

### Speed Limit Review – Accent drive (East Tamaki)

Accent drive, East Tamaki, is divided into two sections as outlined below:

1. Section 1: Accent drive between Lady Ruby Drive and Wayne Francis Drive.
2. Section 2: Accent drive between Wayne Francis Drive and Chapel Road.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Accent drive, East Tamaki has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

#### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Accent Drive connects to Lady Ruby Drive, East Tamaki Road, Reg Savory Place, Wayne Francis Drive, Savona Place and Stancombe Road to the east; Lady Ruby Drive, East Tamaki Road, Kord Kordel Place, Beales Place and Siedeberg Drive to the west; Te Irirangi Drive and Chapel Road to the north and south. This road provides access to commercial properties.	
	This section is approximately length 1.03 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).	This section is approximately length 0.36 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).
	This section is a two-way, two lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.	This section is a two-way, four lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records sixteen crashes between 2016 and 2020: zero fatal, zero serious, five minor and eleven non-injury crashes. This resulted in zero	WK NZTA's Crash Analysis System (CAS) records five crashes between 2016 and 2020: zero fatal, zero serious, two minor and three non-injury

Requirement	Comments	
	Section 1	Section 2
	Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Accent Drive were determined using a combination of site drive-over footage, on-site information and GeoMap information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide Lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> multi-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5m) and very narrow shoulder (&lt;0.5 m)</li> </ul> <p><b>Roadside hazards (in both directions):</b> Moderate</p>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using on-site information and geomaps. The IRR defines Commercial big box as “ <i>Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present.</i> ”	The adjacent land use is classified as Urban residential using on-site information and geomaps. The IRR defines Urban residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &gt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 6,709 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 11,571 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.

Requirement	Comments	
	Section 1	Section 2
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via email/meeting on date of sent memo/meeting. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This section has a mean operating speed of 40.13 km/h.	This section has a mean operating speed of 45.74 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Lady Ruby Drive:</b> 50 km/h</li> <li>• <b>East Tamaki Road:</b> 60 km/h (proposed 50 km/h)</li> <li>• <b>Kordel Place:</b> 50 km/h</li> <li>• <b>Reg Savory Place:</b> 50 km/h</li> <li>• <b>Beale Place:</b> 50 km/h</li> <li>• <b>Te Irirangi Drive:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Wayne Francis Drive:</b> 50 km/h</li> <li>• <b>Siedeberg Drive:</b> 50 km/h</li> <li>• <b>Savona Drive:</b> 50 km/h</li> <li>• <b>Chapel Road:</b> 60 km/h (proposed 50 km/h)</li> <li>• <b>Stancombe Road:</b> 60 km/h (proposed 50 km/h)</li> </ul>	

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	5	2
DSI crashes during the period	0	0
Corridor Length (km)	1.03	0.36
Annual Daily Traffic	6,709	11,571

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Multi-lane undivided	3.40
Road alignment	Straight	1.00	Straight	1.00
Carriageway width	Wide lane, Very narrow shoulder	1.58	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43	Moderate	1.43
Adjacent land use	Commercial big box	4.00	Urban residential	3.00
Intersection density (per km)	5 to <10	2.60	>10	5.00
Access density (per km)	5 to <10	1.06	>20	1.30
Traffic volume (vpd)	6000 to <12000	3.00	6000 to <12000	2.20

- Section 1
  - The Infrastructure Risk Rating Score is 2.27. For Urban areas this corresponds to an IRR band of **Medium**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.57. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 50 km/h on Accent drive between Lady Ruby Drive and Wayne Francis Drive (section 1)
- 50 km/h on Accent drive between Wayne Francis Drive and Chapel Road (section 2)

Accent drive (section 1 and 2) is a self-explaining road as the mean operating speeds (40 and 45.74 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Accent drive (section 1 and 2) was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Accent Drive due to a multitude of factors. These being the very narrow shoulder width and low mean operating speed. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.

Crash history from WK NZTA's CAS database shows twenty-one crashes in the last 5 years including zero fatal, zero serious, seven minor, and fourteen non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Accent Drive in East Tamaki, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Anderson Road (Matakana)**

Anderson Road, Matakana (between Westminster Glen and Matakana Road) is divided into four sections as outlined below:

1. Section 1: between Westminster Glen and 310 east of Westminster Glen
2. Section 2: between 310 east of Westminster Glen and Matakana Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Anderson Road, Matakana (between Westminster Glen and Matakana Road) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Section 1	Section 2
	Anderson Road connects to Westminster Glen to the North. This road provides access to residential properties.	Anderson Road connects to Westminster Glen to the North and, Matakana Road to the East. This road provides access to residential properties.
	This section is approximately 0.31 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).	This section is approximately 0.86 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020.

Requirement	Comments	
	and Serious Injury (DSI) crashes.	Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Anderson Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed.</li> <li>• <b>Road alignment:</b> Straight.</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m).</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed.</li> <li>• <b>Road alignment:</b> Straight.</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m).</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	From MegaMaps tool/ a combination of site drive-over footage and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km.</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km.</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 232 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 232 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 08/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to		
Current speed limit	Section 1	Section 2
	The existing speed limit is 80 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 45.55 km/h.	This section has a mean operating speed of 45.55 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Westminster Glen:</b> 60 km/h.</li> <li>• <b>Anderson Road (western section):</b> 40 km/h.</li> <li>• <b>Rosemount Road:</b> 80 km/h.</li> <li>• <b>Matakana Road:</b> 80 km/h</li> </ul>	

**Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	0.31	0.86
Annual Daily Traffic	232	232

Section 1:

- The Collective Risk score is **0.00**. For rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.00**. For rural areas this corresponds to a Personal Risk band of **Low**.

Section 2:

- The Collective Risk score is **0.00**. For rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.00**. For rural areas this corresponds to a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Unsealed	10.0	Unsealed	10.0
Road alignment	Straight	1.0	Straight	1.0
Carriageway width	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79
Roadside hazards	High	2.28	High	2.28
Adjacent land use	Rural residential	1.5	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2	1 to <2	1.2
Access density (per km)	2 to <5	1.03	2 to <5	1.03
Traffic volume	<1000	1.0	<1000	1.0

Section 1:

The Infrastructure Risk Rating Score is **1.86**. For Rural areas this corresponds to an IRR band of **Medium-High**.

Section 2:

The Infrastructure Risk Rating Score is **1.86**. For Rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

Section 1 and 2: The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation:*

- 40 km/h between Westminster Glen and 310 east of Westminster Glen (Section 1)
- 60 km/h between 310 east of Westminster Glen and Matakana Road (Section 2)

Anderson Road is a self-explaining road as the mean operating speeds (45.55 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Anderson Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h and 60 km/h was selected for this road due to a multitude of factors. These being the unsealed surface, medium lane width, very narrow shoulder width, straight nature of the road, high roadside hazards. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road. This proposed speed was also chosen in order to ensure consistency with the rural unsealed road.

After considering all the above factors, the existing speed limit of 80 km/h on Anderson Road in Rodney, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 40 km/h and 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Ara Weiti Road (Stillwater)

The speed limit on Ara Weiti Road, Stillwater has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ara Weiti Road connects to East Coast Road to the west. This road is approximately 2.05 km in length.</p> <p>Ara Weiti Road is classified as an Access road under the one network road classification (ONRC). Ara Weiti Road is a two-way, Two lane undivided road. There are no pedestrian amenities or cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ara Weiti Road were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curve</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> High and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as rural residential using MegaMaps tool. The IRR defines rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 297 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	No planned modification to the road currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ara Weiti Road has a mean operating speed in the range of 30 to 40 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>East Coast Road: 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ara Weiti Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.59. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

### Step 4: Conclusion

Existing speed limit: 100km/h

*Proposed safe and appropriate speed limit recommendation = 60km/h.*

Ara Weiti Road is a self-explaining road as the mean operating speeds are already at, or below, the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Ara Weiti Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

The existing speed limit of 100 km/h on Ara Weiti Road, is not considered to be a safe and appropriate speed limit for this section of road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Ash Road (Wiri)

The speed limit on Ash Road, Wiri has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ash Road connects to Wiri Station Road to the north and Kerrs Road to the south. This road provides access to residential properties.</p> <p>This section is approximately 0.75 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records ten crashes between 2016 and 2020: zero fatal, zero serious, four minor and six non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Ash Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Medium Lane (3.0m-3.5 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> Moderate.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Industry using MegaMaps tool. The IRR defines Industry as <i>“Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present.”</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km.</li> <li>• <b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 5,484 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This road has a mean operating speed of 50.6 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Wiri Station Road:</b> 60 km/h (proposed 50 km/h).</li> <li>• <b>Kerrs Road:</b> 60 km/h (proposed 50 km/h).</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	4
DSI crashes during the period	0
Corridor Length (km)	0.75
Annual Daily Traffic	5,484

- The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards	Moderate	1.43
Adjacent land use	Industry	4.00
Intersection density (per km)	2 to <3	1.30
Access density (per km)	>20	1.30
Traffic volume	1000 to <6000	1.40

The Infrastructure Risk Rating Score is **1.77**. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 50 km/h Ash Road (Full Length).*

Ash Road is a self-explaining road as the mean operating speeds (50.6 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Ash Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Ash Road due to multitude of factors. These being very narrow shoulder width, moderate roadside hazards and commercial big box land use. This proposed speed was also chosen in order to ensure consistency with the surrounding network. Ash Road is identified as one of the top 10% DSI saving network sections.

Crash history from WK NZTA's CAS database shows ten crashes in the last 5 years including zero fatal, zero serious, four minor, and six non-injury crashes.

After considering all the above factors, the existing speed limit of 60 km/h on Ash Road in Wiri, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Aubrey Road (Stillwater)

The speed limit on Aubrey Road, Stillwater has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Aubrey Road connects to Spur Road to the north. This road provides access to residential properties.</p> <p>This section is approximately 0.75 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>Aubrey Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: zero fatal, zero serious, one minor and one non-injury crashes and therefore no Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Aubrey Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as a "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist

Requirement	Comments
	<i>activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 204 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Aubrey Road has a mean operating of 26 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Spur Road:</b> 80 km/h (proposed 60 km/h).</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	0.75
Annual Daily Traffic	204

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.

- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	10 to <20	1.1
Traffic volume	<1000	1.0

- The Infrastructure Risk Rating Score is **1.71**. For Rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Aubrey Road.*

Aubrey Road is a self-explaining road as the mean operating speeds (26 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Aubrey Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Aubrey Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.

Crash history from WK NZTA's CAS database shows two crashes in the last 5 years including zero fatal, zero serious, one minor, and one non-injury crashes.

After considering all of the above factors, the existing speed limit of 80 km/h on Aubrey Road in Stillwater, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Aubrey Road is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Barrett Road (Riverhead)

The speed limit on Barrett Road (between Coatesville Riverhead Highway and Lloyd Road), Riverhead has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Barrett Road connects to Coatesville Riverhead Highway to the North and adjacent section of Barrett Road and Lloyd Road to the South. This road provides access to residential properties.</p> <p>This section is approximately 0.98 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: zero fatal, zero serious, one minor and one non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Barrett Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km.</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 661 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 08/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 52 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Coastville Riverhead Highway:</b> 60 km/h.</li> <li><b>Barrett Road (Southern Section):</b> 40 km/h.</li> <li><b>Lloyd Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	0.98
Annual Daily Traffic	661

- The Collective Risk score is **0.00**. For rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.00**. For rural areas this corresponds to a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	10 to <20	1.10
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is **1.46**. For Rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h Barrett Road (between Coatesville Riverhead Highway and Lloyd Road).*

Barrett Road is a self-explaining road as the mean operating speeds (52 km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Barrett Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for this road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, straight nature of the road, high roadside hazards.

Crash history from NZTA's CAS database shows two crashes in the last 5 years including zero fatal, zero serious, one minor, and one non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on Barrett Road in Rodney, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Beaver Road (Bombay)

The speed limit on Beaver Road, between State Highway 1 and 1340m west of State Highway 1 (Waikato District boundary), Bombay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>This section of Beaver Road connects to State Highway 1 at the eastern end and continues in the Waikato District at the western end. The road provides access to rural residential properties.</p> <p>This section of Beaver Road is approximately 1.34 km in length. Beaver Road is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>Beaver Road is a two-lane, undivided road. There are no pedestrian or cyclist amenities along this road. There is no on-street parking along Beaver Road.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020, one non-injury and one minor injury crash. Beaver Road therefore has no Death and Serious Injury (DSI) crashes. CAS includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Beaver Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (0 to &lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>

Requirement	Comments
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using the drive over footage. The IRR defines Rural Residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/ factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersection per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 218 vehicles per day (vpd). This level of traffic volume is consistent with the nature of this road.
(i) any planned modification to the road; and	There are no known planned modifications to Beaver Road.
(j) the views of interested persons and groups.	The programme team have undertaken early engagement with key partners and stakeholders on the first stage of Tranche 2. This has included the Automobile Association, Auckland Council Safety Collective, Auckland Regional Public Health Service / Healthy Auckland Together, Bike Auckland, Fire and Emergency, Greater Auckland, Kainga Ora, NZ Police, Road Transport Forum, Safekids Aotearoa, Walk Auckland and Waka Kotahi. Potential changes to the speed limits in this area were presented to the Local Board via meetings on 20 April 2021 and 1 June 2021. More detailed feedback is anticipated from each group during public consultation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Beaver Road is 100 km/h between State Highway 1 and 1340m west of State Highway 1
MegaMaps Mean Operating Speed (km/h)	Beaver Road has a mean operating speed in the range of 62 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Beaver Road (west of a point 1340m west of State Highway 1):</b> 100 km/h (within Waikato District)</li> <li><b>State Highway 1:</b> 100 km/hr</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	1.34
Annual Daily Traffic	218

The Collective Risk score is 0.00, and the Personal Risk score is 0.0. For rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.5
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume	< 1,000 vpd	1.00

The Infrastructure Risk Rating Score is 2.0. For rural areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for Beaver Road between State Highway 1 and 1340m west of State Highway 1.*

The mean operating speed on Beaver Road is 62 km/h which is significantly below the existing 100 km/h speed limit. Engineering up of Beaver Road was considered but dismissed due to the substantial and costly upgrades that would be required for what is a low volume, low classification road. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected due to the narrow lanes, winding layout, high roadside hazards and its existing operating speed (62 km/h). These features contribute to the roads "High" IRR score, making it a high risk road.<sup>1</sup>

After considering all the above factors, the speed limit of 100 km/h on Beaver Road between State Highway 1 and 1340m west of State Highway 1, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Beaver Road aligns with the Speed Management Guide (< 80 km/h) and the existing operating speed (62 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Botany Road (Botany Downs)

Botany Road, Botany Downs (between Cascades Road and Ti Rakau Drive) is divided into two sections as follows:<sup>1</sup>

1. Section 1: Botany Road between Cascades Road and Goffland Drive
2. Section 2: Botany Road between Goffland Drive and Ti Rakau Drive

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Botany Road, Botany Downs has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Botany Road connects to Botany Road to the north, Te Irirangi Drive to the south, Ti Rakau Drive, Tarnica Road, Millhouse Drive and Vesca Place to the east and Cascades Road, Seneca Court, Goffland Drive and Ti Rakau Drive to the west. This road provides access to a mixture of residential and commercial properties.	
	This section is approximately 1.13 km in length. It is classified as an Arterial road under the one network road classification (ONRC).	This section is approximately 0.30 km in length. It is classified as an Arterial road under the one network road classification (ONRC).
	This section is a two-way, four-lane, undivided road. There are pedestrian amenities along this section. There are no on-street parking and no cyclist amenities.	This section is a two-way, four-lane, undivided road. There are pedestrian amenities along this section. There are no on-street parking and no cyclist amenities.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records seventy-five crashes between 2016 and 2020: one fatal, zero serious, fourteen minor and sixty non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records seventeen crashes between 2016 and 2020: zero fatal, one serious, five minor and twelve non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Botany Road is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Botany Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided-traversable</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "	The adjacent land use is classified as Commercial big box using on-site information and geomaps. The IRR defines Commercial big box as " <i>Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments	
	Section 1	Section 2
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 32,937 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 26,354 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 26/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of has a mean operating speed of 47.8 km/h.	This section of has a mean operating speed in the range of 39.49 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Te Irirangi Drive:</b> 80 km/h (proposed 50 km/h)</li> <li>• <b>Ti Rakau Drive:</b> 60 km/h (proposed 50 km/h)</li> <li>• <b>Tarnica Road:</b> 50 km/h</li> <li>• <b>Golfland Drive:</b> 50 km/h</li> <li>• <b>Seneca Court:</b> 50 km/h</li> <li>• <b>Millhouse Drive:</b> 50 km/h</li> <li>• <b>Vesca Place:</b> 50km/h</li> <li>• <b>Cascades Road:</b> 60 km/h (proposed 50 km/h)</li> <li>• <b>Botany Road:</b> 50 km/h</li> </ul>	

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	15	6
DSI crashes during the period	1	1

Corridor Length (km)	1.13	0.30
Annual Daily Traffic	32,937	26,354

- Section 1
  - The Collective Risk score is 0.18. For rural areas this corresponds to a Collective Risk band of **Medium-High**
  - The Personal Risk score is 1.47. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.66. For rural areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 6.88. For rural areas this corresponds to a Personal Risk band of **Medium**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Multi-lane undivided	3.40	Divided-traversable	3.00
Road alignment	Straight	1.00	Straight	1.00
Carriageway width	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Urban residential	3.00	Commercial big box	4.00
Intersection density (per km)	3 to <5	1.50	3 to <5	1.50
Access density (per km)	>20	1.30	>20	1.30
Traffic volume (vpd)	>12000	3.00	>12000	3.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.39. For rural areas this corresponds to an IRR band of **Medium**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.46. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 50 km/h on Botany Road between Cascades Road and Golfland Drive (section 1)
- 50 km/h on Botany Road between Golfland Drive and Ti Rakau Drive (section 2)

Botany Road is a self-explaining road as the mean operating speeds (47.8 and 39.49 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Botany Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Botany Road due to a multitude of factors. These being the very narrow shoulder width, high road-side hazards and low mean operating speed (<50 km/h). All of these factors contribute to the road's 'High' IRR score. The collective and personal risk of this road are classified as 'High' and 'Medium' respectively due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.

Crash history from WK NZTA's CAS database shows ninety-two crashes in the last 5 years including one fatal, one serious, nineteen minor, and seventy-two non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Botany Road in Botany Downs, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Brigham Creek Road (Whenuapai)

Brigham Creek Road, Whenuapai, is divided into two sections as outlined below:

1. Section 1: Brigham Creek Road between 80m west of Kauri Road and 280m west of Trig Road
2. Section 2: Brigham Creek Road between 550m west of Totara Road and State Highway 16

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Brigham Creek Road, Whenuapai has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Section 1	Section 2
	Brigham Creek Road connects to Trig Road to the south. This road provides access to residential properties.	Brigham Creek Road connects to Airport Road, Nils Anderson Road, Totara Road, Ripeka Road, Boyes Avenue and Joseph Macdonald Drive to the north and Mamari Road to the South and SH 16 to the west. This road provides access to residential properties.
	This section is approximately 1.50 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).	This section is approximately 0.73 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).
	This Brigham Creek Road is a two-way, two-lane, undivided road. There are no pedestrian amenities and no cyclist amenities. There is on-street parking along this road.	This section is a two-way, two-lane, undivided road. There are no pedestrian amenities and no cyclist amenities. There is on-street parking along this road.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six	WK NZTA's Crash Analysis System (CAS) records fifteen

Requirement	Comments	
	crashes between 2016 and 2020: zero fatal, zero serious, two minor and four non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	crashes between 2016 and 2020: one fatal, zero serious, five minor and nine non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Brigham Creek Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural Residential as a "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8,350 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 12,988 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 05/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to		
Current speed limit	The existing speed limit is 80 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean	This section of Brigham Creek Road has a mean operating speed of 64.16 km/h.	This section of Brigham Creek Road has a mean operating speed of 63.43 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Trig Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Airport Road:</b> 50 km/h</li> <li>• <b>Niils Anderson Road:</b> 50 km/h</li> <li>• <b>Totara Road:</b> 50 km/h</li> <li>• <b>Mamari Road:</b> 50 km/h</li> <li>• <b>Ripeka Lane:</b> 50 km/h</li> <li>• <b>Boyes Avenue:</b> 50 km/h</li> <li>• <b>Joseph Macdonald Drive:</b> 50 km/h</li> <li>• <b>SH 16:</b> 100 km/h</li> </ul>	

**Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	2	6
DSI crashes during the period	0	1
Corridor Length (km)	1.50	0.73
Annual Daily Traffic	8,350	12,988

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**.
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**.
- Section 2:
  - The Collective Risk score is **0.27**. For Rural areas this corresponds to a Collective Risk band of **High**.
  - The Personal Risk score is **5.76**. For Rural areas this corresponds to a Personal Risk band of **Medium**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score	Category	Risk Score
---------	----------	------------	----------	------------

Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Straight	1.0
Carriageway width	Medium lane, Narrow shoulder	1.45	Medium lane, Narrow shoulder	1.45
Roadside hazards	High	2.28	High	2.28
Adjacent land use	Rural residential	1.5	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2	1 to <2	1.2
Access density (per km)	2 to <5	1.03	5 to <10	1.06
Traffic volume	6000 to <12000	2.2	>12000	2.2

Section 1:

- The Infrastructure Risk Rating Score is 2.03. For Rural areas this corresponds to an IRR band of **High**.

Section 2:

- The Infrastructure Risk Rating Score is 1.92. For Rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

Section 1: The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

Section 2: The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60 km/h between 80m west of Kauri Road and 280m west of Trig Road (*Section 1*)
- 60 km/h between 550m west of Totara Road and State Highway 16 (*Section 2*)

Brigham Creek Road is a self-explaining road as the mean operating speeds (64.16 km/h and 63.43 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Brigham Creek Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for section 1 and 2 of Brigham Creek Road due to multitude of factors. These being the medium lane width, narrow shoulder width, curved nature of the road, high road side hazards and local land use. All of these factors contribute to the road's 'High' and 'Medium-High' IRR score respectively. The collective and personal risk of section 2 of this road are classified as "**High**" and "**Medium**" respectively due the number of Death and Serious Injury (DSI)

crashes, making it a high-risk road.<sup>1</sup> This proposed speed was also chosen in order to ensure consistency with the surrounding network.

Crash history from WK NZTA's CAS database shows twenty-one crashes in the last 5 years including one fatal, zero serious, seven minor, and thirteen non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on Brigham Creek Road in Whenuapai, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Bristol Road (Whenuapai)

The speed limit on Bristol Road, Whenuapai has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bristol Road connects to Dale Road to the south, Rope Road and Riverlea Road to the east. This road provides access to residential properties.</p> <p>This section is approximately 1.82 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Bristol Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as an "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 637 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 05/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bristol Road has a mean operating speed of 43.56 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Dale Road:</b> 80 km/h (proposed 50 and 60 km/h)</li> <li><b>Rope Road:</b> 80 km/h (proposed 60 km/h)</li> <li><b>Riverlea Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.82
Annual Daily Traffic	637

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**.

- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	10 to <20	1.1
Traffic volume	<1000	1.0

- The Infrastructure Risk Rating Score is **1.45**. For Rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h Bristol Road (Full length)*

Bristol Road is a self-explaining road as the mean operating speeds (43.56 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Bristol Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for this road due to multitude of factors. These being the narrow lane width, very narrow shoulder width, straight nature of the road, high road side hazards and low mean operating speeds. This proposed speed was also chosen in order to ensure consistency with the surrounding network.

After considering all the above factors, the existing speed limit of 80 km/h on Bristol Road in Whenuapai, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Brown Street (Ponsonby)**

The speed limit on Brown Street, Ponsonby has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Brown Street connects to Ponsonby Road to the East, Richmond Road to the West and forms a 4-way junction with Fitzroy Street. This road provides access to residential properties.</p> <p>This section is approximately 0.59 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records nine crashes between 2016 and 2020: one minor and eight non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Brown Street were determined using a combination of site drive-over footage, on-site information and geomatics information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0m) and Very narrow shoulder (&lt;0.5m).</li> <li><b>Roadside hazards (in both directions):</b> Moderate.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist

Requirement	Comments
	<i>activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km.</li> <li>• <b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,099 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
Megamaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Ponsonby Road:</b> 50 km/h.</li> <li>• <b>Richmond Road:</b> Variable Speed 40 km/h &amp; 50 km/h.</li> <li>• <b>Fitzroy Street:</b> 50 Km/h (proposed 30 km/h).</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	0.59
Annual Daily Traffic	1,099

- The Collective Risk score is **0.00**. For urban areas this corresponds to a Collective Risk band of **Low**.

- The Personal Risk score is **0.00**. For urban areas this corresponds to a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	Moderate	1.43
Adjacent land use	Urban residential	3.0
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.30
Traffic volume	1000 to <6000	1.40

The Infrastructure Risk Rating Score is **2.12**. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h Brown Street (Full Length)*

Brown Street is a self-explaining road as the mean operating speeds are below or near, the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Brown Street was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30 km/h was selected for this road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, moderate roadside hazards and low mean operating speeds (<30 km/h). This proposed speed was chosen in order to ensure consistency with the surrounding network.

Crash history from NZTA's CAS database shows nine crashes in the last 5 years including one minor, and eight non-injury crashes.

After considering all the above factors, the existing speed limit of 50 km/h on Brown Street in Waitemata, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit for Brown Street is 30 km/h which is lower than the speed limit recommended by the Speed Management Guide (40 km/h); however, this is considered

appropriate based on the function of the road and the mean operating speed (20 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Campana Road (Wiri)**

The speed limit on Campana Road, Wiri has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Campana Road connects to Puhinui Road to the south. This road provides access to residential properties.
	This section is approximately 0.40 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).
	This section is a two-way, two-lane, unsealed road. There is no pedestrian, cyclist amenities and on-street parking along this road.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Campana Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural Residential as " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km.</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps/ Auckland Transport Traffic Counts as 131 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Puhinui Road:</b> 100 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	<b>0</b>
DSI crashes during the period	0
Corridor Length (km)	0.40
Annual Daily Traffic	131

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	2 to <3	1.30
Access density (per km)	2 to <5	1.03
Traffic volume	<1000	1.00

The Infrastructure Risk Rating Score is **1.90**. For Rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h Campana Road (Full Length).*

Campana Road is a self-explaining road as the mean operating speeds (20 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Campana Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for this Campana Road due multitude of factors. These being the narrow lane width, very narrow shoulder width, high roadside hazards and low mean operating speeds (<40 km/h). All of these factors contribute to the road's '**Medium-High**' IRR score, making it a high-risk road.

After considering all the above factors, the existing speed limit of 100 km/h on Campana Road in Wiri, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Cascades Road (Pakuranga Heights)

Cascades Road, Pakuranga Heights (between 300m west of Aviemore Drive to Botany Road), is divided into two sections as follows:<sup>1</sup>

1. Section 1: Cascades Road between 300m west of Aviemore Drive to Aviemore Drive
2. Section 2: Cascades Road between Aviemore Drive to Botany Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Cascades Road, Pakuranga Heights has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Cascades Road connects to Lochend Place, Aviemore Drive, Bernie Edwards Place and Solana Court to the north, Botany Road to the east and Cascades Road to the west. This road provides access to residential properties.	
	This section is approximately 0.3 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).	This section is approximately 0.6 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.	This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and	WK NZTA's Crash Analysis System (CAS) records thirteen

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	2020: zero fatal, zero serious, two minor and four non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	crashes between 2016 and 2020: zero fatal, zero serious, one minor and twelve non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Cascades Road is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Cascades Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide Lane (&gt;3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide Lane (&gt;3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 22,260 vehicles per day (vpd). This level of traffic volume is	Average daily traffic (ADT) was determined from MegaMaps as 29,944 vehicles per day (vpd). This level of traffic volume is

Requirement	Comments	
	Section 1	Section 2
	consistent with the nature of the road and traffic survey.	consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 26/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This section of has a mean operating speed of 47.68 km/h.	This section of has a mean operating speed of 47.67 km/h
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Cascades Road:</b> 50 km/h</li> <li>• <b>Lochend Place:</b> 50 km/h</li> <li>• <b>Aviemore Drive:</b> 60 km/h</li> <li>• <b>Bernie Edwards Place:</b> 50 km/h</li> <li>• <b>Solana Court:</b> 50 km/h</li> <li>• <b>Botany Road (north):</b> 50 km/h</li> <li>• <b>Botany Road (south):</b> 60 km/h (proposed 50 km/h)</li> </ul>	

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	2	1
DSI crashes during the period	0	0
Corridor Length (km)	0.3	0.6
Annual Daily Traffic	22,260	29,944

- Section 1

- The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Multi-lane Undivided	3.40
Road alignment	Straight	1.00	Straight	1.00
Carriageway width	Wide lane, Very narrow shoulder	1.58	Wide lane, Very narrow shoulder	1.58
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Urban residential	3.00	Urban residential	3.00
Intersection density (per km)	5 to <10	2.60	5 to <10	2.6
Access density (per km)	>20	1.30	>20	1.30
Traffic volume (vpd)	>12000	3.00	>12000	3.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.57. For urban areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.53. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 50 km/h on Cascades Road between 300m west of Aviemore Drive to Aviemore Drive
- 50 km/h on Cascades Road between Aviemore Drive to Botany Road

Cascades Road is a self-explaining road as the mean operating speeds (47.68 and 47.67 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Cascades Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Cascades Road due to a multitude of factors. These being the very narrow shoulder width, and high road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.

Crash history from WK NZTA's CAS database shows nineteen crashes in the last 5 years including zero fatal, zero serious, three minor, and sixteen non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Cascades Road in Pakuranga Heights, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Cavendish Drive (Manukau)**

Cavendish Drive, Suburb, is divided into three sections as follows: <sup>1</sup>

- Section 1: Cavendish Drive between Great South Road and Lambie Drive.
- Section 2: Cavendish Drive between Lambie Drive and Noel Burnside Road.
- Section 3: Cavendish Drive between Noel Burnside Road and Jerry Green Street.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Cavendish Drive, Manukau has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Cavendish Drive connects to Jerry Green Street, Noel Burnside Road, Glasgow Avenue, Plunket Avenue, Lambie Drive, Sharkey Street to the south, State Highway 20 motorway onramp/offramp, Great South Road, Te Irirangi Drive to the east, State Highway 20 motorway onramp/offramp, Noel Burnside Road to the west and Nesdale Avenue, Ranfurly Road, Plunket Avenue, Grayson Avenue, Norman Spencer Drive, Lambie Drive, Jack Conway Avenue to the north. This road provides access to commercial and residential properties.		
	This section is approximately 0.76 km in length. It is classified as a Regional road under the one network road classification (ONRC).	This section is approximately 2.02 km in length. It is classified as a Regional road under the one network road classification (ONRC).	This section is approximately 0.46 km in length. It is classified as a Regional road under the one network road classification (ONRC).

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	This section is a two-way, four-lane, divided road. There are pedestrian amenities and cyclist amenities along this section. There is no on-street parking.	This section is a two-way, four-lane, divided road. There are pedestrian amenities and cyclist amenities along this section. There is no on-street parking.	This section is a two-way, four-lane, divided road. There are pedestrian amenities and cyclist amenities along this section. There is no on-street parking.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records <b>eighty-five</b> crashes between 2016 and 2020: zero fatal, four serious, eleven minor and seventy non-injury crashes. This resulted in four Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records <b>eighty-four</b> crashes between 2016 and 2020: zero fatal, four serious, twenty minor and sixty non-injury crashes. This resulted in four Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records <b>thirty-four</b> crashes between 2016 and 2020: one fatal, one serious, eleven minor and twenty-one non-injury crashes. This resulted in two Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Cavendish Drive is identified as one of the top 10% DSI saving network sections for New Zealand.		
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Cavendish Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Divided-traversable</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Multi-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Divided-traversable</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>

Requirement	Comments		
	Section 1	Section 2	Section 3
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using on-site information and geomaps. The IRR defines Commercial big box as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."	The adjacent land use is classified as Commercial big box using on-site information and geomaps. The IRR defines Commercial big box as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."	The adjacent land use is classified as Commercial big box using on-site information and geomaps. The IRR defines Commercial big box as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &lt;1 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 32,052 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 31,208 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 33,136 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
Current speed limit	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 44.46km/h.	This section has a mean operating speed of 50.57 km/h.	This section has a mean operating speed of 47.72 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Jerry Green Street: 60 km/h</li> <li>Noel Burnside Road: 60 km/h</li> <li>Glasgow Avenue: 50 km/h</li> <li>Plunket Avenue: 50 km/h</li> <li>Lambie Drive: 60 km/h (proposed 50 km/h)</li> <li>Sharkey Street: 50 km/h</li> <li>State Highway 20 motorway: 100 km/h</li> <li>Great South Road: 60 km/h (proposed 50 km/h)</li> <li>Te Irirangi Drive: 60 km/h (proposed 50 km/h)</li> <li>Nesdale Avenue: 50 km/h</li> <li>Ranfurl Road: 50 km/h</li> <li>Grayson Avenue: 50 km/h</li> <li>Norman Spencer Drive: 50 km/h</li> <li>Jack Conway Avenue: 50 km/h</li> </ul>		

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data		
	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	15	24	13
DSI crashes during the period	4	4	2
Corridor Length (km)	0.76	2.02	0.46
Annual Daily Traffic	32,052	31,208	33,136

- Section 1
  - The Collective Risk score is 1.05. For urban areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 8.96. For urban areas this corresponds to a Personal Risk band of **Medium-High**
- Section 2

- Section 3
  - The Collective Risk score is 0.88. For urban areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 7.27. For urban areas this corresponds to a Personal Risk band of **Medium-High**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2		Section 3	
	Category	Risk Score	Category	Risk Score	Category	Risk Score
Road stereotype	Divided-traversable	3.00	Multi-lane undivided	3.40	Divided-traversable	3.00
Road alignment	Straight	1.00	Curved	1.80	Straight	1.00
Carriageway width	Medium lane, Very narrow shoulder	1.79	Narrow lane, Very narrow shoulder	2.01	Medium lane, Narrow shoulder	1.45
Roadside hazards (in both directions)	Moderate	1.43	Moderate	1.43	High	2.28
Adjacent land use	Commercial big box	4.00	Commercial big box	4.00	Commercial big box	4.00
Intersection density (per km)	5 to <10	2.60	3 to <5	1.50	5 to <10	2.60
Access density (per km)	>20	1.30	>20	1.30	<1	1.00
Traffic volume (vpd)	>12000	3.00	>12000	3.00	>12000	3.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.56. For urban areas this corresponds to an IRR band of **Medium-High**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.58. For urban areas this corresponds to an IRR band of **Medium-High**

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 50 km/h on Cavendish Drive Great South Road and Lambie Drive (section 1)
- 50 km/h on Cavendish Drive Lambie Drive and Noel Burnside Road (section 2)
- 50 km/h on Cavendish Drive Noel Burnside Road and Jerry Green Street (section 3)

Cavendish Drive is a self-explaining road as the mean operating speeds (44.6 to 50.6 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Cavendish Drive was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Cavendish Drive due to a multitude of factors. These being the narrow lane and shoulder width, high road-side hazards and low mean operating speed. All of these factors contribute to the road's 'Medium-High' IRR score. The collective and personal risk of this road are classified as 'High' and 'Medium-High' respectively due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>2</sup>

Crash history from WK NZTA's CAS database shows two hundred and three crashes in the last 5 years including one fatal, nine serious, forty-two minor, and hundred and fifty-one non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Cavendish Drive in Manukau, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Chapel Road (East Tamaki)

Chapel Road, East Tamaki, is divided into three sections as follows: <sup>1</sup>

1. Section 1: Chapel Road between Dawson Road to 200m north of Ormiston Road
2. Section 2: Chapel Road between 200m north of Ormiston Road to Baverstock Road.
3. Section 3: Chapel Road between Baverstock Road to Smales Road.
4. Section 4: Chapel Road between Smales Road to Armoy Drive.
5. Section 5: Chapel Road between Armoy Drive to Ti Rakau Drive
6. Section 6: Chapel Road between Ti Rakau Drive to Orangewood Drive/Whitford Road Roundabout.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Chapel Road, East Tamaki has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Chapel Road connects to Dawson Road, Matthews Road and Thomas Road to the south, Smales Road, Chapel Road and Kilkenny Drive to the north, Ballybay Road, Banville Road, Premwood Road, Spenbrooke Road, Accent Drive, Ormiston Road, Fusion Road, Michael Jones Drive, Medvale Avenue to the west and Rialto Court, Gracechurch Drive, Barcaldine Road, Duntrune Road, Cyril French Drive, Baverstock Road, Stancombe Road, Ormiston Road, Flat Bush School Road, Broadhurst Road and Carrick Glen Avenue to the east. This road provides access to commercial and residential properties.		

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	This section is approximately 2.04 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).	This section is approximately 0.93 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).	This section is approximately 1.36 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).
	This section is a two-way, two-lane, divided road. There are pedestrian amenities, cyclist amenities and on-street parking along this section.	This section is a two-way, two-lane, divided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.	This section is a two-way, two-lane, divided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records <b>forty-nine</b> crashes between 2016 and 2020: zero fatal, zero serious, nine minor and forty non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records <b>thirty-nine</b> crashes between 2016 and 2020: one fatal, two serious, eleven minor and twenty-five non-injury crashes. This resulted in three Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records <b>thirty</b> crashes between 2016 and 2020: zero fatal, zero serious, four minor and twenty-six non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Chapel Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide Lane (&gt;3.5</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow Lane</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane</li> </ul>

Requirement	Comments		
	Section 1	Section 2	Section 3
	m) and Very narrow shoulder (<0.5 m) <ul style="list-style-type: none"> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	(<3.0 m) and Wide shoulder (1.0 to 2.0 m) <ul style="list-style-type: none"> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	(3.0 to 3.5 m) and Very narrow shoulder (<0.5 m) <ul style="list-style-type: none"> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"	The adjacent land use is classified as Commercial big box using on-site information and geomaps. The IRR defines Commercial big box as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 16,359 vehicles per day (vpd). This level of traffic volume is consistent with the	Average daily traffic (ADT) was determined from MegaMaps as 17,529 vehicles per day (vpd). This level of traffic volume is consistent with the	Average daily traffic (ADT) was determined from MegaMaps as 19,479 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.

	cyclist amenities and no on-street parking.	street parking along this section.	There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records <b>seven</b> crashes between 2016 and 2020: zero fatal, zero serious, one minor and six non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records <b>twenty-two</b> crashes between 2016 and 2020: zero fatal, zero serious, four minor and eighteen non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records <b>thirty-one</b> crashes between 2016 and 2020: zero fatal, one serious, six minor and twenty-four non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Chapel Road is identified as one of the top 10% DSI saving network sections for New Zealand.		
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Chapel Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Multi-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using on-site information and	The adjacent land use is classified as Commercial big box using on-site information and	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR

Requirement	Comments		
	Section 4	Section 5	Section 6
	geomaps. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"	geomaps. The IRR defines Commercial big box as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."	defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 20,079 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 20,741 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 21,531 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 26/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes..		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
Current speed limit	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of has a mean operating speed in the range of 47.6 km/h.	This section of has a mean operating speed in the range of 49.7 km/h.	This section of has a mean operating speed in the range of 43.2 km/h.
AT also had regard to	Section 4	Section 5	Section 6
Current speed limit	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of has a mean operating speed in the range of 44.1 km/h.	This section of has a mean operating speed in the range of 42.5 km/h.	This section of has a mean operating speed in the range of 49.1 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads (for Section 1 to Section 6) are: <ul style="list-style-type: none"> <li>Dawson Road: 50 km/h</li> <li>Matthews Road: 50 km/h</li> <li>Thomas Road: 50 km/h:</li> <li>Smales Road: 60 km/h (proposed 50 km/h)</li> <li>Kilkenny Drive: 50 km/h</li> <li>Ballybay Road: 50 km/h</li> <li>Banville Road: 50 km/h</li> <li>Premwood Road: 50 km/h</li> <li>Spembrooke Road: 50 km/h</li> <li>Accent Drive: 60 km/h (proposed 50 km/h)</li> <li>Ormiston Road: 60 km/h (proposed 50 km/h)</li> <li>Fusion Road: 50 km/h</li> <li>Michael Jones Drive: 50 km/h</li> <li>Medvale Avenue: 50 km/h</li> <li>Rialto Court: 50 km/h</li> <li>Gracechurch Drive: 50 km/h</li> <li>Barcaldine Road: 50 km/h</li> <li>Dunrune Road: 50 km/h</li> <li>Cyril French Drive: 50 km/h</li> <li>Baverstock Road: 50 km/h</li> <li>Stancombe Road: 60 km/h (proposed 50 km/h)</li> <li>Flat Bush School Road: 50 km/h</li> <li>Broadhurst Road: 50 km/h</li> <li>Carrick Glen Avenue: 50 km/h</li> <li>Santa Ana Drive: 50 km/h</li> <li>Kingsgate Place: 50 km/h</li> <li>Maghera Drive: 50 km/h</li> <li>Dannemora Drive: 50 km/h</li> <li>Stellamaris Way: 50 km/h</li> <li>Kilimanjaro Drive: 50 km/h</li> <li>Armoy Drive: 50 km/h</li> </ul>

- Section 5
  - The Infrastructure Risk Rating Score is 2.45. For urban areas this corresponds to an IRR band of **Medium-High**
- Section 6
  - The Infrastructure Risk Rating Score is 2.39. For urban areas this corresponds to an IRR band of **Medium**

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 50 km/h on Chapel Road between Dawson Road to 200m north of Ormiston Road (section 1)
- 50 km/h on Chapel Road between 200m north of Ormiston Road to Baverstock Road (section 2)
- 50 km/h on Chapel Road between Baverstock Road to Smales Road (section 3)

- 50 km/h on Chapel Road between Smales Road to Armoy Drive (section 4)
- 50 km/h on Chapel Road between Armoy Drive to Ti Rakau Drive (section 5)
- 50 km/h on Chapel Road between Ti Rakau Drive to Orangewood Drive/Whitford Road Roundabout (section 6)

Chapel Road section is a self-explaining road as the mean operating speeds are below the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit.

Engineering up of Chapel Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Chapel Road due to a multitude of factors. These being the very narrow shoulder width, high road-side hazards and low mean operating speed. All of these factors contribute to the road's 'Medium-High' IRR score. The collective and personal risk of this road are classified as '**High**' and '**High**' respectively due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>2</sup>

Crash history from WK NZTA's CAS database shows hundred and seventy-eight crashes in the last 5 years including zero fatal, three serious, thirty-five minor, and hundred and thirty-nine non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Chapel Road in East Tamaki, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Creamery Road (Mangere)

The speed limit on Creamery Road, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Creamery Road connects to Greenwood Road to the west and Kirkbride Road, Wallace Road and Mountain Road to the east. This road provides access to residential properties.</p> <p>This section is approximately 0.43 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: zero fatal, zero serious, zero minor and three non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Creamery Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Curved.</li> <li><b>Carriageway width:</b> Wide Lane (&gt;3.5 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> Severe.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist

Requirement	Comments
	<i>activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km.</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 13/10/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 50 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Greenwood Road:</b> 60 km/h (proposed 50 km/h).</li> <li><b>Kirkbride Road:</b> 50 km/h.</li> <li><b>Wallace Road:</b> 50 km/h.</li> <li><b>Mountain Road:</b> 50 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.43
Annual Daily Traffic	1,520

- The Collective Risk score is **0.00**. For urban areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.00**. For urban areas this corresponds to a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Wide lane, Very narrow shoulder	1.58
Roadside hazards	Severe	2.80
Adjacent land use	Urban residential	3.0
Intersection density (per km)	1 to <2	1.2
Access density (per km)	5 to <10	1.06
Traffic volume	1000 to <6000	1.40

The Infrastructure Risk Rating Score is **2.14**. For Urban areas this corresponds to an IRR band of Low-Medium.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 50 km/h Creamery Road (Full Length).*

Creamery Road is a self-explaining road as the mean operating speeds (50 km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Creamery Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Creamery Road due to multitude of factors. These being very narrow shoulder width, curved nature of the road, severe roadside hazards. This proposed speed was also chosen in order to ensure consistency with the surrounding network.

Crash history from WK NZTA's CAS database shows three crashes in the last 5 years, including zero fatal, zero serious, zero minor and three non-injury crashes.

After considering all the above factors, the existing speed limit of 60 km/h on Creamery Road in Mangere, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Dairy Flat Highway (Dairy Flat)

The speed limit on Dairy Flat Highway, Dairy Flat (between State Highway 1 and 100m southwest of Pine Valley Road) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Dairy Flat Highway connects to Northern Motorway to the east and Pine Valley Road to the west. This road provides access to Northern Motorway.</p> <p>This section is approximately 0.38 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian and cyclist amenities along this road. There is on street parking along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records fourteen crashes between 2016 and 2020: zero fatal, one serious, two minor and eleven non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Dairy Flat Highway were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very wide shoulder (&gt; 2.0m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural Residential as "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist

Requirement	Comments
	<i>activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km.</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 15,640 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 08/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed	This section has a mean operating speed of 57.86 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Northern Motorway:</b> 100 km/h.</li> <li><b>Pine Valley Road:</b> 80 km/h. (Proposed 60 km/h).</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	3
DSI crashes during the period	1
Corridor Length (km)	0.37
Annual Daily Traffic	15,640

- The Collective Risk score is **0.54**. For Rural areas this corresponds to a Collective Risk band of **High**

- The Personal Risk score is **9.46**. For Rural areas this corresponds to a Personal Risk band of **High**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Medium lane, Very wide shoulder	0.78
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	3 to <5	1.5
Access density (per km)	5 to <10	1.06
Traffic volume	>12000	3.0

The Infrastructure Risk Rating Score is **2.03**. For Rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h Dairy Flat Highway (between SH1 and 100m southwest of Pine Valley Road).*

This section of Dairy Flat Road is a self-explaining road as the mean operating speeds is below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. In addition, this section of Dairy Flat Highway is becoming urbanised and the new development will change the existing road environment. The residential developments are also likely to reduce the operating speed.

A proposed speed limit of 60 km/h was selected for this road due to multitude of factor. These being the medium lane width, very wide shoulder width, straight nature of the road, high roadside hazards and rural residential land use. All of these factors contribute to the road's 'High' IRR score. Both the collective and personal risk of this road are classified as '**High**' due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.<sup>1</sup>

Crash history from WK NZTA's CAS database shows fourteen crashes in the last 5 years including zero fatal, one serious, two minor, and eleven non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on Dairy Flat Highway in Dairy Flat, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Dale Road (Whenuapai)

Dale Road, Whenuapai (between 45m west of Totara Road and western end of Dale Road), is divided into two sections as outlined below:

1. Section 1: Dale Road between 45m west of Totara Road and Riverlea Road.
2. Section 2: Dale Road between Riverlea Road and western end of Dale Road

The speed limit on Dale Road, Whenuapai has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Section 1	Section 2
	Dale Road connects to Riverlea Road and Bristol Road to the north. This road provides access to residential properties.	Dale Road provides access to residential properties.
	This section is approximately 0.93 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).	This section is approximately 0.33 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.	This section is a two-way, unsealed road. There are no pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Dale Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	

Requirement	Comments	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural Residential as a "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.	
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 712 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 73 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 05/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes..	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to		
Current speed limit	The existing speed limit is 80 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Dale Road has a mean operating speed of 48.74 km/h.	This section of Dale Road has a mean operating speed of 20km/h.

Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Riverlea Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Bristol Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>
---------------------------------	---

**Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	0.93	0.33
Annual Daily Traffic	712	73

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature				
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Unsealed	10.0
Road alignment	Straight	1.0	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28	High	2.28
Adjacent land use	Rural residential	1.5	Rural residential	1.5
Intersection density (per km)	3 to <5	1.5	3 to <5	1.5
Access density (per km)	>20	1.3	5 to <10	1.06

Traffic volume	<1000	1.0	<1000	1.0
----------------	-------	-----	-------	-----

- Section 1:
  - The Infrastructure Risk Rating Score is **1.65**. For Rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2:
  - The Infrastructure Risk Rating Score is **1.99**. For Rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

For section 1 & 2 of Dale Road the safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation:*

- 50 km/h between 45m west of Totara Road and Riverlea Road (Section 1)
- 60 km/h between Riverlea Road and western end of Dale Road (Section 2)

Dale Road is a self-explaining road as the mean operating speeds (48.74 and 20 km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Dale Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h and 60 km/h were selected for Section 1 and 2 respectively for Dale Road due to multitude of factors. These being the unsealed surface, narrow lane width, very narrow shoulder width, straight nature of the road, high road side hazards and local land use. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road. This proposed speed was also chosen in order to ensure consistency with the surrounding network.

After considering all the above factors, the existing speed limit of 80 km/h on Dale Road in Whenuapai, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 50 km/h and 60 km/h on section 1 and 2, which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Dominion Road (Mt Eden)

Dominion Road (Mt Eden), is divided into one section as outlined below:

1. Section 1: between Ian Mckinnon Drive and Horopito Street.

The speed limit on Dominion Road, Mt Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Dominion Road connects to Ian Mckinnon Drive to the north, Horopito Street to the west and adjacent section of Dominion Road to the south. This road provides access to Dominion Road interchange ramp.</p> <p>This section is approximately 0.28 km in length. It is classified as an Arterial road under the one network road classification (ONRC).</p> <p>This section is a two-way, multilane-lane, divided road. There are protected pedestrian and cyclist amenities and on-street parking along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: zero fatal, zero serious, one minor and five non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Dominion Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Divided-non-traversable.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> Moderate.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Controlled access using MegaMaps tool. The IRR defines Controlled access as " <i>with roadside development and controlled access, such as an urban state</i>

Requirement	Comments
	<i>highway or arterial where there are few accesses to the road e.g., as a result of a service road. Some pedestrian and cyclist activity may also be present but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km.</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 22,716 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This section has a mean operating speed of 55.18 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Ian Mckinnon Drive:</b> 60 km/h (proposed 50 km/h).</li> <li><b>Dominion Road interchange:</b> 50 km/h.</li> <li><b>Horopito Street:</b> 50 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	0.28
Annual Daily Traffic	22,716

- The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Divided-non-traversable	1.0
Road alignment	Straight	1.0
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards	Moderate	1.43
Adjacent land use	Controlled access	2.0
Intersection density (per km)	3 to <5	1.50
Access density (per km)	5 to <10	1.06
Traffic volume	>12000	3.0

- The Infrastructure Risk Rating Score is **1.39**. For Urban areas this corresponds to an IRR band of **Low**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 50 km/h Dominion Road (between Ian Mckinnon Drive and Horopito Street).*

Dominion Road is a road which requires challenging conversations and behavioural change from road users in order to introduce a lower yet necessary speed limit. Engineering down/up of Dominion Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Dominion Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, straight nature of the road and moderate roadside hazards and controlled access land use. This section of Dominion Road has high number of cycling demanded. This proposed speed will create a safer cycling environment and ensure consistency speed with the surrounding network.

Crash history from WK NZTA's CAS database shows six crashes in the last 5 years including zero fatal, zero serious, one minor, and five non-injury crashes.

After considering all the above factors, the existing speed limit of 60 km/h on Dominion Road, Mt Eden, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

As previously mentioned, the cost of engineering down Dominion Road would substantially outweigh any benefits. Therefore, no physical interventions are proposed for this road. Given that the existing mean operating speed is 55.18 km/h and the survey 85<sup>th</sup> percentile speed is 63 km/h, which is higher than the recommended speed limit of 50 km/h, behavioural changes will be required of road users. Informative consultation will be vital to ensuring that the reasoning behind lowering the speed limit is conveyed, as well as ensuring that the new speed limit is adhered to and that the buy-in of local users is achieved.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Douglas Street (Ponsonby)

The speed limit on Douglas Street, Ponsonby has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Douglas Street connects to Ponsonby Road to the East, Fitzroy Street to the south and Richmond Road to the West. This road provides access to residential properties.</p> <p>This section is approximately 0.61 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records nine non-injury crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Douglas Street were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km.</li> <li><b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,040 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 23.68 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Ponsonby Road:</b> 50 km/h.</li> <li><b>Fitzroy Street:</b> 50 km/h. (proposed 30 km/h).</li> <li><b>Richmond Road:</b> Variable Speed 40 km/h &amp; 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.61
Annual Daily Traffic	1,040

- The Collective Risk score is **0.00**. For urban areas this corresponds to a Collective Risk band of **Low**.

- The Personal Risk score is **0.00**. For urban areas this corresponds to a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Urban residential	3.0
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.30
Traffic volume	1000 to <6000	1.40

The Infrastructure Risk Rating Score is **2.33**. For Urban areas this corresponds to an IRR band of Medium.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h Douglas Street (Full Length)*

Douglas Street is a self-explaining road as the mean operating speeds (23.68 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Douglas Street was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30 km/h was selected for this road due to a multitude of factors. These being to the narrow lane width, narrow shoulder width, moderate roadside hazards and urban residential land use. This proposed speed was also chosen in order to ensure consistency with the surrounding network.

Crash history from NZTA's CAS database shows nine non-injury crashes in the last 5 years.

After considering all the above factors, the existing speed limit of 50 km/h on Douglas Street in Waitemata, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit for Douglas Street is 30 km/h which is lower than the speed limit recommended by the Speed Management Guide (40 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (23.68 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Druces Road (Wiri)

The speed limit on Druces Road, Wiri has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Druces Road connects to Wiri Station Road and Lambie Drive to the north, and Kerrs Road to the south. This road provides access to residential properties.</p> <p>This section is approximately 1.06 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, divided-non-traversable road. There are pedestrian amenities, cyclist amenities and on-street parking along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records thirty -five crashes between 2016 and 2020: zero fatal, one serious, nine minor and twenty-five non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Druces Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Divided-non-traversable.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Wide Lane (&gt;3.5 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> Moderate.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using MegaMaps tool. The IRR defines Commercial big box as " <i>Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present.</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km.</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 9,164 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This section has a mean operating speed of 45.92 km/h
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Wiri Station Road:</b> 60 km/h (proposed 50 km/h).</li> <li><b>Lambie Drive:</b> 60 km/h (proposed 50 km/h).</li> <li><b>Kerrs Road:</b> 60 km/h (proposed 50 km/h).</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	10
DSI crashes during the period	1
Corridor Length (km)	1.06
Annual Daily Traffic	9,164

- The Collective Risk score is **0.19**. For urban areas this corresponds to a Collective Risk band of **Medium-High**.

- The Personal Risk score is **5.64**. For urban areas this corresponds to a Personal Risk band of **Medium**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Divided-non-traversable	1.00
Road alignment	Straight	1.00
Carriageway width	Wide lane, Very narrow shoulder	1.58
Roadside hazards	Moderate	1.43
Adjacent land use	Commercial big box	4.00
Intersection density (per km)	3 to <5	1.50
Access density (per km)	10 to <20	1.10
Traffic volume	6000 to <12000	2.20

The Infrastructure Risk Rating Score is **1.48**. For Urban areas this corresponds to an IRR band of **Low**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 50 km/h Druces Road (Full Length).*

Druces Road is a self-explaining road as the mean operating speeds (45.92 km/h) is below the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Druces Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Druces Road due to multitude of factors. These being very narrow shoulder width, moderate roadside hazards and commercial big box land use.

Due to adverse crash history on the road. The collective and personal risk of this road are classified as **'Medium-High'** and **'Medium'** respectively due to the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>1</sup> This proposed speed was also chosen in order to ensure consistency with the surrounding network.

Crash history from WK NZTA's CAS database shows thirty-five crashes in the last 5 years including zero fatal, one serious, nine minor, and twenty-five non-injury crashes.

After considering all the above factors, the existing speed limit of 60 km/h on Druces Road in Wiri, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Duck Creek Road (Stillwater)

The speed limit on Duck Creek Road, Stillwater (Between Spur Road and 200m southwest of Coastal Heights) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Duck Creek Road connects to Spur Road and Messenger Road to the north. This road provides access to residential properties.
	<p>This section is approximately 4.04 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records nine crashes between 2016 and 2020: one fatal, one serious, four minor and five non-injury crashes. This resulted in two Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Duck Creek Road is identified as one of the top 10% DSI saving network sections for New Zealand.</p>
(e) the characteristics of the road and roadsides; and	The following characteristics for Duck Creek Road were determined using MegaMaps tool/ a combination of site drive-over footage and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as a "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist

Requirement	Comments
	<i>activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool/ a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,866 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed	This section of Duck Creek Road has a mean operating speed in the range of 50.1 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Spur Road:</b> 80 km/h (Proposed 60 km/h)</li> <li><b>Messenger Road:</b> 80 km/h (Proposed 60 km/h)</li> <li><b>Coastal Heights:</b> 50 km/h</li> <li><b>Stillwater Crescent:</b> 50 km/h</li> <li><b>Upper Duck Creek Road:</b> 50 km/h</li> <li><b>Snapper Road:</b> 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Section 1
Crash Analysis Period (years)	5
Total injury crashes during period	6
DSI crashes during the period	2
Corridor Length (km)	4.04

Annual Daily Traffic	1,866
----------------------	-------

- The Collective Risk score is **9.90**. For Rural areas this corresponds to a Collective Risk band of **Medium**.
- The Personal Risk score is **14.54**. For Rural areas this corresponds to a Personal Risk band of **High**.

### **Step 3: Calculate the IRR score**

Feature	Section 1	
	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Tortuous	6.0
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	5 to <10	1.06
Traffic volume	1000 to <6000	1.4

- The Infrastructure Risk Rating Score is **2.37**. For Rural areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h between Spur Road and 200m southwest of Coastal Heights.*

Duck Creek Road is a self-explaining road as the mean operating speeds are already at, or below, the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Duck Creek Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Duck Creek Road due to a multitude of factors. These being the medium lane and very narrow shoulder width, tortuous nature of the road, high road-side hazards. All of these factors contribute to the road's '**High**' IRR score. The collective and personal

risk of this road are classified as '**Medium**' and '**High**' respectively due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>1</sup>

Crash history from WK NZTA's CAS database shows nine crashes in the last 5 years including one fatal, one serious, four minor and five non-injury crashes

After considering all of the above factors, the existing speed limit of 80 km/h on Duck Creek Road in Stillwater, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Duck Creek Road is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Dye Access Road (Kaukapakapa)

The speed limit on Dye Access Road, Kaukapakapa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Dye Access Road connects to Rapson Road to the south. This road provides access to residential properties.
	This section is approximately 0.36 km in length. It is classified as an Access Road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Dye Access Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed.</li> <li><b>Road alignment:</b> Curved.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km.</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 29 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 08/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 32.46 km/h
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Rapson Road:</b> 100 km/h (proposed speed: 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.36
Annual Daily Traffic	29

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.0
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	<1	1.0
Access density (per km)	2 to <5	1.03
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is **2.05**. For Rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h Dye Access Road (Full length).*

Dye Access Road is a self-explaining road as the mean operating speeds (32.46 km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Dye Access Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for this Dye Access Road due to multitude of factors. These being narrow lane width, very narrow shoulder width, curved nature of the road, and high roadside hazards. All of these factors contribute to the road's 'High' IRR score, making it a high-risk road. This proposed speed was also chosen in order to ensure consistency with the surrounding network.

After considering all the above factors, the existing speed limit of 100 km/h on Dye Access Road in Kaukapakapa, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – East Coast Road (Silverdale)**

East Coast Road, Silverdale, is divided into five sections as outlined below:

- Section 1: East Coast Road between 330 m south of Tavern Road and 400 m south of Tavern Road
- Section 2: East Coast Road between 400 m south of Tavern Road and 1700m south of Hibiscus Coast Highway.
- Section 3: East Coast Road between 1700m south of Hibiscus Coast Highway and 800m northwest of Haigh Access Road.
- Section 4: East Coast Road between 800m northwest of Haigh Access Road and Okura River Road.
- Section 5: East Coast Road between Okura River Road and Glenvar Road.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on East Coast Road, Silverdale has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Section 1	Section 2	Section 3
	This section connects to Newman Road and Spur Road to the west and Stillwater Drive to the east. This road provides access to residential properties and is approximately 0.07 km in length.	This section connects to Newman Road and Spur Road to the west and Stillwater Drive to the east. This road provides access to residential properties and is approximately 0.94 km in length.	This section connects to Bawden Road, Ara Weiti Road, Jackson Way to the west and Wilks Road to the east. This road provides access to residential properties and is approximately 5.36 km in length.
	East Coast Road is classified as an Arterial Road under the one network road	East Coast Road is classified as an Arterial Road under the one network road classification	East Coast Road is classified as an Arterial Road under the one network road

Requirement	Comments		
	classification (ONRC). East Coast Road is a two-way, divided non-traversable road. There is no pedestrian or cyclists' amenities along this road and there is no on-street parking along this section.	(ONRC). East Coast Road is a two-way, two-lane, undivided road. There is no pedestrian or cyclists' amenities along this road and there is no on-street parking along this section.	classification (ONRC). East Coast Road is a two-way, two-lane, undivided road. There is no pedestrian or cyclists' amenities along this road and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.  East Coast Road is identified as one of the top 10% DSI saving network sections for New Zealand.	WK NZTA's Crash Analysis System (CAS) records seven crashes between 2016 and 2020  : two minor and four non-injury crashes and therefore Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered	WK NZTA's Crash Analysis System (CAS) records thirty-two crashes between 2016 and 2020  : five serious, eleven minor and sixteen non-injury crashes. This resulted in five Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.  East Coast Road is identified as one of the top 10% DSI saving network sections for New Zealand.
(e) the characteristics of the road and roadsides; and	The following characteristics for East Coast Road were determined using MegaMaps tool/ a combination of site drive-over footage and geomaps information.		
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Divided-non-traversable</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Wide shoulder (&gt;1.0 to 2.0 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Wide shoulder (&gt;1.0 to 2.0 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use for all sections of East Coast Road is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as: <i>a Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>		

Requirement	Comments		
(g) the number of intersections and property accessways; and	From MegaMaps tool/ a combination of site drive-over footage and geomaps information.		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 7,162 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 7,162 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 8,508 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.		

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Section 4	Section 5
	This section connects to Rodeo Drive to the east, Awanohi Road and John Brian Drive to the west, Redvale Rise to the south and Haigh Access Road to the north.	This section connects to Lonely track Road to the south, Glenvar Road and Okura River Road to the north.
	This road provides access to residential properties and is approximately 3.67 km in length.	This road provides access to residential properties and is approximately 0.66 km in length.

Requirement	Comments	
	East Coast Road is classified as an Arterial Road under the one network road classification (ONRC).	East Coast Road is classified as an Arterial Road under the one network road classification (ONRC).
	East Coast Road is a two-way, two-lane, undivided road. There is no pedestrian or cyclists' amenities along this road and there is no on-street parking along this section.	East Coast Road is a two-way, two-lane, undivided road. There is no pedestrian or cyclists' amenities along this road and there is no on-street parking along this section.
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records forty-five crashes between 2016 and 2020  : one fatal, four serious, thirteen non-injury and twenty-three non-injury crashes. This resulted in five Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	NZTA's Crash Analysis System (CAS) records fifteen crashes between 2016 and 2020  : two minor and thirteen non-injury crashes and therefore no Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for East Coast Road were determined using MegaMaps tool/ a combination of site drive-over footage and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Wide shoulder (&gt;1.0 to 2.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Wide shoulder (&gt;1.0 to 2.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. **Section 1:**

- o The Infrastructure Risk Rating Score is **1.63**. For Rural areas this corresponds to an IRR band of **Medium-High**.

**Section 2:**

- o The Infrastructure Risk Rating Score is **1.63**. For Rural areas this corresponds to an IRR band of **Medium-High**.

**Section 3:**

- o The Infrastructure Risk Rating Score is **1.87**. For Rural areas this corresponds to an IRR band of **Medium-High**.

**Section 4:**

- o The Infrastructure Risk Rating Score is **1.88**. For Rural areas this corresponds to an IRR band of **Medium-High**.

**Section 5:**

- o The Infrastructure Risk Rating Score is **2.13**. For Rural areas this corresponds to an IRR band of **High**

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

Section 1: The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

Section 2,3,4 &5: The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation*

- 60 km/h East Coast Road between 330 m south of Tavern Road and 400 m south of Tavern Road. (Section 1)
- 80 km/h East Coast Road between 400m south of Tavern Road and 1700m south of Hibiscus Coast Highway. (Section 2)- no change )- no change
- 80 km/h East Coast Road between 1700m south of Hibiscus Coast Highway and 800m northwest of Haigh Access Road. (Section 3)
- 80 km/h East Coast Road between 800m northwest of Haigh Access Road and Okura River Road. (Section 4) - no change
- 80 km/h East Coast Road between Okura River Road and Glenvar Road. (Section 5) )- no change

The proposed speed is a challenging conversation as the existing mean operating speed of East Coast Road section 1 is higher than the recommended speed limit of 60 km/h. However this section of East Coast Road is becoming urbanised and the new development will change the existing road environment. The residential developments are likely to reduce the operating speed, hence physical interventions are not required at this stage.

East Coast Road section 3 is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit.

Engineering up of East Coast Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h for section1 and 80 km/h for section 3 was selected for East Coast Road due to a multitude of factors. These being the medium lane and very narrow/wide shoulder width, straight/curved nature of the road, high road-side hazards. All of these factors contribute to the road's 'Medium to High' IRR score, making it a high-risk road and due to adverse crash history on the road.

Crash history from NZTA's CAS database shows one hundred and fifteen crashes in the last 5 years including one fatal, ten serious, thirty-seven minor, and sixty-seven non-injury crashes.

After considering all of the above factors, the existing speed limit for section 1 and 3 of 80 & 100 km/h respectively on East Coast Road in Hibiscus and Bays, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for East Coast Road section 1 and 3 are 60 km/h and 80 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – East Tamaki Road (Otarā)

East Tamaki Road, Otara, is divided into seven sections as follows:<sup>1</sup>

- Section 1: East Tamaki Road between Huia Road and SH1 On/Off Ramp
- Section 2: East Tamaki Road between SH1 On/Off Ramp and Preston Road
- Section 3: East Tamaki Road between Preston Road and Springs Road
- Section 4: East Tamaki Road between Springs Road and 'The Depot' Main Entrance
- Section 5: East Tamaki Road between 'The Depot' Main Entrance and Accent Drive
- Section 6: East Tamaki Road between Accent Drive and Paul Stevenson Place
- Section 7: East Tamaki Road between Paul Stevenson Place and Craigavon Drive

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on East Tamaki Road, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	East Tamaki Road connects to East Tamaki Road, Holroyd Place, Huia Road, Fulton Crescent, Bairds Road, Ferguson Road, East Tamaki Road Service Lane, Preston Road to the south, Birmingham Road to the east, Johnstone Road to the west and Otara Road, Newbury Street, Bairds Road, Hills Road and Springs Road to the north. This road provides access to commercial and residential properties.		
	This section is approximately 0.78 km in length. It is classified as a Regional road under the one network road	This section is approximately 1.87 km in length. It is classified as a Regional road under the one network road	This section is approximately 0.74 km in length. It is classified as a Regional (road under the one network road classification (ONRC).

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	classification (ONRC).	classification (ONRC).	
	This section is a two-way, multi-lane, divided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.	This section is a two-way, multi-lane, divided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.	This section is a two-way, multi-lane, divided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records <b>twenty-four</b> crashes between 2016 and 2020: zero fatal, zero serious, five minor and nineteen non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records <b>two hundred and ten</b> crashes between 2016 and 2020: zero fatal, eight serious, thirty-four minor and hundred and sixty-eight non-injury crashes. This resulted in eight Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records <b>fifty-four</b> crashes between 2016 and 2020: zero fatal, four serious, nine minor and forty-one non-injury crashes. This resulted in four Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of East Tamaki Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided-traversable</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> </ul>

Requirement	Comments		
	Section 1	Section 2	Section 3
	<ul style="list-style-type: none"> <li><b>Carriageway width:</b> Wide Lane (&gt;3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<p>Lane (&gt;3.5 m) and Very narrow shoulder (&lt;0.5 m)</p> <p><b>Roadside hazards (in both directions):</b> Severe</p>	<ul style="list-style-type: none"> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>	The adjacent land use is classified as Commercial big box using on-site information and geomaps. The IRR defines Commercial big box as <i>"Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 32,759 vehicles per day (vpd). This level of traffic volume is consistent with the	Average daily traffic (ADT) was determined from MegaMaps as 26,000 vehicles per day (vpd). This level of traffic volume is consistent with the	Average daily traffic (ADT) was determined from MegaMaps as 25,147 vehicles per day (vpd). This level of traffic volume is consistent with the

	risk for all road users were considered.	road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of East Tamaki Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide Lane (&gt;3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide Lane (&gt;3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using on-site information and geomaps. The IRR defines Commercial big box as " <i>Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present.</i> "	The adjacent land use is classified as Controlled Access using on-site information and geomaps. The IRR defines Controlled Access as " <i>Road with roadside development and controlled access, such as an urban state highway or arterial where there are few accesses to the road e.g., as a result of a service road. Some pedestrian and cyclist activity may also be present but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3,895 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 3,895 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 26/08/2021. Responses were	

Requirement	Comments	
	Section 4	Section 5
	received and considered for investigation. The local board was generally supportive of the speed limit changes	

Requirement	Comments	
	Section 6	Section 7
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	East Tamaki Road connects to East Tamaki Road and Accent Drive to the west and Craigavon Drive to the east. This road provides access to commercial and residential properties.	
	This section is approximately 0.19 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.40 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.	Repeat
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	WK NZTA's Crash Analysis System (CAS) records <b>three</b> crashes between 2016 and 2020: zero fatal, <b>zero</b> serious, <b>zero</b> minor and three non-injury crashes. This resulted in <b>zero</b> Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.

- Section 1
  - The Infrastructure Risk Rating Score is 2.01. For urban areas this corresponds to an IRR band of **Medium**.

- Section 2
  - The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.55. For urban areas this corresponds to an IRR band of **Medium-High**
- Section 4
  - The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**
- Section 5
  - The Infrastructure Risk Rating Score is 1.64. For urban areas this corresponds to an IRR band of **Low-Medium**
- Section 6
  - The Infrastructure Risk Rating Score is 2.36. For urban areas this corresponds to an IRR band of **Medium**
- Section 7
  - The Infrastructure Risk Rating Score is 2.42. For urban areas this corresponds to an IRR band of **Medium-High**

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

Section 1, 2, 3, 4, 5, 6 and 7: The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 50 km/h on East Tamaki Road between Huia Road and SH1 On/Off Ramp (section 1)
- 50 km/h on East Tamaki Road between SH1 On/Off Ramp and Preston Road (section 2)
- 50 km/h on East Tamaki Road between Preston Road and Springs Road (section 3)
- 50 km/h on East Tamaki Road between Springs Road and 'The Depot' Main Entrance (section 4)
- 50 km/h on East Tamaki Road between 'The Depot' Main Entrance and Accent Drive (section 5)
- 50 km/h on East Tamaki Road between Accent Drive and Paul Stevenson Place (section 6)
- 50 km/h on East Tamaki Road between Paul Stevenson Place and Craigavon Drive (section 7)

East Tamaki Road is a self-explaining road as the mean operating speeds is below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of East Tamaki Road were considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h were selected for East Tamaki Road sections 1, 2, 3, 4, 5, 6 and 7 due to a multitude of factors. These being the very narrow shoulder width, severe road-side hazards and low mean operating speed. All of these factors contribute to the road's 'Medium-High' IRR score on certain sections. The collective and personal risk of this road are classified as '**High**' and '**High**' respectively due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>2</sup>

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Crash history from WK NZTA's CAS database shows three hundred and two crashes in the last 5 years including zero fatal, fourteen serious, fifty minor, and two hundred thirty-eight non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on the full section of East Tamaki Road in Otara, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for East Tamaki Road is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Edward Jonkers Drive (Riverhead)**

The speed limit on Edward Jonkers Drive, Riverhead has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Edward Jonkers Drive connects to Lloyd Road to the west. This road provides access to residential properties.</p> <p>This section is approximately 0.87 km in length. It is classified as an Access Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Edward Jonkers Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Curved.</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> Low.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as a "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km.</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 145 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 08/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 31.67 km/h
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Lloyd Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.87
Annual Daily Traffic	145

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards	Low	0.4
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	10 to <20	1.1
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is **0.96**. For Rural areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h Edward Jonkers Drive (Full length).*

Edward Jonkers Drive is a self-explaining road as the mean operating speeds (31.67 km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Edward Jonkers Drive was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Edward Jonkers Drive due to multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, low roadside hazards and low mean operating speeds. This proposed speed was also chosen in order to ensure consistency with the surrounding network.

After considering all the above factors, the existing speed limit of 80 km/h on Edward Jonkers Drive in Riverhead, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Favona Road (Favona)

The speed limit on Favona Road, Favona has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Favona Road connects to Walmsley Road and Robertson Road to the west, Norana Avenue to the north, James Fletcher Drive and Savill Drive to the east and Dewhurst Place, Harania Avenue and Forbes Road to the south. This road provides access to residential properties and commercial centres.</p> <p>This section is approximately 1.69 km in length. It is classified as a Regional road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records sixty-five crashes between 2016 and 2020: zero fatal, three serious, eleven minor and fifty-one non-injury crashes. This resulted in three Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Favona Road is identified as one of the top 10% DSI saving network sections for New Zealand.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Favona Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Wide Lane (&gt;3.5 m) and Narrow shoulder (0.5 to 1.0 m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated</i>

Requirement	Comments
	<i>by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km.</li> <li><b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 24,390 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 13/10/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This section has a mean operating speed of 50 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Walmsley Road:</b> 60 km/h (proposed 50 km/h).</li> <li><b>Robertson Road:</b> 50 km/h.</li> <li><b>James Fletcher Drive:</b> 60 km/h (proposed 50 km/h).</li> <li><b>Savill Drive:</b> 50 km/h.</li> <li><b>Harania Ave:</b> 50 km/h.</li> <li><b>Forbes Road:</b> 50 km/h.</li> <li><b>Dewhurst Avenue:</b> 50 km/h.</li> </ul>

**Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	14
DSI crashes during the period	3
Corridor Length (km)	1.69
Annual Daily Traffic	24,390

- The Collective Risk score is **0.36**. For urban areas this corresponds to a Collective Risk band of **High**.
- The Personal Risk score is **4.00**. For urban areas this corresponds to a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Wide lane, Narrow shoulder	1.18
Roadside hazards	High	2.28
Adjacent land use	Urban residential	3.0
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.30
Traffic volume	>12000	3.0

The Infrastructure Risk Rating Score is **2.33**. For Urban areas this corresponds to an IRR band of Medium.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 50 km/h Favona Road (Full Length).*

Favona Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Favona Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Favona Road due to multitude of factors. These being narrow shoulder width, high roadside hazards and urban residential land use. This proposed speed was also chosen in order to ensure consistency with the surrounding network.

Due to adverse crash history on the road. The collective and personal risk of this road are classified as **'High'** and **'Low'** respectively due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>1</sup> Favona Road is identified as one of the top 10% DSI saving network sections for New Zealand.

Crash history from WK NZTA's CAS database shows sixty-five crashes in the last 5 years including zero fatal, three serious, eleven minor, and fifty-one non-injury crashes.

After considering all the above factors, the existing speed limit of 60 km/h on Favona Road in Favona, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Fitzroy Street (Ponsonby)

The speed limit on Fitzroy Street, Ponsonby has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fitzroy Street connects Douglas Street to the north, Brown Street to the east and west and Richmond Road to the south. This road provides access to residential properties.</p> <p>This section is approximately 0.61 km in length. It is classified as an Access Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Fitzroy Street were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km.</li> <li><b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Douglas Street:</b> 50 km/h (proposed 30 km/h).</li> <li><b>Richmond Road:</b> 50 km/h</li> <li><b>Brown Street:</b> 50 km/h (proposed 30 km/h).</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.16
Annual Daily Traffic	156

- The Collective Risk score is **0.00**. For urban areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.00**. For urban areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards	High	2.28
Adjacent land use	Urban residential	3.0
Intersection density (per km)	>10	5.00
Access density (per km)	>20	1.30
Traffic volume	<1000	1.00

The Infrastructure Risk Rating Score is **2.46**. For Urban areas this corresponds to an IRR band of Medium-High.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30 km/h Fitzroy Street (Full Length)*

Fitzroy Street is a self-explaining road as the mean operating speeds (20 km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Fitzroy Street was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30 km/h was selected for this street due to multitude of factors. These being medium lane width, very narrow shoulder width, straight nature of road, high roadside hazards and low mean operating speeds (<30 km/h). All of these factors contribute to the road's '**Medium-High**' IRR score, making it a high-risk road.

After considering all the above factors, the existing speed limit of 50 km/h on Fitzroy Street in Waitemata, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit for Fitzroy Street is 30 km/h which is lower than the speed limit recommended by the Speed Management Guide (40 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (20 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Flintridge Drive (Flat Bush)

The speed limit on Flintridge Drive, Flat Bush (between 34m and 57m north of Ormiston Road) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Flintridge Drive connects to Flintridge Drive to the north and south. This road provides access to residential properties.
	This section is approximately 0.02 km in length. It is classified as an Access Road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadides; and	The following characteristics for each section of Flintridge Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> &lt;1 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 234 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 26/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of has a mean operating speed of 20km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Flintridge Drive (south):</b> Variable Speed Zone – 40km/h &amp; 60km/h</li> <li>• <b>Flintridge Drive (north):</b> 50 km/h</li> </ul>

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.02
Annual Daily Traffic	234

- The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**

#### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3.00
Intersection density (per km)	<1	1.00
Access density (per km)	<1	1.00
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is **1.45**. For urban areas this corresponds to an IRR band of **Low**.

#### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 50 km/h for this length of Flintridge Drive, Flat Bush between 34m and 57m north of Ormiston Road.*

Flintridge Drive is a self-explaining road as the mean operating speeds (20 km/h) are below the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Flintridge Drive was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for this section of Flintridge Drive due to a multitude of factors. These being the narrow lane and very narrow shoulder width, and low mean operating speed. This proposed speed was also chosen in order to ensure consistency with the surrounding network.

After considering all of the above factors, the existing speed limit of 60 km/h on Flintridge Drive in Flat Bush, is not considered to be a safe and appropriate speed limit for this road.

The recommended safe and appropriate speed limit for Flintridge Drive is 50 km/h which is higher than the Speed Management Guide recommendation (40 km/h) but are considered appropriate as it align with the proposed speed limit along Ormiston Road and the rest of Flintridge Drive.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Goldwater Drive (Silverdale)

The speed limit on Goldwater Drive, Silverdale has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Goldwater Drive connects to Small Road to the west and East Coast Road to the east. This road provides access to residential properties and is approximately 0.38km in length.</p> <p>Goldwater Drive is classified as an Access road under the one network road classification (ONRC). Goldwater Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Goldwater Drive were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following characteristics for Goldwater Drive were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 61 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	<p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban residential area.</p> <p>Potential changes to the speed limit in this area will be sent to the Local Board via email in November. Responses will be considered for investigation.</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Goldwater Drive has a mean operating speed in the range of <30km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>East Coast Road: 60km/h</li> <li>Small Road: 50 km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

The following characteristics for Goldwater Drive were estimated using MegaMaps tool :

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

Goldwater Drive is a self-explaining road as the mean operating speeds is below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Goldwater Drive was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

The proposed safe and appropriate speed limit for Goldwater Drive is 30 km/h which is lower than the speed limit recommended by the Speed Management Guide (40 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed supports the reduction. The proposed 30 km/h speed will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Grand Drive (Orewa)**

The speed limit on Grand Drive, Orewa (between 410m west of Flavell Drive and State Highway 1) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Grand Drive connects to the Northern motorway to the west. This road provides access to residential properties.
	This section is approximately 0.46 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).
	Grand Drive is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020</p> <p>: one fatal, zero serious, one minor crash and zero non-injury. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Grand Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Wide shoulder (&gt;1.0 to 2.0 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Controlled Access using MegaMaps tool. The IRR defines Controlled Access as a "Road with roadside development and controlled access, such as an urban state highway or arterial where there are few accesses to the road e.g. as a result of a service road. Some pedestrian and cyclist activity may also be present but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> &lt;1 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 6,000 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed	This section of Grand Drive has a mean operating speed of 56.2 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Northern Motorway:</b> 100 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	2
DSI crashes during the period	1
Corridor Length (km)	0.46
Annual Daily Traffic	6,000

- The Collective Risk score is **0.43**. For Urban areas this corresponds to a Collective Risk band of **High**.
- The Personal Risk score is **19.98**. For Urban areas this corresponds a Personal Risk band of **High**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Medium lane, Wide shoulder	1.0
Roadside hazards	High	2.28
Adjacent land use	Controlled access	2.0
Intersection density (per km)	2 to <3	1.3
Access density (per km)	<1	1.0
Traffic volume	6000 to <12000	2.2

The Infrastructure Risk Rating Score is **1.75**. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation = 60 km/h for the Grand Drive between 410m west of Flavell Drive and State Highway 1.

Grand Drive is a self-explaining road as the mean operating speeds (56 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Grand Drive was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Grand Drive due to a multitude of factors. These being the medium lane and wide shoulder width, straight nature of the road, high road-side hazards. Due to adverse crash history on the road. The collective and personal risk of this road are classified as 'High' and 'High' respectively due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>1</sup>

Crash history from WK NZTA's CAS database shows two crashes in the last 5 years including one fatal and one minor crash.

After considering all of the above factors, the existing speed limit of 70 km/h on Grand Drive Orewa, is not considered to be a safe and appropriate speed limit for this road.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Great South Road (Manukau)**

Great South Road, Manukau, is divided into three sections as follows: <sup>1</sup>

1. Section 1: Great South Road between Reagan Road and Te Irirangi Drive.
2. Section 2: Great South Road between Te Irirangi Drive and Lakewood Ct.
3. Section 3: Great South Road between Lakewood Ct and Orams Road.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Great South Road, Manukau has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Great South Road connects to Reagan Road, Great South Road and Puhinui Road to the north, Ryan Place, Cavendish Drive, Ronwood Avenue, Manukau Station Road, Kerrs Road and Superclinic Road to the west, Te Irirangi Drive, Bakerfield Place, Gladding Place, Redoubt Road, Lakewood Court, Pacific Events Centre Drive, Rata Vine Drive, Totara Meadows Court and Costar Place to the east and Orams Road, Browns Road and Great South Road to the south. This road provides access to commercial and residential properties.		
	This section is approximately 0.69 km in length. It is classified as an Arterial road under the one network road classification (ONRC).	This section is approximately 0.95 km in length. It is classified as an Arterial road under the one network road classification (ONRC).	This section is approximately 1.81 km in length. It is classified as an Arterial road under the one network road classification (ONRC).

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	This section is a two-way, four-lane, divided road. There are pedestrian amenities and cyclist amenities along this section. There is no on-street parking.	This section is a two-way, four-lane, divided road. There are pedestrian amenities and cyclist amenities along this section. There is no on-street parking.	This section is a two-way, four-lane, divided road. There are pedestrian amenities, cyclist amenities and on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records <b>seventy-two</b> crashes between 2016 and 2020: zero fatal, six serious, nine minor and fifty-seven non-injury crashes. This resulted in six Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records <b>thirty-six</b> crashes between 2016 and 2020: one fatal, five serious, fourteen minor and hundred and sixteen non-injury crashes. This resulted in six Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records <b>hundred and thirty-nine</b> crashes between 2016 and 2020: one fatal, five serious, twenty-nine minor and hundred and four non-injury crashes. This resulted in six Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Great South Road is identified as one of the top 10% DSI saving network sections for New Zealand.		
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Great South Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both</b></li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided-traversable</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both</b></li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both</b></li> </ul>

Requirement	Comments		
	Section 1	Section 2	Section 3
	<b>directions):</b> High	<b>directions):</b> High	<b>directions):</b> High
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using on-site information and geomaps. The IRR defines Commercial big box as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."	The adjacent land use is classified as Commercial big box using on-site information and geomaps. The IRR defines Commercial big box as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 18,151 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 27,061 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 23,087 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.

Requirement	Comments

(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
Current speed limit	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This section has a mean operating speed of 40.08 km/h.	This section has a mean operating speed of 34.03 km/h.	This section has a mean operating speed of 47.2 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Great South Road (north): 50 km/h</li> <li>Great South Road (south): 50 km/h</li> <li>Reagan Road: 50 km/h</li> <li>Puhinui Road: 50 km/h</li> <li>Ryan Place: 50 km/h</li> <li>Cavendish Drive: 60 km/h (proposed 50 km/h)</li> <li>Ronwood Avenue: 50 km/h</li> <li>Manukau Station Road: 60 km/h (proposed 50 km/h)</li> <li>Kerrs Road: 60 km/h (proposed 50 km/h)</li> <li>Superclinic Road: 60 km/h</li> <li>Te Irirangi Drive: 60 km/h (proposed 50 km/h)</li> <li>Bakerfield Place: 50 km/h</li> <li>Gladding Place: 50 km/h</li> <li>Redoubt Road: 50 km/h</li> <li>Lakewood Court: 50 km/h</li> <li>Pacific Events Centre Drive: 50 km/h</li> <li>Rata Vine Drive: 50 km/h</li> <li>Totara Meadows Court: 50 km/h</li> <li>Costar Place: 50 km/h</li> <li>Orams Road: 50 km/h</li> <li>Browns Road: 50 km/h</li> </ul>		

**Step 2: Determine the road safety metrics**

	Data

Required Information for safety metrics calculations	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	15	20	35
DSI crashes during the period	6	6	6
Corridor Length (km)	0.69	0.95	1.81
Annual Daily Traffic	18,151	27,061	23,087

- Section 1
  - The Collective Risk score is 1.75. For urban areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 26.40. For urban areas this corresponds to a Personal Risk band of **High**
- Section 2
  - The Collective Risk score is 1.27. For urban areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 12.83. For urban areas this corresponds to a Personal Risk band of **High**
- Section 3
  - The Collective Risk score is 0.66. For urban areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 7.89. For urban areas this corresponds to a Personal Risk band of **Medium-High**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2		Section 3	
	Category	Risk Score	Category	Risk Score	Category	Risk Score
Road stereotype	Multi-lane undivided	3.40	Divided-traversable	3.00	Multi-lane undivided	3.40
Road alignment	Straight	1.00	Curved	1.80	Curved	1.80
Carriageway width	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28	High	2.28	High	2.28
Adjacent land use	Commercial big box	4.00	Commercial big box	4.00	Urban residential	3.00
Intersection density (per km)	3 to <5	1.50	5 to <10	2.60	3 to <5	1.50

Access density (per km)	>20	1.30	10 to <20	1.10	>20	1.30
Traffic volume (vpd)	>12000	3.00	>12000	3.00	>12000	3.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.51. For urban areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.88. For urban areas this corresponds to an IRR band of **High**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.64. For urban areas this corresponds to an IRR band of **Medium-High**

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 50 km/h on Great South Road between Reagan Road and Te Irirangi Drive (section 1)
- 50 km/h on Great South Road between Te Irirangi Drive and Lakewood Ct (section 2)
- 50 km/h on Great South Road between Lakewood Ct and Orams Road (section 3)

Great South Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Great South Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Great South Road due to a multitude of factors. These being the very narrow shoulder width, high road-side hazards and low mean operating speed. All of these factors contribute to the road's 'High' IRR score. The collective and personal risk of this road are classified as '**High**' and '**High**' respectively due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>2</sup>

Crash history from WK NZTA's CAS database shows three hundred and forty-seven crashes in the last 5 years including two fatal, sixteen serious, fifty-two minor, and two hundred and seventy-seven non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Great South Road in Manukau, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

---

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Greenwood Road (Mangere)

The speed limit on Greenwood Road, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Greenwood Road connects to Creamery Road to the north, Island Road to the west and Ascot Road to the south. This road provides access to residential properties.
	This section is approximately 1.35 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are pedestrian amenities for some part of the road and majority of the road has no pedestrian amenities. There is on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: zero fatal, one serious, one minor and one non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Greenwood Road is identified as one of the top 10% DSI saving network sections for New Zealand.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Greenwood Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Curved.</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Wide shoulder (1.0 to 2.0 m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>

Requirement	Comments
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km.</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2,200 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 13/10/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This section has a mean operating speed of 56 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Creamery Road:</b> 60 km/h (proposed 50 km/h).</li> <li><b>Ascot Road:</b> 50 km/h.</li> <li><b>Island Road:</b> 100 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	2
DSI crashes during the period	1
Corridor Length (km)	1.35

Annual Daily Traffic	2.200
----------------------	-------

- The Collective Risk score is **0.15**. For urban areas this corresponds to a Collective Risk band of **Medium-High**.
- The Personal Risk score is **18.31**. For urban areas this corresponds to a Personal Risk band of **High**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.8
Carriageway width	Medium lane, Wide shoulder	1.0
Roadside hazards	High	2.28
Adjacent land use	Urban residential	3.00
Intersection density (per km)	1 to <2	1.20
Access density (per km)	5 to <10	1.06
Traffic volume	1000 to <6000	1.40

The Infrastructure Risk Rating Score is **1.98**. For Urban areas this corresponds to an IRR band of Low-Medium.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 50 km/h Greenwood Road (Full Length).*

Greenwood Road is a road which requires challenging conversations and behavioural change from road users in order to introduce a lower yet necessary speed limit. Engineering down/up of Greenwood Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Greenwood Road due to multitude of factors. These being curved nature of the road, high roadside hazards and urban residential land use. This proposed speed was also chosen in order to ensure consistency with the surrounding network.

Due to adverse crash history on the road. The collective and personal risk of this road are classified as **'Medium-High'** and **'High'** respectively due to the number of Death and Serious Injury (DSI) crashes,

making it a high-risk road.<sup>1</sup> Greenwood Road is identified as one of the top 10% DSI saving network sections for New Zealand.

Crash history from WK NZTA's CAS database shows three crashes in the last 5 years including zero fatal, one serious, one minor, and one non-injury crashes.

After considering all the above factors, the existing speed limit of 60 km/h on Greenwood Road in Mangere, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

As previously mentioned, the cost of engineering down Greenwood Road would substantially outweigh any benefits. Therefore, no physical interventions are proposed for this road. Given that the existing mean operating speed is 64 km/h and higher than the recommended speed limit of 50 km/h, behavioural changes will be required of road users. Informative consultation will be vital to ensuring that the reasoning behind lowering the speed limit is conveyed, as well as ensuring that the new speed limit is adhered to and that the buy-in of local users is achieved.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Greville Road (Pinehill)

Greville Road, Pinehill (between 150m southwest of Hauraki Crescent and Albany Expressway), is divided into two sections as outlined below:

1. Section 1: Greville Road between 150m southwest of Hauraki Crescent and Hugh Green Drive
2. Section 2: Greville Road between Hugh Green Drive and Albany Expressway

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Greville Road, Pinehill has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Section 1	Section 2
	Greville Road connects to Hugh Green Drive to the south. This road provides access to residential properties and is approximately 0.28 km in length.	Greville Road connects to Northern Motorway and Albany Expressway to the north. This road provides access to residential properties and is approximately 0.81 km in length.
	Greville Road is classified as an Arterial Road under the one network road classification (ONRC). Greville Road is a two-way, divided-non-traversable road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.	Greville Road is classified as an Arterial Road under the one network road classification (ONRC). Greville Road is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records seven crashes between 2016 and 2020: zero fatal, zero serious, zero minor and seven non-injury crashes and therefore no Death and Serious Injury (DSI). This	WK NZTA's Crash Analysis System (CAS) records ninety-nine crashes between 2016 and 2020: zero fatal, one serious, eleven minor and eighty-seven non-injury crashes. This resulted in one Death and Serious Injury

Requirement	Comments	
	data includes crashes for all road users and therefore crash risk for all road users were considered.	(DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.  Greville Road is identified as one of the top 10% DSI saving network sections for New Zealand.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Greville Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided-non-traversable</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Controlled Access using MegaMaps tool. The IRR defines Controlled Access as a <i>Road with roadside development and controlled access, such as an urban state highway or arterial where there are few accesses to the road e.g. as a result of a service road. Some pedestrian and cyclist activity may also be present but with few crossing movements.</i>	The adjacent land use is classified as Controlled Access using MegaMaps tool. The IRR defines Controlled Access as a <i>Road with roadside development and controlled access, such as an urban state highway or arterial where there are few accesses to the road e.g. as a result of a service road. Some pedestrian and cyclist activity may also be present but with few crossing movements.</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 20,768 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 20,768 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.	

Requirement	Comments
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 05/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to		
Current speed limit	The existing speed limit is 80 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Greville Road has a mean operating speed of 47.7 km/h.	This section of Greville Road has a mean operating speed in the range of 46 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Hugh Green Drive:</b> 50 km/h</li> <li><b>Albany Expressway:</b> 80 km/h</li> </ul>	

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	12
DSI crashes during the period	0	1
Corridor Length (km)	0.28	0.81
Annual Daily Traffic	20,768	20,768

#### Section 1:

- o The Collective Risk score is **0.0**. For Urban areas this corresponds to a Collective Risk band of **Low**.
- o The Personal Risk score is **0.0**. For Urban areas this corresponds to a Personal Risk band of **Low**.

#### Section 2:

- o The Collective Risk score is **0.24**. For Urban areas this corresponds to a Collective Risk band of **High**.
- o The Personal Risk score is **3.26**. For Urban areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Divided-non-traversable	1.0	Multi-lane undivided	3.4
Road alignment	Straight	1.0	Straight	1.0
Carriageway width	Medium lane, Narrow shoulder	1.45	Medium lane, Very narrow shoulder	1.79
Roadside hazards	High	2.28	High	2.28
Adjacent land use	Controlled access	2.0	Controlled access	2.0
Intersection density (per km)	3 to <5	1.5	2 to <3	1.3
Access density (per km)	10 to <20	1.10	1 to <2	1.01
Traffic volume	>12000	3.0	>12000	3.0

#### Section 1:

- o The Infrastructure Risk Rating Score is **1.60**. For Urban areas this corresponds to an IRR band of **Low-Medium**.

#### Section 2:

- o The Infrastructure Risk Rating Score is **2.02**. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

For section 1 & 2 of Greville Road the safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation:*

- 50 km/h between 150m southwest of Hauraki Crescent and Hugh Green Drive (Section 1)
- 50 km/h between Hugh Green Drive and Albany Expressway (Section 2)

Greville Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Greville Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for this road due to the land use, medium lane width, narrow/very narrow shoulder width, straight nature of the road and high road side hazards.

Crash history from WK NZTA's CAS database shows ninety-nine crashes in the last 5 years including zero fatal, one serious, eleven minor, and eighty-seven non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on Greville Road in Pinehill, is not considered to be a safe and appropriate speed limit for this section of road.

Given that the existing mean operating speed of Greville Road section 1 is 47.7 km/h and section 2 is 46 km/h are close to the recommended speed limit of 50 km/h. In addition, Greville Road is urbanised and with new residential development along this section of the road. Proposed 50 km/h is a safe and appropriate speed limit for this section of road.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Haigh Access Lane (Redvale)**

The speed limit on Haigh Access Lane, Redvale has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Haigh Access Lane connects to Haigh Access Road south. This road provides access to residential properties.</p> <p>This section is approximately 0.2 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Haigh Access Lane were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote Rural using MegaMaps tool. The IRR defines Remote Rural as <i>Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry.</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 14 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Haigh Access Lane has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Haigh Access Lane:</b> 80 km/h</li> <li>• <b>East Coast Road:</b> 80 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.2
Annual Daily Traffic	14

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Remote rural	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	>20	1.3
Traffic volume	<1000	1.0

- The Infrastructure Risk Rating Score is **1.60**. For Rural areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Haigh Access Lane.*

Haigh Access Lane is a self-explaining road as the mean operating speeds are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Haigh Access Lane was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Haigh Access Lane due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.

After considering all of the above factors, the existing speed limit of 80 km/h on Haigh Access Lane in Redvale, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Haigh Access Lane is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Haigh Access Road (Redvale)

The speed limit on Haigh Access Road, Redvale has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Haigh Access Road connects to Haigh Access Lane to the north and East Coast Road to the south. This road provides access to residential properties.</p> <p>This section is approximately 1.21 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Haigh Access Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote Rural using MegaMaps tool. The IRR defines Remote Rural as <i>Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry.</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 476 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Haigh Access Road has a mean operating speed of 36.98 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Haigh Access Lane:</b> 80 km/h</li> <li><b>East Coast Road:</b> 80 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.21
Annual Daily Traffic	476

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Remote rural	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	>20	1.3
Traffic volume	<1000	1.0

- The Infrastructure Risk Rating Score is **1.60**. For Rural areas this corresponds to an IRR band of **Medium-High**.

#### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

#### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Haigh Access Road.*

Haigh Access Road is a self-explaining road as the mean operating speeds (36.98 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Haigh Access Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Haigh Access Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.

After considering all of the above factors, the existing speed limit of 80 km/h on Haigh Access Road in Redvale, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Haigh Access Road is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Harris Road (East Tamaki)**

The speed limit on Harris Road, East Tamaki has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Harris Road connects to Ti Rakau Drive to the north, Springs Road, Smales Road and Allens Road to the south. This road provides access to commercial properties.</p> <p>This section is approximately 1.84 km in length. It is classified as a regional road under the one network road classification (ONRC).</p> <p>This section is a two-way, four-lane, undivided road. There are pedestrian amenities along this section. There are no cyclist amenities and on-street parking along this section.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records ninety-two crashes between 2016 and 2020: zero fatal, one serious, eighteen minor and seventy-three non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Harris Road is identified as one of the top 10% DSI saving network sections for New Zealand.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Harris Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Multi-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using on-site information and geomaps. The IRR defines Commercial big box

Requirement	Comments
	as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 24,612 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 26/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This section has a mean operating speed of 52.9 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Allens Road:</b> 50 km/h</li> <li>• <b>Springs Road:</b> 50 km/h</li> <li>• <b>Smales Road:</b> 60 km/h (proposed 50 km/h)</li> <li>• <b>Crooks Road:</b> 50 km/h</li> <li>• <b>Neales Road:</b> 50 km/h</li> <li>• <b>Greenmount Drive:</b> 50 km/h</li> <li>• <b>Cryers Road:</b> 50 km/h</li> <li>• <b>Nandina Avenue:</b> 50 km/h</li> <li>• <b>Ti Rakau Drive:</b> 60 km/h (proposed 50 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5

Total injury crashes during period	19
DSI crashes during the period	1
Corridor Length (km)	1.84
Annual Daily Traffic	24,612

- The Collective Risk score is 0.11. For urban areas this corresponds to a Collective Risk band of **Medium-High**.
- The Personal Risk score is 1.21. For urban areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Multi-lane undivided	3.40
Road alignment	Straight	1.00
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Commercial big box	4.00
Intersection density (per km)	3 to <5	1.50
Access density (per km)	>20	1.30
Traffic volume (vpd)	>12000	3.00

The Infrastructure Risk Rating Score is 2.31. For rural areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation = 50 km/h for the full length of Harris Road.

Harris Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Harris Road

was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Harris Road due to a multitude of factors. These being the very narrow shoulder width, commercial big box land use and due to adverse crash history on the road. The collective and personal risk of this road are classified as 'Medium-High' and 'Low' respectively due to the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>1</sup>

Crash history from WK NZTA's CAS database shows ninety-two crashes in the last 5 years including zero fatal, one serious, eighteen minor, and seventy-three non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Harris Road in East Tamaki, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## **Speed Limit Review – Helianthus Avenue (Ormiston)**

The speed limit on Helianthus Avenue, Ormiston (between 45m south of Ormiston Road and 60m south of Ormiston Road) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Helianthus Avenue connects to Helianthus Avenue to the north/south. This road provides access to residential properties.</p> <p>This section is approximately 0.02 km in length. It is classified as an Access Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crashes between 2016 and 2020: zero serious, zero minor and one non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Helianthus Avenue were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &gt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 26/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 24.47 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Helianthus Avenue (north):</b> Variable Speed Zone – 40km/h &amp; 60km/h</li> <li>• <b>Helianthus Avenue (south):</b> 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.02
Annual Daily Traffic	50

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**

- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3.00
Intersection density (per km)	>10	5.00
Access density (per km)	>20	1.30
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.27. For rural areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 50 km/h for the Helianthus Avenue between 45m and 60m South of Ormiston Road.*

Helianthus Avenue for this section is a self-explaining road as the mean operating speeds (25 km/h) are below the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Helianthus Avenue was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Helianthus Avenue due to a multitude of factors. These being the narrow lane and very narrow shoulder width and low mean operating speed (<50 km/h).

Crash history from NZTA's CAS database shows one crash in the last 5 years including zero fatal, zero serious, zero minor, and one non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Helianthus Avenue in Ormiston, is not considered to be a safe and appropriate speed limit for this road.

The recommended safe and appropriate speed limit for Helianthus Avenue is 50 km/h which is higher than the Speed Management Guide recommendation (40 km/h) but are considered appropriate as it align with the proposed speed limit along Ormiston Road and the rest of Helianthus Avenue.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Hibiscus Coast Highway (Waiwera)**

Hibiscus Coast Highway, Waiwera, is divided into six sections as outlined below:

1. Section 1: Hibiscus Coast Highway between Weranui Road and 624m north of Otanerua Road
2. Section 2: Hibiscus Coast Highway between 624m north of Otanerua Road and 450m north of Puriri Ave
3. Section 3: Hibiscus Coast Highway (interchange) between Dairy Flat Highway and 143m west of Jack Hawken Lane
4. Section 4: Hibiscus Coast Highway between 143m west of Jack Hawken Lane and 80 m west of Brian Smith Drive
5. Section 5: Hibiscus Coast Highway between 80 m west of Brian Smith Drive and 100 m north of Whangapararoa Road.
6. Section 6: Hibiscus Coast Highway between 100 m north of Whangapararoa Road and 86m south of Moffat Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Hibiscus Coast Highway, Waiwera has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>	
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Section 1	Section 2
	Hibiscus Coast Highway does not connect to any roads along this section of road. This road provides access to residential properties.	Hibiscus Coast Highway connects to Otanerua Road, Hammond Road and Hillcrest Road to the east and Ocean View Road to the west. This road provides access to residential properties.

Requirement	Comments	
	This section is approximately 2.78 km in length. Hibiscus Coast Highway is classified as an Arterial Road under the one network road classification (ONRC).	This section is approximately 1.89 km in length. Hibiscus Coast Highway is classified as an Arterial Road under the one network road classification (ONRC).
	Hibiscus Coast Highway is a two-way, two-lane, undivided road. There is no pedestrian or cyclists' amenities along this road and there is no on-street parking along this section.	Hibiscus Coast Highway is a two-way, two-lane, undivided road. There is no pedestrian or cyclists' amenities along this road and there is no on-street parking along this section.
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records forty-one crashes between 2016 and 2020</p> <p>: one fatal, three serious, fifteen minor and twenty-two non-injury crashes. This resulted in four Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Yes Hibiscus Coast Highway is identified as one of the top 10% DSI saving network sections for New Zealand.</p>	<p>WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020</p> <p>: zero fatal, zero serious, one minor and three non-injury crashes and therefore no Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Yes Hibiscus Coast Highway is identified as one of the top 10% DSI saving network sections for New Zealand.</p>
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Hibiscus Coast Highway were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Wide shoulder (&gt;1.0 to 2.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as: <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>	The adjacent land use is classified as Controlled Access using MegaMaps tool. The IRR defines Urban Residential as: <i>Road with roadside development and controlled access, such as an urban state highway or arterial where there are few accesses to the road e.g. as a result of a service road. Some pedestrian and cyclist activity may also be present but with few crossing movements.</i>
(g) the number of	From MegaMaps tool/ a combination of site drive-over footage and geomaps information.	

Requirement	Comments	
intersections and property accessways; and	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 5,554 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 9,313 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

Requirement	Comments	
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul>	Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Section 3	Section 4
	Hibiscus Coast Highway (interchange) connects to Dairy Flat Highway to the west. This road provides access to residential properties.	Hibiscus Coast Highway connects to Jack Hawken Lane to the north and Painton Road to the south. This road provides access to residential properties.
	This section is approximately 0.27 km in length. Hibiscus Coast Highway (interchange) is classified as a Arterial	This section is approximately 0.64 km in length. Hibiscus Coast Highway is classified as a Primary Collector Road

Requirement		Comments
	road under the one network road classification (ONRC).	under the one network road classification (ONRC).
	Hibiscus Coast Highway (interchange) is a two-way, two-lane, undivided road. There is no pedestrian or cyclists' amenities along this road and there is no on-street parking along this section.	Hibiscus Coast Highway is a two-way, two-lane, undivided road. There is no pedestrian or cyclists' amenities along this road and there is no on-street parking along this section.
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records twenty-three crashes between 2016 and 2020</p> <p>: zero fatal, zero serious, two minor and twenty-one non-injury crashes and therefore no Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>	<p>WK NZTA's Crash Analysis System (CAS) records twenty-three crashes between 2016 and 2020</p> <p>: zero fatal, one serious, eight minor and fourteen non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and road sides; and	<p>The following characteristics for Hibiscus Coast Highway were determined using MegaMaps tool/ a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-Lane , undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Controlled Access using MegaMaps tool. The IRR defines Controlled Access as: <i>Road with roadside development and controlled access, such as an urban state highway or arterial where there are few accesses to the road e.g. as a result of a service road. Some pedestrian and cyclist activity may also be present but with few crossing movements.</i>	The adjacent land use is classified as Controlled Access using MegaMaps tool. The IRR defines Controlled Access as: <i>Road with roadside development and controlled access, such as an urban state highway or arterial where there are few accesses to the road e.g. as a result of a service road. Some pedestrian and cyclist activity may also be present but with few crossing movements.</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool/ a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &lt;1 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 10,001	Average daily traffic (ADT) was determined from MegaMaps as 10,001

Requirement		Comments
	vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

Requirement	Comments	
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Section 5	Section 6
	Hibiscus Coast Highway connects to Brian Smith Drive, Silverdale Street, Wainui Road to the north, East Coast Road, Tavern Road, Titan Place to the south, Millwater Parkway to the west and Whangaparaoa Road to the east. This road provides access to residential properties.	Hibiscus Coast Highway connects to Panorama Bore Access, Taikura Avenue and Greenview Lane to the east, Totara Views Drive, Jelas Drive and Veronica Close to the west. This road provides access to residential properties.
	This is approximately 1.52 km in length. Hibiscus Coast Highway is classified as an Arterial Road under the one network road classification (ONRC).	This is approximately 0.92 km in length. Hibiscus Coast Highway is classified as an Arterial Road under the one network road classification (ONRC).
	Hibiscus Coast Highway is a two-way, Divided traversable road. There is no pedestrian or cyclists' amenities along this road and there is no on-street parking along this section.	Hibiscus Coast Highway is a two-way, multi-lane undivided road. There is no pedestrian or cyclists' amenities along this road and there is no on-street parking along this section.

Requirement	Comments	
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records seventy-three crashes between 2016 and 2020</p> <p>: one serious, eighteen minor and fifty-four non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Yes Hibiscus Coast Highway is identified as one of the top 10% DSI saving network sections for New Zealand.</p>	<p>WK NZTA's Crash Analysis System (CAS) records nine crashes between 2016 and 2020</p> <p>: three minor and six non-injury crashes and therefore no Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Hibiscus Coast Highway were determined using a combination of site drive-over footage, on-site information and geomaps information.</p>	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided-traversable</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> </ul> <p><b>Roadside hazards (in both directions):</b> Moderate</p>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Wide shoulder (&gt;1.0 to 2.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	<p>The adjacent land use is classified as Controlled Access using MegaMaps tool. The IRR defines Controlled Access as: <i>Road with roadside development and controlled access, such as an urban state highway or arterial where there are few accesses to the road e.g. as a result of a service road. Some pedestrian and cyclist activity may also be present but with few crossing movements.</i></p>	<p>The adjacent land use is classified as Controlled Access using MegaMaps tool. Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Tavern Road:</b> 60 km/h</li> <li>• <b>Silverdale Street:</b> 50 km/h</li> <li>• <b>Wainui Road:</b> 50 km/h</li> <li>• <b>Titan place:</b> 50 km/h</li> <li>• <b>Whangaparaoa Road:</b> 50 km/h</li> <li>• <b>Millwater Parkway:</b> 50 km/h</li> <li>• <b>Panorama Bore Access:</b> 50 km/h</li> <li>• <b>Totara Views Drive:</b> 50 km/h</li> <li>• <b>Jelas Road:</b> 50 km/h</li> <li>• <b>Taikura Avenue:</b> 50 km/h</li> <li>• <b>Greenview Lane:</b> 50 km/h</li> <li>• <b>Veronica Close:</b> 50 km/h</li> <li>• <b>Jelas Road:</b> 50 km/h</li> </ul>	

**Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	19	1
DSI crashes during the period	4	0
Corridor Length (km)	2.78	1.89
Annual Daily Traffic	5,554	9,313

Required Information for safety metrics calculations	Section 3	Section 4
Crash Analysis Period (years)	5	5
Total injury crashes during period	2	9
DSI crashes during the period	0	1
Corridor Length (km)	0.27	0.64
Annual Daily Traffic	10,001	10,001

Required Information for safety metrics calculations	Section 5	Section 6
Crash Analysis Period (years)	5	5
Total injury crashes during period	19	3
DSI crashes during the period	1	0
Corridor Length (km)	1.52	0.92
Annual Daily Traffic	18,139	10,001

Section 1:

- The Collective Risk score is **0.28** For Rural areas this corresponds to a Collective Risk band of **High**.
- The Personal Risk score is **14.19**. For Rural areas this corresponds to a Personal Risk band of **High**.

Section 2:

- The Collective Risk score is **0.0**. For Urban areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Urban areas this corresponds to a Personal Risk band of **Low**.

Section 3:

- The Collective Risk score is **0.13**. For Urban areas this corresponds to a Collective Risk band of **Medium-High**.
- The Personal Risk score is **1.98**. For Urban areas this corresponds to a Personal Risk band of **Low**.

Section 4:

- The Collective Risk score is **0.31**. For Urban areas this corresponds to a Collective Risk band of **High**.
- The Personal Risk score is **8.53**. For Urban areas this corresponds to a Personal Risk band of **Medium-High**.

Section 5:

- o The Collective Risk score is **0.0**. For Urban areas this corresponds to a Collective Risk band of **Low**.
- o The Personal Risk score is **1.0**. For Urban areas this corresponds to a Personal Risk band of **Low**.

Section 6:

- o The Collective Risk score is **0.0**. For Urban areas this corresponds to a Collective Risk band of **Low**.
- o The Personal Risk score is **0.0**. For Urban areas this corresponds to a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Curved	1.8
Carriageway width	Medium lane, Narrow shoulder	1.45	Medium lane, Wide shoulder	1.0
Roadside hazards	Severe	2.8	Severe	2.8
Adjacent land use	Rural residential	1.5	Controlled access	2.0
Intersection density (per km)	<1	1.0	2 to <3	1.3
Access density (per km)	2 to <5	1.03	10 to <20	1.1
Traffic volume	1000 to <6000	1.4	6000 to <12000	2.2

Feature	Section 3		Section 4	
	Category	Risk Score	Category	Risk Score
Road stereotype	Multi-lane undivided	3.4	Multi-lane undivided	3.4

Road alignment	Straight	1.0	Straight	1.0
Carriageway width	Medium lane, Narrow shoulder	1.79	Medium lane, Narrow shoulder	1.79
Roadside hazards	High	2.28	Moderate	1.43
Adjacent land use	Controlled access	2.0	Controlled access	2.0
Intersection density (per km)	5 to <10	2.6	2 to <3	1.3
Access density (per km)	<1	1.0	5 to <10	1.06
Traffic volume	6000 to <12000	2.2	>12000	3.0

Feature	Section 5		Section 6	
	Category	Risk Score	Category	Risk Score
Road stereotype	Divided-traversable	3.0	Multi-lane undivided	3.4
Road alignment	Straight	1.0	Straight	1.0
Carriageway width	Medium lane, Narrow shoulder	1.79	Medium lane, Wide shoulder	1.45
Roadside hazards	Moderate	1.43	Moderate	1.43
Adjacent land use	Controlled access	2.0	Controlled access	2.0
Intersection density (per km)	2 to <3	1.3	5 to <10	2.6
Access density (per km)	5 to <10	1.06	5 to <10	1.06
Traffic volume	>12000	3.0	6000 to <12000	2.2

Section 1:

- o The Infrastructure Risk Rating Score is **1.86**. For Rural areas this corresponds to an IRR band of **Medium-High**.

Section 2:

- o The Infrastructure Risk Rating Score is **2.14**. For Urban areas this corresponds to an IRR band of **Medium**.

Section 3:

- o The Infrastructure Risk Rating Score is **2.2**. For Urban areas this corresponds to an IRR band of **Medium**.

Section 4:

- o The Infrastructure Risk Rating Score is **1.84**. For Urban areas this corresponds to an IRR band of **Low-Medium**.

Section 5:

- o The Infrastructure Risk Rating Score is **1.79**. For Urban areas this corresponds to an IRR band of **Low-Medium**.

Section 6:

- o The Infrastructure Risk Rating Score is **1.86**. For Urban areas this corresponds to an IRR band of **Low-Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

Section 1 and 3: The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

Section 2: The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h

Section 4, 5 and 6: The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 60 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- *60 km/h on Hibiscus Coast Highway between Weranui Road and 624m north of Otanerua Road (section 1)*
- *50 km/h on Hibiscus Coast Highway between 624m north of Otanerua Road and 450m north of Puriri Ave (section 2)*
- *60 km/h on Hibiscus Coast Highway (interchange) between Dairy Flat Highway and 143m west of Jack Hawken Lane(section 3)*
- *60 km/h on Hibiscus Coast Highway between 143m west of Jack Hawken Lane and 80 m west of Brian Smith Drive(section 4)*
- *60 km/h on Hibiscus Coast Highway between 80 m west of Brian Smith Drive and 100 m north of Whangapararoa Road(section 5)*
- *60 km/h on Hibiscus Coast Highway between 100 m north of Whangapararoa Road and 86m south of Moffat Road(section 6)*

Hibiscus Coast Highway section 1, 3, 4, 5, & 6 are self-explaining roads as the mean operating speeds (62.24, 45.46, 51.53, 56.39 & 58.47 km/h respectively) are below or near the proposed safe and appropriate speeds, despite the existing 80/70 km/h speed limit.

The proposed speed of Hibiscus Coast Highway section 2 is a challenging conversation as the existing mean operating speed is 61.2 km/h and which is higher than the recommended speed limit of 50 km/h. However, this section of Hibiscus Coast Highway is becoming urbanised and the new development will change the existing road environment. The residential developments are likely to reduce the operating speed, hence physical interventions are not required at this stage.

Engineering up of Hibiscus Coast Highway was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50/60 km/h was selected for Hibiscus Coast Highway due to a multitude of factors. These being the medium/narrow lane and shoulder width, straight/curved nature of the road, and severe/high road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score for Section 1 of Hibiscus Coast Highway. Due to adverse crash history on the road. The collective and personal risk of this road are classified as 'High', 'Medium-High' and "Low", and "High" and "Medium-High" for section 1, 3 and 4 respectively due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.<sup>1</sup>

Crash history from WK NZTA's CAS database shows one hundred and eighty-one crashes in the last 5 years including one fatal, six serious, fifty minor, and one hundred and twenty-four non-injury crashes.

After considering all of the above factors, the existing speed limit of 80, 60, 80, 70, 70 & 70 km/h respectively on Hibiscus Coast Highway section 1, 2, 3, 4, 5 & 6 in Hibiscus and Bays, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit of 60 and 50 km/h for section 1 and 2 is aligned with the recommended safe and appropriate speed.

The proposed safe and appropriate speed limit for section 3,4,5 and 6 Hibiscus Coast Highway is 60 km/h are considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (45.46, 51.53, 56.39 & 58.47 km/h respectively).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Hingaia Road (Takanini)

The speed limit on Hingaia Road (between 370m east of Oakland Road and Linwood Road), Takanini has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Hingaia Road connects to Oakland Road and Hihiki Road to the north and Towai Road and Linwood Road to the south. This road provides access to residential properties.
	This section is approximately 1.08 km in length. It is classified as a Regional road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are pedestrian amenities, on-street parking and cyclist amenities along this road.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: zero fatal, one serious, three minor and two non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Hingaia Road is identified as one of the top 10% DSI saving network sections for New Zealand.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Hingaia Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide Lane (&gt;3.5 m) and Wide shoulder (&gt;1.0 to 2.0 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as a <i>Rural area with accesses present to private dwellings and farms. There may be</i>

Requirement	Comments
	<i>the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>
(g) the number of intersections and property accessways; and	From MegaMaps tool/ a combination of site drive-over footage and geomaps information. <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 7,746 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	New residential development along Hingaia Road.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hingaia Road has a mean operating speed in the range of 64.45km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Oakland Road:</b> 50 km/h</li> <li><b>Hihiki Road:</b> 50 km/h</li> <li><b>Towai Road:</b> 50 km/h</li> <li><b>Linwood Road:</b> 60 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	4
DSI crashes during the period	1
Corridor Length (km)	1.08
Annual Daily Traffic	7,746

- The Collective Risk score is **0.18**. For Rural areas this corresponds to a Collective Risk band of **Medium-High**.

- The Personal Risk score is **6.55**. For Rural areas this corresponds to a Personal Risk band of **Medium**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Wide lane, Wide shoulder	0.85
Roadside hazards	Moderate	1.43
Adjacent land use	Rural residential	1.5
Intersection density (per km)	3 to <5	1.5
Access density (per km)	5 to <10	1.06
Traffic volume	6000 to <12000	2.2

The Infrastructure Risk Rating Score is **1.44**. For Rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 50 km/h for the full length of Hingaia Road.*

A proposed speed limit of 50 km/h was selected for Hingaia Road due to a multitude of factors. These being the wide lane and wide width, straight nature of the road, and moderate road-side hazards. The collective and personal risk of this road are classified as **'Medium-High'** and **'Medium'** respectively due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.<sup>1</sup> In addition, this section of Hingaia Road is becoming urbanised and therefore will be urban residential in the near future.

Crash history from WK NZTA's CAS database shows six crashes in the last 5 years including zero fatal, one serious, three minor, and two non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Hingaia Road in Takanini, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

The proposed speed is a challenging conversation as the existing mean operating speed of Hingaia Road is 64.46 km/h and higher than the recommended speed limit of 50 km/h, however this section of

Hingaia Road is becoming urbanised and the new development will change the existing road environment. The residential developments are likely to reduce the operating speed, hence physical interventions are not required at this stage.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Ian Mckinnon Drive (Eden Terrace)

Ian Mckinnon Drive, Eden Terrace, is divided into two sections as outlined below:

1. Section 1: Ian Mckinnon Drive between Dominion Road and 90 m north of Piwakawaka Street.
2. Section 2: Ian Mckinnon Drive between 90 m north of Piwakawaka Street and Upper Queen St.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Ian Mckinnon Drive, Eden Terrace has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	This section of Ian Mckinnon Drive connects to Dominion Road in the south and Piwakawaka Street in the North. This road provides access to residential properties and commercial centres.	This section of Ian Mckinnon Drive connects to Piwakawaka Street in the south and Upper Queen Street in the North. This road provides access to residential properties and commercial centres.
	This section is approximately 0.44 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).	This section is approximately 0.70 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).
	This section is a two-way, divided traversable road. There are pedestrian amenities along this road. There are no cyclist amenities.	This section is a two-way, multi-lane undivided road. There are pedestrian amenities along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records fifteen crashes on this section of Ian Mckinnon Drive between 2016	WK NZTA's Crash Analysis System (CAS) records eight crashes on this section of Ian Mckinnon Drive between 2016

Requirement	Comments	
	Section 1	Section 2
	and 2020: three minor and twelve non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	and 2020: one fatal, three serious, two minor and two non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
	This section of Ian Mckinnon Drive is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Ian Mckinnon Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided-traversable.</li> <li>• <b>Road alignment:</b> Straight.</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m).</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate.</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided.</li> <li>• <b>Road alignment:</b> Curved.</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Controlled access using MegaMaps tool. The IRR defines Controlled access as "with roadside development and controlled access, such as an urban state highway or arterial where there are few accesses to the road e.g. as a result of a service road. Some pedestrian and cyclist activity may also be present but with few crossing movements."	
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<b>Intersection density:</b> 5 to <10 intersections per km. <b>Access density:</b> <1 accesses per km.	<b>Intersection density:</b> 1 to <2 intersections per km. <b>Access density:</b> <1 accesses per km.
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 31,200 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	
(i) any planned modification to the road; and	There are no planned modifications at this time.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to		
Current speed limit	The existing speed limit is 60 km/h.	
MegaMaps Mean Operating Speed	This section has a mean operating speed of 48.49 km/h.	This section has a mean operating speed of 50.45 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Dominion Road:</b> 60 km/h. (proposed 50 km/h)</li> <li>• <b>Devon Street:</b> 50 km/h.</li> <li>• <b>Piwakawaka Street:</b> 50 km/h.</li> <li>• <b>Upper Queen Street:</b> 50 km/h.</li> </ul>	

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data	Data
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	4
Corridor Length (km)	0.44	0.70
Annual Daily Traffic	31,200	31,200

- Section 1:
  - The Collective Risk score is **0.0**. For Urban areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is **0.0**. For Urban areas this corresponds to a Personal Risk band of **Low**.
- Section 2:
  - The Collective Risk score is **1.14**. For Urban areas this corresponds to a Collective Risk band of **High**.
  - The Personal Risk score is **10.06**. For Urban areas this corresponds to a Personal Risk band of **High**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Divided-traversable	3.0	Multi-lane undivided	3.4
Road alignment	Straight	1.0	Curved	1.8
Carriageway width	Medium lane, Very narrow shoulder	1.79	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	Moderate	1.43	Moderate	1.43
Adjacent land use	Controlled access	2.0	Controlled access	2.0
Intersection density (per km)	5 to <10	2.6	1 to <2	1.2
Access density (per km)	<1	1.0	<1	1.0
Traffic volume	>12000	3.0	>12000	3.0

- Section 1:
  - The Infrastructure Risk Rating Score is **2.07**. For Urban areas this corresponds to an IRR band of **Medium**.
- Section 2:
  - The Infrastructure Risk Rating Score is **2.03**. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

- Section 1: The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.
- Section 2: The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 50 km/h lan Mckinnon Drive: between Dominion Road and 90 m North of Piwakawaka Street (Section 1).
- 50 km/h lan Mckinnon Drive: between 90 m North of Piwakawaka Street and Upper Queen Street (Section 2)

Ian Mckinnon Drive is a self-explaining road as the mean operating speeds (48.49 and 50.45 km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Ian Mckinnon Drive was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for the first section of this road due to multitude of factors. These being the medium lane width, very narrow shoulder width, straight nature of the road, moderate road side hazards and low mean operating speeds (<50 km/h). This section of Ian Mckinnon Drive is identified as one of the top 10% DSI saving network sections for New Zealand.

Crash history from NZTA's CAS database shows fifteen crashes in the last 5 years on this section of Ian Mckinnon Drive including three minor, and twelve non-injury crashes.

A proposed speed limit of 50 km/h was selected for the second section of this road due to multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, moderate road side hazards and low mean operating speeds (<50 km/h). Due to adverse crash history on the road. Both the collective and personal risk of this road are classified as 'and **High**' due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows eight crashes in the last 5 years on this section of Ian Mckinnon Drive including one fatal, three serious, two minor, and two non-injury crashes.

After considering all the above factors, the existing speed limit of 60 km/h on Ian Mckinnon Drive in Waitemata, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 50 km/h for section 1 and 2 which is aligned with the recommended safe and appropriate speed.

Given that the existing mean operating speed is 60 km/h and higher than the recommended speed limit of 50 km/h, behavioural changes will be required of road users. Informative consultation will be vital to ensuring that the reasoning behind lowering the speed limit is conveyed, as well as ensuring that the new speed limit is adhered to and that the buy-in of local users is achieved.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Ihumatao Quarry Road (Mangere)

The speed limit on Ihumatao Quarry Road, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ihumatao Quarry Road connects to Oruarangi Road and Landing Drive to the south. This road provides access to residential properties.</p> <p>This section is approximately 0.55 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Ihumatao Quarry Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0) and Very narrow shoulder (&lt;0.5m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural Residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km.</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 291 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 13/10/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h).	This section has a mean operating speed of 27.56 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Oruarangi Road:</b> 100 km/h (proposed 60 km/h, discussed in Rural marae safe speed programme).</li> <li>• <b>Landing Drive:</b> 50 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.55
Annual Daily Traffic	291

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**.

- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.20
Access density (per km)	5 to <10	1.06
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is **1.44**. For Rural areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h Ihumatao Quarry Road (Full Length).*

Ihumatao Quarry Road is a self-explaining road as the mean operating speeds are already at, or below, the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Ihumatao Quarry Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for this road due to multitude of factors. These being the narrow lane width, very narrow shoulder width, high roadside hazards and low mean operating speeds (<40 km/h).

After considering all the above factors, the existing speed limit of 100 km/h on Ihumatao Quarry Road in Mangere, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit for Ihumatao Quarry Road is 60 km/h which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (27.56 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Ihumatao Road (Mangere)**

Ihumatao Road, Mangere, is divided into two sections as follows: <sup>1</sup>

- Section 1: Ihumatao Road between George Bolt Memorial Drive to 630m West of Oruarangi Road
- Section 2: Ihumatao Road between 630m West of Oruarangi Road to End

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Ihumatao Road, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Ihumatao Road connects to George Bolt Memorial Drive to the east, Sistema Way, Te Tiki Road and Oruarangi Road to the north and Renton Road to the south. This road provides access to commercial and residential properties, and is surrounded by farmland.	
	This section is approximately 3.28 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).	This section is approximately 0.64 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There is on-street parking along this section. There are no pedestrian and cyclist amenities.	This section is a two-way, two-lane, unsealed road. There is on-street parking along this section. There are no pedestrian and cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records <b>fourteen</b>	WK NZTA's Crash Analysis System (CAS) records <b>one</b>

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e. tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	crashes between 2016 and 2020: zero fatal, zero serious, five minor and nine non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	crashes between 2016 and 2020: zero fatal, zero serious, zero minor and one non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Ihumatao Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and very narrow (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow (&lt;3.0 m) and very narrow (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 585 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	

Requirement	Comments	
	Section 1	Section 2
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 13/10/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of has a mean operating speed of 56.27 km/h.	This section of has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>George Bolt Memorial Drive:</b> 60 km/h</li> <li>• <b>Sistema Way:</b> 50 km/h</li> <li>• <b>Te Tiki Road:</b> 50 km/h</li> <li>• <b>Renton Road:</b> 100 km/h (proposed 40 km/h)</li> <li>• <b>Oruarangi Road:</b> 100 km/h</li> </ul>	

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	5	0
DSI crashes during the period	0	0
Corridor Length (km)	3.28	0.64
Annual Daily Traffic	585	65

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Unsealed	10.0
Road alignment	Straight	1.00	Straight	1.00
Carriageway width	Medium lane, Very narrow shoulder	1.79	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	Moderate	2.28
Adjacent land use	Rural residential	1.50	Rural residential	1.50
Intersection density (per km)	1 to <2	1.20	<1	1.00
Access density (per km)	2 to <5	1.03	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 1.43. For rural areas this corresponds to an IRR band of **Medium**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.61. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60 km/h on Ihumatao Road between George Bolt Memorial Drive to 630m West of Oruarangi Road (section 1)
- 40 km/h on Ihumatao Road between 630m West of Oruarangi Road to End (section 2)

Ihumatao Road is a self-explaining road as the mean operating speeds (56.27 and 20 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit.

Engineering up of Ihumatao Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Ihumatao Road section 1 and 40 km/h was selected for Ihumatao Road section 2 due to a multitude of factors. These being the unsealed road surface, narrow lane and shoulder width, high road-side hazards and low mean operating speed (20 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.

Crash history from WK NZTA's CAS database shows fifteen crashes in the last 5 years including zero fatal, zero serious, five minor, and ten non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Ihumatao Road in Mangere, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for section 1 is 60 km/h and for section 2 is 40 km/h which are aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Jackson Way (Stillwater)

The speed limit on Jackson Way, Stillwater has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Jackson Way connects to Whio Way to the north and East Coast Road to the west. This road provides access to residential properties.</p> <p>Jackson Way is approximately 1.02 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>Jackson Way is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crashes between 2016 and 2020: zero fatal, zero serious, zero minor and one non-injury crashes and therefore no Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Jackson Way were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as: <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 297 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Jackson Way has a mean operating speed of 36.2 km/h
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Whio Way:</b> 100 km/h (proposed 60 km/h)</li> <li><b>East Coast Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.02
Annual Daily Traffic	297

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	>20	1.3
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is **1.53**. For Rural areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Jackson Way.*

Jackson Way is a self-explaining road as the mean operating speeds (56 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Jackson Way was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Jackson Way due to a multitude of factors. These being the narrow lane and very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (<100 km/h).

Crash history from WK NZTA's CAS database shows one crash in the last 5 years including zero fatal, zero serious, zero minor, and one non-injury crash.

After considering all of the above factors, the existing speed limit of 100 km/h on Jackson Way in Stillwater, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Jackson Way is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – James Fletcher Drive (Otahuhu)

The speed limit on James Fletcher Drive, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>James Fletcher Drive connects to Favona Road and Savill Drive to the west, Beach Road to the north and Tui Street and Kahu Street to the east. This road provides access to residential properties.</p> <p>This section is approximately 0.92 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are pedestrian amenities along this road. There are no cyclist amenities and on-street parking.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records twenty-four crashes between 2016 and 2020: zero fatal, one serious, two minor and twenty-one non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of James Fletcher Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very wide shoulder (&gt; 2.0 m).</li> <li><b>Roadside hazards (in both directions):</b> Moderate.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Industry using MegaMaps tool. The IRR defines Industry as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km.</li> <li>• <b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 20,793 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 13/10/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This section has a mean operating speed of 51.98 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Favona Road:</b> 60 km/h (proposed 50 km/h).</li> <li>• <b>Savill Drive:</b> 50 km/h.</li> <li>• <b>Tui Street:</b> 50 km/h.</li> <li>• <b>Kahu Street:</b> 50 km/h.</li> <li>• <b>Beach Road:</b> 50 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	3
DSI crashes during the period	1
Corridor Length (km)	0.92
Annual Daily Traffic	20,793

- The Collective Risk score is **0.22**. For urban areas this corresponds to a Collective Risk band of **High**.
- The Personal Risk score is **2.86**. For urban areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Medium lane, Very wide shoulder	0.78
Roadside hazards	High	2.28
Adjacent land use	Industry	4.00
Intersection density (per km)	3 to <5	1.50
Access density (per km)	>20	1.30
Traffic volume	>12000	3.00

The Infrastructure Risk Rating Score is **2.35**. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 50 km/h James Fletcher Drive (Full Length).*

James Fletcher Drive is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of James Fletcher Drive was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for James Fletcher Drive due to multitude of factors. These being moderate roadside hazards and industrial land use. This proposed speed was also chosen in order to ensure consistency with the surrounding.

Due to adverse crash history on the road. The collective and personal risk of this road are classified as 'High' and 'Low' respectively due to the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>1</sup>

Crash history from WK NZTA's CAS database shows twenty-four crashes in the last 5 years including zero fatal, one serious, two minor, and twenty-one non-injury crashes.

After considering all the above factors, the existing speed limit of 60 km/h on James Fletcher Drive in Otahuhu, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – James Paige Lane (Riverhead)**

The speed limit on James Paige Lane, Riverhead has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	James Paige Lane connects to Lloyd Road to the north. This road provides access to residential properties.
	This section is approximately 0.74 km in length. It is classified as an Access Road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of James Paige Lane were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Curved.</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km.</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 114 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 08/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 28.76 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Lloyd Road:</b> 80 km/h (proposed 60 km/h).</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.74
Annual Daily Traffic	114

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	<1	1.0
Access density (per km)	5 to <10	1.06
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is **1.64**. For Rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h James Paige Lane (Full length).*

James Paige Lane is a self-explaining road as the mean operating speeds (28.76 km/h.) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of James Paige Lane was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for James Paige Lane due to multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, high road side hazards and low mean operating speeds (<40 km/h). All of these factors contribute to the road's '**Medium-High**' IRR score, making it a high-risk road. This proposed speed was also chosen in order to ensure consistency with the surrounding network.

After considering all the above factors, the existing speed limit of 80 km/h on James Paige Lane in Riverhead, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – John Brian Drive (Redvale)

The speed limit on John Brian Drive, Redvale has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	John Brian Drive connects to East Coast Road to the west. This road provides access to residential properties.
	John Brian Drive is approximately 0.46 km in length. John Brian Drive is classified as a. Access Road under the one network road classification (ONRC).
	John Brian Drive is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of John Brian Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as: <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 52 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of John Brian Drive has a mean operating speed of 26.19 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>East Coast Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.46
Annual Daily Traffic	52

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	2 to <5	1.03
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is **1.68**. For Rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of John Brian Drive.*

John Brian Drive is a self-explaining road as the mean operating speeds (26.19 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of John Brian Drive was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for John Brian Drive due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road, and high roadside hazards. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.

After considering all of the above factors, the existing speed limit of 80 km/h on John Brian Drive in Redvale, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for John Brian Drive is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Kauri Road (Whenuapai)**

The speed limit on Kauri Road, Whenuapai (between 80m north of Brigham Creek Road and 100m south of Kingsway Road) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kauri Road connects to Brigham Creek Road to the south and Old Kauri Road, Rata Road and Kingsway Road to the north. This road provides access to residential properties.</p> <p>Kauri Road is approximately 2.06 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).</p> <p>Kauri Road is a two-way, two-lane, undivided road. There are no pedestrian amenities and cyclist amenities. There exists on-street parking along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: zero fatal, zero serious, three minor and three non-injury crashes and therefore no Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadides; and	<p>The following characteristics for each section of Kauri Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist</i>

Requirement	Comments
	<i>activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3,435 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 05/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kauri Road has a mean operating speed of 62.8 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Brigham Creek Road:</b> 50 km/h</li> <li>• <b>Old Kauri Road:</b> 70 km/h</li> <li>• <b>Rata Road:</b> 70 km/h (proposed 40 km/h)</li> <li>• <b>Kingsway Road:</b> 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	3
DSI crashes during the period	0
Corridor Length (km)	2.06
Annual Daily Traffic	3,435

- The Collective Risk score is **0.0**. For Urban areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is **0.0**. For Urban areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Urban residential	3.0
Intersection density (per km)	<1	1.0
Access density (per km)	>20	1.3
Traffic volume	1000 to <6000	1.4

- The Infrastructure Risk Rating Score is 2.17. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 60 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h Kauri Road between 80m north of Brigham Creek Road and 100m south of Kingsway Road.*

Kauri Road is a self-explaining road as the mean operating speeds (62.8 km/h) are already at, or below, the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Riverlea Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Kauri Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road, high road-side hazards.

Crash history from WK NZTA's CAS database shows six crashes in the last 5 years including zero fatal, zero serious, three minor and three non-injury crashes.

After considering all the above factors, the existing speed limit of 70 km/h on Kauri Road in Whenuapai, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Kea Road (Silverdale)

The speed limit on Kea Road, Silverdale has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kea Road connects to Goldwater Drive to the north and Silverwater Drive to the south. This road provides access to residential properties and is approximately 0.27km in length.</p> <p>Kea Road is classified as an Access road under the one network road classification (ONRC). Kea Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kea Road were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	The following characteristics for Kea Road were estimated using MegaMaps tool. <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to 10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 61 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Key stakeholders have indicated general support for implementing 30km/h speed limits around urban residential area.  Potential changes to the speed limit in this area will be sent to the Local Board via email in November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kea Road has a mean operating speed in the range of <30km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Goldwater Drive: 50 km/h (proposed 30km/h)</li> <li>• Silverwater Drive: 50 km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

The following characteristics for Kea Road were estimated using MegaMaps tool. :

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

Kea Road is a self-explaining road as the mean operating speeds is below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Kea Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

The proposed safe and appropriate speed limit for Kea Road is 30 km/h which is lower than the speed limit recommended by the Speed Management Guide (40 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed supports the reduction. The proposed 30 km/h speed will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kennedys Road (Whenuapai)

The speed limit on Kennedys Road, Whenuapai has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kennedys Road connects to twin Coast Highway to the south. This road provides access to residential properties.</p> <p>Kennedys Road is approximately 0.41 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).</p> <p>Kennedys Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Kennedys Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as a <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 69 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 05/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kennedys Road has a mean operating speed of 50 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Twin Coast Highway:</b> 80 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.41
Annual Daily Traffic	69

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
---------	----------	------------

Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	2 to <3	1.3
Access density (per km)	>20	1.3
Traffic volume	<1000	1.0

- The Infrastructure Risk Rating Score is 1.57. For Rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 60 km/h for the full length of Kennedys Road.*

Kennedys Road is a self-explaining road as the mean operating speeds are already at, or below, the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Kennedys Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Kennedys Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (<50 km/h).

After considering all the above factors, the existing speed limit of 80 km/h on Kennedys Road in Whenuapai, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Kent Street (Ponsonby)**

The speed limit on Kent Street, Ponsonby has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kent Street connects Lincoln Street to the North and Norfolk Street to the South. This road provides access to residential properties.</p> <p>This section is approximately 0.08 km in length. It is classified as an Access Road under the one network road classification (ONRC).</p> <p>This section is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Kent Street were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> Moderate.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &gt;10 intersections per km.</li> <li>• <b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Lincoln Street:</b> 50 km/h. (Proposed 30 km/h).</li> <li>• <b>Norfolk Street:</b> 50 km/h. (Proposed 30 km/h).</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.08
Annual Daily Traffic	156

- The Collective Risk score is **0.00**. For urban areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.00**. For urban areas this corresponds to a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	Moderate	1.43
Adjacent land use	Urban residential	3.0
Intersection density (per km)	>10	5.00
Access density (per km)	>20	1.30
Traffic volume	<1000	1.40

The Infrastructure Risk Rating Score is **2.26**. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h Kent Street (Full Length)*

Kent Street is a self-explaining road as the mean operating speeds (20 km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Kent Street was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30 km/h was selected for this road due to multitude of factors. These being narrow lane width, very narrow shoulder width, straight nature of the road, moderate roadside hazards and low mean operating speeds (<30 km/h). This proposed speed was also chosen in order to ensure consistency with the surrounding network.

After considering all the above factors, the existing speed limit of 50 km/h on Kent Street in Waitemata, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit for Kent Street is 30 km/h which is lower than the speed limit recommended by the Speed Management Guide (40 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (20 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Kerrs Road (Wiri)

Kerrs Road, Wiri, is divided into two sections as outlined below:

1. Section 1: Kerrs Road between Ash Road and Druces Road.
2. Section 2: Kerrs Road between Druces Road and Great South Road.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit for all sections of Kerrs Road, Wiri have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Kerrs Road connects to Hobill Avenue to the north, Ash Road to the west, Druces Road to the east and Dalgety Drive to the south. This road provides access to residential properties.	Kerrs Road connects to Trevor Hosken Drive and Inverell Avenue to the north, Druces Road to the west and Great South Road and Pacific Events Centre Drive to the east. This road provides access to residential properties.
	This section is approximately 1.15 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).	This section is approximately 0.85 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).
	Kerrs Road is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.	Kerrs Road is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records thirty-one crashes on this section of Kerrs Road between 2016 and 2020:	WK NZTA's Crash Analysis System (CAS) records forty crashes on this section of Kerrs Road between 2016 and 2020: zero fatal, three serious, twelve

Requirement	Comments	
	Section 1	Section 2
	zero fatal, one serious, nine minor and twenty-one non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	minor and twenty-five non-injury crashes. This resulted in three Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Kerrs Road is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Kerrs Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided.</li> <li>• <b>Road alignment:</b> Straight.</li> <li>• <b>Carriageway width:</b> Wide Lane (&gt;3.5 m) and Very narrow shoulder (&lt;0.5 m).</li> <li>• <b>Roadside hazards (in both directions):</b> High.</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided.</li> <li>• <b>Road alignment:</b> Straight.</li> <li>• <b>Carriageway width:</b> Wide Lane (&gt;3.5 m) and Very narrow shoulder (&lt;0.5 m).</li> <li>• <b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using MegaMaps tool. The IRR defines Commercial big box as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km.</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km.</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km.</li> <li>• <b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 16,998 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 12,991 vehicles per day (vpd).

Requirement	Comments	
	Section 1	Section 2
	This level of traffic volume is consistent with the nature of the road.	This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This section of Kerrs Road has a mean operating speed of 49.28 km/h.	This section of Kerrs Road has a mean operating speed of 47.31 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>• <b>Ash Road:</b> 60 km/h (proposed 50 km/h).</li> <li>• <b>Druces Road:</b> 60 km/h (proposed 50 km/h).</li> <li>• <b>Hobill Avenue:</b> 50 km/h.</li> <li>• <b>Dalgety Drive:</b> 50 km/h.</li> </ul>	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>• <b>Druces Road:</b> 60 km/h (proposed 50 km/h).</li> <li>• <b>Pacific Events Centre Drive:</b> 50 km/h.</li> <li>• <b>Great South Road:</b> 60 km/h (proposed 50 km/h).</li> <li>• <b>Trevor Hosken Drive:</b> 50 km/h.</li> <li>• <b>Inverell Avenue:</b> 50 km/h.</li> </ul>

**Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	10	15
DSI crashes during the period	1	3
Corridor Length (km)	1.15	0.85

Annual Daily Traffic	16,998	12,991
----------------------	--------	--------

- Section 1
  - The Collective Risk score is **0.17**. For Urban areas this corresponds to a Collective Risk band of **Medium-High**.
  - The Personal Risk score is **2.80**. For Urban areas this corresponds to a Personal Risk band of **Low**.
- Section 2
  - The Collective Risk score is **0.70**. For Urban areas this corresponds to a Collective Risk band of **High**.
  - The Personal Risk score is **14.85**. For Urban areas this corresponds to a Personal Risk band of **High**.

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Straight	1.00	Straight	1.00
Carriageway width	Wide lane, Very narrow shoulder	1.58	Wide lane, Very narrow shoulder	1.58
Roadside hazards	High	2.28	High	2.28
Adjacent land use	Commercial big box	4.00	Urban Residential	3.00
Intersection density (per km)	1 to <2	1.20	5 to <10	2.60
Access density (per km)	10 to <20	1.10	>20	1.30
Traffic volume	>12000	3.00	>12000	3.00

- Section 1: The Infrastructure Risk Rating Score is 2.27. For Urban areas this corresponds to an IRR band of **Medium**.
- Section 2: The Infrastructure Risk Rating Score is 2.40. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is:

- The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h. (Section 1).
- The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h. (Section 2).

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendationis*

- 50 km/h Kerrs Road (between Ash Road and Druces Road) (Section 1).
- 50 km/h Kerrs Road (between Druces Road and Great South Road) (Section 2).

Kerrs Road (section 1 and 2) is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Kerrs Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Kerrs Road (Section 1 and 2) due to multitude of factors. These being the very narrow shoulder width, high roadside hazards and commercial big box/controlled access land use.

Due to adverse crash history on the road. The collective and personal risk of this road are classified as 'Medium-High' and 'Low' for section 1 and 'High' for section 2 respectively due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.<sup>1</sup>This proposed speed was also chosen in order to ensure consistency with the surrounding network.Kerrs Road is identified as one of the top 10% DSI saving network sections for New Zealand.

Crash history from WK NZTA's CAS database shows seventy-one crashes in the last 5 years including zero fatal, four serious, twenty-one minor, and forty-six non-injury crashes.

After considering all the above factors, the existing speed limit of 60 km/h on both the sections of Kerrs Road in Wiri, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit on section 1 and section 2 is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## **Speed Limit Review – Kirkbride Road (Mangere Bridge)**

The speed limit on Kirkbride Road, Mangere Bridge (between McKenzie Road and Massey

Road) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>This section of Kirkbride Road connects to McKenzie Road to the south Masse Road to the north. This road provides access to residential properties.</p> <p>This section is approximately 1.64 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are pedestrian amenities, cycle amenities and on-street parking along this road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records thirty-one crashes between 2016 and 2020: zero fatal, four serious, fourteen minor and fifty non-injury crashes. This resulted in three Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Kirkbride Road is identified as one of the top 10% DSI saving network sections for New Zealand.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Kirkbride Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided.</li> <li>• <b>Road alignment:</b> Straight.</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Wide shoulder (&gt;1.0 to 2.0 m).</li> <li>• <b>Roadside hazards (in both directions):</b> Severe.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as "dominated

Requirement	Comments
	<i>by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day'</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km.</li> <li>• <b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps 10570 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 13/10/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This section has a mean operating speed of 43.7 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Kirkbride Road:</b> 60 km/h.</li> <li>• <b>Miller Road:</b> 50 km/h.</li> <li>• <b>Coronation Road:</b> 60 km/h.</li> <li>• <b>Walmsley Road:</b> 60 km/h (proposed 50 km/h).</li> <li>• <b>Tarata Crescent:</b> 50 km/h.</li> <li>• <b>Bader Drive:</b> 50 km/h.</li> <li>• <b>Valiant Street:</b> 50 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	18
DSI crashes during the period	4

Corridor Length (km)	1.64
Annual Daily Traffic	10,570

- The Collective Risk score is **0.48**. For urban areas this corresponds to a Collective Risk band of **High**.
- The Personal Risk score is **12.64**. For urban areas this corresponds to a Personal Risk band of **High**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Medium lane, Very wide shoulder	0.78
Roadside hazards	Severe	2.80
Adjacent land use	Urban residential	3.00
Intersection density (per km)	3 to <5	1.50
Access density (per km)	>20	1.30
Traffic volume	>12000	3.00

The Infrastructure Risk Rating Score is **2.38**. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 50 km/h Kirkbride Road (Full Length).*

Kirkbride Road is a self-explaining road as the mean operating speeds is below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Kirkbride Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Kirkbride Road due to multitude of factors. These being severe roadside hazards and low mean operating speeds (<50 km/h).

Due to adverse crash history on the road. Both the collective and personal risk of this road are classified as 'High' due to the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>1</sup> This proposed speed was also chosen in order to ensure consistency with the surrounding network. Kirkbride Road is identified as one of the top 10% DSI saving network sections for New Zealand.

Crash history from WK NZTA's CAS database shows thirty-one crashes in the last 5 years including three serious, eight minor, and twenty non-injury crashes.

After considering all the above factors, the existing speed limit of 60 km/h on Kirkbride Road in Mangere Bridge, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Lambie Drive (Manukau)

Lambie Drive, Manukau, is divided into three sections as follows:<sup>1</sup>

- Section 1: Lambie Drive between Puhinui Road and Cavendish Drive
- Section 2: Lambie Drive between Cavendish Drive and Ronwood Ave
- Section 3: Lambie Drive between Ronwood Ave and Wiri Station Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Lambie Drive, Manukau has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Lambie Drive connects to Carruth Road and Puhinui Road to the north, Ihaka Place, Cavendish Drive and Ronwood Avenue to the east, Cavendish Drive to the west and Wiri Station Road and Druces Road to the south. This road provides access to commercial properties.		
	This section is approximately 0.65 km in length. It is classified as an Arterial road under the one network road classification (ONRC).	This section is approximately 0.25 km in length. It is classified as a Regional road under the one network road classification (ONRC).	This section is approximately 0.79 km in length. It is classified as a Regional road under the one network road classification (ONRC).
	This section is a two-way, two-lane, divided road. There are pedestrian amenities, cyclist	This section is a two-way, four-lane, divided road. There are pedestrian amenities and cyclist	This section is a two-way, four-lane, divided road. There are pedestrian amenities and on-street parking

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	amenities and on-street parking along this section.	amenities along this section. There is no on-street parking.	along this section. There are cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records <b>twenty-seven</b> crashes between 2016 and 2020: zero fatal, zero serious, five minor and twenty-two non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records thirty-one crashes between 2016 and 2020: zero fatal, zero serious, six minor and twenty-five non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records <b>seventy-six</b> crashes between 2016 and 2020: zero fatal, two serious, sixteen minor and fifty-eight non-injury crashes. This resulted in two Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Lambie Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided-traversable</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided-traversable</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided-traversable</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using on-site information and geomaps. The IRR defines Commercial big box as "Large (big	The adjacent land use is classified as Commercial big box using on-site information and geomaps. The IRR defines Commercial big box as "Large (big	The adjacent land use is classified as Commercial big box using on-site information and geomaps. The IRR defines Commercial big box as "Large (big

Requirement	Comments		
	Section 1	Section 2	Section 3
	box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."	box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."	box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 22,412 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 31,830 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 24,741 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
-----------------------	-----------	-----------	-----------

Current speed limit	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This section has a mean operating speed of 42.4 km/h.	This section has a mean operating speed of 40.88 km/h.	This section has a mean operating speed of 43 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Carruth Road: 50 km/h</li> <li>• Puhinui Road: 50 km/h</li> <li>• Ihaka Place: 50 km/h</li> <li>• Cavendish Drive: 60 km/h (proposed 50 km/h)</li> <li>• Ronwood Avenue: 50 km/h</li> <li>• Wiri Station Road: 60 km/h (proposed 50 km/h)</li> <li>• Druces Road: 60 km/h (proposed 50 km/h)</li> </ul>

  - The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**
- Section 3
  - The Collective Risk score is 0.51. For urban areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 5.64. For urban areas this corresponds to a Personal Risk band of **Medium**

**Step 3: Calculate the IRR score**

Feature	Section 1	Section 2	Section 3
---------	-----------	-----------	-----------

	Category	Risk Score	Category	Risk Score	Category	Risk Score
Road stereotype	Divided-traversable	3.00	Divided-traversable	3.00	Divided-traversable	3.00
Road alignment	Straight	1.00	Straight	1.00	Straight	1.00
Carriageway width	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	Severe	2.80	Severe	2.80	Severe	2.80
Adjacent land use	Commercial big box	4.00	Commercial big box	4.00	Commercial big box	4.00
Intersection density (per km)	3 to <5	1.50	5 to <10	2.60	5 to <10	2.60
Access density (per km)	>20	1.30	10 to <20	1.10	2 to <5	1.03
Traffic volume (vpd)	>12000	3.00	>12000	3.00	>12000	3.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.55. For urban areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.71. For urban areas this corresponds to an IRR band of **Medium-High**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.68. For urban areas this corresponds to an IRR band of **Medium-High**

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation is

- 50 km/h on Lambie Drive between Puhinui Road and Cavendish Drive (section 1)
- 50 km/h on Lambie Drive between Cavendish Drive and Ronwood Ave (section 2)
- 50 km/h on Lambie Drive between Ronwood Ave and Wiri Station Road (section 3)

Lambie Drive is a self-explaining road as the mean operating speeds (42.4, 40.88 and 43km/h) are below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit.

Engineering up of Lambie Drive was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Lambie Drive due to a multitude of factors. These being the very narrow shoulder width, severe road-side hazards and low mean operating speed. All of these factors contribute to the road's 'Medium-High' IRR score. The collective and personal risk of this road are classified as 'High' and 'Medium' respectively due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>2</sup>

Crash history from WK NZTA's CAS database shows hundred and thirty-four crashes in the last 5 years including zero fatal, two serious, twenty-seven minor, and hundred and five non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Lambie Drive in Manukau, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Lascelles Drive (Dairy Flat)**

The speed limit on Lascelles Drive, Dairy Flat has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lascelles Drive connects to Wilks Road to the north. This road provides access to residential properties.</p> <p>Lascelles Drive is approximately 0.40 km in length. It is classified as an Access Road under the one network road classification (ONRC).</p> <p>Lascelles Drive is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Lascelles Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as: <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 135 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 08/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Lascelles Drive has a mean operating speed of 24.57 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Wilks Road:</b> 80 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.40
Annual Daily Traffic	135

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
---------	----------	------------

Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	2 to <3	1.3
Access density (per km)	10 to <20	1.10
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is 1.49. For Rural areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Lascelles Drive.*

Lascelles Drive is a self-explaining road as the mean operating speeds (24.57 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Lascelles Drive was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Lascelles Drive due to a multitude of factors. These being the narrow lane and very narrow shoulder width, straight nature of the road, and high road-side hazards.

After considering all of the above factors, the existing speed limit of 80 km/h on Lascelles Drive in Dairy Flat, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Lascelles Drive is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Lennon Access Road (Stillwater)

The speed limit on Lennon Access Road, Stillwater has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lennon Access Road connects to Spur Road to the west. This road provides access to residential properties.</p> <p>Lennon Access Road is approximately 0.81 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>Lennon Access Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Lennon Access Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as: <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 263 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Lennon Access Road has a mean operating speed of 41.15 km/h
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Spur Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.81
Annual Daily Traffic	263

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	<1	1.0
Access density (per km)	10 to <20	1.10
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is 1.65. For Rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Lennon Access Road.*

Lennon Access Road is a self-explaining road as the mean operating speeds (41.15 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Lennon Access Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Lennon Access Road due to a multitude of factors. These being the medium lane and very narrow shoulder width, curved nature of the road, and high road-side hazards. All of these factors contribute to the road's **'Medium-High'** IRR score, making it a high-risk road.

After considering all of the above factors, the existing speed limit of 80 km/h on Lennon Access Road in Stillwater, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Lennon Access Road is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Lincoln Street (Ponsonby)

The speed limit on Lincoln Street, Ponsonby has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lincoln Street connects Kent Street, Mira Street, Richmond Road and John Street to the South and Ponsonby Road to the North. This road provides access to residential properties.</p> <p>This section is approximately 0.64 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: one serious, one minor and one non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Lincoln Street were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist</i>

Requirement	Comments
	<i>activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km.</li> <li>• <b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,725 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 26.18 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Richmond Road:</b> VSL 40 km/h &amp; 50 km/h.</li> <li>• <b>John Street:</b> VSL 40 km/h &amp; 50 km/h.</li> <li>• <b>Ponsonby Road:</b> 40 km/h.</li> <li>• <b>Mira Street:</b> 50 km/h (proposed 30 km/h).</li> <li>• <b>Kent Street:</b> 50 km/h (proposed 30 km/h).</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	2
DSI crashes during the period	1
Corridor Length (km)	0.65
Annual Daily Traffic	1,725

- The Collective Risk score is **0.31**. For urban areas this corresponds to a Collective Risk band of **High**.
- The Personal Risk score is **49.32**. For urban areas this corresponds to a Personal Risk band of **High**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Urban residential	3.0
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.30
Traffic volume	1000 to <6000	1.40

The Infrastructure Risk Rating Score is **2.33**. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30 km/h Lincoln Street (Full Length)*

Lincoln Street is a self-explaining road as the mean operating speeds (26.18 km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Lincoln Street was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30 km/h was selected for this road due to multitude of factors. These being narrow lane width, very narrow shoulder width, high roadside hazards and low mean operating speeds (<30 km/h). Due to adverse crash history on the road. Both the collective and personal risk of this road are classified as and 'High' due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>1</sup> This proposed speed was also chosen in order to ensure consistency with the surrounding network.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Crash history from NZTA's CAS database shows three crashes in the last 5 years including one serious, one minor, and one non-injury crashes.

After considering all the above factors, the existing speed limit of 50 km/h on Lincoln Street in Waitemata, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit for Lincoln Street is 30 km/h which is lower than the speed limit recommended by the Speed Management Guide (40 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (26.18 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Lloyd Road (Riverhead)

The speed limit on Lloyd Road, Riverhead has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lloyd Road connects to Barrett Road to the West, Beacon Road and James Paige Lane to the South and Edwards Jonkers Drive to the East. This road provides access to residential properties.</p> <p>This section is approximately 1.71 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: zero fatal, zero serious, one minor and zero non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Lloyd Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as a "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist

Requirement	Comments
	<i>activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km.</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 493 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 08/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 44.64 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Barrett Road:</b> 40 km/h.</li> <li>• <b>Barrett Road 80 km/h.</b> (Proposed 60 km/h).</li> <li>• <b>Beacon Road:</b> 40 km/h.</li> <li>• <b>James Paige Lane:</b> 80 km/h. (Proposed 60 km/h).</li> <li>• <b>Edward Jonkers Drive:</b> 80 km/h (Proposed 60 km/h).</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	1.71
Annual Daily Traffic	493

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	2 to <3	1.3
Access density (per km)	10 to <20	1.10
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is **1.49**. For Rural areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60km/h Lloyd Road (Full length).*

Lloyd Road is a self-explaining road as the mean operating speeds (44.64 km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Lloyd Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for this road due to multitude of factors. These being the medium lane width, very narrow shoulder width, straight nature of the road, high roadside hazards and low mean operating speeds.

Crash history from WK NZTA's CAS database shows one crash in the last 5 years including zero fatal, zero serious, one minor and zero non-injury crashes. .

After considering all the above factors, the existing speed limit of 80 km/h on Lloyd Road in Riverhead, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Mamari Road (Whenuapai)**

The speed limit on Mamari Road, Whenuapai (between 225m south of Brigham Creek Road and Spedding Road) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mamari Road connects to Spedding Road to the south. This road provides access to residential properties.</p> <p>Mamari Road is approximately 0.53 km in length. It is classified as an Access Road under the one network road classification (ONRC).</p> <p>Mamari Road is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Mamari Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 147 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 05/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Mamari Road has a mean operating speed of 36.6 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Spedding:</b> 80 km/h (proposed 60 km/h)</li> </ul>

#### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.53
Annual Daily Traffic	147

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

#### Step 3: Calculate the IRR score

Feature	Category	Risk Score
---------	----------	------------

Road stereotype	Unsealed	10.0
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	>20	1.3
Traffic volume	<1000	1.0

- The Infrastructure Risk Rating Score is **1.96**. For Rural areas this corresponds to an IRR band of **Medium-High**.

#### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

#### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation: 40km/h Mamari Road between 225m south of Brigham Creek Road and Spedding Road.*

Mamari Road is a self-explaining road as the mean operating speeds are already at, or below, the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Mamari Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Mamari Road due to a multitude of factors. These being the unsealed road surface, narrow lane and very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (<50 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.

After considering all the above factors, the existing speed limit of 80 km/h on Mamari Road in Whenuapai, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Manukau Station Road (Manukau)

The speed limit on Manukau Station Road, Manukau has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Manukau Station Road connects to Davies Avenue and Osterley Way to the north, Lambie Drive to the west, Great South Road and Redoubt Road to the east, and Wiri Station Road and Barrowcliffe Place to the south. This road provides access to residential properties and commercial centres.</p> <p>This section is approximately 1.03 km in length. It is classified as a Regional road under the one network road classification (ONRC).</p> <p>This section is a two-way, multilane-lane, divided-traversable road. There are pedestrian amenities, cyclist amenities and on-street parking along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records <b>fifty-three</b> crashes between 2016 and 2020: zero fatal, one serious, thirteen minor and thirty-nine non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Manukau Station Road were determined using MegaMaps tool/ a combination of site drive-over footage and GeoMap information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Divided-traversable.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using MegaMaps tool. The IRR defines Commercial big box as " <i>Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas.</i> "

Requirement	Comments
	<i>Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."</i>
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km.</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 11,817 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of value 37.31 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Lambie Drive:</b> 60 km/h (proposed 50 km/h)</li> <li><b>Great South Road:</b> 60 km/h (proposed 50 km/h).</li> <li><b>Redoubt Road:</b> 50 km/h.</li> <li><b>Davies Avenue:</b> 50 km/h.</li> <li><b>Osterley Way:</b> 50 km/h.</li> <li><b>Wiri Station Road:</b> 60 km/h. (proposed 50 km/h).</li> <li><b>Barrowcliffe Place:</b> 50 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	14
DSI crashes during the period	1
Corridor Length (km)	1.03

Annual Daily Traffic	11,817
----------------------	--------

- The Collective Risk score is **0.19**. For Urban areas this corresponds to a Collective Risk band of **High**.
- The Personal Risk score is **4.50**. For Urban areas this corresponds to a Personal Risk band of **Low-Medium**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Divided-traversable	3.00
Road alignment	Straight	1.00
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards	High	2.28
Adjacent land use	Commercial big box	4.00
Intersection density (per km)	5 to <10	2.60
Access density (per km)	5 to <10	1.06
Traffic volume	6000 to <12000	2.20

The Infrastructure Risk Rating Score is **2.47**. For Urban areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 50 km/h Manukau Station Road (Full Length).*

Manukau Station Road is a self-explaining road as the mean operating speeds (37.31 km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Manukau Station Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Manukau Station Road due to multitude of factors. These being very narrow shoulder width, high roadside hazards and low mean operating speeds (<40 km/h). All of these factors contribute to the road's 'Medium-High' IRR score. The collective and personal risk of this road are classified as '**High**' and '**Low-Medium**' respectively due the number of Death and

Serious Injury (DSI) crashes, making it a high-risk road.<sup>1</sup>This proposed speed was also chosen in order to ensure consistency with the surrounding network.

Crash history from WK NZTA's CAS database shows fifty-three crashes in the last 5 years including one serious, thirteen minor, and thirty-nine non-injury crashes.

After considering all the above factors, the existing speed limit of 60 km/h on Manukau Station Road in Manukau, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Marsics Street (Glen Innes)

The speed limit on Marsics Street, Glen Innes, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Marsics Street connects to Leybourne Circle to the north and Sunnymead Road to the south. This road provides access to residential properties and is approximately 0.16km in length.</p> <p>Marsics Street is classified as an Access road under the one network road classification (ONRC). Marsics Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Marsics Street were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0 m to &lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Marsics Street has a mean operating speed in the range of <30km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Leybourne Circle: 50km/h (proposed 30km/h)</li> <li>Aveline Place: 50km/h (proposed 30km/h)</li> <li>Sunnymead Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Marsics Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.69. For urban areas this corresponds to an IRR band of **Medium High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Marsics Street, the actual operating speed estimated using the MegaMaps tool is: <30 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Massey Road (Mangere)**

The speed limit on Massey Road, Mangere (between State Highway 20 and Naylor's Drive) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Massey Road connects to Thomas Road, Pershore Place, Mascot Avenue, Duggan Avenue, Friesian Drive, Imrie Avenue to the north, Naylor's Drive and Kirkbride Road to the west, State Highway 20 and Massey Road to the east, Plumley Crescent, Peninsula Road, Pukaki Road, Prangley Avenue, Tussock Avenue, Tidal Road to the south. This road provides access to residential properties.</p> <p>This section is approximately 2.10 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records one hundred and twenty crashes between 2016 and 2020: zero fatal, two serious, twenty-three minor and ninety-five non-injury crashes. This resulted in two Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Massey Road is identified as one of the top 10% DSI saving network sections for New Zealand.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Massey Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided.</li> <li>• <b>Road alignment:</b> Straight.</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very wide shoulder (&gt;2.0 m).</li> <li>• <b>Roadside hazards (in both directions):</b> Severe.</li> </ul>

Requirement	Comments
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km.</li> <li>• <b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 19,580 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 13/10/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This section has a mean operating speed of 47.18 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Naylor Drive:</b> 50 km/h.</li> <li>• <b>Thomas Road:</b> 50 km/h.</li> <li>• <b>Pershire Place:</b> 50 km/h.</li> <li>• <b>Mascot Avenue:</b> 50 km/h.</li> <li>• <b>Duggan Avenue:</b> 50 km/h.</li> <li>• <b>Friesian Drive:</b> 50 km/h.</li> <li>• <b>Imrie Avenue:</b> 50 km/h.</li> <li>• <b>Plumley Crescent:</b> 50km/h.</li> <li>• <b>Peninsula Road:</b> 50 km/h.</li> <li>• <b>Pukaki Road:</b> 50 km/h.</li> <li>• <b>Prangley Avenue:</b> 50 km/h.</li> <li>• <b>Tussock Avenue:</b> 50 km/h.</li> <li>• <b>Tidal Road:</b> 50 km/h.</li> <li>• <b>Kirkbride Road:</b> 60 km/h.</li> <li>• <b>State Highway 20:</b> 100 km/h.</li> <li>• <b>Massey Road:</b> 50 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	25
DSI crashes during the period	2
Corridor Length (km)	2.10
Annual Daily Traffic	19,580

- The Collective Risk score is **0.19**. For urban areas this corresponds to a Collective Risk band of **High**.
- The Personal Risk score is **2.67**. For urban areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Medium lane, Very wide shoulder	0.78
Roadside hazards	Severe	2.80
Adjacent land use	Urban residential	3.00
Intersection density (per km)	5 to <10	2.60
Access density (per km)	>20	1.30
Traffic volume	>12000	3.00

The Infrastructure Risk Rating Score is **2.75**. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation = 50 km/h Massey Road (between State Highway 20 and Naylor Drive).

Massey Road is a self-explaining road as the mean operating speeds are below than the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Massey Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for this section of Massey Road due to multitude of Factors. These being severe roadside hazards and urban residential land use. All of these factors contribute to the road's 'Medium-High' IRR score. The collective and personal risk of this road are classified as 'High' and 'Low' respectively due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>1</sup> This proposed speed was also chosen in order to ensure consistency with the surrounding network. Massey Road is identified as one of the top 10% DSI saving network sections for New Zealand.

Crash history from WK NZTA's CAS database shows one hundred and twenty crashes in the last 5 years including two serious, twenty-three minor, and ninety-five non-injury crashes.

After considering all the above factors, the existing speed limit of 60 km/h on Massey Road in Mangere, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – McCorquindale Lane (New Lynn)

The speed limit on McCorquindale Lane, New Lynn has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>McCorquindale Lane connects to McCrae Way to the north and Totara Avenue to the south. This road provides access to residential properties and is approximately 0.04km in length.</p> <p>McCorquindale Lane is classified as an Access road under the one network road classification (ONRC). McCorquindale Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for McCorquindale Lane were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Big Box/Industrial using MegaMaps tool. The IRR defines Commercial Big Box/Industrial as "Large (big box) shops and/or industry/factories with intermittent large access ways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present".

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Requirement	Comments
(g) the number of intersections and property accessways; and	The following characteristics for McCorquindale Lane were estimated using MegaMaps tool. <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 550 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of McCorquindale Lane has a mean operating speed is 20km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Totara Avenue: 50 km/h (proposed 10 km/h)</li> <li>• McCrae Way: 50 km/h (proposed 10 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

The following characteristics for McCorquindale Lane were estimated using MegaMaps tool. :

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 10km/h.*

A proposed speed limit of 10 km/h was selected for this road primarily due to a multitude of factors. These being the Shared Zone and commercial big box land use. The existing speed limit of 50 km/h on McCorquindale Lane in New Lynn is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 10 km/h, which is aligned with the recommended safe and appropriate speed. The existing mean operating speed of McCorquindale Lane is 20 km/h. Although the speed is higher than the recommended speed limit of 10 km/h, the road environment is self-explained as a low speed shared environment. Also, this is aligned with the speed limit at other shared zones. The proposed change of speed limit will be a challenging conversation. Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – McCrae Way (New Lynn)

The speed limit on McCrae Way, New Lynn has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>McCrae Way connects Great North Road on the West to Memorial Drive on the East. This road provides access to commercial centre and parking spaces.</p> <p>McCrae Way is approximately 0.19 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).</p> <p>McCrae Way is a two-lane, undivided road. This street is a Shared zone for all road users with on-street parking.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of McCrae Way were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Curved.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0m) Very Narrow Shoulder (&lt;0.5m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using MegaMaps tool. The IRR defines Commercial big box as "Roads with Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km.</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2,261 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
Surveyed Mean Operating Speed (km/h)	This section has a mean operating speed of 23 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Great North Road:</b> 50 km/h.</li> <li><b>Memorial Drive:</b> 50 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.19
Annual Daily Traffic	2,261

- The Collective Risk score is **0.0**. For Urban areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is **0.0**. For Urban areas this corresponds to a Personal Risk band of **Low**.

## Speed Limit Review – Mckean Road (Whenuapai)

The speed limit on Mckean Road, Whenuapai has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mckean Road connects to Totara Road to the east. This road provides access to residential properties. is approximately 0.44 km in length.</p> <p>Mckean Road is approximately 0.44 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>Mckean Road is a two-way, two-lane, undivided road. There are no pedestrian amenities and cyclist amenities. There exists on-street parking along this road</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Mckean Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Low</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as a <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Commercial big box	4.0
Intersection density (per km)	>10	5.00
Access density (per km)	10 to <20	1.10
Traffic volume	1000 to <6000	1.40

- The Infrastructure Risk Rating Score is **2.92**. For Urban areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 10 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 10 km/h McCrae Way (Full Length).*

A proposed speed limit of 10 km/h was selected for this road primarily due to a multitude of factors. These being the Shared Zone, narrow lane width, very narrow shoulder width, curved nature of the road, high roadside hazards and commercial big box land use. All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.

After considering all the above factors, the existing speed limit of 50 km/h on McCrae Way in New Lynn is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 10 km/h, which is aligned with the recommended safe and appropriate speed. The existing mean operating speed of *McCrae Way* is 23 km/h. Although the speed is higher than the recommended speed limit of 10 km/h, the road environment is self-explained as a low speed shared environment. Also, this is aligned with the speed limit at other shared zones. The proposed change of speed limit will be a challenging conversation.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 599 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 05/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Mckean Road has a mean operating speed of 33.4 km/h
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Totara Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.44
Annual Daily Traffic	599

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	Low	0.4
Adjacent land use	Rural residential	1.5
Intersection density (per km)	3 to <5	1.5
Access density (per km)	10 to <20	1.10
Traffic volume	<1000	1.0

- The Infrastructure Risk Rating Score is 0.81. For Rural areas this corresponds to an IRR band of **Low-Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 60 km/h Full length of Mckean Road.*

Mckean Road is a self-explaining road as the mean operating speeds are already at, or below, the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Mckean Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Mckean Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, straight nature of the road, low road-side hazards and low mean operating speed (<50 km/h).

After considering all the above factors, the existing speed limit of 80 km/h on Mckean Road in Whenuapai, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Mckenzie Road (Mangere Bridge)

The speed limit on Mckenzie Road, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mckenzie Road connects to Kirkbride Road to the south and Miller Road, Tarata Crescent to the west, Bader Drive and Valiant Street to the east and Coronation Road and Walmsley Road to the north. This road provides access to residential properties.</p> <p>This section is approximately 1.58 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are pedestrian amenities, cycle amenities and on-street parking along this road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records thirty-one crashes between 2016 and 2020: zero fatal, three serious, eight minor and twenty non-injury crashes. This resulted in three Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Mckenzie Road is identified as one of the top 10% DSI saving network sections for New Zealand.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Mckenzie Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Wide shoulder (&gt;1.0 to 2.0 m).</li> <li><b>Roadside hazards (in both directions):</b> Severe.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular

Requirement	Comments
	<i>intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day'</i>
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km.</li> <li><b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps 16,693 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 13/10/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This section has a mean operating speed of 48.58 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Kirkbride Road:</b> 60 km/h.</li> <li><b>Miller Road:</b> 50 km/h.</li> <li><b>Coronation Road:</b> 60 km/h.</li> <li><b>Walmsley Road:</b> 60 km/h (proposed 50 km/h).</li> <li><b>Tarata Crescent:</b> 50 km/h.</li> <li><b>Bader Drive:</b> 50 km/h.</li> <li><b>Valiant Street:</b> 50 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	11
DSI crashes during the period	3

Corridor Length (km)	1.58
Annual Daily Traffic	16,693

- The Collective Risk score is **0.38**. For urban areas this corresponds to a Collective Risk band of **High**.
- The Personal Risk score is **11.71**. For urban areas this corresponds to a Personal Risk band of **High**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Medium lane, Very wide shoulder	0.78
Roadside hazards	Severe	2.80
Adjacent land use	Urban residential	3.00
Intersection density (per km)	3 to <5	1.50
Access density (per km)	>20	1.30
Traffic volume	>12000	3.00

The Infrastructure Risk Rating Score is **2.38**. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 50 km/h Mckenzie Road (Full Length).*

Mckenzie Road is a self-explaining road as the mean operating speeds is below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Mckenzie Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Mckenzie Road due to multitude of factors. These being severe roadside hazards and low mean operating speeds (<50 km/h).

Due to adverse crash history on the road. Both the collective and personal risk of this road are classified as '**High**' due to the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>1</sup> This proposed speed was also chosen in order to ensure consistency with the surrounding network. Mckenzie Road is identified as one of the top 10% DSI saving network sections for New Zealand.

Crash history from WK NZTA's CAS database shows thirty-one crashes in the last 5 years including three serious, eight minor, and twenty non-injury crashes.

After considering all the above factors, the existing speed limit of 60 km/h on Mckenzie Road in Mangere Bridge, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Memorial Drive (New Lynn)

The speed limit on Memorial Drive, New Lynn (between Great North Road and Totara Avenue) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Memorial Drive connects Great north road on the north to Totara Avenue on the south. This road provides access to commercial centre and parking spaces.</p> <p>Memorial Drive is approximately 0.19 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).</p> <p>Memorial Drive is a two-lane, undivided road. This street is a Shared zone for all road users with on-street parking.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two non-injury crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Memorial Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Curved.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0m) Very Narrow Shoulder (&lt;0.5m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using MegaMaps tool. The IRR defines Commercial big box as "Roads with Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km.</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2900 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
Surveyed Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Great North Road:</b> 50 km/h.</li> <li><b>Totara Avenue:</b> 50 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.19
Annual Daily Traffic	550

- The Collective Risk score is **0.0**. For Urban areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is **0.0**. For Urban areas this corresponds to a Personal Risk band of **Low**.

## Speed Limit Review – Messenger Road (Stillwater)

The speed limit on Messenger Road, Stillwater has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Messenger Road connects to Duck Creek Road to the south. This road provides access to residential properties.</p> <p>Messenger Road is approximately 1.04 km in length. It is classified as an Access Road under the one network road classification (ONRC).</p> <p>Messenger Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Messenger Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as: Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Commercial big box	4.0
Intersection density (per km)	>10	5.00
Access density (per km)	10 to <20	1.10
Traffic volume	1000 to <6000	1.40

- The Infrastructure Risk Rating Score is **2.92**. For Urban areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 30 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30 km/h Memorial Drive (between Great North Road and Totara Avenue).*

Memorial Drive is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit

A proposed speed limit of 30 km/h was selected for this road primarily due to a multitude of factors. These being the Shared Zone, narrow lane width, very narrow shoulder width, curved nature of the road, high roadside hazards and commercial big box land use. All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.

After considering all the above factors, the existing speed limit of 50 km/h on Memorial Drive in New Lynn is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 30 km/h, which is aligned with the recommended safe and appropriate speed. The existing mean operating speed of *Memorial Drive* is 20 km/h.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 117 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Messenger Road has a mean operating speed of 44 km/h
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Duck Creek Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.04
Annual Daily Traffic	117

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Winding	3.5
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	<1	1.0
Access density (per km)	10 to <20	1.1
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is 1.94. For Rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Messenger Road.*

Messenger Road is a self-explaining road as the mean operating speeds (44 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Messenger Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Messenger Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, winding nature of the road, and high roadside hazards. All of these factors contribute to the road's '**Medium-High**' IRR score, making it a high-risk road.

After considering all of the above factors, the existing speed limit of 80 km/h on Messenger Road in Stillwater, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Messenger Road is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Mira Street (Ponsonby)

The speed limit on Mira Street, Ponsonby has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mira Street connects to connects Lincoln Street to the North and Norfolk Street to the South. This road provides access to residential properties.</p> <p>This section is approximately 0.08 km in length. It is classified as an Access Road under the one network road classification (ONRC).</p> <p>This section is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Mira Street were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km.</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 78 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Lincoln Street:</b> 50 km/h (proposed 30 km/h).</li> <li><b>Norfolk Street:</b> 50 km/h (proposed 30 km/h).</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.08
Annual Daily Traffic	78

- The Collective Risk score is **0.00**. For urban areas this corresponds to a Collective Risk band of **Low**.

- The Personal Risk score is **0.00**. For urban areas this corresponds to a Personal Risk band of **Low**.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Urban residential	3.0
Intersection density (per km)	>10	5.00
Access density (per km)	10 to <20	1.10
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is **2.39**. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h Mira Street (Full Length)*

Mira Street is a self-explaining road as the mean operating speeds (20 km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Mira Street was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30 km/h was selected for this road due to multitude of factors. These being narrow lane width, very narrow shoulder width, straight nature of the road, high roadside hazards and low mean operating speeds (<30 km/h). This proposed speed was also chosen in order to ensure consistency with the surrounding network.

After considering all the above factors, the existing speed limit of 50 km/h on Mira Street in Waitemata, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit for Mira Street is 30 km/h which is lower than the speed limit recommended by the Speed Management Guide (40 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (20 km/h) supports the reduction.

## Speed Limit Review – Mita Road (Silverdale)

The speed limit on Mita Road, Silverdale has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mita Road connects to Goldwater Drive to the north and Silverwater Drive to the south. This road provides access to residential properties and is approximately 0.27km in length.</p> <p>Mita Road is classified as an Access road under the one network road classification (ONRC). Mita Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mita Road were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following characteristics for Mita Road were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 61 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	<p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban residential area.</p> <p>Potential changes to the speed limit in this area will be sent to the Local Board via email in November. Responses will be considered for investigation.</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Mita Road has a mean operating speed in the range of <30km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Goldwater Drive: 50 km/h (proposed 30km/h)</li> <li>Silverwater Drive: 50 km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

The following characteristics for Mita Road were estimated using MegaMaps tool. :

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

Mita Road is a self-explaining road as the mean operating speeds is below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Mita Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

The proposed safe and appropriate speed limit for Mita Road is 30 km/h which is lower than the speed limit recommended by the Speed Management Guide (40 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed supports the reduction. The proposed 30 km/h speed will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Murphys Road (Flat Bush)**

Murphys Road, Flat Bush is divided into two sections as follows:<sup>1</sup>

- Section 1: Murphys Road Between Redoubt Road to 150 m south of Flat Bush School Road.
- Section 2: Murphys Road Between Stancombe Road to 80 meter south of Ormiston Road.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Murphys Road, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Murphys Road connects to Stancombe Road and Jeffs Road to the north, Redoubt Road to the south, Murphys Park Drive, Flat Bush School Road, Horsefields Drive, Te Kura Road, Bush View Place, Timmer Road, Ormiston Road, Norwood Drive, Birchlands Road to the east and Malahide Drive, Multose Drive, Salford Crescent, Ormiston Road, Geranium Avenue, Kerrykeel Drive, Flat Bush School Road and Thomas Road to the west. This road provides access to residential properties.	
	This section is approximately 1.82 km in length. It is classified as an Arterial road under the one network road classification (ONRC).	This section is approximately 0.92 km in length. It is classified as an Arterial road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are pedestrian amenities, cyclist facilities and on-street parking along this section.	This section is a two-way, two-lane, undivided road. There are pedestrian amenities, cyclist facilities and on-street parking along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records <b>forty-one</b> crashes between 2016 and 2020: zero fatal, zero serious, eleven minor and thirty non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records <b>twenty-seven</b> crashes between 2016 and 2020: zero fatal, zero serious, six minor and twenty-one non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Murphys Road is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Murphys Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural Residential as " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as	Average daily traffic (ADT) was determined from MegaMaps as

Requirement	Comments	
	Section 1	Section 2
	6,515 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and but it's not consistent with the traffic survey.	12,656 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 26/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 80 km/h.	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed/ surveyed 85 <sup>th</sup> percentile speed (km/h)	This section of has a mean operating speed in the range of 56.68 km/h.	This section of has a mean operating speed in the range of 47.27 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Redoubt Road:</b> 60 km/h</li> <li>• <b>Thomas Road:</b> 50 km/h</li> <li>• <b>Murphys Park Drive:</b> 50 km/h</li> <li>• <b>Te Kura Road:</b> 50 km/h</li> <li>• <b>Bush View Place:</b> 50 km/h</li> <li>• <b>Flat Bush School Road:</b> 60 km/h (proposed 50 km/h)</li> <li>• <b>Horsefields Drive:</b> 50 km/h</li> <li>• <b>Kerrykeel Drive:</b> 50 km/h</li> <li>• <b>Timmer Road:</b> 50 km/h</li> <li>• <b>Geranium Avenue:</b> 50 km/h</li> <li>• <b>Ormiston Road:</b> 60 km/h (proposed 50 km/h)</li> <li>• <b>Salford Crescent:</b> 50 km/h</li> <li>• <b>Multose Drive:</b> 50 km/h</li> <li>• <b>Norwood Drive:</b> 50 km/h</li> <li>• <b>Malahide Drive:</b> 50 km/h</li> <li>• <b>Birchlands Road:</b> 50 km/h</li> <li>• <b>Jeffer Road:</b> 50 km/h</li> <li>• <b>Stancombe Road:</b> 60 km/h (proposed 50 km/h)</li> </ul>	

**Step 2: Determine the road safety metrics**

	<b>Data</b>
--	-------------

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	11	6
DSI crashes during the period	0	0
Corridor Length (km)	1.82	0.92
Annual Daily Traffic	6,515	12,656

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

#### **Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Straight	1.00	Straight	1.00
Carriageway width	Narrow lane, Narrow shoulder	1.79	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural residential	1.50	Urban residential	3.00
Intersection density (per km)	2 to <3	1.30	5 to <10	2.60
Access density (per km)	2 to <5	1.03	>20	1.30
Traffic volume (vpd)	6000 to <12000	2.20	>12000	3.00

- Section 1

- The Infrastructure Risk Rating Score is 1.81. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.66. For rural areas this corresponds to an IRR band of **Medium-High**.

#### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

Section 1: The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80

Section 2: The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

#### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60 km/h on Murphys Road Between Redoubt Road to 150 m south of Flat Bush School Road. (section 1)
- 50 km/h on Murphys Road Between Stancombe Road to 80 meter south of Ormiston Road. (section 2)

Murphys Road (Section 1 & 2) is a self-explaining road as the mean operating speeds are already at, or below, the proposed safe and appropriate speeds, despite the existing 60 km/h and 80 km/h speed limit.

Engineering down/up of Murphys Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60/50 km/h was selected for Section 1 and 2 of Murphys Road respectively due to a multitude of factors. These being the narrow lane and shoulder width and high road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.

Crash history from WK NZTA's CAS database shows seventy-eight crashes in the last 5 years including zero fatal, one serious, eighteen minor, and fifty-nine non-injury crashes.

After considering all of the above factors, the existing speed limit of 80 km/h on section 1 and 60 km/h on section 2 of Murphys Road in Flat Bush, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60/50 km/h for section 1 and 2 respectively, which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Newman Road (East) (Stillwater)

The speed limit on Newman Road (east), Stillwater (between Spur Road and 700m west of Spur Road) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Newman Road (east) connects to Spur Road to the south. This road provides access to residential properties.</p> <p>Newman Road is approximately 0.51 km in length. It is classified as an Access Road under the one network road classification (ONRC).</p> <p>Newman Road (east) is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Newman Road (east) were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as a "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 98 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Newman Road (east) has a mean operating speed of 33.2 km/h
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Spur Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.51
Annual Daily Traffic	98

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	>20	1.3
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is 1.78. For Rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h Newman Road (east) (between Spur Road and 700m west of Spur Road).*

Newman Road (east) is a self-explaining road as the mean operating speeds (33.2 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Newman Road (east) was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Newman Road (east) due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road, and high roadside hazards. All of these factors contribute to the road's '**Medium-High**' IRR score, making it a high-risk road.

After considering all of the above factors, the existing speed limit of 80 km/h on Newman Road (east) in Stillwater, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Newman Road (east) is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Newman Road (west) (Stillwater)**

Newman Road (west), Stillwater, is divided into one section as follows: <sup>1</sup>

- Section 1: Road Name between East Coast Road and 880m east of East Coast Road.

The speed limit on Newman Road (west), Stillwater has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Newman Road (west) connects to East Coast Road to the east. This road provides access to residential properties and is approximately 0.67 km in length.</p> <p>Newman Road (west) is classified as a Access road under the one network road classification (ONRC). Newman Road (west) is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadides; and	<p>The following characteristics for each section of Newman Road (west) were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as: <i>Rural area with accesses present to private dwellings and farms. There may be</i>

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments
	<i>the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 81 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Newman Road (west) has a mean operating speed of 38 km/h
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>East Coast Road:</b> 80 km/h</li> </ul>

**Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.67
Annual Daily Traffic	81

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.

- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	2 to <3	1.3
Access density (per km)	10 to <20	1.1
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is **1.75**. For Rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for Newman Road (west) (between East Coast Road and 880m east of East Coast Road).*

Newman Road (west) is a self-explaining road as the mean operating speeds (38 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Newman Road (west) was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Newman Road (west) due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road, and high road-side hazards. All of these factors contribute to the road's '**Medium-High**' IRR score, making it a high-risk road.

After considering all of the above factors, the existing speed limit of 80 km/h on Newman Road (west) in Stillwater, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Newman Road (west) is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Norfolk Street (Ponsonby)

The speed limit on Norfolk Street, Ponsonby has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Norfolk Street connects to Kent Street and Mira Street to the north, Ponsonby Road to the East and Richmond Road to the West. This road provides access to residential properties.</p> <p>This section is approximately 0.62 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records five non-injury crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Norfolk Street were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km.</li> <li><b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 867 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 23.63 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Ponosonby Road:</b> 40 km/h.</li> <li><b>Richmond Road:</b> VSL 40 &amp; 50 km/h.</li> <li><b>Kent Street:</b> 50 km/h (proposed 30 km/h).</li> <li><b>Mira Street:</b> 50 km/h (proposed 30 km/h).</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.62
Annual Daily Traffic	867

- The Collective Risk score is **0.00**. For urban areas this corresponds to a Collective Risk band of **Low**.

- The Personal Risk score is **0.00**. For urban areas this corresponds to a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Urban residential	3.0
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.30
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is **2.18**. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h Norfolk Street (Full Length)*

Norfolk Street is a self-explaining road as the mean operating speeds are (23.63 km/h) below or near, the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Norfolk Street was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30 km/h was selected for this road due to multitude of factors. These being narrow lane width, very narrow shoulder width, nature of the road, high roadside hazards and low mean operating speeds (<40 km/h). This proposed speed was also chosen in order to ensure consistency with the surrounding network.

Crash history from NZTA's CAS database shows five non-injury crashes in the last 5 years.

After considering all the above factors, the existing speed limit of 50 km/h on Norfolk Street in Waitemata, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit for Norfolk Street is 30 km/h which is lower than the speed limit recommended by the Speed Management Guide (40 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (23.63 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Okura River Road (Okura)

Okura River Road, Okura, is divided into two sections as outlined below:

1. Section 1: Okura River Road between 370m south of Gails Drive and Vaughans Road.
2. Section 2: Okura River Road between Vaughans Road and East Coast Road.

The speed limit on Okura River Road, Okura has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Section 1	Section 2
	Okura River Road connects to Warman Road to the west, and Vaughans Road to the east. This road provides access to residential properties.	Okura River Road connects to East Coast Road to the south. This road provides access to residential properties
	Okura River Road is approximately 1.35 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).	Okura River Road is approximately 1.05 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).
	Okura River Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	Okura River Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: zero fatal, one serious, one minor and two non-injury crashes. This resulted in one Death and Serious Injury (DSI).	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: zero fatal, one serious, one minor and two non-injury crashes. This resulted in one Death and Serious Injury (DSI).

Requirement	Comments	
	This data includes crashes for all road users and therefore crash risk for all road users were considered.	This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Okura River Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided.</li> <li>• <b>Road alignment:</b> Curved.</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li>• <b>Roadside hazards (in both directions):</b> High.</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided.</li> <li>• <b>Road alignment:</b> Curved.</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li>• <b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as: <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as: <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,198 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 1,198 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to		
Current speed limit	The existing speed limit is 80 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Okura River Road has a mean operating speed of 50.4 km/h.	This section of Okura River Road has a mean operating speed of 49.5 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Vaughans Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>East Cast Road:</b> 80 km/h</li> </ul>	

**Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	2	2
DSI crashes during the period	1	1
Corridor Length (km)	1.35	1.05
Annual Daily Traffic	1198	1198

Section 1:

- o The Collective Risk score is **0.15**. For Rural areas this corresponds to a Collective Risk band of **Medium-High**.
- o The Personal Risk score is **33.88**. For Rural areas this corresponds to a Personal Risk band of **High**.

Section 2:

- o The Collective Risk score is **0.19**. For Rural areas this corresponds to a Collective Risk band of **High**.
- o The Personal Risk score is **43.35**. For Rural areas this corresponds to a Personal Risk band of **High**.

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28	High	2.28
Adjacent land use	Rural residential	1.5	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2	1 to <2	1.2
Access density (per km)	>20	1.3	>20	1.3
Traffic volume	1000 to <6000	1.4	1000 to <6000	1.4

Section 1:

- The Infrastructure Risk Rating Score is **1.93**. For Rural areas this corresponds to an IRR band of **Medium-High**.

Section 2:

- The Infrastructure Risk Rating Score is **1.93**. For Rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

Section 1: The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

Section 2: The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation*

- 60 km/h for Okura River Road between 370m south of Gails Drive and Vaughans Road. (Section 1)
- 60 km/h for Okura River Road between Vaughans Road and East Coast Road. (Section 2)

Okura River Road is a self-explaining road as the mean operating speeds is below or near, the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit.

Engineering down/up of Okura River Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Okura River Road Section 1 & 2 due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road, and high road-side hazards. All of these factors contribute to the road's 'High' IRR score. The collective and personal risk of this road are classified as 'Medium-High' and 'High' for section 1, 'High' and 'High' for section 2 respectively due to the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>1</sup>

Crash history from WK NZTA's CAS database shows eight crashes in the last 5 years including zero fatal, two serious, two minor, and four non-injury crashes.

After considering all of the above factors, the existing speed limit of 80 km/h on Okura River Road in Okura, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h for Okura River Road section 1 and 2 which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Old Pine Valley Road (Dairy Flat)

The speed limit on Old Pine Valley Road, Dairy Flat has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> <li>Refer to the Process Summary for further information.</li> </ul>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Old Pine Valley Road connects to Pine Valley Road to the south. This road is approximately 0.34 km in length.	Old Pine Valley Road connects to Pine Valley Road to the south. This road is approximately 0.51 km in length.
	Old Pine Valley Road is classified as an Access road under the one network road classification (ONRC). Old Pine Valley Road is a two-way, Two lane undivided road. There are no pedestrian amenities or cyclist amenities.	Old Pine Valley Road is classified as an Access road under the one network road classification (ONRC). Old Pine Valley Road is a unseal road. There are no pedestrian amenities or cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one serious injury crash between 2016 and 2020. This Resulted in one Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	From MegaMaps tool. <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curve</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and very narrow shoulder (0 to &lt;0.5m)</li> </ul>	From MegaMaps tool. <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curve</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow</li> </ul>

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

(f) adjacent land use; and	The adjacent land use is classified as rural residential using MegaMaps tool. The IRR defines rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.".	The adjacent land use is classified as rural residential using MegaMaps tool. The IRR defines rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.".
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	From MegaMaps tool: <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) from MegaMaps is 57 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) from MegaMaps is 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road
(i) any planned modification to the road; and	Planned new development in the area	Planned new development in the area
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to		
Current speed limit	The existing speed limit is 100km/h.	The existing speed limit is 100km/h.

MegaMaps Mean Operating Speed (km/h)	This section of Old Pine Valley Road has a mean operating speed in the range of 30 to 40 km/h.	This section of Old Pine Valley Road has a mean operating speed in less than 30 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Pine Valley Road: 80 km/h (proposed 60 km/h)</li> </ul>	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Pine Valley Road: 80 km/h (proposed 60 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Old Pine Valley Road has the following information:

Section 1:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **High**.

Section 2:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.98. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

For section 1 and 2, the safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 60km/h.

### **Step 4: Conclusion**

Existing speed limit: 100km/h

*Proposed safe and appropriate speed limit recommendation = 60km/h.*

Old Pine Valley Road is a self-explaining road as the mean operating speeds are already at, or below, the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Old Pine Valley Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

The existing speed limit of 100 km/h on Old Pine Valley Road, is not considered to be a safe and appropriate speed limit for this section of road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed. In addition, the proposed 60 km/h speed limit support the new residential development in the area.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Ormiston Road (Flat Bush)

Ormiston Road, Flat Bush, is divided into six sections as follows: <sup>1</sup>

1. Section 1: Ormiston Road between Springs Road and Te Irirangi Drive
2. Section 2: Ormiston Road between Te Irirangi Drive and 160 m west of Rienzo Drive.
3. Section 3: Ormiston Road between 160 m west of Rienzo Drive and Wallen Road
4. Section 4: Ormiston Road between Wallen Drive and 460 m northeast of Wallen Drive.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Ormiston Road, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Ormiston Road connects to Preston Road to the west, Murchison Road, Jarvis Way, Florence Carter Avenue, Te Irirangi Drive, Michael Jones Drive, Chapel Road, Whenua Road, Mary Ann Road, Bonnette Road, Haddington Drive, Pencaitland Drive, Collier Drive, Te Ara Kahikatea Road, Helianthus Avenue, Murphys Road, Henry Maxwell Drive, Valderama Drive, Tipu Road to the south, Laidlaw Way, Bishop Lenihan Place, Te Irirangi Drive, Chapel Road, Bellingham Road, Pencaitland Drive, Flintridge Drive, Murphys Road, Rienzo Drive, Valderama Drive, Azzurro Way to the north, and Tamure Road, Ormiston Road and Wallen Road to the east. This road provides access to commercial and residential properties.		
	This section is approximately 1.21 km in length. It is classified as a Regional road under the one network road	This section is approximately 2.21 km in length. It is classified as an Arterial road under the one network road	This section is approximately 0.78 km in length. It is classified as an Arterial road under the

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	classification (ONRC).	classification (ONRC).	one network road classification (ONRC).
	This section is a two-way, multi-lane, divided road. There are pedestrian amenities and cyclist amenities along this section. There is no on-street parking.	This section is a two-way, multi-lane, divided road. There are pedestrian amenities and cyclist amenities along this section. There is no on-street parking.	This section is a two-way, multi-lane, divided road. There are pedestrian amenities and cyclist amenities along this section. There is no on-street parking.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records <b>seventy-seven</b> crashes between 2016 and 2020: zero fatal, three serious, eight minor and sixty-six non-injury crashes. This resulted in three Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records <b>sixty-one</b> crashes between 2016 and 2020: zero fatal, two serious, eleven minor and forty-eight non-injury crashes. This resulted in two Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records <b>fourteen</b> crashes between 2016 and 2020: zero fatal, zero serious, seven minor and seven non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Ormiston Road is identified as one of the top 10% DSI saving network sections for New Zealand.		Ormiston Road is identified as one of the top 10% DSI saving network sections for New Zealand.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Ormiston Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b></li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided-traversable</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b></li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b></li> </ul>

Intersection density (per km)	5 to <10	2.60	3 to <5	1.50	3 to <5	1.50
Access density (per km)	10 to <20	1.10	5 to <10	1.06	2 to <5	1.03
Traffic volume (vpd)	>12000	3.00	6000 to <12000	2.20	>12000	3.00
Feature	Section 4					
	Category		Risk Score			
Road stereotype	Two-lane undivided		3.70			
Road alignment	Curved		1.80			
Carriageway width	Wide lane, Narrow shoulder		1.18			
Roadside hazards (in both directions)	High		2.28			
Adjacent land use	Controlled access		2.00			
Intersection density (per km)	1 to <2		1.20			
Access density (per km)	2 to <5		1.03			
Traffic volume (vpd)	6000 to <12000		2.20			

- Section 1
  - The Infrastructure Risk Rating Score is 2.68. For urban areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.93. For urban areas this corresponds to an IRR band of **Low-Medium**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.11. For urban areas this corresponds to an IRR band of **Medium**
- Section 4
  - The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

Section 1, 2, 3 and 4: The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 50 km/h on Ormiston Road between Springs Road and Te Irirangi Drive (section 1)
- 50 km/h on Ormiston Road between Te Irirangi Drive and 160 m west of Rienzo Drive (section 2)
- 50 km/h on Ormiston Road between 160 m west of Rienzo Drive and Wallen Road (section 3)
- 50 km/h on Ormiston Road between Wallen Drive and 460 m north east of Wallen Drive. section 4)

Ormiston Road section 1 is a self-explaining road as the mean operating speeds (50 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit.

Ormiston Road section 2, 3, and 4 are road requiring engineering down interventions in order to lower the mean operating speeds such that it is suitable to implement the proposed safe and appropriate speed.

Engineering up of Ormiston Road were considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h were selected for Ormiston Road sections 1, 2, 3 and 4, due to a multitude of factors. These being the very narrow shoulder width, high road-side hazards and low mean operating speed. All of these factors contribute to the road's 'Medium-High' IRR score. The collective and personal risk of this road are classified as '**High**' and '**High**' respectively due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>2</sup>

Crash history from WK NZTA's CAS database shows hundred and seventy crashes in the last 5 years including zero fatal, eight serious, thirty-two minor, and hundred and thirty non-injury crashes.

After considering all of the above factors, the existing speed limit of 60km/h on Ormiston Road in Flat Bush is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Ormiston Road section 1, 2, 3 and 4 is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Orrs Road (Wiri)

The speed limit on Orrs Road, Wiri has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Orrs Road connects to Puhinui Road to the south. This road provides access to residential properties.
	This section is approximately 0.26 km in length. It is classified as an Access Road under the one network road classification (ONRC).
	This section is a two-way, two-lane, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Orrs Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural Residential as " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km.</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 140 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Puhinui Road:</b> 100 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.26
Annual Daily Traffic	140

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	3 to <5	1.50
Access density (per km)	5 to <10	1.06
Traffic volume	<1000	1.00

The Infrastructure Risk Rating Score is **1.99**. For Rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h Orrs Road (Full Length).*

Orrs Road is a self-explaining road as the mean operating speeds (20 km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Orrs Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Orrs Road due to multitude of factors. These being the narrow lane width, very narrow shoulder width, high roadside hazards and low mean operating speeds. All of these factors contribute to the road's '**Medium-High**' IRR score, making it a high-risk road.

After considering all the above factors, the existing speed limit of 100 km/h on Orrs Road in Wiri, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Painton Road (Silverdale)

The speed limit on Painton Road, Silverdale (between 50 m south of Hibiscus Coast Highway and Small Road) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Painton Road connects to Hibiscus Coast Highway to the north and Small Road to the south. This road provides access to residential properties and is approximately 0.17 km in length.</p> <p>Painton Road is classified as an access road under the one network road classification (ONRC). Painton Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Painton Road were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Big Box using MegaMaps tool. The IRR defines urban residential as " <i>Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present.</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	The following characteristics for Painton Road were estimated using MegaMaps tool. <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Painton Road has a mean operating speed of 26.76 km/h
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Goldwater Drive: 50 km/h (proposed 30km/h)</li> <li>• Small Road: 50 km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

The following characteristics for Painton Road were estimated using MegaMaps tool. :

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low- Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

Painton Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. this section of Painton Road is at the back of main bus hub with high number of pedestrian movements.

The proposed safe and appropriate speed limit for Painton Road is 30 km/h which is lower than the speed limit recommended by the Speed Management Guide (40 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed supports the reduction. The proposed 30 km/h speed will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Pakiri River Road (Pakiri)

The speed limit on Pakiri River Road, Pakiri (between 1700m North of Witten Road to the road end) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
	Section 1
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Pakiri River Road connects to Witten Road to the east. This road provides access to residential properties.
	<p>This section is approximately 0.69 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020. Zero fatal, zero serious, zero minor and one non-injury. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Pakiri River Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed.</li> <li><b>Road alignment:</b> Curved.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "area with

Requirement	Comments
	Section 1
	<i>accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersection per km.</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 221 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 08/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 34.95 km/h
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Pakiri Road:</b> 60 km/h.</li> <li><b>Witten Road:</b> 100 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Section 1
Crash Analysis Period (years)	5
Total injury crashes during period	0

DSI crashes during the period	0
Corridor Length (km)	0.69
Annual Daily Traffic	221

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

Feature	Section 2	
	Category	Risk Score
Road stereotype	Unsealed	10.0
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	<1	1.0
Access density (per km)	2 to <5	1.03
Traffic volume	<1000	1.0

- The Infrastructure Risk Rating Score is 2.1. For Rural areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h between 1700m North of Witten Road (Pakiri Beach holiday park) to the road end.*

*Pakiri River Road* is a self-explaining road as the mean operating speeds (34.95 km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of *Pakiri River Road* was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Pakiri Road due multitude of factors. These being to unsealed surface, narrow lane width, very narrow shoulder width, curved nature of the road, high road side hazards. All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.

Crash history from WK NZTA's CAS database shows one crash in the last 5 years including zero fatal, zero serious, zero minor and one non- injury.

After considering all the above factors, the existing speed limit of 60 km/h on *Pakiri River Road* in *Pakiri*, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Pakuranga Road (Pakuranga)

Road Name, Pakuranga, is divided into three sections as follows: <sup>1</sup>

1. Section 1: Pakuranga Road between 180m east of Kerswill Place and Ti Rakau Drive
2. Section 2: Pakuranga Road between Ti Rakau Drive and Grammar School Road
3. Section 3: Pakuranga Road between Grammar School Road and 144m west of Stanniland Street
4. Section 4: Pakuranga Road between 144m west of Stanniland Street and Ridge Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Pakuranga Road, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	<p>Pakuranga Road connects to Pakuranga Road and Kerswill Place to the west, Millen Avenue, Latham Avenue, Ti Rakau Drive, Brampton Court, Williams Roberts Road, Lewis Road Greenhill Crescent, Johns Lane, Gossamer Drive to the south, Williams Avenue, Tamaki Bay Drive, Kentigern Close, Grammar School Road, Glenmore Road and Wilbur Place to the north and Pakuranga Road to the east. This road provides access to commercial and residential properties.</p>		
	This section is approximately 0.60 km in length. It is classified as a Regional road under the one network road classification (ONRC).	This section is approximately 1.24 km in length. It is classified as a Regional road under the one network road classification (ONRC).	This section is approximately 0.87 km in length. It is classified as a Regional road under the one network road classification (ONRC).

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	This section is a two-way, five-lane, divided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.	This section is a two-way, six-lane, divided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.	This section is a two-way, four-lane, divided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records <b>thirty</b> crashes between 2016 and 2020: zero fatal, zero serious, six minor and twenty-four non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records <b>seventy-six</b> crashes between 2016 and 2020: zero fatal, one serious, twenty-three minor and fifty-two non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records <b>forty-six</b> crashes between 2016 and 2020: one fatal, one serious, five minor and thirty-nine non-injury crashes. This resulted in two Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Pakuranga Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided-traversable</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided-traversable</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>

Requirement	Comments		
	Section 1	Section 2	Section 3
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 31,848 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 10,920 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 42,000 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 26/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.		

Requirement	Comments	
	Section 4	
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Pakuranga Road connects to Pakuranga Road to the west, Stanniland Street, Fortunes Road, Pigeon Mountain Road, Bucklands Beach Road, Hutchinsons Road, Angelo Avenue, The Link to the north, Cascades Road, Bells Road, Aviemore Drive, Aberfeldy Avenue, Cromdale Avenue, to the south and Ridge Road and Botany Road to the east. This road provides access to commercial and residential properties.	
	This section is approximately 2.75 km in length. It is classified as a Regional road under the one network road classification (ONRC).	
	This section is a two-way, four-lane, divided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.	
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records <b>hundred and eighty-seven</b> crashes between 2016 and 2020: zero fatal, eight serious, forty minor and hundred and thirty-nine non-injury crashes. This resulted in eight Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	
	Pakuranga Road is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Pakuranga Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Multi-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"	

Requirement	Comments
	Section 4
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 42000 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 26/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
Current speed limit	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This section of has a mean operating speed in the range of 46.54 km/h.	This section of has a mean operating speed in the range of 53.5 km/h.	This section of has a mean operating speed in the range of 53.6 km/h.
AT also had regard to	Section 4		
Current speed limit	The existing speed limit is 60 km/h.		
MegaMaps Mean Operating Speed	This section of has a mean operating speed in the range of 46.3 km/h.		
Speed limits on adjoining roads	The existing speed limits on adjoining roads (for Section 1 to Section 4) are: <ul style="list-style-type: none"> <li>• Kerswill Place: 50 km/h</li> <li>• Millen Avenue: 50 km/h</li> <li>• Latham Avenue: 50 km/h</li> <li>• Ti Rakau Drive: 60 km/h (proposed 50 km/h)</li> <li>• Brompton Court: 50 km/h</li> <li>• Williams Roberts Road: 50 km/h</li> <li>• Lewis Road: 50 km/h</li> <li>• Greenhill Crescent: 50 km/h</li> <li>• Johns Lane: 50 km/h</li> </ul>		

<ul style="list-style-type: none"> <li>• Gossamer Drive: 50 km/h</li> <li>• Williams Avenue: 50 km/h</li> <li>• Tamaki Bay Drive: 50 km/h</li> <li>• Kentigern Close: 50 km/h</li> <li>• Grammar School Road: 50 km/h</li> <li>• Glenmore Road: 50 km/h</li> <li>• Wilbur Place: 50 km/h</li> <li>• Stanniland Street: 50 km/h</li> <li>• Fortunes Road: 50 km/h</li> <li>• Pigeon Mountain Road: 50 km/h</li> <li>• Bucklands Beach Road: 50 km/h</li> <li>• Hutchinsons Road: 50 km/h</li> <li>• Angelo Avenue: 50 km/h</li> <li>• The Link: 50 km/h</li> <li>• Cascades Road: 50 km/h</li> <li>• Bells Road: 50 km/h</li> <li>• Aviemore Drive: 60 km/h</li> <li>• Aberfeldy Avenue: 50 km/h</li> <li>• Cromdale Avenue: 50 km/h</li> <li>• Ridge Road: 50 km/h</li> <li>• Botany Road: 50 km/h</li> </ul>
---

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data		
	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	6	24	7
DSI crashes during the period	0	1	2
Corridor Length (km)	0.60	1.24	0.87
Annual Daily Traffic	31,848	10,920	42,000
Required Information for safety metrics calculations	Data		
	Section 4		
Crash Analysis Period (years)	5		
Total injury crashes during period	48		
DSI crashes during the period	8		
Corridor Length (km)	2.75		
Annual Daily Traffic	42,000		

- Section 1:
  - The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**

- o The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**
- Section 2:
  - o The Collective Risk score is 0.16. For urban areas this corresponds to a Collective Risk band of **Medium-High**
  - o The Personal Risk score is 4.03. For urban areas this corresponds to a Personal Risk band of **Low-Medium**
- Section 3:
  - o The Collective Risk score is 0.46. For urban areas this corresponds to a Collective Risk band of **High**
  - o The Personal Risk score is 3.01. For urban areas this corresponds to a Personal Risk band of **Low**
- Section 4:
  - o The Collective Risk score is 0.58. For urban areas this corresponds to a Collective Risk band of **High**
  - o The Personal Risk score is 3.79. For urban areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2		Section 3	
	Category	Risk Score	Category	Risk Score	Category	Risk Score
Road stereotype	Divided-traversable	3.00	Multi-lane undivided	3.40	Divided-traversable	3.00
Road alignment	Straight	1.00	Straight	1.00	Straight	1.00
Carriageway width	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43	Moderate	1.43	Moderate	1.43
Adjacent land use	Urban residential	3.00	Urban residential	3.00	Urban residential	3.00
Intersection density (per km)	5 to <10	2.60	5 to <10	2.60	3 to <5	1.50
Access density (per km)	>20	1.30	>20	1.30	>20	1.30
Traffic volume (vpd)	>12000	3.00	6000 to <12000	2.20	>12000	3.00
Feature	Section 4					
	Category			Risk Score		
Road stereotype	Multi-lane undivided			3.40		

Road alignment	Straight	1.00
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3.00
Intersection density (per km)	3 to <5	1.50
Access density (per km)	>20	1.30
Traffic volume (vpd)	>12000	3.00

- Section 1
  - o The Infrastructure Risk Rating Score is 2.37. For urban areas this corresponds to an IRR band of **Medium**.
- Section 2
  - o The Infrastructure Risk Rating Score is 2.29. For urban areas this corresponds to an IRR band of **Medium**.
- Section 3
  - o The Infrastructure Risk Rating Score is 2.13. For urban areas this corresponds to an IRR band of **Medium**
- Section 4
  - o The Infrastructure Risk Rating Score is 2.18. For urban areas this corresponds to an IRR band of **Medium**

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 50 km/h on Pakuranga Road between 180m east of Kerswill Place and Ti Rakau Drive (section 1)
- 50 km/h on Pakuranga Road between Ti Rakau Drive and Grammar School Road (section 2)
- 50 km/h on Pakuranga Road between Grammar School Road and 144m west of Stanniland Street (section 3)
- 50 km/h on Pakuranga Road between 144m west of Stanniland Street and Ridge Road (section 4)

Pakuranga Road is self-explaining roads as the mean operating speeds (46.54, 53.5, 53.5 and 46.29 km/h respectively) are below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit.

Engineering up of Pakuranga Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Pakuranga Road due to a multitude of factors. These being the very narrow shoulder width and low mean operating speed. The collective and personal risk of this road are classified as 'High' and 'Low-Medium' respectively due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>2</sup>

Crash history from WK NZTA's CAS database shows three hundred and thirty-nine crashes in the last 5 years including one fatal, ten serious, seventy-four minor, and two hundred and fifty-four non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Pakuranga Road in Pakuranga, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Park Estate Road (Rosehill)

The speed limit on Park Estate Road, Rosehill (between motorway bridge and western end of Park Estate Road.) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Park Estate Road connects to Park Green Avenue, Parkmore Drive to the south and Papakowhatu Road to the north. This road provides access to residential properties.</p> <p>This section is approximately 1,07 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian and cyclist amenities. There is on-street parking along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: zero fatal, zero serious, one minor and one non-injury crash and therefore no Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Park Estate Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as a "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist

Requirement	Comments
	<i>activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,303 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Park Estate Road has a mean operating speed of 41.46 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Park Estate Road (east section)- 40 km/h</b></li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	1.07
Annual Daily Traffic	1,303

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**.

- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	Moderate	1.43
Adjacent land use	Rural residential	1.5
Intersection density (per km)	5 to <10	2.6
Access density (per km)	10 to <20	1.1
Traffic volume	1000 to <6000	1.4

The Infrastructure Risk Rating Score is **1.75**. For Rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40 km/h for Park Estate Road between motorway bridge and western end of Park Estate Road.*

Hingaia Road is a self-explaining road as the mean operating speeds (41.46 km/h) are near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Hingaia Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Hingaia Road due to a multitude of factors. These being the narrow lane and shoulder width, straight nature of the road, moderate road-side hazards and low mean operating speed. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.

Crash history from WK NZTA's CAS database shows two crashes in the last 5 years including zero fatal, zero serious, one minor, and one non-injury crashes.

After considering all of the above factors, the existing speed limit of 80 km/h on Hingaia Road in Rosehill, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Pine Valley Road (Silverdale)**

The speed limit on Pine Valley Road, Silverdale (between 50m southwest of Old Pine Valley and Dairy Flat Highway) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Pine Valley Road connects to Old Pine Valley Road to the north and Dairy Flat Highway to the south. This road provides access to residential properties.</p> <p>This section is approximately 0.65 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: zero fatal, one serious, one minor and one non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Pine Valley Road is identified as one of the top 10% DSI saving network sections for New Zealand.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Pine Valley Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Wide shoulder (&gt;1.0 to 2.0 m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural Residential as "Rural area

Requirement	Comments
	<i>with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km.</li> <li>• <b>Access density:</b> &lt;1 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 6,552 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 08/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	New residential development along Pine Valley Road
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 69.5 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Old Pine Valley Road:</b> 100 km/h.</li> <li>• <b>Dairy Flat Highway:</b> 80 km/h. (Proposed 60 km/h).</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	2
DSI crashes during the period	1
Corridor Length (km)	0.60
Annual Daily Traffic	6,552

- The Collective Risk score is **0.33**. For Rural areas this corresponds to a Collective Risk band of **High**.
- The Personal Risk score is **13.93**. For Rural areas this corresponds to a Personal Risk band of **High**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Medium lane, Wide shoulder	1.0
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	<1	1.0
Traffic volume	6000 to <12000	2.2

- The Infrastructure Risk Rating Score is **1.59**. For Rural areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h Pine Valley Road (between 50m southwest of Old Pine Valley Road and Dairy Flat Highway).*

A proposed speed limit of 60 km/h was selected for this Pine Valley Road due to multitude of factors. These being the medium lane width, wide shoulder width, straight nature of the road, high roadside hazards and rural residential land use. Both the collective and personal risk of this road are classified as '**High**' due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.<sup>1</sup>. This road is identified as one of the top 10% DSI saving network sections for New Zealand.

Crash history from WK NZTA's CAS database shows three crashes in the last 5 years including zero fatal, one serious, one minor, and one non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on Pine Valley Road in Silverdale, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

The proposed speed is a challenging conversation as the existing mean operating speed of Pine Valley Road is 69.5 km/h and higher than the recommended speed limit of 60 km/h. However this section

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

of Pine Valley Road is becoming urbanised and the new development will change the existing road environment. The residential developments are likely to reduce the operating speed, hence physical interventions are not required at this stage.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Pohewa Road (Silverdale)

The speed limit on Pohewa Road, Silverdale has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Pohewa Road connects to Goldwater Drive to the north and Silverwater Drive to the south. This road provides access to residential properties and is approximately 0.27km in length.</p> <p>Pohewa Road is classified as an Access road under the one network road classification (ONRC). Pohewa Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Pohewa Road were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	The following characteristics for Pohewa Road were estimated using MegaMaps tool. <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to 10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 61 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Key stakeholders have indicated general support for implementing 30km/h speed limits around urban residential area.  Potential changes to the speed limit in this area will be sent to the Local Board via email in November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Pohewa Road has a mean operating speed in the range of <30km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Goldwater Drive: 50 km/h (proposed 30km/h)</li> <li>• Silverwater Drive: 50 km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

The following characteristics for Pohewa Road were estimated using MegaMaps tool. :

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

Pohewa Road is a self-explaining road as the mean operating speeds is below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Pohewa Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

The proposed safe and appropriate speed limit for Pohewa Road is 30 km/h which is lower than the speed limit recommended by the Speed Management Guide (40 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed supports the reduction. The proposed 30 km/h speed will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Polygon Road (Mission Bay)

The speed limit on Polygon Road, Mission Bay between 15m east of Turua Street and 120m east of Turua Street has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>This section of Polygon Road connect with Turua Street and provides access to the town centre and is approximately 0.11 km in length.</p> <p>This section of Polygon Road is classified as a Secondary Collector road under the one network road classification (ONRC). Polygon Road is a two-lane, undivided road. There are pedestrian amenities and cycle lanes along this section of road with no on-street parking.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crashes between 2016 and 2020: one minor. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Polygon Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area originated from the public feedback report on St Heliers town centre safety improvements project. This reflects the public's views on the engineering measures implemented in the town centre.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Polygon Road has a mean operating speed in the range of 25-30 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads:</p> <ul style="list-style-type: none"> <li><b>Turua Street:</b> 30 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, Polygon Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.6. For urban areas this corresponds to an IRR band of **Low**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed Polygon Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Prices Road (Wiri)

The speed limit on Prices Road, Wiri has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Prices Road connects to Puhinui Road to the north. This road provides access to residential properties.
	This section is approximately 1.06 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian amenities, cyclist amenities and on-street parking along this road.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records <b>one</b> crash between 2016 and 2020: zero fatal, zero serious, one minor and zero non-injury. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Prices Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural Residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist

Requirement	Comments
	<i>activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km.</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 380 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 44.21 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Puhinui Road:</b> 100 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	1.06
Annual Daily Traffic	380

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**.

- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.20
Access density (per km)	10 to <20	1.10
Traffic volume	<1000	1.00

The Infrastructure Risk Rating Score is 1.40. For Rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Prices Road.*

Prices Road is a self-explaining road as the mean operating speeds (44.21 km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Prices Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for this road due to multitude of factors. These being the very narrow shoulder width, high road side hazards and low mean operating speeds.

Crash history from WK NZTA's CAS database shows one crash in the last 5 years including zero fatal, zero serious, one minor, and zero non-injury crashes.

After considering all the above factors, the existing speed limit of 100 km/h on Prices Road in Wiri, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Puni Road (Pukekohe)

Puni Road, Pukekohe, is divided into one section as follows:<sup>1</sup>

- Section 1: Puni Road between Beresford Street and Rowles Road.

The speed limit on Puni Road, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Puni Road connects to Beresford Street, Ward Street to the west and Rowles Street to the south. This road provides access to residential properties.</p> <p>This section is approximately 0.82 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records eleven crashes between 2016 and 2020: zero fatal, zero serious, four minor and seven non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Puni Road is identified as one of the top 10% DSI saving network sections for New Zealand.</p>
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Puni Road were determined using a combination of site drive-over footage, on-site information and geomaps information.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Wide shoulder (&gt;1.0 to 2.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 9,525 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Proposed new pedestrian facility at this section of Puni Road.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Puni Road has a mean operating speed of 62.3 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>• <b>Rowles Road:</b> 50 km/h</li> <li>• <b>Ward Street:</b> 50 km/h</li> <li>• <b>Beresford Street:</b> 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5

Total injury crashes during period	4
DSI crashes during the period	0
Corridor Length (km)	0.82
Annual Daily Traffic	9,525

- The Collective Risk score is **0.0**. For Urban areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Urban areas this corresponds to a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Medium lane, Wide shoulder	1.0
Roadside hazards	Moderate	1.43
Adjacent land use	Urban residential	3.0
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume	6000 to <12000	2.2

- The Infrastructure Risk Rating Score is **1.92**. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 50 km/h between Beresford Street and Rowles Road of Puni Road.*

Puni Road is a road requiring engineering down interventions in order to lower the mean operating speeds such that it is suitable to implement the proposed safe and appropriate speed. Engineering up of Puni Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Puni Road due to a multitude of factors. These being the medium lane and wide shoulder width, straight nature of the road, and moderate road-side hazards.

Crash history from WK NZTA's CAS database shows eleven crashes in the last 5 years including zero fatal, zero serious, four minor, and seven non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Puni Road in Pukekohe, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Given that the existing mean operating speed of Puni Road is 62.3 km/h and higher than the recommended speed limit of 50 km/h, physical interventions are required to engineer down the operating speed. Auckland Transport has planned to install new pedestrian facility on Puni Road to reduce the travel speeds.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Rata Road (Whenuapai)

The speed limit on Rata Road, Whenuapai has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rata Road connects to Kauri Road and Old Kauri Road. This road provides access to residential properties.</p> <p>Rata Road is approximately 0.45 km in length. It is classified as an Access Road under the one network road classification (ONRC).</p> <p>Rata Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Rata Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 147 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 05/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Rata Road has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Kauri Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.45
Annual Daily Traffic	147

- The Collective Risk score is **0.0**. For Urban areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is **0.0**. For Urban areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
---------	----------	------------

Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	Moderate	1.43
Adjacent land use	Urban residential	3.0
Intersection density (per km)	2 to <3	1.3
Access density (per km)	>20	1.3
Traffic volume	<1000	1.0

- The Infrastructure Risk Rating Score is **1.66**. For Urban areas this corresponds to an IRR band of **Low-Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 40 km/h Rata Road Between Kingsway Road and Kauri Road.*

Rata Road is a self-explaining road as the mean operating speeds are already at, or below, the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Rata Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Rata Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, straight nature of the road, moderate road-side hazards and low mean operating speed (<50 km/h).

After considering all the above factors, the existing speed limit of 70 km/h on Rata Road in Whenuapai, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Renton Road (Mangere)**

Renton Road, Mangere, is divided into two sections as outlined below:

- Section 1: Renton Road between Ihumatao Road and 341m south of Ihumatao Road.
- Section 2: Renton Road between 341m south of Ihumatao Road and end of the road.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit for all sections of Renton Road, Mangere have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Renton Road connects to Ihumatao Road to the north and Renton Road to the south. This road provides access to residential properties.	Renton Road connects to Renton Road to the north. This road provides access to residential properties.
	This section is approximately 0.34 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).	This section is approximately 0.57 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian amenities, cyclist amenities and on-street parking along this road.	This section is a two-way, two-lane, unsealed road. There are no pedestrian amenities, cyclist amenities and on-street parking along this road.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash on this section of the road between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	WK NZTA's Crash Analysis System (CAS) records zero crash on this section of the road between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.

Requirement	Comments	
	Section 1	Section 2
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Renton Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided.</li> <li>• <b>Road alignment:</b> Straight.</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate.</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed.</li> <li>• <b>Road alignment:</b> Straight.</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li>• <b>Roadside hazards (in both directions):</b> Low.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural Residential as <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural Residential as <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km.</li> <li>• <b>Access density:</b> &lt;1 access per km.</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersection per km.</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 48 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 48 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 13/10/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Renton Road has a mean operating speed of 38 km/h.	This section of Renton Road has a mean operating speed of 24.47 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Ihumatao Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Renton Road:</b> 100 km/h (proposed 40 km/h)</li> </ul>	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Renton Road:</b> 100 km/h (proposed 40 km/h)</li> </ul>

**Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	0.34	0.57
Annual Daily Traffic	48	48

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**.
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**.
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**.
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Unsealed	10.00
Road alignment	Straight	1.0	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	Moderate	1.43	Low	0.40
Adjacent land use	Rural residential	1.50	Rural residential	1.50
Intersection density (per km)	2 to <3	1.3	<1	1.00
Access density (per km)	<1	1.00	1 to <2	1.01
Traffic volume	<1000	1.00	<1000	1.00

- Section 1:
  - The Infrastructure Risk Rating Score is **1.25**. For rural areas this corresponds to an IRR band of **Medium**.
- Section 2:
  - The Infrastructure Risk Rating Score is **1.04**. For rural areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is:

- The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h. (Section 1).
- The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h. (Section 2).

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 60 km/h Renton Road (between Ihumatao Road and 341m south of Ihumatao Road) (Section 1).
- 60 km/h Renton Road (between 341m south of Ihumatao Road and end of the road) (Section 2).

Section 1 and 2 of Renton Road is a self-explaining road as the mean operating speeds (38 km/h and 24.67 km/h respectively) are below or near, the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Renton Road was considered but dismissed due to

the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Renton Road due to a multitude of factors. These being the unsealed surface, narrow lane width, very narrow shoulder width, moderate roadside hazards, rural residential land use and low mean operating speed (<40 km/h).

After considering all the above factors, the existing speed limit of 100 km/h on Renton Road in Mangere, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit for Renton Road is 60 km/h which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (38 and 24.67 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Riverlea Road (Whenuapai)

The speed limit on Riverlea Road, Whenuapai has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Riverlea Road connects to Bristol Road and Rope Road to the north and Dale Road to the south. This road provides access to residential properties.</p> <p>Riverlea Road is approximately 1.78 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>Riverlea Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crashes between 2016 and 2020: zero fatal, zero serious, zero minor and one non-injury crashes and therefore no Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Riverlea Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Minor</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as a <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 569 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 05/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Riverlea Road has a mean operating speed of 49.03 km/h
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Bristol Road:</b> 80 km/h (proposed to be lowered to 60 km/h).</li> <li><b>Rope Road:</b> 80 km/h (proposed to be lowered to 60 km/h).</li> <li><b>Dale Road:</b> 80 km/h (proposed to be lowered to 50 and 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.78
Annual Daily Traffic	569

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	Minor	0.67
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	>20	1.3
Traffic volume	<1000	1.0

- The Infrastructure Risk Rating Score is **1.25**. For Rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 60 km/h Full length Riverlea Road.*

Riverlea Road is a self-explaining road as the mean operating speeds are already at, or below, the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Riverlea Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Riverlea Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road, minor road-side hazards and low mean operating speed (<50 km/h).

Crash history from WK NZTA's CAS database shows six crashes in the last 5 years including zero fatal, zero serious, zero minor and one non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on Riverlea Road in Whenuapai, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Rodeo Drive (Redvale)

The speed limit on Rodeo Drive, Redvale has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Rodeo Drive connects to East Coast Road to the south. This road provides access to residential properties.
	Rodeo Drive is approximately 0.48 km in length. It is classified as an Access Road under the one network road classification (ONRC).
	Rodeo Drive is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Rodeo Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural Residential as a "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Rodeo Drive has a mean operating speed of 24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>East Coast Road:</b> 80 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.48
Annual Daily Traffic	41

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
---------	----------	------------

Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	Moderate	1.43
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	>20	1.3
Traffic volume	<1000	1.0

- The Infrastructure Risk Rating Score is **1.58**. For Rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Rodeo Drive.*

Rodeo Drive is a self-explaining road as the mean operating speeds (24 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Rodeo Drive was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Rodeo Drive due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road, and moderate road-side hazards.

After considering all of the above factors, the existing speed limit of 80 km/h on Rodeo Drive in Redvale, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Rodeo Drive is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Rope Road (Whenuapai)**

The speed limit on Rope Road, Whenuapai has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rope Road connects to Bristol Road to the west and Riverlea Road to the east. This road provides access to residential properties.</p> <p>Rope Road is approximately 0.26 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>Rope Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Rope Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as a <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 351 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 05/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Rope Road has a mean operating speed in the range of 32 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Bristol Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Riverlea Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.26
Annual Daily Traffic	351

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	Moderate	1.43
Adjacent land use	Rural residential	1.5
Intersection density (per km)	5 to <10	2.6
Access density (per km)	5 to <10	1.06
Traffic volume	<1000	1.0

- The Infrastructure Risk Rating Score is **1.59**. For Rural areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 60 km/h Full length Rope Road.*

Rope Road is a self-explaining road as the mean operating speeds are already at, or below, the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Rope Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Rope Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, straight nature of the road, moderate road-side hazards and low mean operating speed (<50 km/h).

After considering all the above factors, the existing speed limit of 80 km/h on Rope Road in Whenuapai, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Roscommon Road (Clendon Park)

Roscommon Road, Clendon Park is divided into two sections as follows:<sup>1</sup>

1. Section 1: Roscommon Road between Palmers Road and Browns Road
2. Section 2: Roscommon Road between Wiri Station Road and Cavendish Drive

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Roscommon Road, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Roscommon Road connects to Cavendish Drive, Vogler Drive and Puaki Drive to the north, Wiri Station Road, Langley Road, Bolderwood Place, Browns Road, Burbank Avenue, Pushon Place, Wordsworth Road and Sharland Avenue to the east, Hautu Drive, Kiwi Tamaki Road, Finlayson Avenue, Moncrieff Avenue, Burundi Avenue and Robert Ross Place to the west and Palmers Road, Weymouth Road and Mahia Road to the south. This road provides access to commercial and residential properties.	
	This section is approximately 1.40 km in length. It is classified as an Arterial road under the one network road classification (ONRC).	This section is approximately 0.71 km in length. It is classified as an Arterial road under the one network road classification (ONRC).
	This section is a two-way, four-lane, divided road. There are pedestrian amenities along this	This section is a two-way, two-lane, divided road. There are pedestrian amenities and on-street

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	section. There are no cyclist amenities and on-street parking.	parking along this section. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one-hundred and fifteen crashes between 2016 and 2020: zero fatal, three serious, thirty-two minor and eighty non-injury crashes. This resulted in three Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records <b>twenty-four</b> crashes between 2016 and 2020: zero fatal, two serious, seven minor and fifteen non-injury crashes. This resulted in two Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Roscommon Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided-non-traversable</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Wide shoulder &gt;1.0 to 2.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided-traversable</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"	The adjacent land use is classified as Commercial big box using on-site information and geomaps. The IRR defines Commercial big box as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 15,558 vehicles per day (vpd). This level of traffic volume is	Average daily traffic (ADT) was determined from MegaMaps as 16,714 vehicles per day (vpd). This level of traffic volume is

Requirement	Comments	
	Section 1	Section 2
	consistent with the nature of the road and traffic survey.	consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via email/meeting on date of sent memo/meeting. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 60 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed	This section has a mean operating speed in the range of 48.4 km/h.	This section has a mean operating speed in the range of 46.88 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Cavendish Drive: 60 km/h (proposed 50 km/h)</li> <li>• Vogler Drive: 50 km/h</li> <li>• Puaki Drive: 50 km/h</li> <li>• Wiri Station Road: 60 km/h (proposed 50 km/h)</li> <li>• Langley Road: 50 km/h</li> <li>• Bolderwood Place: 50 km/h</li> <li>• Browns Road: 50 km/h</li> <li>• Burbank Avenue: 50 km/h</li> <li>• Pushon Place: 50 km/h</li> <li>• Wordsworth Road: 50 km/h</li> <li>• Sharland Avenue: 50 km/h</li> <li>• Hautu Drive: 50 km/h</li> <li>• Kiwi Tamaki Road: 50 km/h</li> <li>• Finlayson Avenue: 50 km/h</li> <li>• Moncrieff Avenue: 50 km/h</li> <li>• Burundi Avenue: 50 km/h</li> <li>• Robert Ross Place: 50 km/h</li> <li>• Palmers Road: 50 km/h</li> <li>• Weymouth Road: 50 km/h</li> <li>• Mahia Road: 50 km/h</li> </ul>	

**Step 2: Determine the road safety metrics**

	Data

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	35	9
DSI crashes during the period	3	2
Corridor Length (km)	1.40	0.71
Annual Daily Traffic	15,558	16,714

- Section 1
  - The Collective Risk score is 0.43. For urban areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 7.56. For urban areas this corresponds to a Personal Risk band of **Medium-High**
- Section 2
  - The Collective Risk score is 0.56. For urban areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 9.21. For urban areas this corresponds to a Personal Risk band of **High**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Divided-non-traversable	1.00	Divided-traversable	3.00
Road alignment	Straight	1.00	Straight	1.00
Carriageway width	Medium lane, Wide shoulder	1.00	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	Severe	2.80	Moderate	1.43
Adjacent land use	Urban residential	3.00	Commercial big box	4.00
Intersection density (per km)	5 to <10	2.60	1 to <2	1.20
Access density (per km)	>20	1.30	10 to <20	1.10
Traffic volume (vpd)	>12000	3.00	>12000	3.00

- Section 1

- o The Infrastructure Risk Rating Score is 2.02. For urban areas this corresponds to an IRR band of **Medium**.
- Section 2
  - o The Infrastructure Risk Rating Score is 2.07. For urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 50 km/h on Roscommon Road between Palmers Road and Browns Road (section 1)
- 60 km/h on Roscommon Road between Wiri Station Road and Cavendish Drive. (section 2)

Roscommon Road is a self-explaining road as the mean operating speeds are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit.

Engineering up of both sections of Roscommon Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for section 1 and 2 of Roscommon Road due to multitude of factors. These being the very narrow shoulder, non-traversable median, severe roadside hazards and low mean operating speed. The collective and personal risk of this road are classified as **'High'** and **'Medium-High'** for section 1 and **'High'** for section 2 respectively due to the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>2</sup>

Crash history from WK NZTA's CAS database shows one-hundred and thirty nine crashes along this section in the last 5 years including zero fatal, five serious, thirty-nine minor and ninety-five non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on section 1 and 80km/h on section 2 of Roscommon Road in Clendon Park, are not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit of section 1 is 50 km/h which is aligned with the recommended safe and appropriate speed.

The recommended safe and appropriate speed limit for section 2 of Roscommon Road is 60 km/h which is higher than the Speed Management Guide recommendation (50 km/h) but are considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (80 km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## **Speed Limit Review – Russell Road (Wainui)**

The speed limit on Russell Road, Wainui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Russell Road connects to Upper Orewa Road to the east. This road provides access to residential properties.
	This section is approximately 0.58 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Russell Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed.</li> <li>• <b>Road alignment:</b> Curved.</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li>• <b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as a <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km.</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 92 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 08/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes..

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 32.32km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Upper Orewa Road:</b> 50 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.58
Annual Daily Traffic	92

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.0
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	2 to <3	1.3
Access density (per km)	2 to <5	1.03
Traffic volume	<1000	1.0

- The Infrastructure Risk Rating Score is **2.15**. For Rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40 km/h Russell Road (Full length).*

Russell Road is a self-explaining road as the mean operating speeds (32.32km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Russell Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Russell Road due to multitude of factors. These being the unsealed surface, narrow lane width, very narrow shoulder width, curved nature of the road, high road side hazards and low mean operating speeds. All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.

After considering all the above factors, the existing speed limit of 100 km/h on Russell Road in Wainui, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Shelly Beach Parade (Cockle Bay)

The speed limit on Shelly Beach Parade, Cockle Bay (between 50m east of Pah Road and the eastern end of Shelly Beach Parade) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Shelly Beach Parade connects to Pah Road to the west. This road is approximately 0.36 km in length.</p> <p>Shelly Beach Parade is classified as an Access road under the one network road classification (ONRC). Shelly Beach Parade is a two-way, Two lane undivided road. There is pedestrian amenities and road side parking, but no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and wide shoulder (1.0 m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 582 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	No planned modification to the road currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 28/10/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Shelly Beach Parade has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Pah Road: 50 km/h</li> <li>• Cookle Bay Road: 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Shelly Beach Parade has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.58. For urban areas this corresponds to an IRR band of **Low**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Megamap is 40 km/h

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 20km/h (for Parks)

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 20km/h.*

Shelly Beach Parade is a self-explaining road as the mean operating speeds are already at, or below, the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Shelly Beach Parade was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

The existing speed limit of 50 km/h on Shelly Beach Parade, is not considered to be a safe and appropriate speed limit for this section of road. The proposed safe and appropriate speed limit is 20 km/h which is aligned with the recommended safe and appropriate speed. Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Silverwater Drive (Silverdale)

The speed limit on Silverwater Drive, Silverdale has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Silverwater Drive connects to Spine Road to the west and East Coast Road to the east. This road provides access to residential properties and is approximately 0.38km in length.</p> <p>Silverwater Drive is classified as an Access road under the one network road classification (ONRC). Silverwater Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Silverwater Drive were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following characteristics for Silverwater Drive were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 61 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	<p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban residential area.</p> <p>Potential changes to the speed limit in this area will be sent to the Local Board via email in November. Responses will be considered for investigation.</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Silverwater Drive has a mean operating speed in the range of <30km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>East Coast Road: 80km/h (proposed 60km/h)</li> <li>Spine Road: 50 km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

The following characteristics for Silverwater Drive were estimated using MegaMaps tool. :

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

Silverwater Drive is a self-explaining road as the mean operating speeds is below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Silverwater Drive was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

The proposed safe and appropriate speed limit for Silverwater Drive is 30 km/h which is lower than the speed limit recommended by the Speed Management Guide (40 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed supports the reduction. The proposed 30 km/h speed will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Simpson Road (Henderson Valley)**

The speed limit on Simpson Road, Henderson Valley (Simpson Road between 90m south of Tasman Avenue and Candia Road) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Simpson Road connects to Candia Road to the south. This road provides access to residential properties.
	This section is approximately 0.51 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records five crashes between 2016 and 2020: zero fatal, zero serious, one minor and four non-injury crashes and therefore no Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Yes, Simpson Road is identified as one of the top 10% DSI saving network sections for New Zealand.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Simpson Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as an "area with

Requirement	Comments
	<i>accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2,443 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 17/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed	This section of Simpson Road has a mean operating speed of 51.9 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Candia Road:</b> 70 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	0.51
Annual Daily Traffic	2,443

The Collective Risk score is **0.0**, while the Personal Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	10 to <20	1.1
Traffic volume	1000 to <6000	2.2

The Infrastructure Risk Rating Score is **1.86**. For Rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h between 90m south of Tasman Avenue and Candia Road of Simpson Road.*

Simpson Road is a self-explaining road as the mean operating speeds (51.9 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Simpson Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Simpson Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road, and high road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.

Crash history from WK NZTA's CAS database shows five crashes in the last 5 years including zero fatal, zero serious, one minor, and four non-injury crashes.

After considering all of the above factors, the existing speed limit of 70 km/h on Simpson Road in Henderson valley, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Smales Road (East Tamaki)**

Smales Road, East Tamaki is divided into two sections as follows: <sup>1</sup>

1. Section 1: Smales Road Between Springs/Harris Road and Kelvin Hart Drive
2. Section 2: Smales Road Between Kelvin Hart Drive and Chapel Drive.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Smales Road, East Tamaki has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Smales Road connects to Kilkenny Drive and Chapel Road to the east, Allens Road, Harris Road and Springs Road to the west, Kelvin Hart Drive, Kellaway Drive, Te Irirangi Drive, Shrulie Place, Snave Place, and Armoy Drive and Wayne Francis Drive, Te Irirangi Drive and Sir William Avenue to the south. This road provides access to mixture of commercial and residential properties.	
	This section is approximately 0.99 km in length. It is classified as a regional road under the one network road classification (ONRC).	This section is approximately 0.76 km in length. It is classified as a regional road under the one network road classification (ONRC).
	This section is a two-way, multi-lane, undivided road. There are pedestrian amenities, on-street parking and cyclist amenities along this section.	This section is a two-way, multi-lane, undivided road. There are pedestrian amenities, on-street parking and cyclist amenities along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e. tortuous vs curved) as specified within the IRR.

Requirement	Comments			
	Section 1	Section 2		
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records <b>thirty-one</b> crashes between 2016 and 2020: zero fatal, one serious, nine minor and twenty-one non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Smales Road is identified as one of the top 10% DSI saving network sections for New Zealand.</p>	<p>WK NZTA's Crash Analysis System (CAS) records <b>eighteen</b> crashes between 2016 and 2020: zero fatal, zero serious, five minor and thirteen non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>		
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Smales Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <table border="0"> <tr> <td style="vertical-align: top;"> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul> </td> <td style="vertical-align: top;"> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul> </td> </tr> </table>		<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Multi-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>			
(f) adjacent land use; and	<p>The adjacent land use is classified as Commercial big box using on-site information and geomaps. The IRR defines Commercial big box as "<i>Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present.</i>"</p>	<p>The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as "<i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i>"</p>		
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p>			

Requirement	Comments	
	Section 1	Section 2
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	<p>Average daily traffic (ADT) was determined from MegaMaps as 15,220 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.</p>	<p>Average daily traffic (ADT) was determined from MegaMaps as 14,906 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.</p>
(i) any planned modification to the road; and	<p>There are no planned modifications currently.</p>	
(j) the views of interested persons and groups.	<p>Potential changes to the speed limit in this area were presented to the Local Board via meeting on 26/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.</p>	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of has a mean operating speed of 52.09 km/h.	This section of has a mean operating speed of 46.62 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>• <b>Allens Road:</b> 50 km/h</li> <li>• <b>Harris Road:</b> 60 km/h (proposed 50 km/h)</li> <li>• <b>Springs Road:</b> 50 km/h</li> <li>• <b>Sir William Avenue:</b> 50 km/h</li> <li>• <b>Snave Place:</b> 50 km/h</li> <li>• <b>Kelvin Hart Drive:</b> 50 km/h</li> <li>• <b>Shrule Place:</b> 50 km/h</li> <li>• <b>Kellaway Drive:</b> 50 km/h</li> <li>• <b>Te Irirangi Drive:</b> 60 km/h (proposed 50 km/h)</li> <li>• <b>Wayne Francis Drive:</b> 50 km/h</li> <li>• <b>Armoy Drive:</b> 50 km/h</li> <li>• <b>Chapel Road:</b> 60 km/h (proposed 50 km/h)</li> <li>• <b>Kilkenny Drive:</b> 50 km/h</li> </ul>	

**Step 2: Determine the road safety metrics**

	<b>Data</b>
--	-------------

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	<b>10</b>	<b>5</b>
DSI crashes during the period	1	0
Corridor Length (km)	0.99	0.76
Annual Daily Traffic	15,220	14,906

- Section 1
  - The Collective Risk score is 0.20. For urban areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 3.65. For urban areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Multi-lane undivided	3.40	Multi-lane undivided	3.40
Road alignment	Straight	1.00	Straight	1.00
Carriageway width	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43	Moderate	1.43
Adjacent land use	Commercial big box	4.00	Urban residential	3.00
Intersection density (per km)	3 to <5	1.50	5 to <10	2.60
Access density (per km)	10 to <20	1.10	>20	1.30
Traffic volume (vpd)	>12000	3.00	>12000	3.00

- Section 1

- The Infrastructure Risk Rating Score is 2.24. For urban areas this corresponds to an IRR band of **Medium**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.42. For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 50 km/h on Smales Road Between Springs/Harris Road and Kelvin Hart Drive (section 1)
- 50 km/h on Smales Road Between Kelvin Hart Drive and Chapel Drive. (section 2)

Smales Road is a self-explaining road as the mean operating speeds (52.09 km/h and 46.63 km/h) are near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit.

Engineering up of Smales Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Smales Road due to a multitude of factors. These being the very narrow shoulder width and low mean operating speed (<50 km/h). All of these factors contribute to the road's 'Medium-High' IRR score. The collective and personal risk of this road are classified as 'High' and 'Low' respectively and due to the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.

Crash history from WK NZTA's CAS database shows forty-nine crashes in the last 5 years including zero fatal, one serious, fourteen minor, and thirty-four non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Smales Road in East Tamaki, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Small Road (Silverdale)

The speed limit on Small Road, Silverdale (between Painton Road and 160m west of Rainton Road) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Small Road connects to Goldwater Drive to the north and Silverwater Drive to the south. This road provides access to residential properties and is approximately 0.16 km in length.</p> <p>Small Road is classified as a Secondary Collector road under the one network road classification (ONRC). Small Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Small Road were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Big Box using MegaMaps tool. The IRR defines urban residential as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following characteristics for Small Road were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 1129 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	<p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban residential area.</p> <p>Potential changes to the speed limit in this area will be sent to the Local Board via email in November. Responses will be considered for investigation.</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Small Road has a mean operating speed of 40.79 km/h
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Goldwater Drive: 50 km/h (proposed 30km/h)</li> <li>Painton Road: 50 km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

The following characteristics for Small Road were estimated using MegaMaps tool. :

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low- Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

The proposed speed is a challenging conversation as the existing mean operating speed of Small Road is 40.79 km/h and higher than the recommended speed limit of 30 km/h. However, this section of Small Road is at the back of main bus hub with high number of pedestrian movement. There's a behaviour change required for the driver, the road environment is also likely to encourage a lower speed, hence physical interventions are not required at this stage.

The proposed safe and appropriate speed limit for Small Road is 30 km/h which is lower than the speed limit recommended by the Speed Management Guide (40 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed supports the reduction. The proposed 30 km/h speed will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Spedding Road (Whenuapai)**

Spedding Road, Whenuapai, is divided into two sections as outlined below:

1. Section 1: Spedding Road Between Trig Road and Mamari Road
2. Section 2: Spedding Road Between Mamari Road and end of the road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Spedding Road, Whenuapai has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Section 1	Section 2
	Spedding Road connects to Trig Road to the east. This road provides access to residential properties.	Spedding Road connects to Mamari Road to the north. This road provides access to residential properties.
	This section is approximately 0.58 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).	This section is approximately 0.45 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).
	Spedding Road is classified as a Spedding Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	Spedding Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: zero fatal, one serious, zero minor and zero non injury. This	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death

Requirement	Comments	
	resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for Spedding Road were determined using MegaMaps tool/ a combination of site drive-over footage and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use for this section is classified as Rural residential using MegaMaps tool. The IRR defines Rural Residential as a <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>	The adjacent land use for this section is classified as Rural residential using MegaMaps tool. The IRR defines Rural Residential as a <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 285 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 115 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 05/08/2021. Responses were	

Requirement	Comments
	received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to		
Current speed limit	The existing speed limit is 80 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Spedding Road has a mean operating speed of 43.14km/h.	This section of Spedding Road has a mean operating speed of 22.14 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Trig Road:</b> 80 km/h</li> <li>• <b>Mamari Road:</b> 80 km/h</li> </ul>	

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	1	0
DSI crashes during the period	1	0
Corridor Length (km)	0.58	0.45
Annual Daily Traffic	285	115

- Section 1:
  - The Collective Risk score is **0.34**, while the Personal Risk score is **332.05**. For Rural areas this corresponds to a Collective Risk band of **High**, and a Personal Risk band of **High**.
- Section 2:
  - The Collective Risk score is **0.0**, while the Personal Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score

Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Straight	1.0	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28	High	2.28
Adjacent land use	Rural residential	1.5	Rural residential	1.5
Intersection density (per km)	3 to <5	1.5	2 to <3	1.3
Access density (per km)	10 to <20	1.1	10 to <20	1.1
Traffic volume	<1000	1.0	<1000	1.0

Section 1:

- The Infrastructure Risk Rating Score is 1.57. For Rural areas this corresponds to an IRR band of **Medium**.

Section 2:

- The Infrastructure Risk Rating Score is 1.49. For Rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

1. 60 km/h Spedding Road Between Trig Road and Mamari Road (Section 1)
2. 60 km/h Spedding Road Between Mamari Road and end of the road (Section 2)

Spedding Road is a self-explaining road as the mean operating speeds (43.14 & 22.14 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Spedding Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Spedding Road due to a multitude of factors. These being the narrow lane and shoulder width, straight nature of the road, high road-side hazards and low mean operating speed. All of these factors contribute to the road's 'Medium' IRR score. The collective and personal risk of this road are classified as '**High**' and '**High**' making it a high-risk road.<sup>1</sup>

Crash history from WK NZTA's CAS database shows six crashes in the last 5 years including zero fatal, one serious, zero minor and zero non-injury crashes.

After considering all of the above factors, the existing speed limit of 80 km/h on Spedding Road in Whenuapai, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Spedding Road is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Spine Road (Silverdale)

The speed limit on Spine Road, Silverdale has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Spine Road connects to Goldwater Drive to the north and Silverwater Drive to the south. This road provides access to residential properties and is approximately 0.23km in length.</p> <p>Spine Road is classified as an Access road under the one network road classification (ONRC). Spine Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Spine Road were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following characteristics for Spine Road were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 61 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	<p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban residential area.</p> <p>Potential changes to the speed limit in this area will be sent to the Local Board via email in November. Responses will be considered for investigation.</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Spine Road has a mean operating speed in the range of <30km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Goldwater Drive: 50 km/h (proposed 30km/h)</li> <li>Silverwater Drive: 50 km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

The following characteristics for Spine Road were estimated using MegaMaps tool. :

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

Spine Road is a self-explaining road as the mean operating speeds is below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Spine Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

The proposed safe and appropriate speed limit for Spine Road is 30 km/h which is lower than the speed limit recommended by the Speed Management Guide (40 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed supports the reduction. The proposed 30 km/h speed will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Springs Road (Otaru)**

Springs Road, Otara, is divided into two sections as outlined below:

1. Section 1: Springs Road Between East Tamaki Road and Lady Ruby Drive
2. Section 2: Springs Road Between Lady Ruby Drive and Smales Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit for all sections of Springs Road, Otara have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	<p>Springs Road connects to Pearl Baker Drive and Valder Avenue to the west, East Tamaki Road and Johnstones Road to the south and Kerwyn Avenue, Springs Road (north) and Lady Ruby Drive to the north. This road provides access to residential properties and commercial centres.</p>	<p>Springs Road connects to Springs Road (south), Kerwyn Avenue and Lady Ruby Drive to the south and Allens Road, Harris Road and Smales Road to the north. This road provides access to commercial centres.</p>
	<p>This section is approximately 0.59 km in length. It is classified as a Regional road under the one network road classification (ONRC).</p>	<p>This section is approximately 0.62 km in length. It is classified as a Regional road under the one network road classification (ONRC).</p>
	<p>Springs Road is a two-way, multi-lane, divided-traversable road. There are pedestrian amenities along this road. There are no on-street parking and no cyclist amenities along this road.</p>	<p>Springs Road is a two-way, multi-lane, divided-traversable road. There are pedestrian amenities along this road. There are no on-street parking and no cyclist amenities along this road.</p>

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records thirty-seven crashes on this section of Springs Road between 2016 and 2020: zero fatal, two serious, nine minor and twenty-six non-injury crashes. This resulted in two Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records nineteen crashes on this section of Springs Road between 2016 and 2020: zero fatal, zero serious, three minor and sixteen non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Springs Road is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Springs Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Divided-traversable.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> Moderate.</li> </ul>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Divided-traversable.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> Moderate.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using MegaMaps tool. The IRR defines Commercial Big Box as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."	The adjacent land use is classified as Commercial big box using MegaMaps tool. The IRR defines Commercial Big Box as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	

Requirement	Comments	
	Section 1	Section 2
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km.</li> <li><b>Access density:</b> &gt;20 accesses per km.</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km.</li> <li><b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 22,193 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 21,961 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 60 km/h.	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed 50.5 km/h.	This section has a mean operating speed of 50.45 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Springs Road (north):</b> 50 km/h.</li> <li><b>Kerwyn Avenue:</b> 50 km/h.</li> <li><b>Lady Ruby Drive:</b> 50 km/h.</li> <li><b>East Tamaki Road:</b> 60 km/h (proposed 50 km/h).</li> <li><b>Johnstone Road:</b> 50 km/h.</li> </ul>	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Springs Road (south):</b> 60 km/h (proposed 50 km/h).</li> <li><b>Kerwyn Avenue:</b> 50 km/h.</li> <li><b>Lady Ruby Drive:</b> 50 km/h.</li> <li><b>Harris Road:</b> 60 km/h (proposed 50 km/h).</li> <li><b>Allens Road:</b> 50 km/h.</li> </ul>

**Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Section 1	Section 2

Crash Analysis Period (years)	5	5
Total injury crashes during period	11	3
DSI crashes during the period	2	0
Corridor Length (km)	0.59	0.62
Annual Daily Traffic	22,193	21,961

- Section 1
  - The Collective Risk score is **0.68**, while the Personal Risk score is **8.40**. For Urban areas this corresponds to a Collective Risk band of **High**, and a Personal Risk band of **Medium-High**.
- Section 2
  - The Collective Risk score is **0.0**, while the Personal Risk score is **0.0**. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Divided-traversable	3.7	Divided-traversable	3.7
Road alignment	Straight	1.0	Straight	1.0
Carriageway width	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79
Roadside hazards	Moderate	1.43	Moderate	1.43
Adjacent land use	Commercial big box	3.0	Commercial big box	3.0
Intersection density (per km)	5 to <10	2.60	3 to <5	1.50
Access density (per km)	>20	1.30	>20	1.30
Traffic volume	>12000	3.00	>12000	3.00

- Section 1: The Infrastructure Risk Rating Score is **2.49**. For urban areas this corresponds to an IRR band of **Medium-High**.
- Section 2: The Infrastructure Risk Rating Score is **2.25**. For urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is:

- The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h. (Section 1).
- The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h. (Section 2).

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation is*

- 50 km/h Springs Road: between East Tamaki Road and Lady Ruby Drive (Section 1).
- No changes proposed for Springs Road: between Lady Ruby Drive and Smales Road (Section 2).

Springs Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Springs Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for the first section of Springs Road due to multitude of factors. These being very narrow shoulder width, moderate roadside hazards and commercial big box land use. All of these factors contribute to the road's **'Medium-High'** IRR score. The collective and personal risk of this road are classified as **'High'** and **'Medium-High'** respectively due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.<sup>1</sup> This proposed speed was also chosen in order to ensure consistency with the surrounding network.

Crash history from WK NZTA's CAS database shows thirty-seven crashes in the last 5 years including two serious, nine minor, and twenty-six non-injury crashes.

Both the sections of Springs Road are identified as one of the top 10% DSI saving network sections for New Zealand.

After considering all the above factors, the existing speed limit of 60 km/h on first section of Springs Road in Otara, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Spur Road (Stillwater)

Spur Road, Stillwater, is divided into two sections as outlined below:

1. Section 1: Spur Road Between East Coast Road and Duck Creek Road
2. Section 2: Spur Road Between Duck Creek Road and end of the Road

The speed limit on Spur Road, Stillwater has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Section 1	Section 2
	Spur Road connects to East Coast Road to the west, Audrey Road to the south and Newman Road (east) to the north. This road provides access to residential properties.	Spur Road connects to Duck Creek Road to the south and Lennon Access Road to the north. This road provides access to residential properties and is approximately km in length.
	This section is approximately 1.41 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).	This section is approximately 1.44 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records seven crashes between 2016 and 2020: zero fatal, zero serious, four minor and three non-injury crashes and therefore no Death and Serious Injury (DSI). This data includes crashes for all road	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: zero fatal, one serious, one minor and one non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for

Requirement	Comments	
	users and therefore crash risk for all road users were considered.	all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Spur Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium Lane 3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as: <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as: <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3,544 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 1,897 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to		
Current speed limit	The existing speed limit is 80 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	Spur Road has a mean operating speed of 46.8 km/h.	Spur Road has a mean operating speed of 62 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>East Coast Road:</b> 100 km/h (proposed 80 km/h)</li> <li>• <b>Aubrey Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Newman Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Duck Creek Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Lennon Access Road:</b> 80 km/h (proposed to 60 km/h)</li> </ul>	

**Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	4	2
DSI crashes during the period	0	1
Corridor Length (km)	1.41	1.44
Annual Daily Traffic	3,544	1,897

Section 1:

- o The Collective Risk score is **0.0**, while For Rural areas this corresponds to a Collective Risk band of **Low**.
- o the Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

Section 2:

- o The Collective Risk score is 0.13, while For Rural areas this corresponds to a Collective Risk band of **Medium-High**.
- o the Personal Risk score is 20.01. For Rural areas this corresponds to a Personal Risk band of **High**.

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score

Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	1.79	Medium lane, Narrow shoulder	2.01
Roadside hazards	High	2.28	High	2.28
Adjacent land use	Rural residential	1.5	Rural residential	1.5
Intersection density (per km)	2 to <3	1.3	2 to <3	1.3
Access density (per km)	10 to <20	1.1	10 to <20	1.1
Traffic volume	1000 to <6000	1.4	1000 to <6000	1.4

Section 1:

- o The Infrastructure Risk Rating Score is **1.89**. For Rural areas this corresponds to an IRR band of **Medium-High**.

Section 2:

- o The Infrastructure Risk Rating Score is **1.89**. For Rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation is

- 60 km/h for Spur Road between East Coast Road and Duck Creek Road (section 1)
- 60 km/h for Spur Road between Duck Creek Road and end of the road (section 2)

Spur Road section 1 and 2 are self-explaining as the mean operating speeds (46.8 and 62 km/h) are near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Spur Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Spur Road section 1 & 2 due to a multitude of factors. These being the medium/narrow lane and very narrow/narrow shoulder width, curved nature of the road, and high road-side hazards respectively. All of these factors contribute to the road's 'Medium-

High' IRR score. The collective and personal risk for second section of Spur Road is classified 'Medium-High' and 'High' due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>1</sup>

Crash history from WK NZTA's CAS database shows ten crashes in the last 5 years including zero fatal, one serious, five minor, and four non-injury crashes.

After considering all of the above factors, the existing speed limit of 80 km/h on Spur Road in Stillwater, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Spur Road section 1 & 2 is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Stancombe Road (Flat Bush)**

The speed limit on Stancombe Road, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Stancombe Road connects to Chapel Road, Erica Road, Lorenzo Way, Kensway Drive, Baverstock Road and Carlos Drive to the north, Murphys Road, Cousins Road, Topland Drive and Chapel Road to the south, Jeffs Road to the east and Accent Drive to the west. This road provides access to residential properties.</p> <p>This section is approximately 1.62 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are pedestrian amenities, cyclist amenities and on-street parking along this section.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records twenty-nine crashes between 2016 and 2020: one fatal, one serious, six minor and twenty-one non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Road Name is identified as one of the top 10% DSI saving network sections for New Zealand.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Stancombe Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Requirement	Comments
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 14,566 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Engineering treatment planned on Stancombe Road to reduce the operating speed.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 26/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This section has a mean operating speed of 46.8 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Accent Drive:</b> 60 km/h (proposed 50 km/h)</li> <li>• <b>Chapel Road:</b> 60 km/h (proposed 50 km/h)</li> <li>• <b>Kestev Drive:</b> 50 km/h</li> <li>• <b>Erica Road:</b> 50 km/h</li> <li>• <b>Lorenzo Way:</b> 50 km/h</li> <li>• <b>Kensway Drive:</b> 50 km/h</li> <li>• <b>Cousins Road:</b> 50 km/h</li> <li>• <b>Baverstock Road:</b> 50 km/h</li> <li>• <b>Carlos Drive:</b> 50 km/h</li> <li>• <b>Topland Drive:</b> 50 km/h</li> <li>• <b>Jeffs Road:</b> 50 km/h</li> <li>• <b>Murphys Road:</b> 60 km/h (proposed 50 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	8
DSI crashes during the period	2
Corridor Length (km)	1.62
Annual Daily Traffic	14,566

- The Collective Risk score is 0.25. For urban areas this corresponds to a Collective Risk band of **High**
- The Personal Risk score is 4.64. For urban areas this corresponds to a Personal Risk band of **Low-Medium**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Urban residential	3.00
Intersection density (per km)	5 to <10	2.60
Access density (per km)	>20	1.30
Traffic volume (vpd)	>12000	3.00

The Infrastructure Risk Rating Score is 2.66. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation = 50 km/h for the full length of Stancombe Road.

Stancombe Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Stancombe Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Stancombe Road due to a multitude of factors. These being the very narrow shoulder width, high road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score. The collective and personal risk of this road are classified as 'High' and 'Low-Medium' respectively due to the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.

Crash history from WK NZTA's CAS database shows twenty-nine crashes in the last 5 years including one fatal, one serious, six minor, and twenty-one non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Stancombe Road in Flat Bush, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

### Speed Limit Review – Stuart Street (Ponsonby)

The speed limit on Stuart Street, Ponsonby has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

#### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"><li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li><li>Infrastructure Risk Rating Manual 2016 (IRR)</li><li>WK NZTA MegaMaps tool</li><li>Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Stuart Street connects to Vermont Street to the south. This road provides access to residential properties.  This section is approximately 0.99 km in length. It is classified as an Access Road under the one network road classification (ONRC).  This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Stuart Street were determined using a combination of site drive-over footage, on-site information and geomaps information. <ul style="list-style-type: none"><li><b>Road stereotype:</b> Two-lane undivided</li><li><b>Road alignment:</b> Straight</li><li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li><li><b>Roadside hazards (in both directions):</b> Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &gt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Vermont Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	<b>0</b>
DSI crashes during the period	0
Corridor Length (km)	0.99
Annual Daily Traffic	50

- The Collective Risk score is **0.0**. For Urban areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Urban areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
---------	----------	------------

Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	Moderate	1.43
Adjacent land use	Urban residential	3.0
Intersection density (per km)	>10	5.0
Access density (per km)	>20	1.3
Traffic volume	<1000	1.0

- The Infrastructure Risk Rating Score is **2.26**. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30 km/h for the full length of Stuart Street.*

Stuart Street is a self-explaining road as the mean operating speeds (20 km/h) are below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Stuart Street was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30 km/h was selected for Stuart Street due to a multitude of factors. These being the narrow lane and very narrow shoulder width, tortuous nature of the road, moderate road-side hazards and low mean operating speed (<50 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a high-risk road.

After considering all of the above factors, the existing speed limit of 50 km/h on Stuart Street in Waitemata, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Stuart Street is 30 km/h which is lower than the speed limit recommended by the Speed Management Guide (40 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (20 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Te Ara Kahikatea (Ormiston)

The speed limit on Te Ara Kahikatea, Ormiston (between 35m and 50m south of Ormiston Road) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Te Ara Kahikatea connects to Te Ara Kahikatea to the north and Te Ara Kahikatea to the south. This road provides access to commercial properties like colleges.</p> <p>This section is approximately 0.02 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: zero serious, zero minor and one non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Te Ara Kahikatea were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,040 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 26/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed in the range of 27.80 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Te Ara Kahikatea (north): Variable Speed Zone – 40 km/h and 60 km/h</li> <li>Te Ara Kahikatea (south): 30 km/h</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.02
Annual Daily Traffic	1,040

- The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**

- The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3.00
Intersection density (per km)	>10	5.00
Access density (per km)	>20	1.30
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.27. For urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 50 km/h for the section of Te Ara Kahikatea, Ormiston between 35m and 50m south of Ormiston Road.*

Te Ara Kahikatea is a self-explaining road as the mean operating speeds (28 km/h) are below the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Te Ara Kahikatea was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Te Ara Kahikatea due to a multitude of factors. These being the very narrow shoulder width and low mean operating speed.

Crash history from WK NZTA's CAS database shows one crashes in the last 5 years including zero fatal, zero serious, zero minor, and one non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Te Ara Kahikatea in Ormiston, is not considered to be a safe and appropriate speed limit for this road.

The recommended safe and appropriate speed limit for Te Ara Kahikatea is 50 km/h which is higher than the Speed Management Guide recommendation (40 km/h) but are considered appropriate as it align with the speed limit of the surrounding environment.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Te Irirangi Drive (East Tamaki)

Te Irirangi Drive, East Tamaki, is divided into four sections as outlined below:

1. Section 1: Te Irirangi Drive between Ti Rakau Drive and 20m south of Te Koha Road.
2. Section 2: Te Irirangi Drive between 20m south of Te Koha Road and 100m north of Belinda Avenue
3. Section 3: Te Irirangi Drive between 100m north of Belinda Avenue and State Highway 1.
4. Section 4: Te Irirangi Drive between State Highway 1 and Great South Road.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Te Irirangi Drive, East Tamaki has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Section 1	Section 2
	Te Irirangi Drive connects to Ti Rakau Drive to the north and Te Koha Road to the east. This road provides access to residential properties and is approximately 0.34 km in length.	Te Irirangi Drive connects to Haven Drive, Leixlep Lane, Kelaway Drive, Gransna Lane, Bishop Dunn Place, Florence Carter Avenue to the west, Brinlack Drive, Aaronville Way, Chapeltown Drive, Sheddings Lane, Banville Road, Shengleton Lane, Moravale Lane, Treneary Lane to the east and Smales Road, Accent Drive, Ormiston Road to the south. This road provides access to residential properties and is approximately 4.63 km in length.
	Te Irirangi Drive is classified as a Regional road under the one network road classification (ONRC). Te Irirangi Drive is a two-way, two-lane, undivided road. There are pedestrian	Te Irirangi Drive is classified as a Regional road under the one network road classification (ONRC). Te Irirangi Drive is a two-way, two-lane, undivided road. --	---

AT also had regard to		
Current speed limit	Section 3 The existing speed limit is 60 km/h.	Section 4 The existing speed limit is 60 km/h.
MegaMaps 85 <sup>th</sup> Percentile Mean Operating Speed (km/h)	This section of Te Irirangi Drive has a mean operating speed of 49.33 km/h.	This section of Te Irirangi Drive has a mean operating speed in the range of 40.03 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Whetstone Road:</b> 50 km/h</li> <li><b>Belinda Avenue:</b> 50 km/h</li> <li><b>Penion Drive:</b> 50 km/h</li> <li><b>Dawson Road:</b> 50 km/h</li> <li><b>Boundary Road:</b> 50 km/h</li> <li><b>Charntay Avenue:</b> 50 km/h</li> <li><b>Othello Drive:</b> 50 km/h</li> <li><b>Leila Place:</b> 50 km/h</li> <li><b>Shalimar Place:</b> 50 km/h</li> <li><b>Sandrine Avenue:</b> 50 km/h</li> <li><b>Diorella Drive:</b> 50 km/h</li> <li><b>Great South Road:</b> 60 km/h</li> </ul>	

#### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	5	48
DSI crashes during the period	1	4
Corridor Length (km)	0.34	4.63
Annual Daily Traffic	13,039	12,549

Required Information for safety metrics calculations	Section 3	Section 4
Crash Analysis Period (years)	5	5
Total injury crashes during period	31	13

DSI crashes during the period	7	2
Corridor Length (km)	2.285	0.32
Annual Daily Traffic	13,456	16,685

Section 1:

- o The Collective Risk score is **0.58**. For Urban areas this corresponds to a Collective Risk band of **High**.
- o The Personal Risk score is **12.39**. For Urban areas this corresponds to a Personal Risk band of **High**.

Section 2:

- o The Collective Risk score is **0.17**. For Urban areas this corresponds to a Collective Risk band of **Medium-High**.
- o The Personal Risk score is **3.76**. For Urban areas this corresponds to a Personal Risk band of **Low**.

Section 3:

- o The Collective Risk score is **0.61**. For Urban areas this corresponds to a Collective Risk band of **High**.
- o The Personal Risk score is **12.47**. For Urban areas this corresponds to a Personal Risk band of **High**.

Section 4:

- o The Collective Risk score is **1.25**. For Urban areas this corresponds to a Collective Risk band of **High**.
- o The Personal Risk score is **20.52**. For Urban areas this corresponds to a Personal Risk band of **High**.

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Divided-traversable	3.0	Divided-traversable	3.0
Road alignment	Straight	1.0	Straight	1.0
Carriageway width	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79
Roadside hazards	Moderate	1.43	Moderate	1.43
Adjacent land use	Commercial big box	4.0	Controlled access	2.0
Intersection density (per km)	5 to <10	2.6	2 to <3	1.3
Access density (per km)	10 to <20	1.1	2 to <5	1.03

Traffic volume	>12000	3.0	>12000	3.0
----------------	--------	-----	--------	-----

Feature	Section 3		Section 4	
	Category	Risk Score	Category	Risk Score
Road stereotype	Divided-traversable	3.0	Divided-traversable	3.0
Road alignment	Straight	1.0	Straight	1.0
Carriageway width	Medium lane, Very narrow shoulder	1.79	Medium lane, Wide shoulder	1.79
Roadside hazards	Moderate	1.43	Moderate	1.43
Adjacent land use	Urban residential	3.0	Commercial big box	4.0
Intersection density (per km)	2 to <3	1.3	5 to <10	2.6
Access density (per km)	>20	1.3	2 to <5	1.03
Traffic volume	>12000	3.0	>12000	3.0

Section 1:

- o The Infrastructure Risk Rating Score is 2.42. For Urban areas this corresponds to an IRR band of **Medium-High**.

Section 2:

- o The Infrastructure Risk Rating Score is 1.77. For Urban areas this corresponds to an IRR band of **Low-Medium**.

Section 3:

- o The Infrastructure Risk Rating Score is 2.05. For Urban areas this corresponds to an IRR band of **Medium**.

Section 4:

- o The Infrastructure Risk Rating Score is 2.22. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation is

- 50 km/h on Te Irirangi Drive between Ti Rakau Drive and Te Koha Road.

- 50 km/h on Te Irirangi Drive between Te Koha Road and 100m north of Belinda Avenue.
- 50 km/h Te Irirangi Drive between 100m north of Belinda Avenue and State Highway 1.
- 50 km/h Te Irirangi Drive between State Highway 1 and Great South Road.

Te Irirangi Drive is a self-explaining roads as the mean operating speeds is near the proposed safe and appropriate speeds, despite the existing 80 km/h & 60 km/h speed limit.

Engineering up of Te Irirangi Drive was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Te Irirangi Drive due to a multitude of factors. These being the medium lane and very narrow shoulder width, straight nature of the road and moderate road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score. The collective and personal risk of this road are classified as "High" and 'High' respectively due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>1</sup>

Crash history from WK NZTA's CAS database shows three hundred seventy-seven crashes in the last 5 years including two fatal, twelve serious, eighty-three minor, and two hundred eighty non-injury crashes.

After considering all of the above factors, the existing speed limit of 80/60 km/h on Te Irirangi Drive in East Tamaki, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Te Kare Road (Glen Innes)

The speed limit on Te Kare Road, Glen Innes, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Te Kare Road connects to Sunnymead Road to the north and Taniwha Street to the south. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Te Kare Road is classified as an Access road under the one network road classification (ONRC). Te Kare Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Te Kare Road were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0 m to &lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Te Kare Road has a mean operating speed in the range of <30km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Aveline Place: 50km/h (proposed 30km/h)</li> <li>• Sunnymead Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Te Kare Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.69. For urban areas this corresponds to an IRR band of **Medium High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Te Kare Road, the actual operating speed estimated using the MegaMaps tool is: <30 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Te Nohotu Road (Glen Innes)

The speed limit on Te Nohotu Road, Glen Innes, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Te Nohotu Road connects to Aveline Place to the north and Sunnymead Road to the south. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Te Nohotu Road is classified as an Access road under the one network road classification (ONRC). Te Nohotu Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Te Nohotu Road were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0 m to &lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Te Nohotu Road has a mean operating speed in the range of <30km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Aveline Place: 50km/h (proposed 30km/h)</li> <li>Sunnymead Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Te Nohotu Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.69. For urban areas this corresponds to an IRR band of **Medium High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Te Nohotu Road, the actual operating speed estimated using the MegaMaps tool is: <30 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – The Avenue (Lucas Hights)**

The speed limit on The Avenue, Lucas Hights (between Paremoremo Road and 200m east of Paremoremo Road) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>The Avenue connects to Hobson Road to the north and Paremoremo Road to the south. This road provides access to residential properties.</p> <p>The Avenue is approximately 0.21 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).</p> <p>The Avenue is a two-way, two-lane, undivided road. There are no pedestrian amenities and no cyclist amenities. There exists on-street parking along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: zero fatal, zero serious, two minor and two non-injury crashes and therefore no Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of The Avenue were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as a <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool/ a combination of site drive-over footage and geomaps information. <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 5,679 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 05/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of The Avenue has a mean operating speed in the range of 55.7 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Hobson Road:</b> 60 km/h</li> <li>• <b>Paremoremo Road:</b> 80 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	2
DSI crashes during the period	0
Corridor Length (km)	0.21
Annual Daily Traffic	5679

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	5 to <10	2.6
Access density (per km)	10 to <20	1.1
Traffic volume	1000 to <6000	1.4

- The Infrastructure Risk Rating Score is 2.21. For Rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation: 50 km/h The Avenue from existing 50 km/h to the intersection of Hobson Road and Paremoremo Road*

The Avenue is a self-explaining road as the mean operating speeds are already at, or below, the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of the Avenue was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for The Avenue due to a multitude of factors. These being the medium lane and very narrow shoulder width, curved nature of the road and high road-side hazards. All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.

Crash history from WK NZTA's CAS database shows two crashes in the last 5 years including zero fatal, zero serious, two minor, and two non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on The Avenue in Lucas Heights, is not considered to be a safe and appropriate speed limit for this section of road.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Thomas Road (Flat Bush)

The speed limit on Thomas Road, Flat Bush (between 125m east of Joseph Street and Murphys Road) been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Thomas Road connects to Murphys Road to the east, Tannaghmore Drive, Bushfield Drive, Drumbuoy Drive to the north, Thomas Road to the west and Piwari Place and Aklander Rise, Elevation Street to the south. This road provides access to residential properties.</p> <p>This section is approximately 0.79 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: zero fatal, zero serious, one minor and five non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Thomas Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street

Requirement	Comments
	<i>parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 379 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 26/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes..

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed in the range of 50.59 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Murphys Road:</b> 80 km/h (proposed 50 km/h)</li> <li><b>Elevation Street:</b> 50 km/h</li> <li><b>Aklander Rise:</b> 50 km/h</li> <li><b>Tannaghmore Drive:</b> 50 km/h</li> <li><b>Bushfield Drive:</b> 50 km/h</li> <li><b>Drumbuoy Drive:</b> 50 km/h</li> <li><b>Piwari Place:</b> 50 km/h</li> <li><b>Thomas Road:</b> 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1

DSI crashes during the period	0
Corridor Length (km)	0.79
Annual Daily Traffic	379

- The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Urban residential	3.00
Intersection density (per km)	5 to <10	2.60
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.10. For urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 50 km/h for the section of Thomas Road, Flat Bush between 125m east of Joseph Street and Murphys Road.*

Thomas Road is a self-explaining road as the mean operating speeds (50.59 km/h) are near the proposed safe and appropriate speeds and matches the existing 50 km/h speed limit. Engineering up of Thomas Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Thomas Road due to a multitude of factors. These being the narrow lane and shoulder width and high road-side hazards. This proposed speed was also chosen in order to ensure consistency with the surrounding network.

Crash history from WK NZTA's CAS database shows six crashes in the last 5 years including zero fatal, zero serious, one minor, and five non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Thomas Road in Flat Bush, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Ti Rakau Drive (East Tamaki)

Ti Rakau Drive, East Tamaki, is divided into two sections as follows:<sup>1</sup>

1. Section 1: Ti Rakau Drive Between Pakuranga Road and 275m east of Gossamer Drive
2. Section 2: Ti Rakau Drive Between 275m east of Gossamer Drive and Chapel Road/ Dannemora Drive

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Ti Rakau Drive, East Tamaki has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Ti Rakau Drive connects to Pakuranga Road, Marriott Road, Chevis Place, Gossamer Drive, Burswood Drive, Torrens Road and Botany Road to the north, Tiraumea Drive, Mattson Road, Roseburn Place, Edgewater Drive, Wheatley Avenue, Fremantle Place, Trugood Drive, Harris Road, Greenmount Drive, Huntington Drive, Amara Place and Te Irirangi Drive to the south, Aylesbury Street, Reeves Road, Chapel Road and Dannemora Drive to the east and Palm Avenue and South Eastern Highway to the west. This road provides access to commercial and residential properties.	
	This section is approximately 2.27 km in length. It is classified as a regional road under the one network road classification (ONRC).	This section is approximately 2.64 km in length. It is classified as a regional road under the one network road classification (ONRC).
	This section is a two-way, four-lane, divided road. There are pedestrian amenities and on-	This section is a two-way, four-lane, divided road. There are no on-street parking and no

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	street parking along this section. There are no cyclist amenities.	cyclist amenities along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records <b>hundred and fifty-six</b> crashes between 2016 and 2020: zero fatal, six serious, nineteen minor and hundred and thirty-one non-injury crashes. This resulted in six Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records <b>two hundred and twenty-four</b> crashes between 2016 and 2020: two fatal, six serious, forty-seven minor and hundred and sixty-nine non-injury crashes. This resulted in eight Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Ti Rakau Drive is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Ti Rakau Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided-traversable</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided-traversable</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "	The adjacent land use is classified as Commercial Big box using on-site information and geomaps. The IRR defines Commercial big box as " <i>Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	

Requirement	Comments	
	Section 1	Section 2
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 19,235 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 19,694 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 26/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of has a mean operating speed in the range of 48.43 km/h.	This section of has a mean operating speed in the range of 42.95 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Pakuranga Road:</b> 60 km/h (proposed 50 km/h)</li> <li><b>Marriott Road:</b> 50 km/h</li> <li><b>Chevis Place:</b> 50 km/h</li> <li><b>Gossamer Drive:</b> 50 km/h</li> <li><b>Burswood Drive:</b> 50 km/h</li> <li><b>Torrens Road:</b> 50 km/h</li> <li><b>Botany Road:</b> 60 km/h (proposed 50 km/h)</li> <li><b>Tiraumea Drive:</b> 50 km/h</li> <li><b>Mattson Road:</b> 50 km/h</li> <li><b>Roseburn Place:</b> 50 km/h</li> <li><b>Edgewater Drive:</b> 50 km/h</li> <li><b>Wheatley Avenue:</b> 50 km/h</li> <li><b>Fremantle Place:</b> 50 km/h</li> <li><b>Trugood Drive:</b> 50 km/h</li> <li><b>Harris Road:</b> 60 km/h (proposed 50 km/h)</li> <li><b>Greenmount Drive:</b> 50 km/h</li> <li><b>Huntington Drive:</b> 50 km/h</li> <li><b>Amera Place:</b> 50 km/h</li> </ul>	

	<ul style="list-style-type: none"> <li><b>Te Irirangi Drive:</b> 80 km/h (proposed 50 km/h)</li> <li><b>Aylesbury Street:</b> 50 km/h</li> <li><b>Reeves Road:</b> 50 km/h</li> <li><b>Chapel Road:</b> 60 km/h (proposed 50 km/h)</li> <li><b>Dannemora Drive:</b> 50 km/h</li> <li><b>Palm Avenue:</b> 50 km/h</li> <li><b>South-Eastern Highway:</b> 80 km/h (proposed 80 km/h)</li> </ul>
--	---

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	25	55
DSI crashes during the period	6	8
Corridor Length (km)	2.27	2.64
Annual Daily Traffic	19,235	19,694

- Section 1
  - The Collective Risk score is 0.53. For urban areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 7.53. For urban areas this corresponds to a Personal Risk band of **Medium-High**
- Section 2
  - The Collective Risk score is 0.61. For urban areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 8.44. For urban areas this corresponds to a Personal Risk band of **Medium-High**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Divided-traversable	3.00	Divided-traversable	3.00
Road alignment	Curved	1.80	Curved	1.80
Carriageway width	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43	Moderate	1.43

Adjacent land use	Urban residential	3.00	Commercial big box	4.00
Intersection density (per km)	5 to <10	2.60	3 to <5	1.50
Access density (per km)	>20	1.30	10 to <20	1.10
Traffic volume (vpd)	>12000	3.00	>12000	3.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.62. For urban areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 50 km/h on Ti Rakau Drive between Pakuranga Road and 275m east of Gossamer Drive (section 1)
- 50 km/h on Ti Rakau Drive Between 275m east of Gossamer Drive and Chapel Road/ Dannemora Drive (section 2)

Ti Rakau Drive (Section 1 and 2) is a self-explaining road as the mean operating speeds (48.43 km/h and 42.95 km/h) are below the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Ti Rakau Drive was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Ti Rakau Drive (Section 1 and 2) due to a multitude of factors. These being the very narrow shoulder width and low mean operating speed. All of these factors contribute to the road's 'Medium-High' IRR score. The collective and personal risk of this road are classified as 'High' and 'Medium-High' respectively due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>2</sup>

Crash history from WK NZTA's CAS database shows three hundred and eighty crashes in the last 5 years including two fatal, twelve serious, sixty-six minor, and three hundred non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Ti Rakau Drive in East Tamaki, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Totara Avenue (New Lynn)

The speed limit on Totara Avenue, New Lynn (between Great North Road and Mccorquindale Lane) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Totara Avenue connects McCrae Way on the north to Totara Avenue on the south. This road provides access to commercial centre and parking spaces.</p> <p>Totara Avenue is approximately 0.15 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).</p> <p>Totara Avenue is a two-lane, undivided road. This street is a Shared zone for all road users with on-street parking.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Totara Avenue were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Curved.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0m) Very Narrow Shoulder (&lt;0.5m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using MegaMaps tool. The IRR defines Commercial big box as "Roads with Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km.</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 550 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
Surveyed Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Great North Road:</b> 50 km/h.</li> <li><b>Memorial Drive:</b> 50 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.15
Annual Daily Traffic	550

- The Collective Risk score is **0.0**. For Urban areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is **0.0**. For Urban areas this corresponds to a Personal Risk band of **Low**.

## Speed Limit Review – Totara Road (Whenuapai)

Totara Road, Whenuapai (between 45m north of Dale Road and 50m west of Karaka Road), is divided into three sections as outlined below:

1. Section 1: Totara Road between 45m north of Dale Road and McKean Road
1. Section 2: Totara Road between McKean Road and 275m north of McKean Road
2. Section 3: Totara Road between 275m north of McKean Road and 50m west of Karaka Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Totara Road, Whenuapai has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Section 1	Section 2	Section 3
	Totara Road connects to Dale Road to the south. This road provides access to residential properties.	Totara Road connects to McKean Road to the west. This road provides access to residential properties.	Totara Road connects to Karaka Road to the south and Waimarie Road to the east. This road provides access to residential properties.
	Totara Road is approximately 1.23 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).	Totara Road is approximately 0.27 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).	Totara Road is approximately 0.89 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).
	Totara Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along	Totara Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this	Totara Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Commercial big box	4.0
Intersection density (per km)	>10	5.00
Access density (per km)	10 to <20	1.10
Traffic volume	1000 to <6000	1.40

- The Infrastructure Risk Rating Score is **2.92**. For Urban areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 10 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 10 km/h Totara Avenue (between Great North Road and Mccorquindale Lane).*

A proposed speed limit of 10 km/h was selected for this road primarily due to a multitude of factors. These being the Shared Zone, narrow lane width, very narrow shoulder width, curved nature of the road, high roadside hazards and commercial big box land use. All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.

After considering all the above factors, the existing speed limit of 50 km/h on Totara Avenue in New Lynn is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 10 km/h, which is aligned with the recommended safe and appropriate speed. The existing mean operating speed of *Totara Avenue* is 20 km/h. Although the speed is higher than the recommended speed limit of 10 km/h, the road environment is self-explained as a low speed shared environment. Also, this is aligned with the speed limit at other shared zones. The proposed change of speed limit will be a challenging conversation.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

Requirement	Comments		
	this road, and there is no on-street parking along this section.	road, and there is no on-street parking along this section.	this road, and there is no on-street parking along this section. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: zero fatal, zero serious, zero minor and one non-injury crash and therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Totara Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Urban Residential as a <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Urban Residential as a <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>

Requirement	Comments		
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2,842 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 2,842 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road. Section 3:

- o The Collective Risk score is **0.0**. For Urban areas this corresponds to a Collective Risk band of **Low**.
- o The Personal Risk score is **0.0**. For Urban areas this corresponds to a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2		Section 3	
	Category	Risk Score	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Straight	1.0	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28	High	2.28	Moderate	2.28
Adjacent land use	Rural residential	1.5	Rural residential	1.5	Rural residential	1.5

Intersection density (per km)	<1	1.0	<1	1.0	1 to <2	1.2
Access density (per km)	10 to <20	1.1	10 to <20	1.1	10 to <20	1.1
Traffic volume	1000 to <6000	1.4	1000 to <6000	1.4	1000 to <6000	1.4

Section 1:

- o The Infrastructure Risk Rating Score is 1.8. For Rural areas this corresponds to an IRR band of **Medium-High**.

Section 2:

- o The Infrastructure Risk Rating Score is 1.54. For Rural areas this corresponds to an IRR band of **Medium**.

Section 3:

- o The Infrastructure Risk Rating Score is 1.40. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

Section 1, 2 and 3: The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60 km/h on Totara Road between 45m north of Dale Road and McKean Road
- 60 km/h Totara Road between McKean Road and 275m north of McKean Road
- 60 km/h Totara Road between 275m north of McKean Road and 50m west of Karaka Road

Totara Road (section 1,2 and 3) is a self-explaining road as the mean operating speeds are already at, or below, the proposed safe and appropriate speeds, despite the existing 70 and 80 km/h speed limit. Engineering up of Riverlea Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Totara Road due to a multitude of factors. These being the narrow lane and shoulder width, curved/straight nature of the road and high road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.

Crash history from WK NZTA's CAS database shows one crash in the last 5 years including zero fatal, zero serious, zero minor, and one non-injury crashes.

After considering all of the above factors, the existing speed limit of 70 and 80 km/h on Totara Road in Whenuapai, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for section 1, 2 and 3 is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Trig Road (Whenuapai)**

The speed limit on Trig Road, Whenuapai (between 50m northwest of Ryans Road and Brigham Creek Road) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Trig Road connects to Brigham Creek Road to the north. This road provides access to residential properties.</p> <p>Trig Road is approximately 1.92 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).</p> <p>Trig Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records twelve crashes between 2016 and 2020: zero fatal, one serious, four minor and seven non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Trig Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as a <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 6,960 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 05/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Trig Road has a mean operating speed of 60.6 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Spedding Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Brigham Creek Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	5
DSI crashes during the period	1
Corridor Length (km)	1.92
Annual Daily Traffic	6,960

- The Collective Risk score is **0.10**. For Rural areas this corresponds to a Collective Risk band of **Medium**.
- The Personal Risk score is **4.09**. For Rural areas this corresponds to a Personal Risk band of **Low-Medium**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	2 to <3	1.3
Access density (per km)	10 to <20	1.10
Traffic volume	6000 to <12000	2.2

- The Infrastructure Risk Rating Score is **2.09**. For Rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation: 60 km/h Trig Road between 50m northwest of Ryans Road and Brigham Creek Road.*

Trig Road is a self-explaining road as the mean operating speeds are already at, or below, the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Trig Road was considered, but dismissed due to the substantial and costly upgrades that would be required.

The cost to do this would substantially outweigh any benefits. A proposed speed limit of 60 km/h was selected for Trig Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road and high road-side hazards. All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.

Crash history from WK NZTA's CAS database shows twelve crashes in the last 5 years including zero fatal, one serious, four minor and seven non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on Trig Road in Whenuapai, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Upper Harbour Drive (Greenhithe)

The speed limit on Upper Harbour Drive, Greenhithe (between 105m east of Tauhinu Road and Albany Highway) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Upper Harbour Drive connects to Tauhinu Road and William Pitcher Place to the south, Shelter Drive and Albany Highway to the north, Bernard Magnus Lane, Greenhithe Lane and Emily Lane to the west and Kereru Gr and Dene Court Lane to the east. This road provides access to residential properties.</p> <p>Upper Harbour Drive is approximately 3.75 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).</p> <p>Upper Harbour Drive is a two-way, two-lane, undivided road. There are no pedestrian amenities and on-street parking along this road. There are cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records thirteen crashes between 2016 and 2020: zero fatal, one serious, six minor and six non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Upper Harbour Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist

Requirement	Comments
	<i>activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3,445 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 05/08/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Upper Harbour Drive has a mean operating speed in the range of 60.2 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Tauhinu Road:</b> 50 km/h</li> <li><b>William Pitcher Pl:</b> 50 km/h</li> <li><b>Shelter Drive:</b> 50 km/h</li> <li><b>Bernard Magnus Lane:</b> 50 km/h</li> <li><b>Greenhithe Road:</b> 50 km/h</li> <li><b>Viridian Lane:</b> 50 km/h</li> <li><b>Kereru Gr:</b> 50 km/h</li> <li><b>Emily Lane:</b> 50 km/h</li> <li><b>Dene Court Lane:</b> 50 km/h</li> <li><b>Albany Highway:</b> 60 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	7

DSI crashes during the period	1
Corridor Length (km)	3.75
Annual Daily Traffic	3,445

- The Collective Risk score is **5.33**. For Urban areas this corresponds to a Collective Risk band of **Low-Medium**.
- The Personal Risk score is **4.24**. For Urban areas this corresponds to a Personal Risk band of **Low-Medium**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Urban residential	3.0
Intersection density (per km)	2 to <3	1.3
Access density (per km)	>20	1.3
Traffic volume	1000 to <6000	1.4

- The Infrastructure Risk Rating Score is 2.27. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 60 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 60 km/h Greenhithe Road between 105m east of Tauhinu Road and Albany Highway.*

Upper Harbour Drive is a self-explaining road as the mean operating speeds are already at, or below, the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Upper Harbour Drive was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Upper Harbour Drive due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road and high road-side hazards. All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.

Crash history from WK NZTA's CAS database shows thirteen crashes in the last 5 years including zero fatal, one serious, six minor, and six non-injury crashes.

After considering all the above factors, the existing speed limit of 70 km/h on Upper Harbour Drive in Greenhithe, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Upper Orewa Road (Upper Orewa)

The speed limit on Upper Orewa Road (Upper Orewa Road Between Wainui Road and 506m west of Russell Road), Upper Orewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Upper Orewa Road connects to Wainui Road to the south and Russel Road to the east. This road provides access to residential properties.</p> <p>This section is approximately 1.33 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: zero fatal, zero serious, one minor and one non-injury crashes and therefore no Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Upper Orewa Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use for is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as a <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist</i>

Requirement	Comments
	<i>activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 08/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps / 85 <sup>th</sup> percentile Mean Operating Speed (km/h)	This section of Upper Orewa Road has a mean operating speed of 81 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Wainui Road:</b> 100 km/h</li> <li><b>Russell Road:</b> 100 km/h (proposed 40 km/h)</li> <li><b>Weranui Road:</b> 100km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Section 1
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	1.33
Annual Daily Traffic	1,260

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature		
	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	10 to <20	1.10
Traffic volume	1000 to <6000	1.4

- The Infrastructure Risk Rating Score is **1.86**. For Rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation:*

- 60 km/h Between Wainui Road and 506m west of Russell Road.

A proposed speed limit of 60 km/h was selected for Upper Orewa Road due to the medium lane width, very narrow shoulder width, curved nature of the road, high road side hazards and local land use which contributes to the sections 'Medium-High' IRR score, making it a high-risk section of road.

Crash history from NZTA's CAS database shows two crashes in the last 5 years including zero fatal, zero serious, one minor, and one non-injury crashes.

The proposed speed will be challenging conversation, given that the existing speed limit of Upper Orewa Road is 50 km/h, the existing mean operating speed of Upper Orewa Road is 81 km/h and the recommended speed limit of 60 km/h.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Vaughans Road (Okura)

Vaughans Road, Okura, is divided into two sections as outlined below:

1. Section 1: Vaughans Road Between Okura River Road and 440 m south of Ridgelea Road
2. Section 2: Vaughans Road Between 440 m south of Ridgelea Road and Piripiri Point Drive

The speed limit on Vaughans Road, Okura has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Section 1	Section 2
	Vaughans Road connects to Okura Rier Road to the west and Ridgelea Road to the south. This road provides access to residential properties.	Vaughans Road connects to Piripiri Road to the north. This road provides access to residential properties.
	Vaughans Road is approximately 1.31 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).	Vaughans Road is approximately 0.96 km in length. It is classified as an Access Road under the one network road classification (ONRC).
	Vaughans Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	Vaughans Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and

Requirement	Comments	
		therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Vaughans Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as: <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as: <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 731 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 731 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to		
Current speed limit	The existing speed limit is 80 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Vaughans Road has a mean operating speed of 48.3 km/h.	This section of Vaughans Road has a mean operating speed of 43.4 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Okura River Road:</b> 80 km/h (proposed 60km/h)</li> <li>• <b>Ridgelea Road:</b> 50 km/h</li> <li>• <b>Piripiri Point Drive:</b> 50 km/h</li> </ul>	

**Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	1.43	0.84
Annual Daily Traffic	731	731

Section 1:

- o The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- o The Personal Risk score is **0.0**. For Rural areas this corresponds to Personal Risk band of **Low**.

Section 2:

- o The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- o The Personal Risk score is **0.0**. For Rural areas this corresponds to Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7

Road alignment	Curved	1.8	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	Moderate	1.43	Moderate	1.43
Adjacent land use	Rural residential	1.5	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2	2 to <3	1.3
Access density (per km)	>20	1.3	10 to <20	1.1
Traffic volume	<1000	1.0	<1000	1.0

Section 1:

- o The Infrastructure Risk Rating Score is **1.58**. For Rural areas this corresponds to an IRR band of **Medium**.

Section 2:

- o The Infrastructure Risk Rating Score is **1.55**. For Rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

For section 1 & 2 the safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- *60 km/h on Vaughans Road Between Okura River Road and 440m south of Ridgelea Road (section 1)*
- *50 km/h on Vaughans Road Between 440m south of Ridgelea Road and Piripiri Point Drive (section 2)*

Vaughans Road is a self-explaining road as the mean operating speeds are already at, or below, the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Riverlea Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h for section 1 and 50 km/h section 2 was selected for Vaughans Road due to a multitude of factors. These being the land use, narrow lane and very narrow shoulder width, curved nature of the road, moderate road-side hazards and low mean operating speed. For section 2, this section of Vaughans Road is becoming urbanised and the new development will change the existing road environment. The residential developments are likely to reduce the operating speed.

After considering all of the above factors, the existing speed limit of 80 km/h on Vaughans Road in Okura, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h for section 1 and 50 km/h for section 2 which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Vermont Street (Ponsonby)

The speed limit on Vermont Street, Ponsonby has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Vermont Street connects to Stuart Street to the north, Ponsonby Road to the East and John Street to the West. This road provides access to residential properties.</p> <p>This section is approximately 0.61 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: one minor and two non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Vermont Street were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> Moderate.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist</i>

Requirement	Comments
	<i>activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km.</li> <li>• <b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2,180 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 22.91 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Ponsonby Road:</b> 40 km/h.</li> <li>• <b>John Street:</b> 50 km/h.</li> <li>• <b>Stuart Street:</b> 50 km/h (proposed 30 km/h).</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	0.62
Annual Daily Traffic	2,180

- The Collective Risk score is **0.00**. For urban areas this corresponds to a Collective Risk band of **Low**.

- The Personal Risk score is **0.00**. For urban areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards	Moderate	1.43
Adjacent land use	Urban residential	3.0
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.30
Traffic volume	1000 to <6000	1.40

The Infrastructure Risk Rating Score is **2.12**. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30 km/h Vermont Street (Full Length).*

Vermont Street is a self-explaining road as the mean operating speeds (22.91 km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Vermont Street was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30 km/h was selected for this road due to multitude of factors. These being narrow lane width, very narrow shoulder width, moderate roadside hazards and low mean operating speeds (<40 km/h). This proposed speed was also chosen in order to ensure consistency with the surrounding network.

Crash history from NZTA's CAS database shows three crashes in the last 5 years including one minor and two non-injury crashes.

After considering all the above factors, the existing speed limit of 50 km/h on Vermont Street in Waitemata, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit for Vermont Street is 30 km/h which is lower than the speed limit recommended by the Speed Management Guide (40 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (22.91 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Waimanu Awa Road (Ararimu)**

The speed limit on Waimanu Awa Road, Ararimu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waimanu Awa Road connects to Great South Road and on the western end of Waimanu Awa Road is a no exit road. This road provides access to residential properties.</p> <p>This section is approximately 1.12km in length. It is classified as an access road under the one network road classification (ONRC).</p> <p>Waimanu Awa Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road. There is no on-street parking along Waimanu Awa Road.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records no crashes between 2016 and 2020. Waimanu Awa Road therefore has no Death and Serious Injury (DSI) crashes. CAS includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Waimanu Awa Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>

Requirement	Comments
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using the drive over footage. The IRR defines Rural Residential as <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/ factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersection per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	No traffic volume data is available, but an estimated ADT is 200 vpd.
(i) any planned modification to the road; and	There are no known planned modifications to Waimanu Awa Road.
(j) the views of interested persons and groups.	The programme team have undertaken early engagement with key partners and stakeholders on the first stage of Tranche 2. This has included the Automobile Association, Auckland Council Safety Collective, Auckland Regional Public Health Service / Healthy Auckland Together, Bike Auckland, Fire and Emergency, Greater Auckland, Kainga Ora, NZ Police, Road Transport Forum, Safekids Aotearoa, Walk Auckland and Waka Kotahi. Potential changes to the speed limits in this area were presented to the Local Board via meetings on 20 April 2021 and 1 June 2021. More detailed feedback is anticipated from each group during public consultation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Waimanu Awa Road is 100 km/h
MegaMaps Mean Operating Speed (km/h)	A MegaMaps operating speed is not available for Waimanu Awa Road, but the estimated operating speed on the road is 40 km/h
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Great South Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.12
Annual Daily Traffic	Approx. 200 vpd

The Collective Risk score is 0.00, and the Personal Risk score is 0.0. For rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume	< 1,000 vpd	1.00

The Infrastructure Risk Rating Score is 1.8. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Waimanu Awa Road*

Waimanu Awa Road is expected to be a self-explaining road as the operating speeds are estimated to be below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Waimanu Awa Road was considered but dismissed due to the substantial and costly upgrades that would be required for what is a low volume, low classification road. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected due to the narrow, winding alignment of the road, moderate roadside hazards and its access function. These factors also contribute to the roads “Medium-High” IRR score, making it a high risk road.<sup>1</sup>

After considering all the above factors, the speed limit of 100 km/h on Waimanu Awa Road in Ararimu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit aligns with the Speed Management Guide (<80 km/h) and is considered appropriate given the nature and function of the road.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Waina Drive (Kumeu)**

The speed limit on Waina Drive, Kumeu, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waina Drive connects to Van Rixel Drive to the east. This road provides access to residential properties and is approximately 0.03km in length.</p> <p>Waina Drive is classified as an Access road under the one network road classification (ONRC). Waina Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Waina Drive were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0 m to &lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Waina Drive has a mean operating speed in the range of <30km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Van Rixel Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Waina Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Waina Drive, the actual operating speed estimated using the MegaMaps tool is: <30 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Waipuna Road (Mount Wellington)

The speed limit on Waipuna Road, Mount Wellington (between 20m east of Levene Place and 20 m east of Pinn Place) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waipuna Road connects to Waipuna Road and Levene Place to the north and South-Eastern Highway to the south. This road provides access to South-Eastern Highway.</p> <p>This section is approximately 0.26 km in length. It is classified as a Regional road under the one network road classification (ONRC).</p> <p>This section is a two-way, multi-lane, divided traversable road. There are no pedestrian amenities, cycle amenities and on-street parking along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records fifteen crashes between 2016 and 2020: zero fatal, one serious, two minor and twelve non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Waipuna Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Divided traversable.</li> <li><b>Road alignment:</b> Curved.</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> Moderate.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist

Requirement	Comments
	<i>activity are also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km.</li> <li><b>Access density:</b> &lt;1 access per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 6,737 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This section has a mean operating speed of actual value 46.6 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Levene Place:</b> 50 km/h</li> <li><b>Waipuna Road (north):</b> 50 km/h</li> <li><b>South Eastern Highway:</b> 80 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	3
DSI crashes during the period	1
Corridor Length (km)	0.26
Annual Daily Traffic	6,737

- The Collective Risk score is **0.78**. For Urban areas this corresponds to a Collective Risk band of **High**

- The Personal Risk score is **17.02**. For Urban areas this corresponds to a Personal Risk band of **High**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Divided-traversable	3.00
Road alignment	Curved	1.80
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards	Moderate	1.43
Adjacent land use	Urban residential	3.00
Intersection density (per km)	>10	5.00
Access density (per km)	<1	1.00
Traffic volume	6000 to <12000	2.20

The Infrastructure Risk Rating Score is **2.3**. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 50 km/h Waipuna Road (between 20m east of Levene Place and South Easter Highway).*

A proposed speed limit of 50 km/h was selected for this section of Waipuna Road due to multitude of factors. These being the very narrow shoulder width, curved nature of the road, moderate roadside hazards and local land use. All of these factors contribute to the road's 'Medium' IRR score. Both the collective and personal risk of this road are classified as 'High' due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.<sup>1</sup>This proposed speed was also chosen in order to ensure consistency with the surrounding network

Crash history from WK NZTA's CAS database shows fifteen crashes in the last 5 years including zero fatal, one serious, two minor, and twelve non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h at this section of Waipuna Road in Mount Wellington, is not considered to be a safe and appropriate speed limit.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

The existing mean operating speed of Waipuna Road is 46.6 km/h and it is close to the recommended speed limit of 50 km/h. Due to the mean operating speed and the length of the road section physical interventions are not required.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Waitoki Road (Wainui)

The speed limit on Waitoki Road, Wainui (between Pebble Brook Road and Wainui Road) has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waitoki Road connects to Pebble Brook Road to the west and Wainui Road to the north. This road provides access to residential properties and is approximately 1.60 km in length.</p> <p>Waitoki Road is classified as a Primary Collector Road under the one network road classification (ONRC). Waitoki Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: zero fatal, zero serious, one minor and two non-injury crashes and therefore no Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Waitoki Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Curved.</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Narrow shoulder 0.5-1.0 m).</li> <li><b>Roadside hazards (in both directions):</b> Moderate.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as a "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km.</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,193 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Auckland Transport proposed to install new school gateway treatment for Wainui School
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 08/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Waitoki Road has a mean operating speed in the range of 80 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Pebble Brook Road:</b> 100 km/h.</li> <li><b>Wainui Road:</b> 100 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	1.606
Annual Daily Traffic	1,193

- The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Medium lane, Narrow shoulder	1.45
Roadside hazards	Moderate	1.43
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	10 to <20	1.10
Traffic volume	1000 to <6000	1.4

- The Infrastructure Risk Rating Score is **1.66**. For Rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h between Pebble Road and Wainui Road.*

Waitoki Road is a road requiring engineering down interventions in order to lower the mean operating speeds such that it is suitable to implement the proposed safe and appropriate speed. Engineering up of Waitoki Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Waitoki Road due to a multitude of factors. These being the medium lane width, narrow shoulder width, curved nature of the road and moderate road side hazards. All these factors contribute to the roads 'Medium-High' IRR score, making it a high-risk section of road.

Crash history from WK NZTA's CAS database shows three crashes in the last 5 years including zero fatal, zero serious, one minor, and two non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on Waitoki Road in Wainui, is not considered to be a safe and appropriate speed limit for this section of road.

Given that the existing mean operating speed of Waitoki Road is 80 km/h and higher than the recommended speed limit of 60 km/h, physical interventions are required to engineer down the road environment in order to reduce travel speeds accordingly. Auckland Transport has plan to install new gateway treatment for school and highlight the speed change.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Walmsley Road (Mangere)

The speed limit on Walmsley Road, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Walmsley Road connects to Mahunga Drive and Waterview Road to the north, Miller Road, Mckenzie Road and Coronation Road to the west, Favona Road, Robertson Road to the east and Hall Avenue and Donnell Avenue to the south. This road provides access to residential properties.</p> <p>This section is approximately 1.08 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are pedestrian amenities along this road. There are no cyclist amenities and on street parking.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records eighty-six crashes between 2016 and 2020: zero fatal, two serious, twenty-one minor and sixty-three non-injury crashes. This resulted in two Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Walmsley Road is identified as one of the top 10% DSI saving network sections for New Zealand.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Walmsley Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very wide shoulder (&gt;2.0 m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban Residential as "dominated

Requirement	Comments
	<i>by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km.</li> <li><b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 21,207 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 13/10/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed	This section has a mean operating speed km/h 43.13 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Miller Road:</b> 50 km/h.</li> <li><b>Mckenzie Road:</b> 60 km/h (proposed 50 km/h).</li> <li><b>Coronation Road:</b> 60 km/h.</li> <li><b>Favona Road:</b> 60 km/h (proposed 50 km/h).</li> <li><b>Robertson Road:</b> 50 km/h.</li> <li><b>Mahunga Drive:</b> 50 km/h.</li> <li><b>Waterview Road:</b> 50 km/h.</li> <li><b>Hall Avenue:</b> 50 km/h.</li> <li><b>Donnell Avenue:</b> 50 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	23

DSI crashes during the period	2
Corridor Length (km)	1.08
Annual Daily Traffic	21,207

- The Collective Risk score is **0.37**. For urban areas this corresponds to a Collective Risk band of **High**.
- The Personal Risk score is **4.80**. For urban areas this corresponds to a Personal Risk band of **Low-Medium**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Medium lane, Very wide shoulder	0.78
Roadside hazards	High	2.28
Adjacent land use	Urban residential	3.00
Intersection density (per km)	5 to <10	2.60
Access density (per km)	>20	1.30
Traffic volume	>12000	3.00

The Infrastructure Risk Rating Score is **2.66**. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 50 km/h Walmsley Road (Full Length).*

Walmsley Road is a self-explaining road as the mean operating speeds is below or near, the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of Walmsley Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Walmsley Road due to multitude of factors. These being medium lane width, very wide shoulder width, high roadside hazards and urban residential land use. All of these factors contribute to the road's 'Medium- High' IRR score. The collective and personal risk of this road are classified as '**High**' and '**Low-Medium**' respectively due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>1</sup> This proposed speed was also chosen in order to ensure consistency with the surrounding network.

Crash history from WK NZTA's CAS database shows eighty-six crashes in the last 5 years including zero fatal, two serious, twenty-one minor, and sixty-three non-injury crashes.

After considering all the above factors, the existing speed limit of 60 km/h on Walmsley Road in Mangere, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Whangaparaoa Road (Whangaparaoa)

The speed limit of two sections of Whangaparaoa Road, Whangaparaoa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

1. Section 1: Whangaparaoa Road Red Beach Road to 170m southeast of Dobell Road
2. Section 2: Whangaparaoa Road between 135m north of Roberts Road and 80m northeast of Gulf Harbour Drive

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Whangaparaoa Road connects to Red Beach Road, Vista Motu, Marellan Drive, Glenelg Road, Shadon Place and Dobell Road to the north, Chenery Road, Matheson Road and Blue Heron Road to the south, Vipond Road and Melia Place to the east and Polar Road to the west. This road provides access to residential properties.	Whangaparaoa Road connects to Gulf Harbour Drive to the north. This road provides access to residential properties.
	Whangaparaoa Road is approximately 2.47 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).	Whangaparaoa Road is approximately 0.89 km in length. It is classified as an Arterial Road under the one network road classification (ONRC).
	Whangaparaoa Road is a two-way, two-lane, undivided road. There are pedestrian amenities along this section. There are no cyclist amenities and on-street parking.	Whangaparaoa Road is a two-way, two-lane, undivided road. There are pedestrian amenities along this section. There are no cyclist amenities and on-street parking.
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records sixty crashes between 2016 and 2020: one fatal, seven serious, eleven minor and forty-one non-injury crashes. This resulted in eight	NZTA's Crash Analysis System (CAS) records seven crashes between 2016 and 2020: zero fatal, zero serious, one minor and 6 non-injury crashes and therefore no Death and Serious

Requirement	Comments	
	Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.  Whangaparaoa Road is identified as one of the top 10% DSI saving network sections for New Zealand.	Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Whangaparaoa Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 25,725 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 12,259 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are planned modifications along Whangaparaoa Road	

Requirement	Comments
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to		
Current speed limit	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Whangaparaoa Road has a mean operating speed of 57 km/h	This section of Whangaparaoa Road has a mean operating speed of 58 km/h
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Red Beach Road:</b> 50 km/h</li> <li>• <b>Chenery Road:</b> 50 km/h</li> <li>• <b>Vista Motu:</b> 50 km/h</li> <li>• <b>Matheson Road:</b> 50 km/h</li> <li>• <b>Marellen Drive:</b> 50 km/h</li> <li>• <b>Glenelg Road:</b> 50 km/h</li> <li>• <b>Vipond Road:</b> 50 km/h</li> <li>• <b>Melia Place:</b> 50 km/h</li> <li>• <b>Polar Road:</b> 50 km/h</li> <li>• <b>Shandon Place:</b> 50 km/h</li> <li>• <b>Blue Heron Rise:</b> 50 km/h</li> <li>• <b>Dobell Road:</b> 50 km/h</li> <li>• <b>Gulf Harbour Drive:</b> 50 km/h</li> </ul>	

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	19	1
DSI crashes during the period	8	0
Corridor Length (km)	2.47	0.89
Annual Daily Traffic	25,725	12,259

Section 1:

- o The Collective Risk score is **0.64**. For Urban areas this corresponds to a Collective Risk band of **High**.

- o The Personal Risk score is **6.89**. For Urban areas this corresponds to a Personal Risk band of **Medium**.

Section 2:

- o The Collective Risk score is **0.0**. For Urban areas this corresponds to a Collective Risk band of **Low**.
- o The Personal Risk score is **0.0**. For Urban areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Curved	1.8
Carriageway width	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79
Roadside hazards	Moderate	1.43	High	2.28
Adjacent land use	Urban residential	3.0	Urban residential	3.0
Intersection density (per km)	3 to <5	1.5	1 to <2	1.2
Access density (per km)	>20	1.3	>20	1.3
Traffic volume	>12000	3.0	>12000	3.0

Section 1:

- o The Infrastructure Risk Rating Score is **2.48**. For Urban areas this corresponds to an IRR band of **Medium-High**.

Section 2:

- o The Infrastructure Risk Rating Score is **2.56**. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 50 km/h on Whangaparaoa Road Red Beach Road to 170m southeast of Dobell Road (section 1)
- 50 km/h on Whangaparaoa Road between 135m north of Roberts Road and 80m northeast of Gulf Harbour Drive (section 2)

Whangaparaoa Road is a road requiring engineering down interventions in order to lower the mean operating speeds such that it is suitable to implement the proposed safe and appropriate speed. Engineering up of Whangaparaoa Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Whangaparaoa Road due to a multitude of factors. These being the medium lane and very narrow shoulder width, curved nature of the road, moderate to high road-side hazards. All of these factors contribute to the road's 'High' IRR score. The collective and personal risk of this road are classified as 'High' and 'Medium' for section 1, due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>1</sup>

Crash history from WK NZTA's CAS database shows sixty-seven crashes in the last 5 years including one fatal, seven serious, twelve minor, and forty-seven non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Whangaparaoa Road in Hibiscus and Bays, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Whio Way (Stillwater)

The speed limit on Whio Way, Stillwater has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Whio Way connects to Jackson Way to the south. This road is approximately 0.11 km in length.</p> <p>Whio Way is classified as an Access road under the one network road classification (ONRC). Whio Way is a two-way, Two lane undivided road. There are no pedestrian amenities or cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Whio Way were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curve</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> High and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as rural residential using MegaMaps tool. The IRR defines rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as less than 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	No planned modification to the road currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Whio Way has a mean operating speed in the range of 30 to 40 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Jackson Way: 100 km/h (proposed 60 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Whio Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.59. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

### **Step 4: Conclusion**

Existing speed limit: 100km/h

*Proposed safe and appropriate speed limit recommendation = 60km/h.*

Whio Way is a self-explaining road as the mean operating speeds are already at, or below, the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Whio Way was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

The existing speed limit of 100 km/h on Whio Way, is not considered to be a safe and appropriate speed limit for this section of road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed. Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Wilks Road (Dairy Flat)

Wilks Road, Dairy Flat (between East Coast Road and Postman Road) is divided into two sections as outlined below:

1. Section 1: Wilks Road between 115 east of Aeropark Dr and East Coast Road.
2. Section 2: Wilks Road between Postman Road to 115 m east of Aeropark Dr.

The speed limit on Wilks Road, Dairy Flat has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Wilks Road connects to Aeropark Road to the south and East Coast Road to the east. This road provides access to residential properties.	Wilks Road connects to Postman Road and Runway Rise to the south. This road provides access to residential properties.
	This section is approximately 0.61 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).	This section is approximately 0.87 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: zero fatal, zero serious, zero minor and two non-injury crashes and therefore no Death and Serious Injury (DSI). This data includes crashes	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: zero fatal, zero serious, one minor and three non-injury crashes and therefore no Death and Serious Injury (DSI). This data includes crashes

Requirement	Comments	
	Section 1	Section 2
	for all road users and therefore crash risk for all road users were considered.	for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Wilks Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Narrow shoulder (0.5-1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,420 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 1,420 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to		
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Wilks Road has a mean operating speed in the range of 74 km/h.	This section of Wilks Road has a mean operating speed in the range of 63.63 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Dairy Flat Highway: 80 km/h</li> <li>• Postman Road: 80 km/h</li> <li>• Lascelles Road: 80 km/h</li> <li>• Runway Rise: N/A</li> <li>• Aeropark Road: N/A</li> <li>• East Coast Road: 100 km/h (proposed 80 km/h)</li> </ul>	

**Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	1
DSI crashes during the period	0	0
Corridor Length (km)	0.61	0.87
Annual Daily Traffic	1,420	1,420

Section 1:

- o The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- o The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

Section 2:

- o The Collective Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low**.
- o The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Section 1	Section 2

	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Straight	1.0
Carriageway width	Medium lane, Narrow shoulder	1.79	Medium lane, Narrow shoulder	1.79
Roadside hazards	Moderate	1.43	Moderate	1.43
Adjacent land use	Rural residential	1.5	Rural residential	1.5
Intersection density (per km)	<1	1.0	3 to <5	1.5
Access density (per km)	2 to <5	1.03	2 to <5	1.03
Traffic volume	<1000	1.0	1000 to <6000	1.4

Section 2:

- o The Infrastructure Risk Rating Score is 1.42. For Rural areas this corresponds to an IRR band of **Medium**.

Section 3:

- o The Infrastructure Risk Rating Score is 1.49. For Rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation is

- 80 km/h on Wilks Road between 115 east of Aeropark Dr and East Coast Road (section 1)
- 80 km/h on Wilks Road between Postman Road to 115 m east of Aeropark Dr (section 2)

Wilks Road is a road requiring engineering up interventions in order to lower the mean operating speeds such that it is suitable to implement the proposed safe and appropriate speed.

A proposed speed limit of 80 km/h was selected for Wilks Road due to a multitude of factors. These being the medium lane and narrow shoulder width, curved nature of the road, moderate road-side hazards and high mean operating speed.

Crash history from WK NZTA's CAS database shows nine crashes in the last 5 years including zero fatal, one serious, two minor, and six non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Wilks Road in Dairy Flat, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 80 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Wiri Station Road (Manukau)**

Wiri Station Road, Manukau, is divided into two sections as follows: <sup>1</sup>

1. Section 1: Wiri Station Road between Ash Road and Druces Road
2. Section 2: Wiri Station Road between Druces Road and Manukau Station Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Wiri Station Road, Manukau has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Wiri Station Road connects to Roscommon Road to the west, Langley Road, Ash Road, Hobill Avenue, Druces Road to the south, Plunket Avenue, Mana Place, Lambie Drive, Manukau Station Road to the north, and Tuaiwi Street to the east. This road provides access to commercial properties.	
	This section is approximately 2.09 km in length. It is classified as an Arterial road under the one network road classification (ONRC).	This section is approximately 0.42 km in length. It is classified as an Arterial road under the one network road classification (ONRC).
	This section is a two-way, multi-lane, undivided road. There are pedestrian amenities and cyclist amenities along this section. There is no on-street parking.	This section is a two-way, multi-lane, undivided road. There are pedestrian amenities and cyclist amenities along this section. There is no on-street parking.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records <b>hundred and one</b> crashes between 2016	WK NZTA's Crash Analysis System (CAS) records <b>twenty-</b>

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	and 2020: zero fatal, two serious, twenty minor and seventy-nine non-injury crashes. This resulted in two Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	<b>three</b> crashes between 2016 and 2020: zero fatal, one serious, four minor and eighteen non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Wiri Station Road is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Wiri Station Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided-traversable</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided-traversable</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using on-site information and geomaps. The IRR defines Commercial big box as " <i>Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present.</i> "	
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &lt;1 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 7,758 vehicles per day (vpd). This	Average daily traffic (ADT) was determined from MegaMaps as 7,240 vehicles per day (vpd).

Requirement	Comments	
	Section 1	Section 2
	level of traffic volume is consistent with the nature of the road and traffic survey.	This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be sent to the Local Board via email in October. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 60 km/h.	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 47.86 km/h.	This section has a mean operating speed of 37.3 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Roscommon Road:</b> 80 km/h (proposed 50 km/h)</li> <li>• <b>Langley Road:</b> 50 km/h</li> <li>• <b>Ash Road:</b> 60 km/h (proposed 50 km/h)</li> <li>• <b>Hobill Avenue:</b> 50 km/h</li> <li>• <b>Druces Road:</b> 60 km/h (proposed 50 km/h)</li> <li>• <b>Plunket Avenue:</b> 50 km/h</li> <li>• <b>Mana Place:</b> 50 km/h</li> <li>• <b>Lambie Drive:</b> 60 km/h (proposed 50 km/h)</li> <li>• <b>Manukau Station Road:</b> 60 km/h (proposed 50 km/h)</li> <li>• <b>Tuaiwi Street:</b> 50 km/h</li> </ul>	

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	<b>22</b>	<b>5</b>
DSI crashes during the period	2	1
Corridor Length (km)	2.09	0.42
Annual Daily Traffic	7,758	7,240

- Section 1
  - The Collective Risk score is 0.19. For rural areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 6.76. For rural areas this corresponds to a Personal Risk band of **Medium**
- Section 2
  - The Collective Risk score is 0.48. For rural areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 18.02. For rural areas this corresponds to a Personal Risk band of **High**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Divided-traversable	3.00	Divided-traversable	3.00
Road alignment	Straight	1.00	Straight	1.00
Carriageway width	Medium lane, very narrow shoulder	1.79	Medium lane, narrow shoulder	1.45
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Commercial big box	4.00	Urban Residential	3.00
Intersection density (per km)	2 to <3	1.30	5 to <10	2.60
Access density (per km)	10 to <20	1.10	<1	1.00
Traffic volume (vpd)	6000 to <12,000	2.20	6000 to <12,000	2.20

- Section 1
  - The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.58. For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 50 km/h on Wiri Station Road between Roscommon Road and Druces Road (section 1)
- 50 km/h on Wiri Station Road between Druces Road and Manukau Station Road (section 2)

Wiri Station Road is a self-explaining road as the mean operating speeds are near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit.

Engineering up of Wiri Station Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Wiri Station Road due to a multitude of factors. These being the very narrow shoulder width, and high road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score. The collective and personal risk of this road are classified as 'High' and 'High' respectively due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.

Crash history from WK NZTA's CAS database shows hundred and twenty-four crashes in the last 5 years including zero fatal, three serious, twenty-four minor, and ninety-seven non-injury crashes.

After considering all of the above factors, the existing speed limit of 60 km/h on Wiri Station Road in Manukau, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Witten Road (Pakiri)

The speed limit on Witten Road, Pakiri has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
	Section 1
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Witten Road connects to Witten Road to the east. This road provides access to residential properties.
	This section is approximately 0.85 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020. Zero fatal, zero serious, zero minor and zero non-injury. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Witten Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed.</li> <li><b>Road alignment:</b> Curved.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "area with

Requirement	Comments
	Section 1
	<i>accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersection per km.</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 5 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 08/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Pakiri Road:</b> 60 km/h.</li> <li><b>Witten Road:</b> 100 km/h.</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Section 1
Crash Analysis Period (years)	5
Total injury crashes during period	0

DSI crashes during the period	0
Corridor Length (km)	0.85
Annual Daily Traffic	5

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

Feature	Section 2	
	Category	Risk Score
Road stereotype	Unsealed	10.0
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	<1	1.0
Access density (per km)	2 to <5	1.03
Traffic volume	<1000	1.0

- The Infrastructure Risk Rating Score is 2.1. For Rural areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h between 1700m North of Witten Road (Pakiri Beach holiday park) to the road end.*

*Witten Road* is a self-explaining road as the mean operating speeds (34.95 km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit. Engineering up of *Witten Road* was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Pakiri Road due multitude of factors. These being to unsealed surface, narrow lane width, very narrow shoulder width, curved nature of the road, high road side hazards. All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.

Crash history from WK NZTA's CAS database shows one crash in the last 5 years including zero fatal, zero serious, zero minor and one non- injury.

After considering all the above factors, the existing speed limit of 60 km/h on *Witten Road* in *Pakiri*, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Woodcocks Road (Warkworth)

Woodcocks Road, Warkworth (between 150m west of Falls Road and Old Kaipara Road), is divided into four sections as outlined below:

1. Section 1: between 150m west of Falls Road and 86m east of Carran Road
2. Section 2: between 86m east of Carran Road and Old Kaipara Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Woodcocks Road, Warkworth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Section 1	Section 2
	Woodcocks Road connects to Falls Road to the North and Wylie Road to the south. This road provides access to residential properties.	Woodcocks Road connects to Carran Road to the north and Old Kaipara Road to the west. This road provides access to residential properties.
	Woodcocks Road is approximately 0.76 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).	Woodcocks Road is approximately 2.16 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).
	Woodcocks Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	Woodcocks Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records seven crashes between 2016 and 2020: zero fatal, two serious, one	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: one fatal, two serious, one

Requirement	Comments	
	<p>minor and four non-injury crashes. This resulted in two Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Section 3 of Woodcocks Road is identified as one of the top 10% DSI saving network sections for New Zealand.</p>	<p>minor and zero non-injury crashes. This resulted in three Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Section 4 of Woodcocks Road is identified as one of the top 10% DSI saving network sections for New Zealand.</p>
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Woodcocks Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural Residential as a <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural Residential as a <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>
(g) the number of intersections and property accessways; and	From MegaMaps tool/ a combination of site drive-over footage and geomaps information.	
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2,641 vehicles per day (vpd). This level of traffic volume is	Average daily traffic (ADT) was determined from MegaMaps as 935 vehicles per day (vpd). This level of traffic volume is

Requirement	Comments	
	consistent with the nature of the road.	consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 08/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to		
Current speed limit	Section 1	Section 2
	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Woodcocks Road has a mean operating speed of 71.4 km/h.	This section of Woodcocks Road has a mean operating speed of 75.4 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Falls Road: 60 km/h</li> <li>• Wyllie Road: 100 km/h</li> <li>• Carran Road: 100 km/h</li> <li>• Old Kaipara Road: 100 km/h</li> </ul>	

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	3	4
DSI crashes during the period	2	3
Corridor Length (km)	0.76	2.16
Annual Daily Traffic	2,641	935

Section 1:

- The Collective Risk score is 0.52. For Rural areas this corresponds to a Collective Risk band of **High**.
- The Personal Risk score is 54.10. For Rural areas this corresponds to a Personal Risk band of **High**.

Section 2:

- The Collective Risk score is 0.27. For Rural areas this corresponds to a Collective Risk band of **High**
- The Personal Risk score is 81.24. For Rural areas this corresponds to a Personal Risk band of **High**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Curved	1.8
Carriageway width	Medium lane, Narrow shoulder	1.45	Medium lane, Narrow shoulder	1.45
Roadside hazards	Moderate	1.43	High	2.28
Adjacent land use	Rural residential	1.5	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2	<1	1.0
Access density (per km)	10 to <20	1.1	10 to <20	1.1
Traffic volume	1000 to <6000	1.4	1000 to <6000	1.4

Section 1:

- The Infrastructure Risk Rating Score is 1.65. For Rural areas this corresponds to an IRR band of **Medium-High**.

Section 2:

- The Infrastructure Risk Rating Score is 1.79. For Rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

Section 3 and 4: The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation:

- 60 km/h Woodcocks Road between 150m west of Falls Road and 86m east of Carran Road (Section 1)
- 60km/h Woodcocks Road between 86m east of Carran Road and Old Kaipara Road (Section 2)

he proposed speed is a challenging conversation as the existing mean operating speed of Woodcocks Road is higher than the proposed safe and appropriate speed. Engineering up of Road Name was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Woodcocks Road due to a multitude of factors. These being the medium lane and narrow shoulder width, curved nature of the road, high/moderate road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score. The collective and personal risk of this road are classified as 'High' and 'High' respectively due to the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.

Crash history from WK NZTA's CAS database shows twenty-seven crashes in the last 5 years including one fatal, five serious, ten minor, and eleven non-injury crashes.

After considering all the above factors, the existing speed limit of 100 km/h on Woodcocks Road section 1 and 2 respectively in Warkworth, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit for section 1 and 2 is 60 km/h which is aligned with the recommended safe and appropriate speed.

Given that the existing mean operating speed on section 1 and 2 of Woodcocks Road is 71.4 and 75.4 km /h km/h respectively, and higher than the recommended speed limit of 60 km/h, physical interventions are required to engineer down the road environment in order to reduce travel speeds accordingly.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Worsnop Way (Stillwater)**

The speed limit on Worsnop Way, Stillwater has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Worsnop Way connects to East Coast Road to the south. This road provides access to residential properties.
	This section is approximately 0.37 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).
	Worsnop Way is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Worsnop Way were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using MegaMaps tool. The IRR defines Rural Residential as: <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 341 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 09/09/2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Worsnop Way has a mean operating speed of 37.89 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>East Coast Road:</b> 80 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.37
Annual Daily Traffic	341

- The Collective Risk score is **0.0**, while For Rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is **0.0**. For Rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
---------	----------	------------

Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Medium lane, Narrow shoulder	1.79
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	2 to <3	1.3
Access density (per km)	10 to <20	1.1
Traffic volume	<1000	1.0

- The Infrastructure Risk Rating Score is 1.75. For Rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Worsnop Way.*

Worsnop Way is a self-explaining road as the mean operating speeds (37.89 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Worsnop Way was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Worsnop Way due to a multitude of factors. These being the medium lane and narrow shoulder width, curved nature of the road, high road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Worsnop Way in Stillwater, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Worsnop Way is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Albertson Place (Manurewa)

The speed limit on Albertson Place, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Albertson Place connects to Buller Crescent to the north. This road provides access to residential properties and is approximately 0.075 km in length.</p> <p>Albertson Place is classified as an Access road under the one network road classification (ONRC). Albertson Place is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Albertson Place were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 800 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Albertson Place has a mean operating speed in the range of 30-34 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Buller Crescent:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Albertson Place** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.2. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed Albertson Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Anglers Way (Wattle Downs)

The speed limit on Anglers Way, Wattle Downs has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Anglers Way connects to Mahia Road to the south. This road provides access to residential properties and is approximately 0.14 km in length.</p> <p>Anglers Way is classified as an Access road under the one network road classification (ONRC). Anglers Way is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Anglers Way were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 180 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Anglers Way has a mean operating speed in the range of 20-24 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>• <b>Mahia Road:</b> 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Anglers Way** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.0. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Anglers Way, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ashmere Lane (Weymouth)

The speed limit on Ashmere Lane, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ashmere Lane Way connects to Sykes Road to the east. This road provides access to residential properties and is approximately 0.20 km in length.</p> <p>Ashmere Lane is classified as an Access road under the one network road classification (ONRC). Ashmere Lane is a two-lane, undivided road. There are pedestrian amenities with no on-street parking or cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ashmere Lane were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Ashmere Lane has a mean operating speed in the range of 20-24 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Sykes Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Ashmere Lane** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.0. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ashmere Lane, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Astor Place (Manurewa)

The speed limit on Astor Place, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Astor Place connects to Friedlanders Road to the west. This road provides access to residential properties and is approximately 0.19 km in length.</p> <p>Astor Place is classified as an Access road under the one network road classification (ONRC). Astor Place is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Astor Place were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 170 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Astor Place has a mean operating speed in the range of 20-24 km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Friedlanders Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, Astor Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.1. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Astor Place, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Beaumonts Way Extension (Manurewa)

The speed limit on Beaumonts Way Extension, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Beaumonts Way Extension connects to Mahia Road to the south. This road provides access to residential properties and is approximately 0.43 km in length.</p> <p>Beaumonts Way Extension is classified as an Access road under the one network road classification (ONRC). Beaumonts Way Extension is a two-lane, undivided road. There are pedestrian amenities with on-street parking. However, there are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Beaumonts Way Extension were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to 3 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Beaumonts Way Extension has a mean operating speed in the range of 25-29km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Mahia Road:</b> 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Beaumonts Way Extension** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.6. For urban areas this corresponds to an IRR band of **Low**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Beaumonts Way Extension, the actual operating speeds from the MegaMaps ranges from 25-29km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Beaumonts Way (Manurewa)**

Beaumonts Way, Manurewa, is divided into two sections as follows: <sup>1</sup>

- Section 1: Beaumonts Way between Weymouth Road and Rogers Road
- Section 2: Beaumonts Way between Rogers Road and the southern end of Beaumonts Way

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Beaumonts Way, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Beaumonts Way connects to Weymouth Road to the north and provides access to residential properties.	
	This section is approximately 0.43 km in length.	This section is approximately 0.2 km in length.
	This section is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is classified as an Access road under the one network road classification (ONRC).
	Beaumonts Way is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.	
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injury (DSI).	

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	This data includes crashes for all road users and therefore crash risk for all road users were considered.	
(e) the characteristics of the road and roadsides; and	The following characteristics for Beaumonts Way were determined using desktop information assessment. <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>	
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "	
(g) the number of intersections and property accessways; and	From desktop information assessment: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to 5 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>	
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1119 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.	
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 50 km/h.	
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed in the range of 35-39 km/h.	This section has a mean operating speed in the range of 20-24 km/h

	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Weymouth Road:</b> 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Beaumonts Way** has the following information:

- Section 1
  - Collective Risk band of **Low**, and a Personal Risk band of **Low**
  - The Infrastructure Risk Rating Score is 1.8. For urban areas this corresponds to an IRR band of **Low-Medium**.
- Section 2
  - Collective Risk band of Low, and a Personal Risk band of Low
  - The Infrastructure Risk Rating Score is 1.9. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation for both sections = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Beaumonts Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Belleek Close (Weymouth)

The speed limit on Belleek Close, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Belleek Close connects to Glenveagh Park Drive to the east. This road provides access to residential properties and is approximately 0.06 km in length.</p> <p>Belleek Close is classified as an Access road under the one network road classification (ONRC). Belleek Close is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Belleek Close were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 80 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Belleek Close has a mean operating speed in the range of 20-24 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Glenveagh Park Drive:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Belleek Close** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Belleek Close, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bernina Place (Weymouth)

The speed limit on Bernina Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bernina Place connects to Sykes Road to the east. This road provides access to residential properties and is approximately 0.27 km in length.</p> <p>Bernina Place is classified as an Access road under the one network road classification (ONRC). Bernina Place is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bernina Place were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 280 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Bernina Place has a mean operating speed in the range of 20-24 km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Sykes Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Bernina Place** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.9. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bernina Place, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Blossom Lane (Manurewa)

The speed limit on Blossom Lane, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Blossom Lane connects to Beaumonts Way to the east and Rogers Road to the west. This road provides access to residential properties and is approximately 0.19 km in length.</p> <p>Blossom Lane is classified as an Access road under the one network road classification (ONRC). Blossom Lane is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Blossom Lane were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 291 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Blossom Lane has a mean operating speed in the range of 25-29km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Beaumonts Way:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Rogers Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Blossom Lane** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.2. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Blossom Lane, the actual operating speeds from the MegaMaps ranges from 25-29km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bohola Rise (Weymouth)

The speed limit on Bohola Rise, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bohola Rise connects to Glenveagh Park Drive to the west. This road provides access to residential properties and is approximately 0.11 km in length.</p> <p>Bohola Rise is classified as an access road under the one network road classification (ONRC). Bohola Rise is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Blossom Lane were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 80 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Bohola Rise has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>• <b>Glenveagh Park Drive:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Bohola Rise** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bohola Rise, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Boon Street (Manurewa)

The speed limit on Boon Street, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Boon Street connects to Grebe Street to the east and Mahia Road to the south. This road provides access to residential properties and is approximately 0.17 km in length.</p> <p>Boon Street is classified as an Access road under the one network road classification (ONRC). Boon Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Boon Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 190 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Boon Street has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Grebe Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Mahia Road:</b> 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, Boon Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.2. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Boon Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Bowater Place (Manurewa)**

Bowater Place, Manurewa, is divided into two sections as follows: <sup>1</sup>

- Section 1: Bowater Place between Weymouth Road and Buller Crescent
- Section 2: Bowater Place between Buller Crescent and Puriri Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Bowater Place, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Bowater Place connects to Weymouth Road to the north and provides access to residential properties	
	This section is approximately 0.20 km in length.	This section is approximately 0.48 km in length.
	This section is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is classified as an Access road under the one network road classification (ONRC).
	Bowater Place is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.	
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injury (DSI).	

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	This data includes crashes for all road users and therefore crash risk for all road users were considered.	
(e) the characteristics of the road and roadsides; and	The following characteristics for Bowater Place were determined using desktop information assessment.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "	
(g) the number of intersections and property accessways; and	From desktop information assessment: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>	
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,166 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 800 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.	
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 50 km/h.	
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed in the range of 25-29km/h.	This section has a mean operating speed in the range of 30-34km/h.

	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Weymouth Road:</b> 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Bowater Place** has the following information:

- Section 1
  - Collective Risk band of **Low**, and a Personal Risk band of **Low**
  - The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.
- Section 2
  - Collective Risk band of **Low**, and a Personal Risk band of **Low**
  - The Infrastructure Risk Rating Score is 2.4. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation for both sections = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Bowater Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Buller Crescent (Manurewa)

The speed limit on Buller Crescent, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Buller Crescent connects to Bowater Place to the north and south. This road provides access to residential properties and is approximately 0.5 km in length.</p> <p>Buller Crescent is classified as an Access road under the one network road classification (ONRC). Buller Crescent is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Buller Crescent were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 800 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Buller Crescent has a mean operating speed in the range of 30-34 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Bowater Place:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Buller Crescent** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.1. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Buller Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Carn Place (Weymouth)

The speed limit on Carn Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Carn Place connects to Glenveagh Park Drive to the west. This road provides access to residential properties and is approximately 0.16 km in length.</p> <p>Carn Place is classified as an access road under the one network road classification (ONRC). Carn Place is a two-lane, undivided road. There are pedestrian amenities with no on-street parking or cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Carn Place were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 220 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Carn Place has a mean operating speed in the range of 20-24 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>• <b>Glenveagh Park Drive:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Carn Place** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.2. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Carn Place, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Castlefinn Drive (Weymouth)

The speed limit on Castlefinn Drive, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Castlefinn Drive connects to Weymouth Road to the North and Mahia Road to the south. This road provides access to residential properties and is approximately 0.16 km in length.</p> <p>Castlefinn Drive is classified as an Access road under the one network road classification (ONRC). Castlefinn Drive is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Castlefinn Drive were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 364 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Castlefinn Drive has a mean operating speed of 20-24 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Mahia Road:</b> 50 km/h</li> <li><b>Weymouth Road:</b> 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Castlefinn Drive** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.9. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Castlefinn Drive, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Celmisia Place (Weymouth)

The speed limit on Celmisia Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Celmisia Place connects to Sykes Road to the west. This road provides access to residential properties and is approximately 0.10 km in length.</p> <p>Celmisia Place is classified as an access road under the one network road classification (ONRC). Celmisia Place is a two-lane, undivided road. There are pedestrian amenities with no on-street parking or cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Celmisia Place were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 150 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Celmisia Place has a mean operating speed in the range of 20-24 km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Sykes Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Celmisia Place** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.5. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Celmisia Place, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Christmas Road (Manurewa)

The speed limit on Christmas Road, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Christmas Road connects to Rogers Road to the north and Mahia Road to the south. This road provides access to residential properties and is approximately 0.7 km in length.</p> <p>Christmas Road is classified as Primary Collector road under the one network road classification (ONRC). Christmas Road is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: one serious, one minor and four non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Christmas Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and wide shoulder (1.0 to 2.0m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4064 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Christmas Road has a mean operating speed in the range of 40-44 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Rogers Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Mahia Road:</b> 50 km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Christmas Road** has the following information:

- Collective Risk band of **High**, and a Personal Risk band of **High**.
- The Infrastructure Risk Rating Score is 2.0. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Christmas Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Churchill Avenue (Manurewa)**

The speed limit on Churchill Avenue, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Churchill Avenue connects to Weymouth Road to the North and Puriri Road to the South. This road provides access to residential properties and is approximately 0.63 km in length.</p> <p>Churchill Avenue is classified as a Primary Collector road under the one network road classification (ONRC). Churchill Avenue is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records nine crashes between 2016 and 2020: one minor and eight non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Churchill Avenue were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to 5 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3,003 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Churchill Avenue has a mean operating speed in the range of 35-39km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Weymouth Road:</b> 50 km/h</li> <li>• <b>Puriri Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Churchill Avenue** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.8. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Churchill Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Claymore Street (Manurewa)

The speed limit on Claymore Street, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Claymore Street connects to William Avenue to the North and Friedlanders Road to the west. This road provides access to residential properties and is approximately 0.48 km in length.</p> <p>Claymore Street is classified as an Access road under the one network road classification (ONRC). Claymore Street Place is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Claymore Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,092 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Claymore Street has a mean operating speed in the range of 25-29km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Friedlanders Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>William Avenue:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Claymore Street** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Claymore Street, the actual operating speeds from the MegaMaps ranges from 25-29km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Coles Place (Manurewa)**

The speed limit on Coles Place, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Coles Place connects to Kirton Crescent to the East and William Avenue to the West. This road provides access to residential properties and is approximately 0.14 km in length.</p> <p>Coles Place is classified as an Access road under the one network road classification (ONRC). Coles Place is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Coles Place were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 925 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Coles Place has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>• <b>Kirton Crescent:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Williams Avenue:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Coles Place** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.2. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Coles Place, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Coxhead Road (Manurewa)

The speed limit on Coxhead Road, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Coxhead Road connects to Weymouth Road to the North and Mahia Road to the South. This road provides access to residential properties and is approximately 1.69 km in length.</p> <p>Coxhead Road is classified as a Primary Collector road under the one network road classification (ONRC). Coxhead Road is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 21 crash between 2016 and 2020: four minor and 17 non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Coxhead Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8,119 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Coxhead Road has a mean operating speed in the range of 45-49km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Mahia Road:</b> 50 km/h</li> <li><b>Weymouth Road:</b> 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Coxhead Road** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.2. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

The speed management guide suggests 40 km/h as the safe and appropriate speed for Coxhead Road.

Therefore, we have determined 40km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Derryveagh Lane (Weymouth)

The speed limit on Derryveagh Lane, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Derryveagh Lane connects to Glenveagh Park Drive to the west. This road provides access to residential properties and is approximately 0.12 km in length.</p> <p>Derryveagh Lane is classified as an Access road under the one network road classification (ONRC). Derryveagh Lane is a two-lane, undivided road. There are pedestrian amenities with no on-street parking or cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Derryveagh Lane were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 140 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Derryveagh Lane has a mean operating speed in the range of 20-24km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Glenveagh Park Drive:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Derryveagh Lane** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.2. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Derryveagh Lane, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Dr Pickering Avenue (Manurewa)

The speed limit on Dr Pickering Avenue, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Dr Pickering Avenue connects to Friedlanders Road to the East. This road provides access to residential properties and is approximately 0.48 km in length.</p> <p>Dr Pickering Avenue is classified as an access road under the one network road classification (ONRC). Dr Pickering Avenue is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: one minor and three non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Dr Pickering Avenue were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to 5 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,273 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Dr Pickering Avenue has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Friedlanders Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Dr Pickering Avenue** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.8. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Dr Pickering Avenue, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Eddowes Street (Manurewa)

The speed limit on Eddowes Street, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Eddowes Street connects to Friedlanders Road to the East. This road provides access to residential properties and is approximately 0.44 km in length.</p> <p>Eddowes Street is classified as an Access road under the one network road classification (ONRC). Eddowes Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Eddowes Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to 5 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 322 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Eddowes Street has a mean operating speed in the range of 20-24km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Friedlanders Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Eddowes Street** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.9. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Eddowes Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Friedlanders Road (Manurewa)

The speed limit on Friedlanders Road, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Friedlanders Road connects to Weymouth Road to the North and Mahia Road to the South. This road provides access to residential properties and is approximately 1.1km in length.</p> <p>Friedlanders Road is classified as a Primary Access road under the one network road classification (ONRC). Woodside Road is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are also cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 16 crash between 2016 and 2020: one serious, four minor and 11 non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Friedlanders Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very Wide shoulder (&gt;1.0 to 2.0m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4,596 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Friedlanders Road has a mean operating speed in the range of 40-44km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Mahia Road:</b> 50 km/h</li> <li><b>Weymouth Road:</b> 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Friedlanders Road** has the following information:

- Collective Risk band of **Medium**, and a Personal Risk band of **High**.
- The Infrastructure Risk Rating Score is 2.0. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Friedlanders Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Glenveagh Park Drive (Weymouth)**

The speed limit on Glenveagh Park Drive, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Glenveagh Park Drive connects to Weymouth Road to the North and Mahia Road to the South. This road provides access to residential properties and is approximately 0.67 km in length.</p> <p>Glenveagh Park Drive is classified as a Secondary Collector road under the one network road classification (ONRC). Glenveagh Park Drive is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: six non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Glenveagh Park Drive were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,317 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Glenveagh Park Drive has a mean operating speed in the range of 35-39km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Mahia Road:</b> 50 km/h</li> <li>• <b>Weymouth Road:</b> 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Glenveagh Park Drive** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Glenveagh Park Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Grebe Street (Manurewa)

The speed limit on Grebe Street, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Grebe Street connects to Boon Street to the West. This road provides access to residential properties and is approximately 0.16 km in length.</p> <p>Grebe Street is classified as an access road under the one network road classification (ONRC). Woodside Road is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Grebe Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 190 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Grebe Street has a mean operating speed in the range of 20-24 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Boon Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Grebe Street** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.0. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Grebe Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hollinbrigg Place (Manurewa)

The speed limit on Hollinbrigg Place, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hollinbrigg Place Road connects to Rogers Road to the South. This road provides access to residential properties and is approximately 0.12 km in length.</p> <p>Hollinbrigg Place is classified as an Access road under the one network road classification (ONRC). Hollinbrigg Place is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hollinbrigg Place were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 140 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Hollinbrigg Place has a mean operating speed in the range of 20-24km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Rogers Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Hollinbrigg Place** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.9. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hollinbrigg Place, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hutt Road (Manurewa)

The speed limit on Hutt Road, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hutt Road connects to Churchill Avenue to the East and Bowater Place to the West. This road provides access to residential properties and is approximately 0.12 km in length.</p> <p>Hutt Road is classified as an access road under the one network road classification (ONRC). Hutt Road is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hutt Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 800 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Hutt Road has a mean operating speed in the range of 30-34 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Bowater Place:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Churchill Avenue:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Hutt Road** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Hutt Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Kevale Place (Manurewa)**

The speed limit on Kevale Place, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kevale Place connects to Great South Road to the East. This road provides access to residential properties and is approximately 0.13 km in length.</p> <p>Kevale Place is classified as an Access road under the one network road classification (ONRC). Kevale Place is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kevale Place were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 572 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Kevale Place has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>• <b>Great South Road:</b> 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Kevale Place** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kevale Place, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kirton Crescent (Manurewa)

The speed limit on Kirton Crescent, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kirton Crescent connects to William Avenue to the West and Weymouth Road to the North. This road provides access to residential properties and is approximately 0.51 km in length.</p> <p>Kirton Crescent is classified as a Secondary Collector road under the one network road classification (ONRC). Kirton Crescent is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: six non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kirton Crescent were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,632 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Kirton Crescent Place has a mean operating speed in the range of 25-29km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Weymouth Road:</b> 50 km/h</li> <li><b>William Avenue:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Kirton Crescent** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.6. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kirton Crescent, the actual operating speeds from the MegaMaps ranges from 25-29km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Kita Road (Manurewa)**

The speed limit on Kita Road, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kita Road connects to Buller Crescent to the East and Coxhead Road to the West. This road provides access to residential properties and is approximately 0.12 km in length.</p> <p>Kita Road is classified as an Access road under the one network road classification (ONRC). Kita Road Place is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kita Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 800 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Kita Road has a mean operating speed in the range of 30-34km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Buller Crescent:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Coxhead Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Kita Road** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.2. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Kita Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kohiwi Road (Manurewa)

The speed limit on Kohiwi Road, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kohiwi Road connects to Tawa Crescent to the East and Coxhead Road to the West. This road provides access to residential properties and is approximately 0.29 km in length.</p> <p>Kohiwi Road is classified as a Secondary Collector road under the one network road classification (ONRC). Kohiwi Road is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kohiwi Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,248 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Kohiwi Road has a mean operating speed in the range of 35-39km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Coxhead Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Tawa Crescent:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Kohiwi Road** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Kohiwi Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Loughinisland Place (Weymouth)

The speed limit on Loughinisland Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Loughinisland Place connects to Glenveagh Park Drive to the East. This road provides access to residential properties and is approximately 0.2 km in length.</p> <p>Loughinisland Place is classified as an Access road under the one network road classification (ONRC). Loughinisland Place is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crashes between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Loughinisland Place were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 62 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Loughinisland Place has a mean operating speed in the range of 20-24km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Glenveagh Park Drive:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Loughinisland Place** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.0. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Loughinisland Place, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – McDivitt Street (Manurewa)

The speed limit on McDivitt Street, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>McDivitt Street connects to Dr Pickering Avenue to the North and Mahia Road to the South. This road provides access to residential properties and is approximately 0.42 km in length.</p> <p>McDivitt Street is classified as a Secondary Collector road under the one network road classification (ONRC). McDivitt Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crashes between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for McDivitt Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to 5 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,155 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>McDivitt Street has a mean operating speed in the range of 25-29km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Dr Pickering Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Mahia Road:</b> 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **McDivitt Street** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.8. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for McDivitt Street, the actual operating speeds from the MegaMaps ranges from 25-29km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Morrin Street (Manurewa)**

The speed limit on Morrin Street, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Morrin Street connects to Coxhead Road to the East and Kirton Crescent to the West. This road provides access to residential properties and is approximately 0.19 km in length.</p> <p>Morrin Street is classified as a Secondary Collector road under the one network road classification (ONRC). Morrin Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: four non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Morrin Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide lane (&gt;3.5m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 863 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Morrin Street has a mean operating speed in the range of 20-24 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Coxhead Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Kirton Crescent:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Morrin Street** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.2. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Morrin Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mountfort Street (Manurewa)

The speed limit on Mountfort Street, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mountfort Street connects to Thompson Terrace to the East and Claymore Street Crescent to the West. This road provides access to residential properties and is approximately 0.26 km in length.</p> <p>Mountfort Street is classified as an Access road under the one network road classification (ONRC). Mountfort Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crashes between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mountfort Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 915 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Mountfort Street has a mean operating speed in the range of 25-29km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Claymore Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Thompson Terrace:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Mountfort Street** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.2. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Mountfort Street, the actual operating speeds from the MegaMaps ranges from 25-29km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Nield Road (Manurewa)**

The speed limit on Nield Road, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nield Road connects to Mahia Road to the South. This road provides access to residential properties and is approximately 0.12 km in length.</p> <p>Nield Road is classified as an Access road under the one network road classification (ONRC). Nield Road is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Nield Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 130 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Nield Road has a mean operating speed in the range of 20-24km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Mahia Road:</b> 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Nield Road** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.0. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Nield Road, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Nield Road (Manurewa)

The speed limit on Nield Road, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nield Road connects to Mahia Road to the South. This road provides access to residential properties and is approximately 0.12 km in length.</p> <p>Nield Road is classified as an Access road under the one network road classification (ONRC). Nield Road is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Nield Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 130 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Nield Road has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Mahia Road:</b> 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Nield Road** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.0. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Nield Road, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – O’Connell Street (Manurewa)**

The speed limit on O’Connell Street, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>O’Connell Street connects to Mountfort Street to the North and Thompson Terrace to the East. This road provides access to residential properties and is approximately 0.36 km in length.</p> <p>O’Connell Street is classified as an Access road under the one network road classification (ONRC). O’Connell Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA’s Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for O’Connell Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Wide lane (&gt;3.5m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> ”
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to 10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 821 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	O'Connell Street has a mean operating speed in the range of 25-29 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Mountfort Street:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Thompson Crescent:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **O'Connell Street** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.1. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for O'Connell Street, the actual operating speeds from the MegaMaps ranges from 25-29km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Olive Street (Manurewa)

The speed limit on Olive Street, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Olive Street connects to Christmas Road to the East. This road provides access to residential properties and is approximately 0.1 km in length.</p> <p>Olive Street is classified as an Access road under the one network road classification (ONRC). Olive Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Olive Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 110 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Olive Street has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Christmas Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Olive Street** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Olive Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Percival Street (Manurewa)

The speed limit on Percival Street, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Percival Street connects to Bowater Place to the East. This road provides access to residential properties and is approximately 0.16 km in length.</p> <p>Percival Street is classified as an Access road under the one network road classification (ONRC). Percival Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Percival Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 190 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Percival Street has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>• <b>Bowater Place:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Percival Street** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.9. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Percival Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Puriri Road (Manurewa)

Puriri Road, Manurewa, is divided into two sections as follows: <sup>1</sup>

- Section 1: Puriri Road between Christmas Road and Churchill Avenue
- Section 2: Puriri Road between Churchill Avenue and Kohiwi Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Puriri Road, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Puriri Road connects to Christmas Road to the east and provides access to residential properties.	
	This section is approximately 0.25 km in length.	This section is approximately 0.58 km in length.
	This section is classified as a Secondary collector road under the one network road classification (ONRC).	This section is classified as an Access road under the one network road classification (ONRC).
	Puriri Road is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.	
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records five crashes between 2016 and 2020: three minor and two non-injury crashes. This resulted in zero Death and Serious Injury (DSI). These were minor and non-injury crashes.	

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e. tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	This data includes crashes for all road users and therefore crash risk for all road users were considered.	
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bowater Place were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>	
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."	
(g) the number of intersections and property accessways; and	From desktop information assessment:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to 10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,730 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 800 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.	
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 50 km/h.	

MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed in range of 30-34km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Christmas Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Puriri Road** has the following information:

- Section 1
  - Collective Risk band of **Low**, and a Personal Risk band of **Low**
  - The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.
- Section 2
  - Collective Risk band of **Low**, and a Personal Risk band of **Low**
  - The Infrastructure Risk Rating Score is 2.1. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation for both sections = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Puriri Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Rhine Place (Weymouth)**

The speed limit on Rhine Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rhine Place connects to Bernina Place to the South. This road provides access to residential properties and is approximately 0.07 km in length.</p> <p>Rhine Place is classified as an Access road under the one network road classification (ONRC). Rhine Place is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rhine Place were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 280 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Rhine Place has a mean operating speed in the range of 20-24km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Bernina Place:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Rhine Place** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Rhine Place, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Rimu Road (Manurewa)

The speed limit on Rimu Road, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rimu Road connects to Puriri Road to the North and Mahia Road to the South. This road provides access to residential properties and is approximately 0.53 km in length.</p> <p>Rimu Road is classified as a Secondary Collector road under the one network road classification (ONRC). Rimu Road is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crash between 2016 and 2020: one serious and three non-injury. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rimu Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,185 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Hutt Road has a mean operating speed in the range of 35-39km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Mahia Road:</b> 50 km/h</li> <li><b>Puriri Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Rimu Road** has the following information:

- Collective Risk band of **High**, and a Personal Risk band of **High**.
- The Infrastructure Risk Rating Score is 2.1. For urban areas this corresponds to an IRR band of **Medium**.
- High risk road<sup>1</sup>

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Rimu Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Rogers Road (Manurewa)

The speed limit on Rogers Road, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rogers Road connects to Weymouth Road to the North. This road provides access to residential properties and is approximately 0.77 km in length.</p> <p>Rogers Road is classified as a Primary Collector road under the one network road classification (ONRC). Rogers Road is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 11 crash between 2016 and 2020: two minor and nine non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rogers Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and Wide shoulder (1.0 to 2.0m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.”</i>
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4,214 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Rogers Road has a mean operating speed in the range of 35-39km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Weymouth Road:</b> 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Rogers Road** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.2. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Rogers Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ruby Street (Manurewa)

The speed limit on Ruby Street, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ruby Street connects to Friedlanders Road to the East and Eddowes Street to the West. This road provides access to residential properties and is approximately 0.1 km in length.</p> <p>Ruby Street is classified as an Access road under the one network road classification (ONRC). Ruby Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ruby Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 322 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Ruby Street has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Friedlanders Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Eddowes Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Ruby Street** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.2. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ruby Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Senecio Place (Weymouth)

The speed limit on Senecio Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Senecio Place connects to Sykes Road to the West. This road provides access to residential properties and is approximately 0.08 km in length.</p> <p>Senecio Place is classified as an access road under the one network road classification (ONRC). Senecio Place is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Senecio Place were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 90 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Senecio Place has a mean operating speed in the range of 20-24 km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Sykes Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Senecio Place** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Senecio Place, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Solo Place (Manurewa)

The speed limit on Solo Place, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Solo Place connects to Thompson Terrace to the East. This road provides access to residential properties and is approximately 0.15 km in length.</p> <p>Solo Place is classified as an access road under the one network road classification (ONRC). Solo Place is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This was a minor crash. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Solo Place were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 190 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Solo Place has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Thompson Terrace:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Solo Place** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.0. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Solo Place, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Southview Place (Wattle Downs)

The speed limit on Southview Place, Wattle Downs has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Southview Place connects to Mahia Road to the South. This road provides access to residential properties and is approximately 0.19 km in length.</p> <p>Southview Place is classified as an Access road under the one network road classification (ONRC). Southview Place is a two-lane, undivided road. There are pedestrian amenities with no on-street parking. There are also no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Southview Place were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 220 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Southview Place has a mean operating speed in the range of 20-24 km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Mahia Road:</b> 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Southview Place** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.0. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Southview Place, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Sykes Road (Weymouth)

Sykes Road, Weymouth, is divided into two sections as follows:<sup>1</sup>

- Section 1: Sykes Road between Weymouth Road and 440m south of Weymouth Road
- Section 2: Sykes Road between 440m south of Weymouth Road and Mahia Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Sykes Road, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Sykes Road connects to Weymouth Road to the north and Mahia Road to the south and provides access to residential properties.	
	This section is approximately 0.44 km in length.	This section is approximately 0.56 km in length.
	This section is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is classified as a Primary Collector road under the one network road classification (ONRC).
	Puriri Road is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.	
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: two minor and four non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(e) the characteristics of the road and roadsides; and	The following characteristics for Sykes Road were determined using desktop information assessment.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very wide shoulder (&lt;2.0m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Wide lane (&gt;3.5 m) and narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.”	
(g) the number of intersections and property accessways; and	From desktop information assessment:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to 3 intersections per km</li> <li>• <b>Access density:</b> 5 to 10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to 10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3,212 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 3,020 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.	
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 50 km/h.	
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed in the range of 30-34km/h.	

	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Mahia Road:</b> 50 km/h</li> <li>• <b>Weymouth Road:</b> 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Skyles Road** has the following information:

- Section 1
  - Collective Risk band of **Low**, and a Personal Risk band of **Low**
  - The Infrastructure Risk Rating Score is 1.6. For urban areas this corresponds to an IRR band of **Low-Medium**.
- Section 2
  - Collective Risk band of **Low**, and a Personal Risk band of **Low**
  - The Infrastructure Risk Rating Score is 2.0. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation for both sections = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Sykes Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Tawa Crescent (Manurewa)**

The speed limit on Tawa Crescent, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tawa Crescent connects to Mahia Road to the South. This road provides access to residential properties and is approximately 0.75 km in length.</p> <p>Tawa Crescent is classified as an access road under the one network road classification (ONRC). Tawa Crescent is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records eight crashes between 2016 and 2020: two minor and eight non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tawa Crescent were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to 5 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 823 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Tawa Crescent has a mean operating speed in the range of 25-29km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Mahia Road:</b> 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Tawa Crescent** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.0. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tawa Crescent, the actual operating speeds from the MegaMaps ranges from 25-29km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Thompson Terrace (Manurewa)

The speed limit on Thompson Terrace, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Thompson Terrace connects to Mahia Road to the South and Morrin Street to the North. This road provides access to residential properties and is approximately 0.92 km in length.</p> <p>Thompson Terrace is classified as an access road under the one network road classification (ONRC). Thompson Terrace Place is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: six non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Thompson Terrace were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 735 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Thompson Terrace has a mean operating speed in the range of 25-29 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Mahia Road:</b> 50 km/h</li> <li><b>Morrin Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Thompson Terrace** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.9. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Thompson Terrace, the actual operating speeds from the MegaMaps ranges from 25-29km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Toro Lane (Manurewa)

The speed limit on Toro Lane, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Toro Lane connects to Rogers Road to the West. This road provides access to residential properties and is approximately 0.10 km in length.</p> <p>Toro Lane is classified as an Access road under the one network road classification (ONRC). Toro Lane is a two-lane, undivided road. There are pedestrian amenities with no on-street parking or cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Toro Lane were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 20 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Toro Lane has a estimated mean operating speed in the range of 20-24 km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Rogers Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Toro Lane** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.5. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Toro Lane, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Totara Road (Manurewa)

The speed limit on Totara Road, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Totara Road connects to Puriri Road to the North and Rimu Road to the East. This road provides access to residential properties and is approximately 0.41 km in length.</p> <p>Totara Road is classified as an access road under the one network road classification (ONRC). Totara Road is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one serious crash. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Totara Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazard:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 800 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Totara Road has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Puriri Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Rimu Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, Totara Road has the following information:

- Collective Risk band of **High**, and a Personal Risk band of **High**.
- The Infrastructure Risk Rating Score is 2.2. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Totara Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tui Crescent (Manurewa)

The speed limit on Tui Crescent, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tui Crescent connects to Bowater Place to the East. This road provides access to residential properties and is approximately 0.18 km in length.</p> <p>Tui Crescent is classified as an access road under the one network road classification (ONRC). Tui Crescent is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tui Crescent were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 800 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Tui Crescent has a mean operating speed in the range of 30-34km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Bowater Place:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Tui Crescent** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.1. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Tui Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – William Avenue (Manurewa)

The speed limit on William Avenue, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>William Avenue connects to Friedlanders Road to the West. This road provides access to residential properties and is approximately 0.32 km in length.</p> <p>William Avenue is classified as an access road under the one network road classification (ONRC). William Avenue is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for William Avenue were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 925 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>William Avenue has a mean operating speed in the range of 20-24 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Friedlanders Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **William Avenue** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.4. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for William Avenue, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Woodside Road (Manurewa)

The speed limit on Woodside Road, Manurewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Woodside Road connects to Great South Road to the East. This road provides access to residential properties and is approximately 0.09 km in length.</p> <p>Woodside Road is classified as an access road under the one network road classification (ONRC). Woodside Road is a two-lane, undivided road. There are pedestrian amenities and on-street parking. There are no cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Woodside Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Woodside Road has a mean operating speed in the range of 20-24km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Great South Road:</b> 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From the desktop information assessment, **Woodside Road** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Woodside Road, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Zurich Place (Weymouth)

The speed limit on Zurich Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Zurich Place connects to Bernina Place to the North. This road provides access to residential properties and is approximately 0.1 km in length.</p> <p>Zurich Place is classified as an Access road under the one network road classification (ONRC). Zurich Place is a two-lane, undivided road. There are pedestrian amenities with no on-street parking or cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Zurich Place were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 280 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 30/09/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Zurich Place has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Bernina Place:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Zurich Place** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Zurich Place, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Abbotsford Terrace (Devonport)

The speed limit on Abbotsford Terrace, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Abbotsford Terrace connects to Victoria Road to the east and Lytton Street to the west. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Abbotsford Terrace is classified as an Access road under the one network road classification (ONRC). Abbotsford Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Abbotsford Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 132 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Abbotsford Terrace has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Victoria Road between Albert Road and northern end of Victoria Road: 50 km/h (proposed 30 km/h)</li> <li>Lytton Street: 50 km/h (proposed 30 km/h)</li> <li>Cowper Street: 50 km/h (proposed 30 km/h)</li> <li>Bulwer Street: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Abbotsford Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Abbotsford Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Adams Road South (Pukekohe)

The speed limit on Adams Road South, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Adams Road South connects to Belmont Road to the south. This road provides access to residential properties and is approximately 0.57km in length.</p> <p>Adams Road South is classified as an Access road under the one network road classification (ONRC). Adams Road South is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Adams Road South were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> High and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i> .
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 31 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Adams Road South has a mean operating speed in the range of 35-39km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Belmont Road: 50km/h (proposed 30km/h)</li> <li>Tawhiti Road: 50km/h (proposed 30km/h)</li> <li>Hempopo Street: 50km/h (proposed 30km/h)</li> <li>Huamanu Street: 50km/h (proposed 30km/h)</li> <li>Rural View Terrace: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Adams Road South has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.69. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 60km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 60km/h as the safe and appropriate speed for Adams Road South, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Adel Place (Weymouth)

The speed limit on Adel Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Adel Place connects to Weymouth Road to the west. This road provides access to residential properties and is approximately 0.15km in length.  Adel Place is classified as an Access road under the one network road classification (ONRC). Adel Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Adel Place were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 160 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Adel Place has a mean operating speed in the range of <30km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Weymouth Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Adel Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Adel Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Admirals Court Drive (Greenhithe)

The speed limit on Admirals Court Drive, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Admirals Court Drive connects to Kyle Road to the east. This road provides access to residential properties and is approximately 0.89km in length.</p> <p>Admirals Court Drive is classified as an Access road under the one network road classification (ONRC). Admirals Court Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Admirals Court Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 297 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Admirals Court Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kyle Road: 50km/h (proposed 30km/h)</li> <li>Cutter Place: 50km/h (proposed 30km/h)</li> <li>Steamer Place: 50km/h (proposed 30km/h)</li> <li>Pitoitoi Avenue: 50km/h (proposed 30km/h)</li> <li>Moko Lane: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Admirals Court Drive has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Admirals Court Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Advene Road (Cockle Bay)**

The speed limit on Advene Road, Cockle Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Advene Road connects to Alexander Street to the west and John Gill Road to the east. This road provides access to residential properties and is approximately 0.58 km in length.</p> <p>Advene Road is classified as a secondary collector road under the one network road classification (ONRC). Advene Road is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2288 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Advene Road has a mean operating speed in the range of 30-34 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Alexander Street: 50 km/h (proposed 30 km/h)</li> <li>• Judkins Crescent: 50 km/h (proposed 30 km/h)</li> <li>• Redcoat Place: 50 km/h (proposed 30 km/h)</li> <li>• John Gill Road: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Advene Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**
- The Infrastructure Risk Rating Score is 2.58 For urban areas this corresponds to an IRR band of **Medium High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Advene Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Agapanthus Place (Flat Bush)

The speed limit on Agapanthus Place, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Agapanthus Place connects to Kestev Drive to the north and Erica Road to the west. This road provides access to residential properties and is approximately 0.18km in length.</p> <p>Agapanthus Place is classified as an Access road under the one network road classification (ONRC). Agapanthus Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Agapanthus Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 124 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Agapanthus Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kestev Drive: 50km/h (proposed 30km/h)</li> <li>Erica Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Agapanthus Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.20. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Agapanthus Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ainwick Road (Flat Bush)

The speed limit on Ainwick Road, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ainwick Road connects to Bronwylian Drive to the north and Cyril French Drive to the south. This road provides access to residential properties and is approximately 0.20km in length.</p> <p>Ainwick Road is classified as an Access road under the one network road classification (ONRC). Ainwick Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ainwick Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 747 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ainwick Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Bronwylan Drive: 50km/h (proposed 30km/h)</li> <li>• Cyril French Drive: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Ainwick Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ainwick Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Akiraho Street (Mount Eden)

The speed limit on Akiraho Street, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Akiraho Street connects to Mount Eden Road to the east. This road provides access to residential properties and is approximately 0.24km in length.</p> <p>Akiraho Street is classified as a Secondary Collector road under the one network road classification (ONRC). Akiraho Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Akiraho Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1352 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Akiraho Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Mount Eden Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Akiraho Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.70. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Akiraho Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Alamein Avenue (Belmont)

The speed limit on Alamein Avenue, Belmont has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Alamein Avenue connects to Lake Road to the west and Montgomery Avenue to the south. This road provides access to residential properties and is approximately 0.40km in length.</p> <p>Alamein Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Alamein Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Alamein Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 696 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Alamein Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Lake Road: 50km/h (no proposed change)</li> <li>Montgomery Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Alamein Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Alamein Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Alan Ave (Henderson)

The speed limit on Alan Ave, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Alan Ave connects to Larnoch Road to the north. This road provides access to residential properties and is approximately 0.16km in length.</p> <p>Alan Ave is classified as an Access road under the one network road classification (ONRC). Alan Ave is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Alan Ave were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 211 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Alan Ave has a mean operating speed in the range of <30km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Larnoch Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Alan Ave has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Alan Ave, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Albert Road (Kelston)

The speed limit on Albert Road, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Albert Road connects to Archibald Road to the east. This road provides access to residential properties and is approximately 0.21km in length.</p> <p>Albert Road is classified as an Access road under the one network road classification (ONRC). Albert Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Albert Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 280 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Albert Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Archibald Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Albert Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Albert Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Albert Street (Leigh)

The speed limit on Albert Street, Leigh has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Albert Street connects to Seatoun Avenue to the east. This road provides access to residential properties and is approximately 0.26km in length.</p> <p>Albert Street is classified as an Access road under the one network road classification (ONRC). Albert Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Albert Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as rural towns using MegaMaps tool. The IRR defines rural towns as " <i>rural town with mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 120 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Albert Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Seatoun Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Albert Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.81. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Albert Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Albert Street (Otahuhu)

The speed limit on Albert Street, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Albert Street connects to Princes Street to the north and Avenue Road to the south. This road provides access to residential properties and is approximately 0.55km in length.</p> <p>Albert Street is classified as a Secondary Collector road under the one network road classification (ONRC). Albert Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records nine crashes between 2016 and 2020: one minor crash, eight non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Albert Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2705 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Albert Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Princes Street: 50km/h (no proposed change)</li> <li>Avenue Road between Atkinson Avenue and the eastern end of Atkinson Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Albert Street has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 1.94. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Albert Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Alberta Street (Point Chevalier)

The speed limit on Alberta Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Alberta Street connects to Point Chevalier to the east. This road provides access to residential properties and is approximately 0.43km in length.  Alberta Street is classified as an Access road under the one network road classification (ONRC). Alberta Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Alberta Street were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 2 to &lt;3 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 350 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Alberta Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Point Chevalier Road: 50 km/h (no proposed change)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Alberta Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.58. For urban areas this corresponds to an IRR band of **Low**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Alberta Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Albion Road (Otahuhu)

The speed limit on Albion Road, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Albion Road connects to Great South Road to the west and Atkinson Avenue to the east. This road provides access to residential properties and is approximately 0.3km in length.</p> <p>Albion Road is classified as a Primary collector road under the one network road classification (ONRC). Albion Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Albion Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as commercial big box/industrial using MegaMaps tool. The IRR defines Urban Residential as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be"

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4440 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Albion Road has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Great South Road: 50km/h (no proposed change)</li> <li>Atkinson Avenue: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Albion Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.96. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Albion Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Alderley Road (Mount Eden)

The speed limit on Alderley Road, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Alderley Road connects to View Road to the north and Bellevue Road to the south. This road provides access to residential properties and is approximately 0.19km in length.</p> <p>Alderley Road is classified as a Access road under the one network road classification (ONRC). Alderley Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Alderley Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 10+ per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 416 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Alderley Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>View Road: 50km/h (proposed 30km/h)</li> <li>Bellevue Road: 50km/h (proposed 30km/h)</li> <li>Lisnoe Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Alderley Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Alderley Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Alexander Street (Otahuhu)

The speed limit on Alexander Street, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Alexander Street connects to Tamaki Avenue to the east and Great South Road to the west. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Alexander Street is classified as an Access road under the one network road classification (ONRC). Alexander Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Alexander Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 572 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Alexander Street has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Tamaki Avenue: 50km/h (proposed 30km/h)</li> <li>• Great southRoad: 50km/h (no proposed change)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Alexander Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Alexander Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Alexander Street (Cockle Bay)

The speed limit on Alexander Street, Cockle Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Alexander Street connects to Churchill Road to the north and Trelawn Place to the south. This road provides access to residential properties and is approximately 0.74 km in length.</p> <p>Alexander Street is classified as a secondary collector road under the one network road classification (ONRC). Alexander Street is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: one minor and three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 401 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Alexander Street has a mean operating speed in the range of &lt;30 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Churchill Road: 50 km/h</li> <li>Avoca Road: 50 km/h (proposed 30 km/h)</li> <li>Advane Road: 50 km/h (proposed 30 km/h)</li> <li>Trelawn Place: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Alexander Street has the following information:

- o Collective Risk band of **Low Medium**, and a Personal Risk band of **Medium**
- o The Infrastructure Risk Rating Score is 1.91 For urban areas this corresponds to an IRR band of **Low Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Alexander Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Allegro Way (Oteha)

The speed limit on Allegro Way, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

#### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Allegro Way connects to Lagonda Rise to the west. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Allegro Way is classified as an Access road under the one network road classification (ONRC). Allegro Way is a two-way, Two lane undivided road. There are no pedestrian amenities, on-street parking and cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Allegro Way were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 2 to &lt;3 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 25 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Allegro Way has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Lagonda Rise: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Allegro Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Allegro Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Alston Avenue (Kelston)

The speed limit on Alston Avenue, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Alston Avenue connects to Kelwyn Road to the west. This road provides access to residential properties and is approximately 1.10km in length.</p> <p>Alston Avenue is classified as an Access road under the one network road classification (ONRC). Alston Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Alston Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 358 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Alston Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kelwyn Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Alston Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Alston Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ambury Road (Mangere Bridge)

The speed limit on Ambury Road, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ambury Road connects to Muir Avenue to the north and Kiwi Esplanade to the west. This road provides access to residential properties and is approximately 0.33km in length.</p> <p>Ambury Road is classified as an Access road under the one network road classification (ONRC). Ambury Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ambury Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1136 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ambury Road has a mean operating speed in the range of 30-34km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Muir Avenue: 50km/h (proposed 30km/h)</li> <li>• Kiwi Esplanade: 50km/h (proposed 30km/h)</li> <li>• Warden Place: 50km/h (proposed 30km/h)</li> <li>• Ashcroft Avenue: 50km/h (proposed 30km/h)</li> <li>• Waterlea Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ambury Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.30. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ambury Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Amon Avenue (Flat Bush)

The speed limit on Amon Avenue, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Amon Avenue connects to Coachman Drive to the east and Middlefield Drive to the west. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Amon Avenue is classified as an Access road under the one network road classification (ONRC). Amon Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Amon Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 572 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Amon Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Coachman Drive: 50km/h (proposed 30km/h)</li> <li>Middlefield Drive: 50km/h (proposed 30km/h)</li> <li>Stonebrook Lane: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Amon Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Amon Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Anarahi Place (Mangere Bridge)

The speed limit on Anarahi Place, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Anarahi Place connects to Waterlea Avenue to the north. This road provides access to residential properties and is approximately 0.89km in length.</p> <p>Anarahi Place is classified as an Access road under the one network road classification (ONRC). Anarahi Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Anarahi Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 561 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Anarahi Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Waterlea Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Anarahi Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Anarahi Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Andersons Road (Oteha)

The speed limit on Andersons Road, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Andersons Road connects to John Jennings Drive to the west. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Andersons Road is classified as an Access Road under the one network road classification (ONRC). Andersons Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Andersons Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 270 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Andersons Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>John Jennings Drive: 50km/h (proposed 30km/h)</li> <li>Ravine Lane: 50km/h (proposed 30km/h)</li> <li>Canyon Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Andersons Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Andersons Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Andes Avenue (Mangere Bridge)

The speed limit on Andes Avenue, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Andes Avenue connects to Kiwi Esplanade to the north and Muir Avenue to the east. This road provides access to residential properties and is approximately 0.34km in length.</p> <p>Andes Avenue is classified as an Access road under the one network road classification (ONRC). Andes Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Andes Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 292 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Andes Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kiwi Esplanade: 50km/h (proposed 30km/h)</li> <li>• Muir Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Andes Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Andes Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Angus Street (Otaru)

The speed limit on Angus Street, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Angus Street connects to Tyrone street to the east. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Angus Street is classified as an Access road under the one network road classification (ONRC). Angus Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Angus Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5 to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 322 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Angus Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tyrone Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Angus Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Angus Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Annalise Place (Orewa)

The speed limit on Annalise Place, Orewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Annalise Place connects to Forest Glen to the south and Hibiscus Coast Highway to the east. This road provides access to residential properties and is approximately 0.29km in length.</p> <p>Annalise Place is classified as an Access road under the one network road classification (ONRC). Annalise Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Annalise Place were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 40 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Annalise Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Forest Glen: 50km/h (proposed 30km/h)</li> <li>• Hibiscus Coast Highway: 50km/h (no proposed change)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Annalise Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Annalise Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ansty Place (Mangere)

The speed limit on Ansty Place, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ansty Place connects to Windrush Road to the east. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Ansty Place is classified as an Access road under the one network road classification (ONRC). Ansty Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ansty Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 670 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ansty Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Windrush Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ansty Place has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **High**.
- o The Infrastructure Risk Rating Score is 2.00. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ansty Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Antrim Crescent (Otarā)

The speed limit on Antrim Crescent, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Antrim Crescent connects to Tyrone Street to the south. This road provides access to residential properties and is approximately 0.48km in length.</p> <p>Antrim Crescent is classified as an Access road under the one network road classification (ONRC). Antrim Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: four non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Antrim Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5 to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 322 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Antrim Crescent has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Tyrone Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Antrim Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Antrim Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Antych Place (Otaru)

The speed limit on Antych Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Antych Place connects to Waimate Street to the west. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Antych Place is classified as an Access road under the one network road classification (ONRC). Antych Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Antych Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 738 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Antych Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Waimate Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Antych Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Antych Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Apa Street (Weymouth)**

The speed limit on Apa Street, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Apa Street connects to Kuurae Crescent to the east and Ipukarea Street to the west. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Apa Street is classified as an Access road under the one network road classification (ONRC). Apa Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Apa Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Apa Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kuurae Crescent: 50km/h (proposed 30km/h)</li> <li>• Ipukarea Street: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Apa Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Apa Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Archibald Road (Kelston)

The speed limit on Archibald Road, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Archibald Road connects to Brains Road to the north and Great North Road to the south. This road provides access to residential properties and is approximately 0.84km in length.</p> <p>Archibald Road is classified as a Primary Collector road under the one network road classification (ONRC). Archibald Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records nine crashes between 2016 and 2020: two minor crashes, seven non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Archibald Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4045 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Archibald Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Brains Road: 50km/h (proposed 30km/h)</li> <li>Great North Road: 50km/h (no proposed change)</li> <li>St Leonards Road: 50km/h (proposed 30km/h)</li> <li>Beaubank Road: 50km/h (proposed 30km/h)</li> <li>Albert Road: 50km/h (proposed 30km/h)</li> <li>Netherlands Avenue: 50km/h (proposed 30km/h)</li> <li>Kelman Road: 50km/h (proposed 30km/h)</li> <li>Scanlen Terrace: 50km/h (proposed 30km/h)</li> <li>Archlynn Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Archibald Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low-Medium**.
- The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Archibald Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Archibald Road is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Archlynn Road (Kelston)**

The speed limit on Archlynn Road, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Archlynn Road connects to Kelwyn Road to the east and St Leonards Road to the west. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Archlynn Road is classified as a Primary Collector road under the one network road classification (ONRC). Archlynn Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor crash, one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Archlynn Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 6931 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Archlynn Road has a mean operating speed in the range of 30-34km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kelwyn Road: 50km/h (proposed 30km/h)</li> <li>• St Leonards Road: 50km/h (proposed 30km/h)</li> <li>• Archibald Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Archlynn Road has the following information:

- o Collective Risk band of **Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 2.78. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Archlynn Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Archlynn Road is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Aries Place (Shelly Park)

The speed limit on Aries Place, Shelly Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Aries Place connects to John Gill Road to the east. This road provides access to residential properties and is approximately 0.11 km in length.</p> <p>Aries Place is classified as an access road under the one network road classification (ONRC). Aries Place is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 120 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Aries Place has a mean operating speed in the range of &lt;30 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>John Gill Road: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Aries Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**
- The Infrastructure Risk Rating Score is 2.74 For urban areas this corresponds to an IRR band of **Medium High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Aries Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Armada Drive (Ranui)

The speed limit on Armada Drive, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Armada Drive connects to Luanda Drive to the north and Swanson Road to the south. This road provides access to residential properties and is approximately 0.52km in length.</p> <p>Armada Drive is classified as a Primary Collector road under the one network road classification (ONRC). Armada Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: one serious crash, one minor crash, one non-injury crash. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Armada Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2134 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Armada Drive has a mean operating speed in the range of 35-39km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Luanda Drive between waitemata Drive roundabout and Swanson Road: 50km/h (proposed 30km/h)</li> <li>• Swanson Road: 50km/h (no proposed change)</li> <li>• Edwin Freeman Place: 50km/h (proposed 30km/h)</li> <li>• Childers Road: 50km/h (proposed 30km/h)</li> <li>• Dunbarton Drive: 50km/h (proposed 30km/h)</li> <li>• Kilmarnock Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Armada Drive has the following information:

- o Collective Risk band of **Low Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 2.22. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Armada Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Armada Drive is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Armagh Road (Blockhouse Bay)

The speed limit on Armagh Road, Blockhouse Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Armagh Road connects to Kinross Street to the north and Gilfillan Street to the east. This road provides access to residential properties and is approximately 0.40km in length.</p> <p>Armagh Road is classified as an Access road under the one network road classification (ONRC). Armagh Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Armagh Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 802 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Armagh Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kinross Street: 50km/h (no proposed change)</li> <li>Gilfillan Street: 50km/h (proposed 30km/h)</li> <li>Endeavour Street: 50km/h (proposed 30km/h)</li> <li>Connaught Street: 50km/h (proposed 30km/h)</li> <li>Connell Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Armagh Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Armagh Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Arodella Crescent (Ranui)

The speed limit on Arodella Crescent, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Arodella Crescent connects to Luanda Drive to the south. This road provides access to residential properties and is approximately 0.55km in length.</p> <p>Arodella Crescent is classified as an Access road under the one network road classification (ONRC). Arodella Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Arodella Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 3 to &lt;5 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 345 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Arodella Crescent has a mean operating speed in the range of 30-34km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Luanda Drive between waitemata Drive roundabout and Swanson Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Arodella Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Arodella Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Aronui Terrace (Kelston)

The speed limit on Aronui Terrace, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Aronui Terrace connects to Tamariki Avenue to the south. This road provides access to residential properties and is approximately 0.47km in length.</p> <p>Aronui Terrace is classified as an Access road under the one network road classification (ONRC). Aronui Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one fatal crash. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Aronui Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 743 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Aronui Terrace has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tamariki Avenue : 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Aronui Terrace has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Aronui Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Aruhe Street (Stonefields)

The speed limit on Aruhe Street, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Aruhe Street connects to Stonefields Avenue to the north and Kauriki Terrace to the south. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Aruhe Street is classified as an Access road under the one network road classification (ONRC). Aruhe Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Aruhe Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Aruhe Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Stonefields Avenue: 50km/h (proposed 30km/h)</li> <li>• Kauriki Terrace: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Aruhe Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Aruhe Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ascot Avenue (Henderson)

The speed limit on Ascot Avenue, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ascot Avenue connects to Harrington Road to the south. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Ascot Avenue is classified as an Access road under the one network road classification (ONRC). Ascot Avenue is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: one minor crash, three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ascot Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 191 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ascot Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Harrington Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ascot Avenue has the following information:

- Collective Risk band of **Medium**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ascot Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ashby Place (Pukekohe)

The speed limit on Ashby Place, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ashby Place connects to Cooper Street to the east. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Ashby Place is classified as an Access road under the one network road classification (ONRC). Ashby Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ashby Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Wide shoulder (1.0m to &lt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 540 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ashby Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Cooper Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Ashby Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ashby Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ashcroft Avenue (Mangere Bridge)

The speed limit on Ashcroft Avenue, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ashcroft Avenue connects to Muir Avenue to the north and Ambury Road to the south. This road provides access to residential properties and is approximately 0.89km in length.</p> <p>Ashcroft Avenue is classified as an Access road under the one network road classification (ONRC). Ashcroft Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ashcroft Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 561 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ashcroft Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Muir Avenue: 50km/h (proposed 30km/h)</li> <li>Ambury Road: 50km/h (proposed 30km/h)</li> <li>Waterlea Avenue: 50km/h (proposed 30km/h)</li> <li>Feltwell Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ashcroft Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ashcroft Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ashgrove Road (Mangere)

The speed limit on Ashgrove Road, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ashgrove Road connects to Bader Road to the north. This road provides access to residential properties and is approximately 0.67km in length.</p> <p>Ashgrove Road is classified as a Primary Collector road under the one network road classification (ONRC). Ashgrove Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records seven crashes between 2016 and 2020: one minor crash, six non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ashgrove Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3065 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ashgrove Road has a mean operating speed in the range of 34-39km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Bader Road: 50km/h (no proposed change)</li> <li>• Friesian Drive: 50km/h (proposed 30km/h)</li> <li>• Ilford Crescent: 50km/h (proposed 30km/h)</li> <li>• Purley Place: 50km/h (proposed 30km/h)</li> <li>• Chingford Close: 50km/h (proposed 30km/h)</li> <li>• Rush Place: 50km/h (proposed 30km/h)</li> <li>• Humphreys Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ashgrove Road has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.58. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ashgrove Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Ashgrove Road is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ashton Road (Mount Eden)

The speed limit on Ashton Road, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ashton Road connects to Valley Road to the north and Grange Road to the south. This road provides access to residential properties and is approximately 0.29km in length.</p> <p>Ashton Road is classified as a Access road under the one network road classification (ONRC). Ashton Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ashton Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4571 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ashton Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Valley Road: 50km/h (proposed 30km/h)</li> <li>Grange Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ashton Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.94. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Ashton Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ashurst Lane (Greenhithe)

The speed limit on Ashurst Lane, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ashurst Lane connects to Greenbough Lane to the west and Greenbough Lane to the east. This road provides access to residential properties and is approximately 0.16km in length.</p> <p>Ashurst Lane is classified as a Secondary Collector road under the one network road classification (ONRC). Ashurst Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ashurst Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ashurst Lane has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Greenbough Lane: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ashurst Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ashurst Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Athelstan Place (Otarā)

The speed limit on Athelstan Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Athelstan Place connects to Wroughton Crescent to the north. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Athelstan Place is classified as an Access road under the one network road classification (ONRC). Athelstan Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Athelstan Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 234 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Athelstan Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Wroughton Crescent: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Athelstan Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Athelstan Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Aurea Avenue (Pakuranga)

The speed limit on Aurea Avenue, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Aurea Avenue connects to Mattson Road to the east. This road provides access to residential properties and is approximately 0.36 km in length.</p> <p>Aurea Avenue is classified as a secondary collector road under the one network road classification (ONRC). Aurea Avenue is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor and one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2069 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Aurea Avenue has a mean operating speed in the range of &lt;30 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Jan Place: 50 km/h (proposed 30 km/h)</li> <li>Mattson Road: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Aurea Avenue has the following information:

- o Collective Risk band of **Low Medium**, and a Personal Risk band of **Medium**
- o The Infrastructure Risk Rating Score is 2.21 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Aurea Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Avenham Walk (Mount Eden)**

The speed limit on Avenham Walk, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Avenham Walk connects to Valley Road to the north. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Avenham Walk is classified as a Access road under the one network road classification (ONRC). Avenham Walk is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Avenham Walk were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Avenham Walk has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Valley Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Avenham Walk has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Avenham Walk, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Avenue Road (Otahuhu)

The speed limit on Avenue Road, Otahuhu, between Atkinson Avenue and the eastern end of Avenue Road, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Avenue Road connects to Todd Place to the east and Atkinson Avenue to the west. This road provides access to residential properties and is approximately 0.32km in length.</p> <p>Avenue Road is classified as a Primary Collector road under the one network road classification (ONRC). Avenue Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records twenty one crashes between 2016 and 2020: two minor crashes, nineteen non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Avenue Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as " <i>characterised by numerous shops facing the streetfront with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will.</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 5060 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Avenue Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Todd Place: 50km/h (proposed 30km/h)</li> <li>• Atkinson Avenue: 50km/h (no proposed change)</li> <li>• Albert Street: 50km/h (proposed 30km/h)</li> <li>• Hutton Street between Princes Street and Fairburn Road: 50km/h (proposed 30km/h)</li> <li>• Church Street between Princes Street and Ngaio Street: 50km/h (proposed 30km/h)</li> <li>• Water Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Avenue Road has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.16. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 30km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 30km/h as the safe and appropriate speed for Avenue Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Avenue Road is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Avoca Road (Cockle Bay)

The speed limit on Avoca Road, Cockle Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Avoca Road connects to Litten Road to the west and Alexander Street to the east. This road provides access to residential properties and is approximately 0.12 km in length.</p> <p>Avoca Road is classified as a secondary collector road under the one network road classification (ONRC). Avoca Road is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1674 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Avoca Road has a mean operating speed in the range of &lt;30 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Litten Road: 50 km/h</li> <li>Alexander Street: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Avoca Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**
- The Infrastructure Risk Rating Score is 2.33 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Avoca Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Avon Lane (Parnell)

The speed limit on Avon Lane, Parnell has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Avon Lane connects to Tauraru Terrace to the east and Gladstone Road to the west. This road provides access to residential properties and is approximately 0.04km in length.</p> <p>Avon Lane is classified as an Access road under the one network road classification (ONRC). Avon Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Avon Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Avon Lane has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Taurarua Terrace: 50km/h (proposed 30km/h)</li> <li>• Gladstone Road: 50km/h (no proposed change)</li> <li>• Avon Street: 50km/h (no proposed change)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Avon Lane has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **High**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Avon Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Awatea Road (Parnell)

The speed limit on Awatea Road, Parnell has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Awatea Road connects to Papahia Street to the east and Saint Stephens Avenue to the west. This road provides access to residential properties and is approximately 0.35km in length.</p> <p>Awatea Road is classified as a Secondary Collector road under the one network road classification (ONRC). Awatea Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Awatea Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 247 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Awatea Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Papahia Street: 50km/h (proposed 30km/h)</li> <li>Saint Stephens Avenue between Gladstone Road and the northern end of Saint Stephens Avenue: 50km/h (proposed 30km/h)</li> <li>Glanville Terrace: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Awatea Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Awatea Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Awhenga Place (Weymouth)

The speed limit on Awhenga Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Awhenga Place connects to Becker Drive to the north. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Awhenga Place is classified as an Access road under the one network road classification (ONRC). Awhenga Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Awhenga Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Awhenga Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Becker Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Awhenga Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Awhenga Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ayrton Street (Te Atatu South)

The speed limit on Ayrton Street, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ayrton Street connects to Roberts Road to the north and Bedford Street to the south. This road provides access to residential properties and is approximately 0.20 km in length.</p> <p>Ayrton Street is classified as an access road under the one network road classification (ONRC). Ayrton Street is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 233 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ayrton Street has a mean operating speed in the range of &lt;30 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Roberts Road: 50 km/h (proposed 30 km/h)</li> <li>Bedford Street: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ayrton Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.15 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Ayrton Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Baber Drive (Stonefields)

The speed limit on Baber Drive, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Baber Drive connects to Emilia Nixon Lane to the south and Tihi Street to the north. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Baber Drive is classified as an Access road under the one network road classification (ONRC). Baber Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Baber Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Baber Drive has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Tihi Street: 50km/h (proposed 30km/h)</li> <li>• Emilia Nixon Lane: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Baber Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Baber Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bagley Street (Hillsborough)

The speed limit on Bagley Street, Hillsborough has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bagley Street connects to Hoskins Avenue to the east. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Bagley Street is classified as an access road under the one network road classification (ONRC). Bagley Street is a two-way, Two lane undivided. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Bagley Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Hoskins Avenue: 50km/h (proposed 30km/h)</li> <li>Filgate Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Bagley Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bagley Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Balnoon Place (Mangere East)

The speed limit on Balnoon Place, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Balnoon Place connects to Chalfont Street to the west. This road provides access to residential properties and is approximately 0.68km in length.</p> <p>Balnoon Place is classified as an Access road under the one network road classification (ONRC). Balnoon Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Balnoon Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 659 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Balnoon Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Chalfont Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Balnoon Place has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Balnoon Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Balwyn Place (Clendon Park)

The speed limit on Balwyn Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Balwyn Place connects to Burundi Avenue to the south. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Balwyn Place is classified as an Access road under the one network road classification (ONRC). Balwyn Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Balwyn Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Balwyn Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Burundi Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Balwyn Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Balwyn Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bamboo Grove (Kelston)

The speed limit on Bamboo Grove, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bamboo Grove connects to St Leonards Road to the north. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Bamboo Grove is classified as an Access road under the one network road classification (ONRC). Bamboo Grove is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bamboo Grove were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 189 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bamboo Grove has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• St Leonards Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Bamboo Grove has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bamboo Grove, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bambury Close (Point Chevalier)

The speed limit on Bambury Close, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bambury Close connects to Shaftesbury Avenue to the north. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Bambury Close is classified as an Access road under the one network road classification (ONRC). Bambury Close is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bambury Close were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 150 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Bambury Close has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Shaftesbury Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Bambury Close has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bambury Close, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Banbury Place (Mangere Bridge)

The speed limit on Banbury Place, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Banbury Place connects to Kiwi Esplanade to the north. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Banbury Place is classified as an Access road under the one network road classification (ONRC). Banbury Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Banbury Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 90 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Banbury Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kiwi Esplanade: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Banbury Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Banbury Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bangor Street (Point Chevalier)

The speed limit on Bangor Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bangor Street connects to Johnstone Street to the south. This road provides access to residential properties and is approximately 0.16km in length.</p> <p>Bangor Street is classified as an Access road under the one network road classification (ONRC). Bangor Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bangor Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 312 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Bangor Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Boscawen Street: 50 km/h (proposed 30 km/h)</li> <li>Johnstone Street: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Bangor Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bangor Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Barbarich Drive (Stonefields)

The speed limit on Barbarich Drive, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Barbarich Drive connects to Tephra Boulevard to the south and Searle Street to the east. This road provides access to residential properties and is approximately 0.97km in length.</p> <p>Barbarich Drive is classified as an Access road under the one network road classification (ONRC). Barbarich Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Barbarich Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 172 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Barbarich Drive has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Tephra Boulevard: 50km/h (proposed 30km/h)</li> <li>• Emilia Nixon Lane: 50km/h (proposed 30km/h)</li> <li>• Robert Sale Rise: 50km/h (proposed 30km/h)</li> <li>• Burden Lane: 50km/h (proposed 30km/h)</li> <li>• Tihi Street: 50km/h (proposed 30km/h)</li> <li>• Styak Street: 50km/h (proposed 30km/h)</li> <li>• Singleton Avenue: 50km/h (proposed 30km/h)</li> <li>• Searle Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Barbarich Drive has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Barbarich Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Barbary Avenue (Kelston)

The speed limit on Barbary Avenue, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Barbary Avenue connects to St Leonards Road to the north and Kelman Road to the south. This road provides access to residential properties and is approximately 0.36km in length.</p> <p>Barbary Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Barbary Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Barbary Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 674 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Barbary Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>St Leonards Road: 50km/h (proposed 30km/h)</li> <li>Kelman Road: 50km/h (proposed 30km/h)</li> <li>Kiernan Place: 50km/h (proposed 30km/h)</li> <li>Daphne Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Barbary Avenue has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Barbary Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Barcroft Place (Clendon Park)

The speed limit on Barcroft Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Barcroft Place connects to Bill Phillip Place to the south. This road provides access to residential properties and is approximately 0.81km in length.</p> <p>Barcroft Place is classified as an Access road under the one network road classification (ONRC). Barcroft Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Barcroft Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 3 to &lt;5 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1127 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Barcroft Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Bill Phillip Place: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Barcroft Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.31. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Barcroft Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Barnard Place (Manurewa East)

The speed limit on Barnard Place, Manurewa East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Barnard Place connects to Ferguson Street to the west. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Barnard Place is classified as an Access road under the one network road classification (ONRC). Barnard Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Barnard Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 90 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Barnard Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ferguson Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Barnard Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Barnard Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Barneys Farm Road (Clendon Park)

The speed limit on Barneys Farm Road, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Barneys Farm Road connects to Maplesden Drive to the north and Palmers Road to the south. This road provides access to residential properties and is approximately 0.48km in length.</p> <p>Barneys Farm Road is classified as a Secondary Collector road under the one network road classification (ONRC). Barneys Farm Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Barneys Farm Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1528 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Barneys Farm Road has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Maplesden Drive: 50km/h (proposed 30km/h)</li> <li>• Palmers Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Barneys Farm Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.81. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Barneys Farm Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Barr Place (Weymouth)

The speed limit on Barr Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Barr Place connects to Settlers Cove to the south. This road provides access to residential properties and is approximately 0.04km in length.</p> <p>Barr Place is classified as an Access road under the one network road classification (ONRC). Barr Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Barr Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1092 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Barr Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Settlers Cove: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Barr Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.60. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Barr Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Barrier View Road (Leigh)

The speed limit on Barrier View Road, Leigh has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Barrier View Road connects to Cotterell Street to the north and Wonderview Road to the west. This road provides access to residential properties and is approximately 0.55km in length.</p> <p>Barrier View Road is classified as an Access road under the one network road classification (ONRC). Barrier View Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Barrier View Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as rural towns using MegaMaps tool. The IRR defines rural towns as " <i>rural town with mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 332 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Barrier View Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Cotterell Street: 50km/h (proposed 30km/h)</li> <li>• Wonderview Road: 50km/h (proposed 30km/h)</li> <li>• Kyle Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Barrier View Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Barrier View Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Barton Street East (Blockhouse Bay)

The speed limit on Barton Street East, Blockhouse Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Barton Street East connects to Endeavour Street to the east. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Barton Street East is classified as an Access road under the one network road classification (ONRC). Barton Street East is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Barton Street East were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 75 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Barton Street East has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Endeavour Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Barton Street East has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.20. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Barton Street East, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Barton Street (Blockhouse Bay)

The speed limit on Barton Street, Blockhouse Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Barton Street connects to Connell Street to the west and Mitchell Street to the east. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Barton Street is classified as an Access road under the one network road classification (ONRC). Barton Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Barton Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Barton Street has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Connell Street: 50km/h (proposed 30km/h)</li> <li>• Mitchell Street: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Barton Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Barton Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bass Road (Albany)

The speed limit on Bass Road, Albany has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bass Road connects to Albany Highway to the north and Sample Road to the south. This road provides access to residential properties and is approximately 0.59km in length.</p> <p>Bass Road is classified as a Secondary Collector road under the one network road classification (ONRC). Bass Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bass Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3533 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Bass Road has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Albany Highway: 50km/h (no proposed change)</li> <li>Sample Road: 50km/h (proposed 30km/h)</li> <li>Kinleith Way: 50km/h (proposed 30km/h)</li> <li>Vinewood Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Bass Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bass Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Baverstock Road (Flat Bush)

The speed limit on Baverstock Road, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

#### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Baverstock Road connects to Chapel Road to the west and Stancombe Road to the south. This road provides access to residential properties and is approximately 1.17km in length.</p> <p>Baverstock Road is classified as a Secondary Collector road under the one network road classification (ONRC). Baverstock Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records fourteen crashes between 2016 and 2020: three minor crashes, eleven non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Baverstock Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3643 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Baverstock Road has a mean operating speed in the range of 30-34km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Chapel Road: 60km/h (no proposed change)</li> <li>• Stancombe Road: 60km/h (no proposed change)</li> <li>• Bronwylian Drive: 50km/h (proposed 30km/h)</li> <li>• Stornaway Drive: 50km/h (proposed 30km/h)</li> <li>• Erica Road: 50km/h (proposed 30km/h)</li> <li>• Middlefield Drive: 50km/h (proposed 30km/h)</li> <li>• Maypark Crescent: 50km/h (proposed 30km/h)</li> <li>• Kensway Drive: 50km/h (proposed 30km/h)</li> <li>• Monique Place: 50km/h (proposed 30km/h)</li> <li>• Oakville Avenue: 50km/h (proposed 30km/h)</li> <li>• Danielle Place: 50km/h (proposed 30km/h)</li> <li>• Woodberry Drive: 50km/h (proposed 30km/h)</li> <li>• Shelby Lane: 50km/h (proposed 30km/h)</li> <li>• Citron Court: 50km/h (proposed 30km/h)</li> <li>• Coachman Drive: 50km/h (proposed 30km/h)</li> <li>• Silverwood Drive: 50km/h (proposed 30km/h)</li> <li>• Villarosa Lane: 50km/h (proposed 30km/h)</li> <li>• Plantation Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Baverstock Road has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Baverstock Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Beach Road (Weymouth)

The speed limit on Beach Road, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Beach Road connects to McLeod Road to the north and McInnes Road to the south. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Beach Road is classified as an Access road under the one network road classification (ONRC). Beach Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Beach Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 478 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Beach Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>McLeod Road: 50km/h (proposed 30km/h)</li> <li>McInnes Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Beach Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Beach Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Beaubank Road (Kelston)

The speed limit on Beaubank Road, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Beaubank Road connects to Archibald Road to the west and Kelwyn Road to the south. This road provides access to residential properties and is approximately 1.10km in length.</p> <p>Beaubank Road is classified as an Access road under the one network road classification (ONRC). Beaubank Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Beaubank Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 358 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Beaubank Road has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Archibald Road: 50km/h (proposed 30km/h)</li> <li>• Kelwyn Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Beaubank Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Beaubank Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Becker Drive (Weymouth)

The speed limit on Becker Drive, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Becker Drive connects to Awhenga Place to the east and Weymouth Road to the west. This road provides access to residential properties and is approximately 0.58km in length.</p> <p>Becker Drive is classified as an Access road under the one network road classification (ONRC). Becker Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Becker Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Becker Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Awhenga Place: 50km/h (proposed 30km/h)</li> <li>Weymouth Road: 50km/h (proposed 30km/h)</li> <li>Hinton Place: 50km/h (proposed 30km/h)</li> <li>Joshua Place: 50km/h (proposed 30km/h)</li> <li>Kohi Kai Place: 50km/h (proposed 30km/h)</li> <li>Kaimoana Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Becker Drive has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Becker Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Bedford Street (Te Atatu South)**

The speed limit on Bedford Street, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bedford Street connects to Ayrton Street to the north. This road provides access to residential properties and is approximately 0.18 km in length.</p> <p>Bedford Street is classified as an access road under the one network road classification (ONRC). Bedford Street is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 233 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bedford Street has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Ayrton Street: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Bedford Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.15 For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Bedford Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bedlow Place (Mangere East)

The speed limit on Bedlow Place, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bedlow Place connects to Chalfont Street to the south. This road provides access to residential properties and is approximately 0.68km in length.</p> <p>Bedlow Place is classified as an Access road under the one network road classification (ONRC). Bedlow Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bedlow Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 659 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Bedlow Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Chalfont Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Bedlow Place has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bedlow Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Beihlers Road (Weymouth)

The speed limit on Beihlers Road, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Beihlers Road connects to Weymouth Road to the west. This road provides access to residential properties and is approximately 0.21km in length.</p> <p>Beihlers Road is classified as an Access road under the one network road classification (ONRC). Beihlers Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor crash, one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Beihlers Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 738 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Beihlers Road has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Weymouth Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Beihlers Road has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Beihlers Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Belfast Street (Hillsborough)

The speed limit on Belfast Street, Hillsborough has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Belfast Street connects to Frederick Street to the south. This road provides access to residential properties and is approximately 0.67km in length.</p> <p>Belfast Street is classified as a Secondary Collector road under the one network road classification (ONRC). Belfast Street is a two-way, Two lane undivided. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: one minor and five non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2080 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Belfast Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Frederick Street: 50km/h (proposed 30km/h)</li> <li>Farnol Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Belfast Street has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Belfast Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bellevue Road (Mount Eden)

The speed limit on Bellevue Road, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bellevue Road connects to Dominion Road to the west and Mount Eden Road to the east. This road provides access to residential properties and is approximately 0.92km in length.</p> <p>Bellevue Road is classified as a Secondary Collector road under the one network road classification (ONRC). Bellevue Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records seven crashes between 2016 and 2020: three minor and four non-injury crashes. This resulted in one Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bellevue Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2080 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bellevue Road has a mean operating speed in the range of 30-34km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Dominion Road: 50km/h (no proposed change)</li> <li>• Carrick Place: 50km/h (proposed 30km/h)</li> <li>• Alderley Road: 50km/h (proposed 30km/h)</li> <li>• Leamington Road: 50km/h (proposed 30km/h)</li> <li>• Horoeke Avenue: 50km/h (proposed 30km/h)</li> <li>• Sherbourne Road: 50km/h (proposed 30km/h)</li> <li>• Esplanade Road: 50km/h (proposed 30km/h)</li> <li>• Mount Eden Road: 50km/h (no proposed change)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Bellevue Road has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.22. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bellevue Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bellville Drive (Clendon Park)

The speed limit on Bellville Drive, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bellville Drive connects to Finlayson Avenue to the east and Eloise Place to the west. This road provides access to residential properties and is approximately 0.81km in length.</p> <p>Bellville Drive is classified as an Access road under the one network road classification (ONRC). Bellville Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bellville Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1127 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bellville Drive has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Finlayson Avenue: 50km/h (proposed 30km/h)</li> <li>• Eloise Place: 50km/h (proposed 30km/h)</li> <li>• Bill Phillip Place: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Bellville Drive has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.31. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bellville Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Belmont Road (Pukekohe)

The speed limit on Belmont Road, Pukekohe, between Jutland Road and 140 metres southwest of Adams Road South, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Belmont Road connects to Russell Road to the west and Jutland Road to the east. This road provides access to residential properties and is approximately 0.69km in length.</p> <p>Belmont Road is classified as a Secondary Collector road under the one network road classification (ONRC). Belmont Road is a two-way, Unsealed road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Belmont Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> High and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 23 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Belmont Road has a mean operating speed in the range of 40-44km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Russell Road: 60km/h (no proposed change)</li> <li>Jutland Road: 50km/h (proposed 30km/h)</li> <li>Matikao Place: 50km/h (proposed 30km/h)</li> <li>Te Manaki Street: 50km/h (proposed 30km/h)</li> <li>Adams Road South: 50km/h (proposed 30km/h)</li> <li>Factory Road: 50km/h (proposed 30km/h)</li> <li>Taepu Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Belmont Road has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.43. For urban areas this corresponds to an IRR band of **High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 60km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 60km/h as the safe and appropriate speed for Belmont Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bernard Street (Mt Wellington)

The speed limit on Bernard Street, Mt Wellington has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bernard Street connects to Jolson Road to the north and Panama Road to the south. This road provides access to residential properties and is approximately 0.54km in length.</p> <p>Bernard Street is classified as a Secondary Collector road under the one network road classification (ONRC). Bernard Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: six non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bernard Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1560 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bernard Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Jolson Road: 50km/h (proposed 30km/h)</li> <li>• Panama Road: 50km/h (proposed 30km/h)</li> <li>• Kealy Road: 50km/h (proposed 30km/h)</li> <li>• Paringa Lane: 50km/h (proposed 30km/h)</li> <li>• Rerehua Lane: 50km/h (proposed 30km/h)</li> <li>• Peace Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Bernard Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.84. For urban areas this corresponds to an IRR band of **High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bernard Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Berrett Place (Otaru)

The speed limit on Berrett Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Berrett Place connects to Hills Road to the west. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Berrett Place is classified as an Access road under the one network road classification (ONRC). Berrett Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Berrett Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 80 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Berrett Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Hills Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Berrett Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Berrett Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Berridge Avenue (Point Chevalier)

The speed limit on Berridge Avenue, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Berridge Avenue connects to Smale Street to the north. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Berridge Avenue is classified as an Access road under the one network road classification (ONRC). Berridge Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Berridge Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 78 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Berridge Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Smale Street: 50 km/h (proposed 30 km/h)</li> <li>Miller Street: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Berridge Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.18. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Berridge Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bezar Place (Flat Bush)

The speed limit on Bezar Place, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bezar Place connects to Janway Avenue to the west. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Bezar Place is classified as an Access road under the one network road classification (ONRC). Bezar Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bezar Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Bezar Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Janway Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Bezar Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bezar Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bill Phillip Place (Clendon Park)

The speed limit on Bill Phillip Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bill Phillip Place connects to Barcroft Place to the north and Bellville Drive to the east. This road provides access to residential properties and is approximately 0.81km in length.</p> <p>Bill Phillip Place is classified as an Access road under the one network road classification (ONRC). Bill Phillip Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bill Phillip Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1127 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bill Phillip Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Barcroft Place: 50km/h (proposed 30km/h)</li> <li>• Bellville Drive: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Bill Phillip Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.31. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bill Phillip Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Birch Place (Otara)

The speed limit on Birch Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Birch Place connects to Kudu Road to the north. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Birch Place is classified as an Access road under the one network road classification (ONRC). Birch Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Birch Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 925 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Birch Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kudu Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Birch Place has the following information:

- Collective Risk band of **Medium**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Birch Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Blackgate Place (Weymouth)

The speed limit on Blackgate Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Blackgate Place connects to Taitimu Drive to the east. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Blackgate Place is classified as an Access road under the one network road classification (ONRC). Blackgate Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Blackgate Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 958 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Blackgate Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Taitimu Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Blackgate Place has the following information:

- o Collective Risk band of **Medium-High**, and a Personal Risk band of **High**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Blackgate Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Blake Road (Mangere East)

The speed limit on Blake Road, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Blake Road connects to Tennessee Avenue to the south and Vine Street to the south. This road provides access to residential properties and is approximately 0.88km in length.</p> <p>Blake Road is classified as an Access road under the one network road classification (ONRC). Blake Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records seven crashes between 2016 and 2020: two minor crashes, five non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Blake Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1075 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Blake Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tennessee Avenue: 50km/h (proposed 30km/h)</li> <li>Vine Street: 50km/h (proposed 30km/h)</li> <li>Sutton Avenue: 50km/h (proposed 30km/h)</li> <li>Macky Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Blake Road has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Blake Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Blampied Road (Otara)

The speed limit on Blampied Road, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

#### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Blampied Road connects to Hamill Road to the west and Dairy Road to the south. This road provides access to residential properties and is approximately 0.59km in length.</p> <p>Blampied Road is classified as an Access road under the one network road classification (ONRC). Blampied Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Blampied Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 655 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Blampied Road has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Dairy Road: 50km/h (proposed 30km/h)</li> <li>• Leonard Place: 50km/h (proposed 30km/h)</li> <li>• Stainton Place: 50km/h (proposed 30km/h)</li> <li>• Hamill Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Blampied Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Blampied Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Blanes Road (Weymouth)

The speed limit on Blanes Road, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Blanes Road connects to Lucas Place to the east and Gibbons Road to the west. This road provides access to residential properties and is approximately 0.22km in length.</p> <p>Blanes Road is classified as a Secondary Collector road under the one network road classification (ONRC). Blanes Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: two minor crashes, one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Blanes Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1164 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Blanes Road has a mean operating speed in the range of 35-39km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Lucas Place: 50km/h (proposed 30km/h)</li> <li>Gibbons Road: 50km/h (proposed 30km/h)</li> <li>Weymouth Road: 50km/h (proposed 30km/h)</li> <li>Evans Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Blanes Road has the following information:

- o Collective Risk band of **Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 2.30. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Blanes Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Blockhouse Bay Road (Blockhouse Bay)

The speed limit on Blockhouse Bay Road, Blockhouse Bay, between Donovan Street and the southern end of Blockhouse Bay Road, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

#### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Blockhouse Bay Road connects to Kinross Street to the north. This road provides access to residential properties and is approximately 0.68km in length.  Blockhouse Bay Road is classified as an Arterial road under the one network road classification (ONRC). Blockhouse Bay Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records five crashes between 2016 and 2020: one minor crash, four non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Blockhouse Bay Road were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 13495 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Blockhouse Bay Road has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kinross Street: 50km/h (no proposed change)</li> <li>• Donovan Street: 50km/h (no proposed change)</li> <li>• Gilfillan Street: 50km/h (proposed 30km/h)</li> <li>• Gill Crescent: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Blockhouse Bay Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low-Medium**.
- o The Infrastructure Risk Rating Score is 2.63. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40/50km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40/50km/h as the safe and appropriate speed for Blockhouse Bay Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Blockhouse Bay Road is an Arterial Road, that is not the intended function of this section of Blockhouse Bay Road.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bluegrey Avenue (Stonefields)

The speed limit on Bluegrey Avenue, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bluegrey Avenue connects to Tephra Boulevard to the south and College Road to the north. This road provides access to residential properties and is approximately 0.57km in length.</p> <p>Bluegrey Avenue is classified as a Primary collector road under the one network road classification (ONRC). Bluegrey Avenue is a two-way, Divided - traverseable road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bluegrey Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Divided - traverseable</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Wide shoulder (1.0m to &lt;2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2996 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bluegrey Avenue has a mean operating speed in the range of 30-34km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• College Road: 50km/h (no proposed change)</li> <li>• Tephra Boulevard: 50km/h (proposed 30km/h)</li> <li>• Tihi Street: 50km/h (proposed 30km/h)</li> <li>• Stonemason Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Bluegrey Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low-Medium**.
- o The Infrastructure Risk Rating Score is 1.72. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Bluegrey Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bluff Terrace (Hillsborough)

The speed limit on Bluff Terrace, Hillsborough has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bluff Terrace connects to Frederick Street to the west. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Bluff Terrace is classified as an access road under the one network road classification (ONRC). Bluff Terrace is a two-way, Two lane undivided. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Bluff Terrace has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Frederick Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Bluff Terrace has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bluff Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Bodi Place (Te Atatu South)**

The speed limit on Bodi Place, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bodi Place connects to McLeod Road to the south. This road provides access to residential properties and is approximately 0.29 km in length.</p> <p>Bodi Place is classified as a secondary collector road under the one network road classification (ONRC). Bodi Place is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 592 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bodi Place has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>McLeod Road: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Bodi Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.08 For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Bodi Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bodmin Place (Mangere East)

The speed limit on Bodmin Place, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bodmin Place connects to Chalfont Street to the west. This road provides access to residential properties and is approximately 0.68km in length.</p> <p>Bodmin Place is classified as an Access road under the one network road classification (ONRC). Bodmin Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bodmin Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 659 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Bodmin Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Chalfont Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Bodmin Place has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h
