 50km/h (proposed 30km/h)</li> <li>• Hauraki Road between Wonderview Road and north of Hauraki Road: 50km/h (proposed 30km/h)</li> <li>• Albert Street: 50km/h (proposed 30km/h)</li> <li>• Sea View Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Seatoun Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.03. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Seatoun Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Seatoun Avenue is an Arterial Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Settlers Cove (Weymouth)

The speed limit on Settlers Cove, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Settlers Cove connects to Weymouth Road to the east and Footwide Place to the west. This road provides access to residential properties and is approximately 0.38km in length.</p> <p>Settlers Cove is classified as an Access road under the one network road classification (ONRC). Settlers Cove is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Settlers Cove were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1092 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Settlers Cove has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Weymouth Road: 50km/h (proposed 30km/h)</li> <li>Footwide Place: 50km/h (proposed 30km/h)</li> <li>Waimahia Avenue: 50km/h (proposed 30km/h)</li> <li>Newbegin Place: 50km/h (proposed 30km/h)</li> <li>Barr Place: 50km/h (proposed 30km/h)</li> <li>Matilda Place: 50km/h (proposed 30km/h)</li> <li>Woodlark Close: 50km/h (proposed 30km/h)</li> <li>Tonson Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Settlers Cove has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.60. For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Settlers Cove, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Settlers Way (Pukekohe)

The speed limit on Settlers Way, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Settlers Way connects to Princes Street West to the south. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Settlers Way is classified as an Access road under the one network road classification (ONRC). Settlers Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Settlers Way were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Settlers Way has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Princes Street West: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Settlers Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Settlers Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sexton Place (Manurewa East)

The speed limit on Sexton Place, Manurewa East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sexton Place connects to Greenmeadows Avenue to the west. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Sexton Place is classified as an Access road under the one network road classification (ONRC). Sexton Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sexton Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 748 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Sexton Place has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Greenmeadows Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Sexton Place has the following information:

- o Collective Risk band of **Low Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 1.66. For urban areas this corresponds to an IRR band of **Low Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sexton Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Seymour Road (Mellons Bay)

The speed limit on Seymour Road, Mellons Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Seymour Road connects to Mellons Bay Road to the south. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Seymour Road is classified as an Access road under the one network road classification (ONRC). Seymour Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Seymour Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Seymour Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Mellons Bay Road: 50km/h (proposed 30km/h)</li> <li>• Oceania Place: 50km/h (proposed 30km/h)</li> <li>• Pleasant Place: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Seymour Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Seymour Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Shannon Grove (Pukekohe)

The speed limit on Shannon Grove, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Shannon Grove connects to Puriri Road to the east. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Shannon Grove is classified as an Access road under the one network road classification (ONRC). Shannon Grove is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Shannon Grove were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Shannon Grove has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Puriri Road: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Shannon Grove has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Shannon Grove, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Shelby Lane (Flat Bush)

The speed limit on Shelby Lane, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Shelby Lane connects to Baverstock Road to the south. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Shelby Lane is classified as an Access road under the one network road classification (ONRC). Shelby Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Shelby Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 30 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Shelby Lane has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Baverstock Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Shelby Lane has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Shelby Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sherbourne Road (Mount Eden)

The speed limit on Sherbourne Road, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sherbourne Road connects to View Road to the north and Valley Road to the south. This road provides access to residential properties and is approximately 0.45km in length.</p> <p>Sherbourne Road is classified as a Primary collector road under the one network road classification (ONRC). Sherbourne Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sherbourne Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3120 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Sherbourne Road has a mean operating speed in the range of 35-39km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• View Road: 50km/h (proposed 30km/h)</li> <li>• Sydenham Road: 50km/h (proposed 30km/h)</li> <li>• Bellevue Road: 50km/h (proposed 30km/h)</li> <li>• Valley Road: 50km/h (proposed 30km/h)</li> <li>• Charlton Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Sherbourne Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.33. For urban areas this corresponds to an IRR band of **Medium**.

#### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Sherbourne Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Shoal Bay Road (Devonport)

The speed limit on Shoal Bay Road, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Shoal Bay Road connects to Patuone Place to the north and Calliope Road to the south. This road provides access to residential properties and is approximately 0.35km in length.</p> <p>Shoal Bay Road is classified as a Secondary Collector road under the one network road classification (ONRC). Shoal Bay Road is a two-way, Divided - traversable road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Shoal Bay Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Divided - traversable</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 197 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Shoal Bay Road has a mean operating speed in the range of 30-34km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Patuone Place: 50km/h (proposed 30km/h)</li> <li>• Calliope Road: 50km/h (no proposed change)</li> <li>• Clarence Street: 50km/h (no proposed change)</li> <li>• St Leonards Road: 50km/h (proposed 30km/h)</li> <li>• Hastings Parade: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Shoal Bay Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.09. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Shoal Bay Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Short Street (Manurewa East)

The speed limit on Short Street, Manurewa East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Short Street connects to Ellen Street to the south. This road provides access to residential properties and is approximately 0.05km in length.</p> <p>Short Street is classified as an Access road under the one network road classification (ONRC). Short Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Short Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Short Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ellen Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Short Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.18. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Short Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Silver Creek Road (Weymouth)

The speed limit on Silver Creek Road, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Silver Creek Road connects to Myna Place to the west and Ethernon Drive to the south. This road provides access to residential properties and is approximately 0.26km in length.</p> <p>Silver Creek Road is classified as an Access road under the one network road classification (ONRC). Silver Creek Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Silver Creek Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 330 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Silver Creek Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Myna Place: 50km/h (proposed 30km/h)</li> <li>• Etherton Drive: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Silver Creek Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Silver Creek Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Silverwood Drive (Flat Bush)

The speed limit on Silverwood Drive, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Silverwood Drive connects to Baverstock Road to the east and Woodberry Drive to the west. This road provides access to residential properties and is approximately 0.22km in length.</p> <p>Silverwood Drive is classified as an Access road under the one network road classification (ONRC). Silverwood Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Silverwood Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1534 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Silverwood Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Baverstock Road: 50km/h (proposed 30km/h)</li> <li>Woodberry Drive: 50km/h (proposed 30km/h)</li> <li>Greenbrooke Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Silverwood Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Silverwood Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Singleton Avenue (Stonefields)

The speed limit on Singleton Avenue, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Singleton Avenue connects to Barbarich Drive to the west and Garin Way to the east. This road provides access to residential properties and is approximately 0.21km in length.</p> <p>Singleton Avenue is classified as an Access road under the one network road classification (ONRC). Singleton Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Singleton Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Singleton Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Barbarich Drive: 50km/h (proposed 30km/h)</li> <li>• Garin Way: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Singleton Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Singleton Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Smale Street (Point Chevalier)

The speed limit on Smale Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Smale Street connects to Hawea Road to the west and Point Chevalier Road to the east. This road provides access to residential properties and is approximately 0.61km in length.</p> <p>Smale Street is classified as a Secondary Collector road under the one network road classification (ONRC). Smale Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Smale Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1040 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Smale Street has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Hawea Street: 50 km/h (proposed 30 km/h)</li> <li>Rama Street: 50 km/h (proposed 30 km/h)</li> <li>Pelham Avenue: 50 km/h (proposed 30 km/h)</li> <li>Berridge Avenue: 50 km/h (proposed 30 km/h)</li> <li>Studholme Street: 50 km/h (proposed 30 km/h)</li> <li>Point Chevalier Road: 50 km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Smale Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Low-Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Smale Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Snell Place (Pakuranga)

The speed limit on Snell Place, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Snell Place connects to Edgewater Drive to the east. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Snell Place is classified as a Access road under the one network road classification (ONRC). Snell Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Snell Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 90 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Snell Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Edgewater Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Snell Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Snell Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sohlue Place (Oteha)

The speed limit on Sohlue Place, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sohlue Place connects to Fernhill Way to the east. This road provides access to residential properties and is approximately 0.23km in length.</p> <p>Sohlue Place is classified as a Secondary Collector road under the one network road classification (ONRC). Sohlue Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sohlue Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Sohlue Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Fernhill Way: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Sohlue Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sohlue Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Songline Road (Karaka)

The speed limit on Songline Road, Karaka has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Songline Road connects to Hayfield Way to the east and Ockhams Street to the west. This road provides access to residential properties and is approximately 0.18km in length.</p> <p>Songline Road is classified as an Access road under the one network road classification (ONRC). Songline Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Songline Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Songline Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Hayfield Way: 50km/h (proposed 30km/h)</li> <li>Ockhams Street: 50km/h (proposed 30km/h)</li> <li>Gingernut Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Songline Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.04. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Songline Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sonoma Crescent (Oteha)

The speed limit on Sonoma Crescent, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sonoma Crescent connects to Fernhill Way to the south. This road provides access to residential properties and is approximately 0.29km in length.</p> <p>Sonoma Crescent is classified as a Secondary Collector road under the one network road classification (ONRC). Sonoma Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sonoma Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Sonoma Crescent has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Fernhill Way: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Sonoma Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sonoma Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sparrow Place (Weymouth)

The speed limit on Sparrow Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sparrow Place connects to Etherton Drive to the north. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Sparrow Place is classified as an Access road under the one network road classification (ONRC). Sparrow Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sparrow Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 90 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Sparrow Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Etherton Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Sparrow Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sparrow Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Splendour Close (Henderson)

The speed limit on Splendour Close, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Splendour Close connects to Rathgar Road to the south. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Splendour Close is classified as an Access road under the one network road classification (ONRC). Splendour Close is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Splendour Close were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 349 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Splendour Close has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Rathgar Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Splendour Close has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Splendour Close, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Spring Valley Place (Oteha)

The speed limit on Spring Valley Place, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Spring Valley Place connects to Canyon Drive to the north. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Spring Valley Place is classified as an Access road under the one network road classification (ONRC). Spring Valley Place is a two-way, Two lane undivided road. There are partial pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Spring Valley Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 500 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Spring Valley Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Canyon Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Spring Valley Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.99. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Spring Valley Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – St Francis Crescent (Point Chevalier)

The speed limit on St Francis Crescent, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>St Francis Crescent connects to Shaftesbury Avenue to the south. This road provides access to residential properties and is approximately 0.26km in length.</p> <p>St Francis Crescent is classified as an Access road under the one network road classification (ONRC). St Francis Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for St Francis Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1050 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of St Francis Crescent has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Shaftesbury Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps St Francis Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.60. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for St Francis Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – St Leonards Road (Devonport)

The speed limit on St Leonards Road, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>St Leonards Road connects to High Street to the east and Shoal Bay Road to the west. This road provides access to residential properties and is approximately 0.24km in length.</p> <p>St Leonards Road is classified as an Access road under the one network road classification (ONRC). St Leonards Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for St Leonards Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 560 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of St Leonards Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>High Street: 50 km/h (proposed 30 km/h)</li> <li>Shoal Bay Road: 50 km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps St Leonards Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for St Leonards Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – St Leonards Road (Kelston)

The speed limit on St Leonards Road, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>St Leonards Road connects to Archibald Road to the east and Sabulite Road between Butterworth Drive and the northern end to the west. This road provides access to residential properties and is approximately 0.72km in length.</p> <p>St Leonards Road is classified as a Primary Collector road under the one network road classification (ONRC). St Leonards Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records seven crashes between 2016 and 2020: one serious crash, two minor crashes, four non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for St Leonards Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 6620 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of St Leonards Road has a mean operating speed in the range of 30-34km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Archibald Road: 50km/h (proposed 30km/h)</li> <li>• Sabulite Road between Butterworth Drive and the northern end: 50km/h (proposed 30km/h)</li> <li>• Barbary Avenue: 50km/h (proposed 30km/h)</li> <li>• Bamboo Grove: 50km/h (proposed 30km/h)</li> <li>• Vanguard Road: 50km/h (proposed 30km/h)</li> <li>• Tamatimu Lane: 50km/h (proposed 30km/h)</li> <li>• Archlynn Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps St Leonards Road has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Low-Medium**.
- o The Infrastructure Risk Rating Score is 2.13. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for St Leonards Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – St Michaels Avenue (Point Chevalier)

The speed limit on St Michaels Avenue, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>St Michaels Avenue connects to Point Chevalier Road to the east. This road provides access to residential properties and is approximately 0.51km in length.</p> <p>St Michaels Avenue is classified as an Access road under the one network road classification (ONRC). St Michaels Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for St Michaels Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of St Michaels Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Point Chevalier Road: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps St Michaels Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.58. For urban areas this corresponds to an IRR band of **Low**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for St Michaels Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Stainton Place (Otaru)

The speed limit on Stainton Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Stainton Place connects to Blampied Road to the west. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Stainton Place is classified as an Access road under the one network road classification (ONRC). Stainton Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Stainton Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 655 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Stainton Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Blampied Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Stainton Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Stainton Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Standage Lane (Kelston)

The speed limit on Standage Lane, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Standage Lane connects to Kelman Road to the south. This road provides access to residential properties and is approximately 0.87km in length.</p> <p>Standage Lane is classified as a Access road under the one network road classification (ONRC). Standage Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Standage Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 268 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Standage Lane has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kelman Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Standage Lane has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Standage Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Stanway Place (Ellerslie)

The speed limit on Stanway Place, Ellerslie has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Stanway Place connects to Kalmia Street to the north. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Stanway Place is classified as an access road under the one network road classification (ONRC). Stanway Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Stanway Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and Very wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box/industrial using MegaMaps tool. The IRR defines Urban Residential as " <i>Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Stanway Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kalmia Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Stanway Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.83. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Stanway Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Staverton Crescent (Mangere)

The speed limit on Staverton Crescent, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Staverton Crescent connects to Killington Crescent to the north and Lawford Place to the south. This road provides access to residential properties and is approximately 0.58km in length.</p> <p>Staverton Crescent is classified as an Access road under the one network road classification (ONRC). Staverton Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Staverton Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 811 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Staverton Crescent has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Killington Crescent: 50km/h (proposed 30km/h)</li> <li>• Lawford Place: 50km/h (proposed 30km/h)</li> <li>• Norton Place: 50km/h (proposed 30km/h)</li> <li>• Orly Avenue: 50km/h (proposed 30km/h)</li> <li>• Desford Place: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Staverton Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Staverton Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Steamer Place (Greenhithe)

The speed limit on Steamer Place, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Steamer Place connects to Admirals Court Drive to the east. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Steamer Place is classified as an Access road under the one network road classification (ONRC). Steamer Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Steamer Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 297 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Steamer Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Admirals Court Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Steamer Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Steamer Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Stephen Avenue (Henderson)

The speed limit on Stephen Avenue, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Stephen Avenue connects to Pomaria Road to the north and Fairdene Avenue to the south. This road provides access to residential properties and is approximately 0.39km in length.</p> <p>Stephen Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Stephen Avenue is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Stephen Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 461 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Stephen Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Pomaria Road: 50km/h (proposed 30km/h)</li> <li>• Fairdene Avenue: 50km/h (proposed 30km/h)</li> <li>• Kona Crescent: 50km/h (proposed 30km/h)</li> <li>• Nephrite Lane: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Stephen Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Stephen Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Stephen Lysnar Place (Hillsborough)

The speed limit on Stephen Lysnar Place, Hillsborough has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Stephen Lysnar Place connects to Hendry Avenue to the north. This road provides access to residential properties and is approximately 0.24km in length.</p> <p>Stephen Lysnar Place is classified as an Access road under the one network road classification (ONRC). Stephen Lysnar Place is a two-way, Two lane undivided. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Stephen Lysnar Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Hendry Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Stephen Lysnar Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.66. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Stephen Lysnar Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sterling Avenue (Manurewa East)

The speed limit on Sterling Avenue, Manurewa East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sterling Avenue connects to Myers Road to the north and Greenmeadows Avenue to the south. This road provides access to residential properties and is approximately 0.38km in length.</p> <p>Sterling Avenue is classified as an Access road under the one network road classification (ONRC). Sterling Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sterling Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 748 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Sterling Avenue has a mean operating speed in the range of 30-34km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Myers Road: 50km/h (proposed 30km/h)</li> <li>• Greenmeadows Avenue: 50km/h (proposed 30km/h)</li> <li>• Jenkins Place: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Sterling Avenue has the following information:

- o Collective Risk band of **Low Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 1.66. For urban areas this corresponds to an IRR band of **Low Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sterling Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Stoll Place (Clendon Park)

The speed limit on Stoll Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Stoll Place connects to Finlayson Avenue to the north. This road provides access to residential properties and is approximately 0.20km in length.</p> <p>Stoll Place is classified as an Access road under the one network road classification (ONRC). Stoll Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Stoll Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 230 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Stoll Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Finlayson Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Stoll Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Stoll Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Stonebrook Lane (Flat Bush)

The speed limit on Stonebrook Lane, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Stonebrook Lane connects to Oakville Avenue to the west and Amon Avenue to the east. This road provides access to residential properties and is approximately 0.18km in length.</p> <p>Stonebrook Lane is classified as an Access road under the one network road classification (ONRC). Stonebrook Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Stonebrook Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 572 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Stonebrook Lane has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Oakville Avenue: 50km/h (proposed 30km/h)</li> <li>• Amon Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Stonebrook Lane has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Stonebrook Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Stonefields Avenue (Stonefields)

The speed limit on Stonefields Avenue, Stonefields between College Road and Tephra Boulevard has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Stonefields Avenue connects to Tephra Boulevard to the south and College Road to the north. This road provides access to residential properties and is approximately 0.65km in length.</p> <p>Stonefields Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Stonefields Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Stonefields Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 971 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Stonefields Avenue has a mean operating speed in the range of 35-39km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>College Road: 50km/h (no proposed change)</li> <li>Tephra Boulevard: 50km/h (proposed 30km/h)</li> <li>Kauriki Terrace: 50km/h (proposed 30km/h)</li> <li>Aruhe Street: 50km/h (proposed 30km/h)</li> <li>Tihi Street: 50km/h (proposed 30km/h)</li> <li>Stonemason Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Stonefields Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Stonefields Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Stonemason Avenue (Stonefields)**

The speed limit on Stonemason Avenue, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Stonemason Avenue connects to Searle Street to the west and Tihī Street to the east. This road provides access to residential properties and is approximately 0.76km in length.</p> <p>Stonemason Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Stonemason Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Stonemason Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 971 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Stonemason Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Searle Street: 50km/h (proposed 30km/h)</li> <li>• Briody Terrace: 50km/h (proposed 30km/h)</li> <li>• Garin Way: 50km/h (proposed 30km/h)</li> <li>• Wynne Gray Avenue: 50km/h (proposed 30km/h)</li> <li>• Bluegrey Avenue: 50km/h (proposed 30km/h)</li> <li>• Brian Slater Way: 50km/h (proposed 30km/h)</li> <li>• Guyon Street: 50km/h (proposed 30km/h)</li> <li>• Scoria Crescent: 50km/h (proposed 30km/h)</li> <li>• Stonefields Avenue: 50km/h (proposed 30km/h)</li> <li>• Vialou Lane: 50km/h (proposed 30km/h)</li> <li>• Fynes Avenue: 50km/h (proposed 30km/h)</li> <li>• Papango Street: 50km/h (proposed 30km/h)</li> <li>• Purchas Hill Drive: 50km/h (proposed 30km/h)</li> <li>• Ganley Terrace: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Stonemason Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Stonemason Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Stornaway Drive (Flat Bush)

The speed limit on Stornaway Drive, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Stornaway Drive connects to Cyril French Drive to the north. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Stornaway Drive is classified as an Access road under the one network road classification (ONRC). Stornaway Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Stornaway Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 228 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Stornaway Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Cyril French Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Stornaway Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Stornaway Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Studholme Street (Point Chevalier)

The speed limit on Studholme Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Studholme Street connects to Smale Street to the north and Miller Street to the south. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Studholme Street is classified as an Access road under the one network road classification (ONRC). Studholme Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Studholme Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 78 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Studholme Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Smale Street: 50 km/h (proposed 30 km/h)</li> <li>• Miller Street: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Studholme Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.18. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Studholme Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sturges Avenue (Otahuhu)

The speed limit on Sturges Avenue, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sturges Avenue connects to Nixon Avenue to the north and Nelson Street to the south. This road provides access to residential properties and is approximately 0.46km in length.</p> <p>Sturges Avenue is classified as an Access road under the one network road classification (ONRC). Sturges Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sturges Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 280 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Sturges Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Nixon Avenue: 50km/h (proposed 30km/h)</li> <li>Nelson Street: 50km/h (proposed 30km/h)</li> <li>Ngaio Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Sturges Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sturges Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Styak Street (Stonefields)**

The speed limit on Styak Street, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Styak Street connects to Barbarich Drive to the west and Wynne Gray Avenue to the east. This road provides access to residential properties and is approximately 0.30km in length.</p> <p>Styak Street is classified as a Secondary Collector road under the one network road classification (ONRC). Styak Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Styak Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1352 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Styak Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Barbarich Drive: 50km/h (proposed 30km/h)</li> <li>• Searle Street: 50km/h (proposed 30km/h)</li> <li>• Wynne Gray Avenue: 50km/h (proposed 30km/h)</li> <li>• Briody Terrace: 50km/h (proposed 30km/h)</li> <li>• Garin Way: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Styak Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.58. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Styak Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sullivan Avenue (Mangere Bridge)

The speed limit on Sullivan Avenue, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sullivan Avenue connects to Boyd Avenue to the north and Muir Avenue to the south. This road provides access to residential properties and is approximately 0.43km in length.</p> <p>Sullivan Avenue is classified as a Access road under the one network road classification (ONRC). Sullivan Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sullivan Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 296 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Sullivan Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Boyd Avenue: 50km/h (proposed 30km/h)</li> <li>Muir Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Sullivan Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sullivan Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sultan Street (Ellerslie)

The speed limit on Sultan Street, Ellerslie has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sultan Street connects to Kalmia Street to the north. This road provides access to residential properties and is approximately 0.17km in length.</p> <p>Sultan Street is classified as an access road under the one network road classification (ONRC). Sultan Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sultan Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and Wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box/industrial using MegaMaps tool. The IRR defines Urban Residential as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be"

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Sultan Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kalmia Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Sultan Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.94. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sultan Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Summer Street (Stanley Point)

The speed limit on Summer Street, Stanley Point has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Summer Street connects to Waterview Road to the north and Calliope Road to the south. This road provides access to residential properties and is approximately 0.39km in length.</p> <p>Summer Street is classified as a Secondary Collector road under the one network road classification (ONRC). Summer Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Summer Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 696 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Summer Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Waterview Road: 50 km/h (proposed 30 km/h)</li> <li>Calliope Road: 50 km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Summer Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Summer Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Summerfield Lane (Albany)

The speed limit on Summerfield Lane, Albany has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Summerfield Lane connects to Albany Highway to the east. This road provides access to residential properties and is approximately 0.15km in length.  Summerfield Lane is classified as an Access road under the one network road classification (ONRC). Summerfield Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Summerfield Lane were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and Very Narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Summerfield Lane has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Albany Highway: 50km/h (no proposed change)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Summerfield Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.20. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Summerfield Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sunnydale Place (Oteha)

The speed limit on Sunnydale Place, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sunnydale Place connects to Fields Parade to the west. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Sunnydale Place is classified as an Access road under the one network road classification (ONRC). Sunnydale Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sunnydale Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Sunnydale Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Fields Parade: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Sunnydale Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sunnydale Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sunnyridge Place (Hillsborough)

The speed limit on Sunnyridge Place, Hillsborough has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sunnyridge Place connects to Carlton Street to the west. This road provides access to residential properties and is approximately 0.17km in length.</p> <p>Sunnyridge Place is classified as a Access road under the one network road classification (ONRC). Sunnyridge Place is a two-way, Two lane undivided. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 200 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Sunnyridge Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Carlton Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Sunnyridge Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sunnyridge Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Sunnyview Avenue (Shelly Park)**

The speed limit on Sunnyview Avenue, Shelly Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sunnyview Avenue connects to Sandspit Road to the west and John Gill Road to the east. This road provides access to residential properties and is approximately 0.44 km in length.</p> <p>Sunnyview Avenue is classified as a secondary collector road under the one network road classification (ONRC). Sunnyview Avenue is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1126 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Sunnyview Avenue has a mean operating speed in the range of 30-34 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• John Gill Road: 50 km/h (proposed 30 km/h)</li> <li>• Rosetta Court: 50 km/h (proposed 30 km/h)</li> <li>• Sandspit Road: 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Sunnyview Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.55 For urban areas this corresponds to an IRR band of **Medium High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Sunnyview Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sunrise Lane (Te Atatu South)

The speed limit on Sunrise Lane, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sunrise Lane connects to Jaemont Avenue to the south. This road provides access to residential properties and is approximately 0.08 km in length.</p> <p>Sunrise Lane is classified as an access road under the one network road classification (ONRC). Sunrise Lane is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 101 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Sunrise Lane has a mean operating speed in the range of &lt;30 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Jaemont Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Sunrise Lane has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**
- The Infrastructure Risk Rating Score is 2.69 For urban areas this corresponds to an IRR band of **Medium High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Sunrise Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sunshine Terrace (Orewa)

The speed limit on Sunshine Terrace, Orewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sunshine Terrace connects to Panorama Heights to the west. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Sunshine Terrace is classified as a Access road under the one network road classification (ONRC). Sunshine Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sunshine Terrace were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 20 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Sunshine Terrace has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Panorama Heights: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Sunshine Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sunshine Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sunvista Avenue (Oteha)

The speed limit on Sunvista Avenue, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sunvista Avenue connects to Nimstedt Avenue to the south. This road provides access to residential properties and is approximately 0.24km in length.</p> <p>Sunvista Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Sunvista Avenue is a two-way, Two lane undivided road. There are partial pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sunvista Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Sunvista Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Nimstedt Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Sunvista Avenue has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sunvista Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Susanne Place (Pakuranga)

The speed limit on Susanne Place, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Susanne Place connects to Edgewater Drive to the north. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Susanne Place is classified as a Access road under the one network road classification (ONRC). Susanne Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Susanne Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 10+ per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 80 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Susanne Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Edgewater Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Susanne Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Susanne Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sutcliffe Place (Otaru)

The speed limit on Sutcliffe Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sutcliffe Place connects to Bairds Road to the south. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Sutcliffe Place is classified as an Access road under the one network road classification (ONRC). Sutcliffe Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sutcliffe Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 110 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Sutcliffe Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Bairds Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Sutcliffe Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sutcliffe Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sutton Avenue (Mangere East)

The speed limit on Sutton Avenue, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sutton Avenue connects to Blake Road to the east. This road provides access to residential properties and is approximately 0.88km in length.</p> <p>Sutton Avenue is classified as an Access road under the one network road classification (ONRC). Sutton Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sutton Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1075 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Sutton Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Blake Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Sutton Avenue has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sutton Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Swan Crescent (Pakuranga)**

The speed limit on Swan Crescent, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Swan Crescent connects to Tiraumea Drive to the north. This road provides access to residential properties and is approximately 0.27 km in length.</p> <p>Swan Crescent is classified as an access road under the one network road classification (ONRC). Swan Crescent is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 572 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Swan Crescent has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Tiraumea Drive: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Swan Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 1.91 For urban areas this corresponds to an IRR band of **Low Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Swan Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sydenham Road (Mount Eden)

The speed limit on Sydenham Road, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sydenham Road connects to Sherbourne Road to the east. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Sydenham Road is classified as a Access road under the one network road classification (ONRC). Sydenham Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sydenham Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5 to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 25 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Sydenham Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Sherbourne Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Sydenham Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.34. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sydenham Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sylvan Avenue East (Mount Eden)

The speed limit on Sylvan Avenue East, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sylvan Avenue East connects to Wynyard Road to the east. This road provides access to residential properties and is approximately 0.17km in length.</p> <p>Sylvan Avenue East is classified as a Secondary Collector road under the one network road classification (ONRC). Sylvan Avenue East is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sylvan Avenue East were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1040 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Sylvan Avenue East has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Mount Eden Road: 50km/h (no proposed change)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Sylvan Avenue East has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.30. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sylvan Avenue East, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Taatahi Street (Weymouth)

The speed limit on Taatahi Street, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Taatahi Street connects to Waimahia Avenue to the south and Waimarino Road to the south. This road provides access to residential properties and is approximately 0.05km in length.</p> <p>Taatahi Street is classified as an Access road under the one network road classification (ONRC). Taatahi Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Taatahi Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 70 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Taatahi Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Waimahia Avenue: 50km/h (proposed 30km/h)</li> <li>Waimarino Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Taatahi Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Taatahi Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Taepu Road (Pukekohe)

The speed limit on Taepu Road, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Taepu Road connects to Belmont Road to the north and Victoria Street West to the south. This road provides access to residential properties and is approximately 0.31km in length.</p> <p>Taepu Road is classified as an Access road under the one network road classification (ONRC). Taepu Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Taepu Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 23 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Taepu Road has a mean operating speed in the range of 30-34km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Belmont Road: 50km/h (proposed 30km/h)</li> <li>• Pollock Road: 60km/h (no proposed change)</li> <li>• Victoria Street West: 50km/h (no proposed change)</li> <li>• Perla Road: 50km/h (proposed 30km/h)</li> <li>• Rainsford Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Taepu Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.34. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Taepu Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Taha Road (Te Atatu South)

The speed limit on Taha Road, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Taha Road connects to Tiroroa Avenue to the south. This road provides access to residential properties and is approximately 0.07 km in length.</p> <p>Taha Road is classified as an access road under the one network road classification (ONRC). Taha Road is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 95 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Taha Road has a mean operating speed in the range of &lt;30 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tiroroa Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Taha Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.49 For urban areas this corresponds to an IRR band of **Medium High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Taha Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tahatai Street (Otahuhu)

The speed limit on Tahatai Street, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tahatai Street connects to Waikare Road to the north. This road provides access to residential properties and is approximately 0.82km in length.</p> <p>Tahatai Street is classified as an Access road under the one network road classification (ONRC). Tahatai Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tahatai Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 228 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tahatai Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Waikare Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Tahatai Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tahatai Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Taiaapure Street (Weymouth)

The speed limit on Taiaapure Street, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Taiaapure Street connects to Ipukarea Street to the north and Tonuitanga Street to the south. This road provides access to residential properties and is approximately 0.19km in length.</p> <p>Taiaapure Street is classified as an Access road under the one network road classification (ONRC). Taiaapure Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Taiaapure Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Taiaapure Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ipukarea Street: 50km/h (proposed 30km/h)</li> <li>Tonuitanga Street: 50km/h (proposed 30km/h)</li> <li>Kaimoana Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Taiaapure Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Taiaapure Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Taikaranga Street (Pukekohe)

The speed limit on Taikaranga Street, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Taikaranga Street connects to Te Manaki Street to the west and Jutland Road to the east. This road provides access to residential properties and is approximately 0.30km in length.</p> <p>Taikaranga Street is classified as an Access road under the one network road classification (ONRC). Taikaranga Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Taikaranga Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Taikaranga Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Te Manaki Street: 50km/h (proposed 30km/h)</li> <li>• Hempopo Street: 50km/h (proposed 30km/h)</li> <li>• Jutland Road: 50km/h (proposed 30km/h)</li> <li>• Matikao Place: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Taikaranga Street has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Taikaranga Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Taitimu Drive (Weymouth)

The speed limit on Taitimu Drive, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Taitimu Drive connects to Palmers Road to the north and Kaimoana Street to the east. This road provides access to residential properties and is approximately 0.48km in length.</p> <p>Taitimu Drive is classified as an Access road under the one network road classification (ONRC). Taitimu Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records five crashes between 2016 and 2020: three minor crashes, two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Taitimu Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 958 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Taitimu Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Palmers Road: 50km/h (proposed 30km/h)</li> <li>Kaimoana Street: 50km/h (proposed 30km/h)</li> <li>Weymoth Road: 50km/h (proposed 30km/h)</li> <li>Lane Martha: 50km/h (proposed 30km/h)</li> <li>Blackgate Place: 50km/h (proposed 30km/h)</li> <li>Rebecca Rise: 50km/h (proposed 30km/h)</li> <li>McGreal Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Taitimu Drive has the following information:

- Collective Risk band of **Medium-High**, and a Personal Risk band of **High**.
- The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Taitimu Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Takutai Street (Parnell)

The speed limit on Takutai Street, Parnell has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Takutai Street connects to Gladstone Road to the east and Lichfield Road to the west. This road provides access to residential properties and is approximately 0.34km in length.</p> <p>Takutai Street is classified as an Access road under the one network road classification (ONRC). Takutai Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor crash, one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Takutai Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 229 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Takutai Street has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Gladstone Road : 50km/h (no proposed change)</li> <li>• Lichfield Road: 50km/h (proposed 30km/h)</li> <li>• Saint Stephens Avenue: 50km/h (proposed 30km/h)</li> <li>• Glanville Terrace: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Takutai Street has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Takutai Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tamaki Avenue (Otahuhu)

The speed limit on Tamaki Avenue, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tamaki Avenue connects to Fairburn Road to the north and Cracroft Street to the south. This road provides access to residential properties and is approximately 0.76km in length.</p> <p>Tamaki Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Tamaki Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: one minor crash, three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tamaki Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 614 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Tamaki Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Fairburn Road: 50km/h (proposed 30km/h)</li> <li>Cracroft Street: 50km/h (proposed 30km/h)</li> <li>Nelson Street: 50km/h (proposed 30km/h)</li> <li>Ngaio Street: 50km/h (proposed 30km/h)</li> <li>Nixon Avenue: 50km/h (proposed 30km/h)</li> <li>Alexander Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Tamaki Avenue has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Low-Medium**.
- The Infrastructure Risk Rating Score is 1.79. For urban areas this corresponds to an IRR band of **Low-Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tamaki Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tamariki Avenue (Kelston)

The speed limit on Tamariki Avenue, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tamariki Avenue connects to Aronui Terrace to the north and Nile Road to the south. This road provides access to residential properties and is approximately 0.47km in length.</p> <p>Tamariki Avenue is classified as an Access road under the one network road classification (ONRC). Tamariki Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tamariki Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 743 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tamariki Avenue has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Aronui Terrace: 50km/h (proposed 30km/h)</li> <li>• Nile Road: 50km/h (proposed 30km/h)</li> <li>• Maybelle Place: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Tamariki Avenue has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tamariki Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tango Place (Henderson)

The speed limit on Tango Place, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tango Place connects to Larnoch Road to the north. This road provides access to residential properties and is approximately 0.21km in length.</p> <p>Tango Place is classified as an Access road under the one network road classification (ONRC). Tango Place is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tango Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Tango Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Larnoch Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Tango Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tango Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tannock Place (Mangere East)

The speed limit on Tannock Place, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tannock Place connects to Wickman Way to the south. This road provides access to residential properties and is approximately 0.19km in length.</p> <p>Tannock Place is classified as an Access road under the one network road classification (ONRC). Tannock Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tannock Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 110 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tannock Place has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Wickman Way: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Tannock Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tannock Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tarata Street (Mount Eden)

The speed limit on Tarata Street, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tarata Street connects to Prospect Terrace to the north. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Tarata Street is classified as a Access road under the one network road classification (ONRC). Tarata Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tarata Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Tarata Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Valley Road: 50km/h (proposed 30km/h)</li> <li>Prospect Terrace: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Tarata Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tarata Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Target Street (Point Chevalier)

The speed limit on Target Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Target Street connects to Muripara Avenue to the west and Point Chevalier Road to the east. This road provides access to residential properties and is approximately 0.33km in length.</p> <p>Target Street is classified as a Secondary Collector road under the one network road classification (ONRC). Target Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Target Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1664 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Target Street has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Point Chevalier Road: 50 km/h (proposed 30 km/h)</li> <li>Neville Street: 50 km/h (proposed 30 km/h)</li> <li>Katoa Street: 50 km/h (proposed 30 km/h)</li> <li>Muripara Avenue: 50 km/h (proposed 30 km/h)</li> <li>Shaftesbury Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Target Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.33. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Target Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tate Place (Otara)

The speed limit on Tate Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tate Place connects to Clarkson Crescent to the north. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Tate Place is classified as an Access road under the one network road classification (ONRC). Tate Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tate Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 166 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tate Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Clarkson Crescent: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Tate Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tate Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Taunton Terrace (Blockhouse Bay)

The speed limit on Taunton Terrace, Blockhouse Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Taunton Terrace connects to Connell Street to the north. This road provides access to residential properties and is approximately 0.67km in length.</p> <p>Taunton Terrace is classified as an Access road under the one network road classification (ONRC). Taunton Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Taunton Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 200 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Taunton Terrace has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Connell Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Taunton Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.65. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Taunton Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tauoma Crescent (Stonefields)

The speed limit on Tauoma Crescent, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tauoma Crescent connects to Tihi Street to the west. This road provides access to residential properties and is approximately 0.31km in length.</p> <p>Tauoma Crescent is classified as an Access road under the one network road classification (ONRC). Tauoma Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tauoma Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 450 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tauoma Crescent has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Tihi Street: 50km/h (proposed 30km/h)</li> <li>• Papango Street: 50km/h (proposed 30km/h)</li> <li>• Reipae Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Tauoma Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.69. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tauoma Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Taurarua Terrace (Parnell)

The speed limit on Taurarua Terrace, Parnell has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Taurarua Terrace connects to Judges Bay Road to the north and Canterbury Place to the south. This road provides access to residential properties and is approximately 0.25km in length.</p> <p>Taurarua Terrace is classified as an Access road under the one network road classification (ONRC). Taurarua Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Taurarua Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Taurarua Terrace has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Judges Bay Road: 50km/h (proposed 30km/h)</li> <li>Canterbury Place: 50km/h (proposed 30km/h)</li> <li>Avon Lane: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Taurarua Terrace has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **High**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Taurarua Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tawhiti Road (Pukekohe)

The speed limit on Tawhiti Road, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tawhiti Road connects to Adams Road south to the west and Jutland Road to the east. This road provides access to residential properties and is approximately 0.58km in length.</p> <p>Tawhiti Road is classified as a Access road under the one network road classification (ONRC). Tawhiti Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tawhiti Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tawhiti Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Adams Road South: 100km/h (proposed 30km/h)</li> <li>• Koropupu Street: 50km/h (proposed 30km/h)</li> <li>• Raki Street: 50km/h (proposed 30km/h)</li> <li>• Kapia Street: 50km/h (proposed 30km/h)</li> <li>• Te Manaki Street: 50km/h (proposed 30km/h)</li> <li>• Jutland Road: 50km/h (proposed 30km/h)</li> <li>• Tomairangi Crescent: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Tawhiti Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tawhiti Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Te Ipukai Drive (Karaka)

The speed limit on Te Ipukai Drive, Karaka has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Te Ipukai Drive connects to Patakatuna Drive to the north and Kauru Way to the west. This road provides access to residential properties and is approximately 0.38km in length.</p> <p>Te Ipukai Drive is classified as an Access road under the one network road classification (ONRC). Te Ipukai Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Te Ipukai Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Te Ipukai Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Patakatuna Drive: 50km/h (proposed 30km/h)</li> <li>Kauru Way: 50km/h (proposed 30km/h)</li> <li>Mataitai Way: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Te Ipukai Drive has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.04. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Te Ipukai Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Te Kanawa Crescent (Henderson)

The speed limit on Te Kanawa Crescent, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Te Kanawa Crescent connects to Lincoln Road to the east. This road provides access to residential properties and is approximately 0.55km in length.</p> <p>Te Kanawa Crescent is classified as a Secondary Collector road under the one network road classification (ONRC). Te Kanawa Crescent is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Te Kanawa Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 799 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Te Kanawa Crescent has a mean operating speed in the range of 30-34km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Lincoln Road: 50km/h (no proposed change)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Te Kanawa Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Te Kanawa Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Te Manaki Street (Pukekohe)

The speed limit on Te Manaki Street, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Te Manaki Street connects to Huamanu Street to the north and Belmont Road to the south. This road provides access to residential properties and is approximately 0.39km in length.</p> <p>Te Manaki Street is classified as an Access road under the one network road classification (ONRC). Te Manaki Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Te Manaki Street were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Te Manaki Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Huamanu Street: 50 km/h (proposed 30 km/h)</li> <li>Marire Place: 50 km/h (proposed 30 km/h)</li> <li>Tawhiti Road: 50 km/h (proposed 30 km/h)</li> <li>Koropupu Street: 50 km/h (proposed 30 km/h)</li> <li>Hempopo Street: 50 km/h (proposed 30 km/h)</li> <li>Taikaranga Street: 50 km/h (proposed 30 km/h)</li> <li>Kare Ariki Place: 50 km/h (proposed 30 km/h)</li> <li>Belmont Road: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Te Manaki Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Te Manaki Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Te Ra Road (Point Chevalier)

The speed limit on Te Ra Road, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Te Ra Road connects to Walford Road to the east and Point Chevalier Road to the west. This road provides access to residential properties and is approximately 0.29km in length.</p> <p>Te Ra Road is classified as a Secondary Collector road under the one network road classification (ONRC). Te Ra Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Te Ra Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 936 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Te Ra Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Walford Street: 50 km/h (proposed 30 km/h)</li> <li>• Point Chevalier Road: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Te Ra Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Te Ra Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Te Wharau Drive (Greenhithe)

The speed limit on Te Wharau Drive, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Te Wharau Drive connects to Orwell Road to the east. This road provides access to residential properties and is approximately 1.17km in length.</p> <p>Te Wharau Drive is classified as an Access road under the one network road classification (ONRC). Te Wharau Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Te Wharau Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Te Wharau Drive has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Orwell Road: 50km/h (proposed 30km/h)</li> <li>Monkton Close: 50km/h (proposed 30km/h)</li> <li>Samuel Cross Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Te Wharau Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Te Wharau Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Templeton Place (Clendon Park)

The speed limit on Templeton Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Templeton Place connects to Burundi Avenue to the north and Volta Place to the east. This road provides access to residential properties and is approximately 0.57km in length.</p> <p>Templeton Place is classified as an Access road under the one network road classification (ONRC). Templeton Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: one minor crash, two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Templeton Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 350 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Templeton Place has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Burundi Avenue: 50km/h (proposed 30km/h)</li> <li>• Volta Place: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Templeton Place has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Templeton Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tennessee Avenue (Mangere East)

The speed limit on Tennessee Avenue, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tennessee Avenue connects to Blake Road to the north and Massey Road to the east. This road provides access to residential properties and is approximately 0.84km in length.</p> <p>Tennessee Avenue is classified as a Primary Collector road under the one network road classification (ONRC). Tennessee Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records sixteen crashes between 2016 and 2020: one serious crash, four minor crashes, eleven non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tennessee Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4759 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Tennessee Avenue has a mean operating speed in the range of 45-49km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Blake Road: 50km/h (proposed 30km/h)</li> <li>Massey Road: 50km/h (no proposed change)</li> <li>Vine Street: 50km/h (proposed 30km/h)</li> <li>Fleming Street: 50km/h (proposed 30km/h)</li> <li>Wickman Way: 50km/h (proposed 30km/h)</li> <li>Farmer Street: 50km/h (proposed 30km/h)</li> <li>Driver Road: 50km/h (proposed 30km/h)</li> <li>Cleek Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Tennessee Avenue has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Tennessee Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Tennessee Avenue is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tephra Boulevard (Stonefields)

The speed limit on Tephra Boulevard, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tephra Boulevard connects to Barbarich Drive to the west and Stonefields Avenue to the east. This road provides access to residential properties and is approximately 0.49km in length.</p> <p>Tephra Boulevard is classified as a Secondary Collector road under the one network road classification (ONRC). Tephra Boulevard is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tephra Boulevard were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tephra Boulevard has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Barbarich Drive: 50km/h (proposed 30km/h)</li> <li>• Stonefields Avenue: 50km/h (proposed 30km/h)</li> <li>• Searle Street: 50km/h (proposed 30km/h)</li> <li>• Wynne Gray Avenue: 50km/h (proposed 30km/h)</li> <li>• Bluegrey Avenue: 50km/h (proposed 30km/h)</li> <li>• Kauriki Terrace: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Tephra Boulevard has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tephra Boulevard, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Terry Place (Otara)

The speed limit on Terry Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Terry Place connects to Clayton Avenue to the east. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Terry Place is classified as an Access road under the one network road classification (ONRC). Terry Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Terry Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 93 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Terry Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Clayton Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Terry Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Terry Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Thomas Hamer Place (Greenhithe)

The speed limit on Thomas Hamer Place, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Thomas Hamer Place connects to William Gamble Drive to the north. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Thomas Hamer Place is classified as a Secondary Collector road under the one network road classification (ONRC). Thomas Hamer Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Thomas Hamer Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Thomas Hamer Place has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• William Gamble Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Thomas Hamer Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Thomas Hamer Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Thomas Road (Mangere)

The speed limit on Thomas Road, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Thomas Road connects to Orly Avenue to the north and Massey Road to the south. This road provides access to residential properties and is approximately 0.57km in length.</p> <p>Thomas Road is classified as a Primary Collector road under the one network road classification (ONRC). Thomas Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records twelve crashes between 2016 and 2020: twelve non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Thomas Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4624 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Thomas Road has a mean operating speed in the range of 36.58km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Orly Avenue: 50km/h (proposed 30km/h)</li> <li>Massey Road: 50km/h (no proposed change)</li> <li>Jordan Road: 50km/h (proposed 30km/h)</li> <li>View Road: 50km/h (proposed 30km/h)</li> <li>Cape Road: 50km/h (proposed 30km/h)</li> <li>Cornwall Road: 50km/h (proposed 30km/h)</li> <li>Staverton Crescent: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Thomas Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.22. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Thomas Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Thomas Road is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Thyme Court (Flat Bush)

The speed limit on Thyme Court, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Thyme Court connects to Woodberry Drive to the west. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Thyme Court is classified as an Access road under the one network road classification (ONRC). Thyme Court is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Thyme Court were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1534 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Thyme Court has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Woodberry Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Thyme Court has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Thyme Court, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ti Nana Crescent (Henderson)

The speed limit on Ti Nana Crescent, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ti Nana Crescent connects to Rathgar Road to the west and Papatahi Place to the south. This road provides access to residential properties and is approximately 0.26km in length.</p> <p>Ti Nana Crescent is classified as an Access road under the one network road classification (ONRC). Ti Nana Crescent is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ti Nana Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 72 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ti Nana Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Rathgar Road: 50km/h (proposed 30km/h)</li> <li>Papatahi Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ti Nana Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ti Nana Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Tiaka Place (Pakuranga)**

The speed limit on Tiaka Place, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tiaka Place connects to Tiraumea Drive to the north. This road provides access to residential properties and is approximately 0.13 km in length.</p> <p>Tiaka Place is classified as an access road under the one network road classification (ONRC). Tiaka Place is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 140 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tiaka Place has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Tiraumea Drive: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Tiaka Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.41 For urban areas this corresponds to an IRR band of **Medium High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Tiaka Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tihi Street (Stonefields)

The speed limit on Tihi Street, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tihi Street connects to Barbarich Drive to the west and College Road to the east. This road provides access to residential properties and is approximately 1.24km in length.</p> <p>Tihi Street is classified as a Secondary Collector road under the one network road classification (ONRC). Tihi Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tihi Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 463 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Tihi Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Barbarich Drive: 50km/h (proposed 30km/h)</li> <li>College Road: 50km/h (no proposed change)</li> <li>Searle Street: 50km/h (proposed 30km/h)</li> <li>Briody Terrace: 50km/h (proposed 30km/h)</li> <li>Garin Way: 50km/h (proposed 30km/h)</li> <li>Wynne Gray Avenue: 50km/h (proposed 30km/h)</li> <li>Bluegrey Avenue: 50km/h (proposed 30km/h)</li> <li>Samuel Place: 50km/h (proposed 30km/h)</li> <li>Guyon Street: 50km/h (proposed 30km/h)</li> <li>Vialou Lane: 50km/h (proposed 30km/h)</li> <li>Stonefields Avenue: 50km/h (proposed 30km/h)</li> <li>Flax Place: 50km/h (proposed 30km/h)</li> <li>Fynes Avenue: 50km/h (proposed 30km/h)</li> <li>Korere Terrace: 50km/h (proposed 30km/h)</li> <li>Papango Street: 50km/h (proposed 30km/h)</li> <li>Tauomo Crescent: 50km/h (proposed 30km/h)</li> <li>Stonemason Avenue: 50km/h (proposed 30km/h)</li> <li>Reipae Street: 50km/h (proposed 30km/h)</li> </ul>

	<ul style="list-style-type: none"> <li>Purchas Hill Drive: 50km/h (proposed 30km/h)</li> </ul>
--	--

**Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Tihi Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tihi Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Timandra Place (Massey)

The speed limit on Timandra Place, Massey has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Timandra Place connects to Lilburn Crescent to the south. This road provides access to residential properties and is approximately 0.31km in length.</p> <p>Timandra Place is classified as an Access road under the one network road classification (ONRC). Timandra Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Timandra Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 214 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Timandra Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Lilburn Crescent: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Timandra Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Timandra Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tindall Crescent (Otara)

The speed limit on Tindall Crescent, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tindall Crescent connects to Bond Street to the north and Cobham Crescent to the west. This road provides access to residential properties and is approximately 0.30km in length.</p> <p>Tindall Crescent is classified as an Access road under the one network road classification (ONRC). Tindall Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tindall Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 769 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Tindall Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Bond Street: 50km/h (proposed 30km/h)</li> <li>Cobham Crescent: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Tindall Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tindall Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tirau Place (Mangere)

The speed limit on Tirau Place, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tirau Place connects to Thomas Road. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Tirau Place is classified as an Access road under the one network road classification (ONRC). Tirau Place is a two-way, Two-lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tirau Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tirau Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Thomas Road: 50km/h (proposed 30km/h)</li> <li>• Cape Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Tirau Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.45. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tirau Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tiraumea Drive (Pakuranga)

The speed limit on Tiraumea Drive, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tiraumea Drive connects to Ti Rakau Drive to the north. This road provides access to residential properties and is approximately 1.28 km in length.</p> <p>Tiraumea Drive is classified as a Secondary Collector road under the one network road classification (ONRC). Tiraumea Drive is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records nine crashes between 2016 and 2020: 2 minor and 7 non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and narrow shoulder (0.5 to 1.0 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1976 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Tiraumea Drive has a mean operating speed in the range of 35-39 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ti Rakau Drive: 60 km/h</li> <li>Dolphin Street: 50 km/h (proposed 30 km/h)</li> <li>Bolina Crescent: 50 km/h (proposed 30 km/h)</li> <li>Jan Place: 50 km/h (proposed 30 km/h)</li> <li>Undine Street: 50 km/h (proposed 30 km/h)</li> <li>Osprey Street: 50 km/h (proposed 30 km/h)</li> <li>Tiaka Place 50 km/h (proposed 30 km/h)</li> <li>Pandora Place: 50 km/h (proposed 30 km/h)</li> <li>Swan Crescent: 50 km/h (proposed 30 km/h)</li> <li>Bolina Crescent: 50 km/h (proposed 30 km/h)</li> <li>Pelorus Place: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Tiraumea Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**

- The Infrastructure Risk Rating Score is 2.43 For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Tiraumea Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Tiroroa Avenue (Te Atatu South)**

The speed limit on Tiroroa Avenue, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tiroroa Avenue connects to Te Atatu Road to the west. This road provides access to residential properties and is approximately 1.48 km in length.</p> <p>Tiroroa Avenue is classified as a primary collector road under the one network road classification (ONRC). Tiroroa Avenue is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1843 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tiroroa Avenue has a mean operating speed in the range of 30-34 km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Lyndhurst Road: 50 km/h (proposed 30 km/h)</li> <li>• Wakeling Avenue: 50 km/h (proposed 30 km/h)</li> <li>• Wairata Place: 50 km/h (proposed 30 km/h)</li> <li>• Taha Road: 50 km/h (proposed 30 km/h)</li> <li>• Te Atatu Road: 50 km/h</li> </ul>

#### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Tiroroa Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.31 For urban areas this corresponds to an IRR band of **Medium**.

#### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Tiroroa Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Tiroroa Avenue is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Titoki Avenue (Mangere Bridge)

The speed limit on Titoki Avenue, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Titoki Avenue connects to Wallace Road to the west. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Titoki Avenue is classified as a Access road under the one network road classification (ONRC). Titoki Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Titoki Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 120 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Titoki Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Wallace Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Titoki Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Titoki Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Todd Place (Otahuhu)

The speed limit on Todd Place, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Todd Place connects to Avenue Road to the south. This road provides access to residential properties and is approximately 0.20km in length.</p> <p>Todd Place is classified as an Access road under the one network road classification (ONRC). Todd Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Todd Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 270 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Todd Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Avenue Road between Atkinson Avenue and the eastern end of Atkinson Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Todd Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Todd Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tomairangi Crescent (Pukekohe)

The speed limit on Tomairangi Crescent, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Tomairangi Crescent connects to Tawhiti Road to the south. This road provides access to residential properties and is approximately 0.28km in length.  Tomairangi Crescent is classified as an Access road under the one network road classification (ONRC). Tomairangi Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Tomairangi Crescent were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tomairangi Crescent has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Tawhiti Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Tomairangi Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tomairangi Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tonson Place (Weymouth)

The speed limit on Tonson Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tonson Place connects to Settlers Cove to the south. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Tonson Place is classified as an Access road under the one network road classification (ONRC). Tonson Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tonson Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1092 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Tonson Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Settlers Cove: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Tonson Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.60. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tonson Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tonuitanga Street (Weymouth)

The speed limit on Tonuitanga Street, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tonuitanga Street connects to Taiaapure Street to the north and Kaimoana Street to the east. This road provides access to residential properties and is approximately 0.23km in length.</p> <p>Tonuitanga Street is classified as an Access road under the one network road classification (ONRC). Tonuitanga Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tonuitanga Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tonuitanga Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Taiaapure Street: 50km/h (proposed 30km/h)</li> <li>• Kaimoana Street: 50km/h (proposed 30km/h)</li> <li>• Kuparu Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Tonuitanga Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tonuitanga Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Toporoa Street (Karaka)

The speed limit on Toporoa Street, Karaka has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Toporoa Street connects to Hayfield Way to the east and Ockhams Street to the west. This road provides access to residential properties and is approximately 0.19km in length.</p> <p>Toporoa Street is classified as an Access road under the one network road classification (ONRC). Toporoa Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Toporoa Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Toporoa Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Hayfield Way: 50km/h (proposed 30km/h)</li> <li>Ockhams Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Toporoa Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.04. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Toporoa Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tornish Drive (Flat Bush)

The speed limit on Tornish Drive, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tornish Drive connects to Bronwylian Drive to the north and Cyril French Drive to the south. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Tornish Drive is classified as an Access road under the one network road classification (ONRC). Tornish Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tornish Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 228 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tornish Drive has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Bronwylian Drive: 50km/h (proposed 30km/h)</li> <li>• Cyril French Drive: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Tornish Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tornish Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Totara Road (Leigh)

The speed limit on Totara Road, Leigh has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Totara Road connects to Hill Street to the east and Hauraki Road to the west. This road provides access to residential properties and is approximately 0.44km in length.</p> <p>Totara Road is classified as an Access road under the one network road classification (ONRC). Totara Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Totara Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as rural towns using MegaMaps tool. The IRR defines rural towns as "rural town with mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present."
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 332 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Totara Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Hill Street: 50km/h (proposed 30km/h)</li> <li>Hauraki Road between Wonderview Road and north of Hauraki Road: 50km/h (proposed 30km/h)</li> <li>Cotterell Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Totara Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Totara Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Towbridge Place (Mellons Bay)**

The speed limit on Towbridge Place, Mellons Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Towbridge Place connects to Castleton Drive to the north. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Towbridge Place is classified as an Access road under the one network road classification (ONRC). Towbridge Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Towbridge Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1032 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Towbridge Place has a mean operating speed in the range of <30km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Castleton Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Towbridge Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low-Medium**.
- o The Infrastructure Risk Rating Score is 1.81. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Towbridge Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tranent Road (Mangere)

The speed limit on Tranent Road, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tranent Road connects to Imrie Avenue to the south. This road provides access to residential properties and is approximately 0.31km in length.</p> <p>Tranent Road is classified as an Access road under the one network road classification (ONRC). Tranent Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tranent Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 170 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Tranent Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Imrie Avenue: 50km/h (proposed 30km/h)</li> <li>Deborah Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Tranent Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tranent Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Trelawn Place (Cockle Bay)**

The speed limit on Trelawn Place, Cockle Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Trelawn Place connects to Sandspit Road to the west. This road provides access to residential properties and is approximately 0.36 km in length.</p> <p>Trelawn Place is classified as an access road under the one network road classification (ONRC). Trelawn Place is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1580 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Trelawn Place has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Sandspit Road: 50 km/h</li> <li>Alexander Street: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Trelawn Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.33 For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Trelawn Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Trembath Avenue (Mangere East)

The speed limit on Trembath Avenue, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Trebath Avenue connects to Farmer Street to the west. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Trebath Avenue is classified as an Access road under the one network road classification (ONRC). Trebath Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Trembath Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 80 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Trembath Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Farmer Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Trembath Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Trembath Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Trenwith Street (Otahuhu)

The speed limit on Trenwith Street, Otahuhu, between Water Street and 70m east of Water Street, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Trenwith Street connects to Frank Grey Place to the east and Princes Street - Otahuhu Off Ramp to the west. This road provides access to residential properties and is approximately 0.30km in length.</p> <p>Trenwith Street is classified as a Primary Collector road under the one network road classification (ONRC). Trenwith Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Trenwith Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4736 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Trenwith Street has a mean operating speed in the range of 40-44km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Frank Grey Place: 50km/h (no proposed change)</li> <li>• Water Street: 50km/h (proposed 30km/h)</li> <li>• Princes Street - Otahuhu Off Ramp: 50km/h (no proposed change)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Trenwith Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.58. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Trenwith Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Trenwith Street is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Trident Place (Shelly Park)

The speed limit on Trident Place, Shelly Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Trident Place connects to John Gill Road to the west. This road provides access to residential properties and is approximately 0.09 km in length.</p> <p>Trident Place is classified as an access road under the one network road classification (ONRC). Trident Place is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 110 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Trident Place has a mean operating speed in the range of &lt;30 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>John Gill Road: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Trident Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**
- The Infrastructure Risk Rating Score is 2.49 For urban areas this corresponds to an IRR band of **Medium High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Trident Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tsar Court (Flat Bush)

The speed limit on Tsar Court, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tsar Court connects to Coachman Drive to the north. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Tsar Court is classified as an Access road under the one network road classification (ONRC). Tsar Court is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tsar Court were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 572 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tsar Court has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Coachman Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Tsar Court has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tsar Court, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tuarongo Road (Karaka)

The speed limit on Tuarongo Road, Karaka has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tuarongo Road connects to Karera Road to the south. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Tuarongo Road is classified as an Access road under the one network road classification (ONRC). Tuarongo Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tuarongo Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Tuarongo Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Karera Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Tuarongo Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.04. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tuarongo Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tumu Road (Karaka)

The speed limit on Tumu Road, Karaka has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tumu Road connects to Hayfield Way to the east and Ockhams Street to the west. This road provides access to residential properties and is approximately 0.19km in length.</p> <p>Tumu Road is classified as an Access road under the one network road classification (ONRC). Tumu Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tumu Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tumu Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Hayfield Way: 50km/h (proposed 30km/h)</li> <li>• Ockhams Street: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Tumu Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.04. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tumu Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tutuwhatu Crescent (Weymouth)

The speed limit on Tutuwhatu Crescent, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tutuwhatu Crescent connects to Kaimoana Street to the south. This road provides access to residential properties and is approximately 0.16km in length.</p> <p>Tutuwhatu Crescent is classified as an Access road under the one network road classification (ONRC). Tutuwhatu Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tutuwhatu Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Tutuwhatu Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kaimoana Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Tutuwhatu Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tutuwhatu Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tuuhura Road (Pukekohe)

The speed limit on Tuuhura Road, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tuuhura Road connects to Rainsford Road to the west. This road provides access to residential properties and is approximately 0.18km in length.</p> <p>Tuuhura Road is classified as an Access road under the one network road classification (ONRC). Tuuhura Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tuuhura Road were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tuuhura Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Rainsford Road: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Tuuhura Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.34. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tuuhura Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tynor Place (Hillsborough)

The speed limit on Tynor Place, Hillsborough has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tynor Place connects to Pallister Drive to the west. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Tynor Place is classified as an Access road under the one network road classification (ONRC). Tynor Place is a two-way, Two lane undivided. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 150 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Tynor Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Pallister Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Tynor Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tynor Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tyrone Street (Otara)

The speed limit on Tyrone Street, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tyrone Street connects to Johnstones Road to the south. This road provides access to residential properties and is approximately 0.63km in length.</p> <p>Tyrone Street is classified as an Access road under the one network road classification (ONRC). Tyrone Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one serious and one non-injury crash. This resulted in one Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tyrone Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5 to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 322 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tyrone Street has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Perth Street: 50km/h (proposed 30km/h)</li> <li>• Antrim Crescent: 50km/h (proposed 30km/h)</li> <li>• Nairn Place: 50km/h (proposed 30km/h)</li> <li>• Angus Street: 50km/h (proposed 30km/h)</li> <li>• Johnstones Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Tyrone Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tyrone Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Umuti Lane (Karaka)

The speed limit on Umuti Lane, Karaka has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Umuti Lane connects to Mataitai Way to the east and Kauru Way to the west. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Umuti Lane is classified as an Access road under the one network road classification (ONRC). Umuti Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Umuti Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Umuti Lane has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Mataitai Way: 50km/h (proposed 30km/h)</li> <li>Kauru Way: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Umuti Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.04. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Umuti Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Undine Street (Pakuranga)**

The speed limit on Undine Street, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Undine Street connects to Tiraumea Drive to the south. This road provides access to residential properties and is approximately 0.12 km in length.</p> <p>Undine Street is classified as an access road under the one network road classification (ONRC). Undine Street is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 130 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Undine Street has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Tiraumea Drive: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Undine Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.15 For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Undine Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Upwood Place (Mangere)

The speed limit on Upwood Place, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Upwood Place connects to Killington Crescent to the north. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Upwood Place is classified as an Access road under the one network road classification (ONRC). Upwood Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Upwood Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 811 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Upwood Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Killington Crescent: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Upwood Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Upwood Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Urban Grove (Ranui)

The speed limit on Urban Grove, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Urban Grove connects to Ulrich Drive to the east. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Urban Grove is classified as an Access road under the one network road classification (ONRC). Urban Grove is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Urban Grove were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 370 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Urban Grove has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Urlich Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Urban Grove has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Urban Grove, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Urlich Drive (Ranui)

The speed limit on Urlich Drive, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Urlich Drive connects to Luanda Drive to the east and Mayer Place to the east. This road provides access to residential properties and is approximately 0.83km in length.</p> <p>Urlich Drive is classified as an Access road under the one network road classification (ONRC). Urlich Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records five crashes between 2016 and 2020: one minor crash, four non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Urlich Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 370 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Urlich Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Luanda Drive between waitemata Drive roundabout and Swanson Road: 50km/h (proposed 30km/h)</li> <li>Mayer Place: 50km/h (proposed 30km/h)</li> <li>Elvira Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Urlich Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ulrich Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Valder Avenue (Otara)

The speed limit on Valder Avenue, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Valder Avenue connects to Pearl Baker Drive to the west and Springs Road to the east. This road provides access to residential properties and is approximately 0.34km in length.  Valder Avenue is classified as an Access road under the one network road classification (ONRC). Valder Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Valder Avenue were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 686 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Valder Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Pearl Baker Drive: 50km/h (proposed 30km/h)</li> <li>• Springs Road: 60km/h (no change proposed)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Valder Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Valder Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Valley Road (Mount Eden)

The speed limit on Valley Road, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Valley Road connects to Sherbourne Road to the north and Mount Eden Road to the east. This road provides access to residential properties and is approximately 0.65km in length.</p> <p>Valley Road is classified as an Arterial road under the one network road classification (ONRC). Valley Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records thirteen crashes between 2016 and 2020: two serious, five minor and six non-injury crashes. This resulted in two Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Valley Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8111 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Valley Road has a mean operating speed in the range of 35-39km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Sherbourne Road: 50km/h (proposed 30km/h)</li> <li>Pentland Avenue: 50km/h (proposed 30km/h)</li> <li>Tarata Street: 50km/h (proposed 30km/h)</li> <li>Mount Eden Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Valley Road has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Low-Medium**.
- The Infrastructure Risk Rating Score is 2.13. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Valley Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Valley Road is an Arterial Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Vanden Place (Henderson)

The speed limit on Vanden Place, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Vanden Place connects to Larissa Avenue to the east. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Vanden Place is classified as an Access road under the one network road classification (ONRC). Vanden Place is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Vanden Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 158 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Vanden Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Larissa Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Vanden Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.20. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Vanden Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Vanguard Road (Kelston)

The speed limit on Vanguard Road, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Vanguard Road connects to Nile Road to the north and St Leonards Road to the south. This road provides access to residential properties and is approximately 0.38km in length.</p> <p>Vanguard Road is classified as a Secondary Collector road under the one network road classification (ONRC). Vanguard Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Vanguard Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2190 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Vanguard Road has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Nile Road: 50km/h (proposed 30km/h)</li> <li>• St Leonards Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Vanguard Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Vanguard Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Velvet Crescent (Otara)

The speed limit on Velvet Crescent, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Velvet Crescent connects to Hills Road to the east. This road provides access to residential properties and is approximately 0.5km in length.</p> <p>Velvet Crescent is classified as an Access road under the one network road classification (ONRC). Velvet Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Velvet Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 572 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Velvet Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Hills Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Velvet Crescent has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Velvet Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Vespa Road (Karaka)

The speed limit on Vespa Road, Karaka has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Vespa Road connects to Hayfield Way to the east and Ockhams Street to the west. This road provides access to residential properties and is approximately 0.20km in length.</p> <p>Vespa Road is classified as an Access road under the one network road classification (ONRC). Vespa Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Vespa Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 3 to &lt;5 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Vespa Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Hayfield Way: 50km/h (proposed 30km/h)</li> <li>• Ockhams Street: 50km/h (proposed 30km/h)</li> <li>• Patakatuna Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Vespa Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.04. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Vespa Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Vialou Lane (Stonefields)

The speed limit on Vialou Lane, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Vialou Lane connects to Tihi Street to the south and Stonemason Avenue to the north. This road provides access to residential properties and is approximately 0.26km in length.</p> <p>Vialou Lane is classified as an Access road under the one network road classification (ONRC). Vialou Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Vialou Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 208 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Vialou Lane has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tihi Street: 50km/h (proposed 30km/h)</li> <li>Stonemason Avenue: 50km/h (proposed 30km/h)</li> <li>Flax Lane: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Vialou Lane has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Vialou Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Vicente Place (Oteha)

The speed limit on Vicente Place, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Vicente Place connects to Fields Parade to the west. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Vicente Place is classified as a Secondary Collector road under the one network road classification (ONRC). Vicente Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Vicente Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Vicente Place has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Fields Parade: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Vicente Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Vicente Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Vickerman Street (Otara)

The speed limit on Vickerman Street, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Vickerman Street connects to Oconnor Street to the north and Flat Bush Road to the south. This road provides access to residential properties and is approximately 0.26km in length.</p> <p>Vickerman Street is classified as an Access road under the one network road classification (ONRC). Vickerman Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Vickerman Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 176 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Vickerman Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Oconnor Street: 50km/h (proposed 30km/h)</li> <li>Flat Bush Road: 50km/h (proposed 30km/h)</li> <li>Don Place: 50km/h (proposed 30km/h)</li> <li>Elsa Lane: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Vickerman Street has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Vickerman Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Victoria Road (Devonport)

The speed limit on Victoria Road, Devonport, between Albert Road and northern end of Victoria Road, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Victoria Road connects to Abbotsford Terrace to the north and King Edward Parade to the south. This road provides access to residential properties and is approximately 0.43km in length.</p> <p>Victoria Road is classified as a Primary Collector road under the one network road classification (ONRC). Victoria Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Victoria Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 821 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Victoria Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Abbotsford Terrace: 50 km/h (proposed 30 km/h)</li> <li>• King Edward Parade: 50 km/h (no proposed change)</li> <li>• Queens Parade: 50 km/h (no proposed change)</li> <li>• Marine Square: 50 km/h (no proposed change)</li> <li>• Flagstaff Terrace: 50 km/h (no proposed change)</li> <li>• Clarence Street: 50 km/h (no proposed change)</li> <li>• Fleet Street: 50 km/h (no proposed change)</li> <li>• Rattray Street: 50 km/h (no proposed change)</li> <li>• Kerr Street: 50 km/h (no proposed change)</li> <li>• Calliope Road: 50 km/h (no proposed change)</li> <li>• Hastings Parade: 50 km/h (proposed 30 km/h)</li> <li>• Albert Road: 50 km/h (no proposed change)</li> <li>• Ewen Alison Avenue: 50 km/h (proposed 30 km/h)</li> <li>• Owens Road: 50 km/h (proposed 30 km/h)</li> <li>• Patuone Avenue: 50 km/h (proposed 30 km/h)</li> <li>• Mozeley Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Victoria Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.

- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Victoria Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Victoria Road is a Primary Collector Road, that is not the intended function of this section of Victoria Road.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – View Road (Mangere)

The speed limit on View Road, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>View Road connects to Thomas Road to the west. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>View Road is classified as an Access road under the one network road classification (ONRC). View Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for View Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 140 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of View Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Thomas Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps View Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for View Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – View Road (Mount Eden)

The speed limit on View Road, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>View Road connects to Dominion Road to the west and Mount Eden Road to the east. This road provides access to residential properties and is approximately 0.90km in length.</p> <p>View Road is classified as a Primary collector road under the one network road classification (ONRC). View Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: one serious, one minor and one non-injury crash. This resulted in one Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for View Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 7179 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of View Road has a mean operating speed in the range of 35-39km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Dominion Road: 50km/h (no proposed change)</li> <li>• Alderley Road: 50km/h (proposed 30km/h)</li> <li>• Kawaka Road: 50km/h (proposed 30km/h)</li> <li>• Wynyard Road: 50km/h (proposed 30km/h)</li> <li>• Horoeke Avenue: 50km/h (proposed 30km/h)</li> <li>• Sherbourne Road: 50km/h (proposed 30km/h)</li> <li>• Esplanade Road: 50km/h (proposed 30km/h)</li> <li>• Mount Eden Road: 50km/h (no proposed change)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps View Road has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.13. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for View Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that View Road is a Primary Collector road, this is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Viking Avenue (Hillsborough)

The speed limit on Viking Avenue, Hillsborough has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Viking Avenue connects to Carlton Street to the east. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Viking Avenue is classified as a Access road under the one network road classification (ONRC). Viking Avenue is a two-way, Two lane undivided. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 200 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Viking Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Carlton Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Viking Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.20. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Viking Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Villarosa Lane (Flat Bush)

The speed limit on Villarosa Lane, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Villarosa Lane connects to Baverstock Road to the east and Greenbrooke Drive to the west. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Villarosa Lane is classified as an Access road under the one network road classification (ONRC). Villarosa Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Villarosa Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1534 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Villarosa Lane has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Baverstock Road: 50km/h (proposed 30km/h)</li> <li>• Greenbrooke Drive: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Villarosa Lane has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Villarosa Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Vilma Place (Otara)

The speed limit on Vilma Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Vilma Place connects to Cobham Crescent to the south. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Vilma Place is classified as an Access road under the one network road classification (ONRC). Vilma Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Vilma Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 80 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Vilma Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Cobham Crescent: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Vilma Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Vilma Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Vine Street (Mangere East)

The speed limit on Vine Street, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Vine Street connects to Tennessee Avenue to the north and Massey Road to the east. This road provides access to residential properties and is approximately 1.14km in length.</p> <p>Vine Street is classified as a Primary Collector road under the one network road classification (ONRC). Vine Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records sixteen crashes between 2016 and 2020: one serious crash, seven minor crashes, eight non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Vine Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1645 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Vine Street has a mean operating speed in the range of 30-34km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Tennessee Avenue: 50km/h (proposed 30km/h)</li> <li>• Massey Road: 50km/h (no proposed change)</li> <li>• Driver Road: 50km/h (proposed 30km/h)</li> <li>• Cleek Road: 50km/h (proposed 30km/h)</li> <li>• Farmer Street: 50km/h (proposed 30km/h)</li> <li>• Wakelin Road: 50km/h (proposed 30km/h)</li> <li>• Blake Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Vine Street has the following information:

- o Collective Risk band of **Medium**, and a Personal Risk band of **High**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Vine Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Vine Street is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Vinewood Drive (Albany)

The speed limit on Vinewood Drive, Albany has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Vinewood Drive connects to Bass Road to the east. This road provides access to residential properties and is approximately 0.37km in length.</p> <p>Vinewood Drive is classified as a Secondary Collector road under the one network road classification (ONRC). Vinewood Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Vinewood Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Vinewood Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Bass Road: 50km/h (proposed 30km/h)</li> <li>Mahoney Drive: 50km/h (proposed 30km/h)</li> <li>Roanoke Way: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Vinewood Drive has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Vinewood Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Volta Place (Clendon Park)

The speed limit on Volta Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Volta Place connects to Templeton Place to the west. This road provides access to residential properties and is approximately 0.57km in length.</p> <p>Volta Place is classified as an Access road under the one network road classification (ONRC). Volta Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Volta Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 3 to &lt;5 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 350 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Volta Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Templeton Place: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Volta Place has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Volta Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Waddon Place (Mangere)

The speed limit on Waddon Place, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waddon Place connects to Mascot Avenue to the east and Orly Avenue to the west. This road provides access to residential properties and is approximately 0.46km in length.</p> <p>Waddon Place is classified as an Access road under the one network road classification (ONRC). Waddon Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records seven crashes between 2016 and 2020: three minor crashes, four non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Waddon Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as commercial big box using MegaMaps tool. The IRR defines commercial big box as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 582 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Waddon Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Mascot Avenue: 50km/h (proposed 30km/h)</li> <li>Orly Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Waddon Place has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 1.78. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Waddon Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wade Street (Blockhouse Bay)

The speed limit on Wade Street, Blockhouse Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wade Street connects to Endeavour Street to the west. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Wade Street is classified as an Access road under the one network road classification (ONRC). Wade Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wade Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 478 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Wade Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Endeavour Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Wade Street has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wade Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wai Iti Place (Clendon Park)

The speed limit on Wai Iti Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wai Iti Place connects to Finlayson Avenue to the east. This road provides access to residential properties and is approximately 0.32km in length.</p> <p>Wai Iti Place is classified as an Access road under the one network road classification (ONRC). Wai Iti Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wai Iti Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Wai Iti Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Finlayson Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Wai Iti Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wai Iti Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Waikare Road (Otahuhu)

The speed limit on Waikare Road, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waikare Road connects to Papaku Road to the north and Church Street to the west. This road provides access to residential properties and is approximately 0.82km in length.</p> <p>Waikare Road is classified as an Access road under the one network road classification (ONRC). Waikare Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Waikare Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 228 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Waikare Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Papaku Road: 50km/h (proposed 30km/h)</li> <li>• Church Street between Princes Street and Ngaio Street: 50km/h (proposed 30km/h)</li> <li>• Tahatai Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Waikare Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Waikare Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Waimahia Avenue (Weymouth)

The speed limit on Waimahia Avenue, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waimahia Avenue connects to Waimarino Road to the east and Weymouth Road to the west. This road provides access to residential properties and is approximately 0.79km in length.</p> <p>Waimahia Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Waimahia Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics (e) Waimahia Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1612 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Waimahia Avenue has a mean operating speed in the range of 40-44km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Waimarino Road: 50km/h (proposed 30km/h)</li> <li>Weymouth Road: 50km/h (proposed 30km/h)</li> <li>Taatahi Street: 50km/h (proposed 30km/h)</li> <li>Reremanu Place: 50km/h (proposed 30km/h)</li> <li>Piriti Place: 50km/h (proposed 30km/h)</li> <li>Kaimoana Street: 50km/h (proposed 30km/h)</li> <li>Justamere Place: 50km/h (proposed 30km/h)</li> <li>Settlers Cove: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Waimahia Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.58. For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Waimahia Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Waimai Avenue (Weymouth)

The speed limit on Waimai Avenue, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
