Frank Street is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Frank Street was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Frank Street due to a multitude of factors. These being the narrow and winding nature of the road, the high roadside hazards, its Secondary Collector function and its existing mean operating speed (22.75km/h). These features also contribute to the road’s “Medium-High” IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA’s CAS database shows 3 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 3 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Frank Street in Oneroa/Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Frank Street, the actual operating speeds from the MegaMaps tool are 22.75 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Garratt Road (Waiheke Island)**

The speed limit on Garratt Road, Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Garratt Road connects to Waiheke Road to the south. This road provides access to residential areas. Garratt Road is approximately 0.29 km in length.</p> <p>Garratt Road is classified as an Access road under the one network road classification (ONRC). Garratt Road is a two-lane undivided road. There are no pedestrian footpaths and on-street parking along this road. There are no cycle lanes.</p>
(d) crash risk for all road users; and	<p>WK NZTA’s Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Garratt Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as “Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day.”
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 124 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (80vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Garratt Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Garratt Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Waiheke Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	290
Annual Daily Traffic (vpd)	124

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume	124	1

The Infrastructure Risk Rating Score is 2.00. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Garratt Road.*

Garratt Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Garratt Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Garratt Road due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Garratt Road in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Garratt Road, the actual operating speeds from the MegaMaps tool are 20 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

### Speed Limit Review – George Street (Oneroa/Surfdale)

The speed limit on George Street, Oneroa/Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

#### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>George Street connects to Beresford Avenue / Beatty Parade to the west and Pacific Parade to the east. This road provides access to residential areas George Street is approximately 0.25 km in length.</p> <p>George Street is classified as an Secondary Collector road under the one network road classification (ONRC). George Street is a two-lane undivided road. There are no pedestrian footpaths and no formal on-street parking along this road. However, it was observed that some vehicles were parallel parked (including on the berm). There are no cycle lanes.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for George Street were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."

Requirement	Comments
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on George Street is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of George Street has a mean operating speed in the range of 39 km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Beresford Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Beatty Parade:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Pacific Parade:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	250
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Winding	3.5
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	520	1

The Infrastructure Risk Rating Score is 2.53. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of George Street.

A proposed speed limit of 30km/h was selected for George Street, due to a multitude of factors. These being the narrow and winding nature of the road, the moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (39km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on George Street in Oneroa/Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for George Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

### Speed Limit Review – Giles Road (Ostend)

The speed limit on Giles Road, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

#### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Giles Road connects to Bay Road to the west. This road provides access to residential areas. Giles Road is approximately 0.31 km in length.</p> <p>Giles Road is classified as an Secondary Collector road under the one network road classification (ONRC). Giles Road is a two-lane undivided road. There are no pedestrian footpaths and on-street parking along this road. There are no cycle lanes.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Giles Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Giles Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Giles Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Bay Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	310
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume	520	1

The Infrastructure Risk Rating Score is 2.00. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Giles Road.*

Giles Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Giles Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Giles Road, due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (20km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Giles Road in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Giles Road, the actual operating speeds from the MegaMaps tool are 20 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

### Speed Limit Review – Glen Brook Road (Ōmiha)

The speed limit on Glen Brook Road, Ōmiha, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

#### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Glen Brook Road connects to Okoka Road to the north and Obrien Road / Pohutukawa Avenue to the south. This road provides access to residential areas. Glen Brook Road is approximately 1.07 km in length.</p> <p>Glen Brook Road is classified as an Secondary Collector road under the one network road classification (ONRC). Glen Brook Road is a two-lane undivided road. There are no pedestrian footpaths and on-street parking along this road. There are no cycle lanes.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. There are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Glen Brook Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Glen Brook Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Glen Brook Road has a mean operating speed in the range of 22.27 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Okoka Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Obrien Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Pohutukawa Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Omiha Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Watson Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Fairview Crescent:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	1,070
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Tortuous	6
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume	520	1

The Infrastructure Risk Rating Score is 2.81. For Urban areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Glen Brook Road.

Glen Brook Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Glen Brook Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Glen Brook Road due to a multitude of factors. These being the narrow and tortuous nature of the road, the severe roadside hazards, its Secondary Collector function and its existing mean operating speed (22.27km/h). These features also contribute to the roads "High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Glen Brook Road in Ōmiha, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Glen Brook Road, the actual operating speeds from the MegaMaps tool are 22.27 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Goodwin Avenue (Oneroa)**

The speed limit on Goodwin Avenue, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Goodwin Avenue connects Ocean View Road to the west and Queens Drive to the east. This road provides access to residential areas. Goodwin Avenue is approximately 0.84 km in length.</p> <p>Goodwin Avenue is classified as an Secondary Collector road under the one network road classification (ONRC). Goodwin Avenue is a two-lane undivided road. There are no pedestrian footpaths and on-street parking along this road. There are no cycle lanes.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. There are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Goodwin Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."

Requirement	Comments
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,118 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and the traffic surveys (1,118vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Goodwin Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Goodwin Avenue has a mean operating speed in the range of 38.73 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Ocean View Road:</b> 50 km/h (proposed 50 km/h)</li> <li>• <b>Queens Drive:</b> 50 km/h (proposed 30 / 40 km/h)</li> <li>• <b>Hekerua Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	840
Annual Daily Traffic (vpd)	1,118

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	1118	1.4

The Infrastructure Risk Rating Score is 2.68. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Goodwin Avenue.

Goodwin Avenue is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Goodwin Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Goodwin Avenue due to a multitude of factors. These being the narrow and curved nature of the road, the severe roadside hazards, its Secondary Collector function and its existing mean operating speed (38.73km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Goodwin Avenue in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Goodwin Avenue is 40 km/h which is aligned with the recommended safe and appropriate speed.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Gordons Road Waiheke Island**

Gordons Road, Waiheke Island, is divided into the following sections and outlined as follows<sup>1</sup>:

1. Section 1: Gordons Road between O'Brien Road and 2.3km south of Carsons Rd (adjacent to Poukaraka Flats)
2. Section 2: Gordons Road between 2.3km south of Carsons Road and southern end of Gordons Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Gordons Road, Waiheke Island has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Gordons Road connects to O'Brien Road to the north west. This road provides access to residential properties, vineyards and Whakanewha Regional Park.	
	This section of Gordons Road is classified as an Secondary Collector road under the one network road classification (ONRC). This section is 3.03km in length.	This section of Gordons Road is classified as an Secondary Collector road under the one network road classification (ONRC). This section is 1.82km in length.
	This section of Gordons Road is two-lane undivided. There are no pedestrian and/or cyclist amenities along this section.	This section of Gordons Road is unsealed. There are no pedestrian and/or cyclist amenities along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes for all road users and therefore the crash risk for all road users was considered.	

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	CAS records 1 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 0 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.	CAS records 0 crashes between 2016 and 2020. Therefore, there are 0 Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for Gordons Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium and Very narrow</li> </ul> <b>Roadside hazards (in both directions):</b> Severe	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium and Very narrow</li> </ul> <b>Roadside hazards (in both directions):</b> Severe
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using the drive over footage. The IRR defines Remote rural as Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry.	The adjacent land use is classified as Remote rural using the drive over footage. The IRR defines Remote rural as Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry.
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2</li> </ul> <b>Access density:</b> 2 to <5	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2</li> </ul> <b>Access density:</b> 2 to <5
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 602 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 602 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limits on Gordons Road are as follows: <ul style="list-style-type: none"> <li>• 80km/h Between O'Brien Road and 2.3km south of Carsons Rd (adjacent to Poukaraka Flats)</li> <li>• 80km/h From 2.3km south of Carsons Road and southern end of Gordons Road</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Gordons Road are as follows: <ul style="list-style-type: none"> <li>• 43km/h Between O'Brien Road and 2.3km south of Carsons Rd (adjacent to Poukaraka Flats)</li> <li>• 24.76km/h From 2.3km south of Carsons Road and southern end of Gordons Road</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>O'Brien Road:</b> 50km/h (50km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (m)	3030	1820
Annual Daily Traffic (vpd)	602	602

- Section 1
  - The Collective Risk score is 0. For Rural areas this corresponds to a Collective Risk band of Low.
  - Personal Risk score is 0. A Personal Risk band of Low.
- Section 2
  - The Collective Risk score is 0. For Rural areas this corresponds to a Collective Risk band of Low.
  - Personal Risk score is 0. A Personal Risk band of Low.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Unsealed	10
Road alignment	Winding	3.5	Curved	1.8

Carriageway width (road lane + shoulder)	Medium, Very narrow	1.79	Medium, Very narrow	1.79
Roadside hazards (in both directions)	Severe	2.8	Severe	2.8
Adjacent land use	Remote rural	1	Remote rural	1
Intersection density (per km)	1 to <2	1.15	1 to <2	1.15
Access density (per km)	2 to <5	1.03	2 to <5	1.03
Traffic volume	602	1	602	1

- Section 1: The Infrastructure Risk Rating Score is 1.89. For Rural areas this corresponds to an IRR band of Medium-High.
- Section 2: The Infrastructure Risk Rating Score is 2.03. For Rural areas this corresponds to an IRR band of High.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is:

- <80km/h Between O'Brien Road and 2.3km south of Carsons Rd (adjacent to Poukaraka Flats) (Section 1),
- <80km/h From 2.3km south of Carsons Road and southern end of Gordons Road (Section 2)

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 50km/h on Between O'Brien Road and 2.3km south of Carsons Rd (adjacent to Poukaraka Flats) (Section 1),
- 40km/h on From 2.3km south of Carsons Road and southern end of Gordons Road (Section 2).

Gordons Road between O'Brien Road and 2.3km south of Carsons Rd (adjacent to Poukaraka Flats), is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 80km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 50km/h was selected, for Section 1 due to a multitude of factors. These being Medium and Winding nature of the road, the Severe roadside hazards, its Secondary Collector function and its existing mean operating speed (43km/h). These features also contribute to the roads "Medium-High" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crashes in the last 5 years including fatal, 0 serious, 1 minor and 0 non-injury crashes.

Gordons Road between 2.3km south of Carsons Road and southern end of Gordons Road, is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 80km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 40km/h was selected, for Section 1 due to a multitude of factors. These being Medium and Curved nature of the road, the

Severe roadside hazards, its Secondary Collector function and its existing mean operating speed (24.76km/h). These features also contribute to the roads "High" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) on Gordons Road in Waiheke Island, are not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Gordons Road Section 2 is 50 km/h which is aligned with the speed limit recommended by the Speed Management Guide (<80km/h); this is considered appropriate based on the function of the road and the mean operating speed supports the reduction.

The proposed safe and appropriate speed limit(s) for Gordons Road Section 2 is 40km/h which is aligned with the recommended safe and appropriate speed.

## Speed Limit Review – Great Barrier Road (Oneroa)

The speed limit on Great Barrier Road, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Great Barrier Road connects to Coromandel Road to the southeast. This road provides access to residential areas and the beach. Great Barrier Road is approximately 1.35 km in length.</p> <p>Great Barrier Road is classified as an Secondary Collector road under the one network road classification (ONRC). Great Barrier Road is a two-lane undivided road. There are no pedestrian footpaths and on-street parking along this road. There are no cycle lanes.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. There are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Great Barrier Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Great Barrier Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Great Barrier Road has a mean operating speed in the range of 28.49 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Coromandel Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Empire Avenue:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	1,350
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	520	1

The Infrastructure Risk Rating Score is 2.53. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Great Barrier Road.*

Great Barrier Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Great Barrier Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Great Barrier Road due to a multitude of factors. These being the narrow and curved nature of the road, the severe roadside hazards, its Secondary Collector function and its existing mean operating speed (28.49km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Great Barrier Road in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Great Barrier Road, the actual operating speeds from the MegaMaps tool are 28.49 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Gulf Place (Oneroa)

The speed limit on Gulf Place, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Gulf Place connects to Junction Road to the south This road provides access to residential areas. Gulf Place is approximately 0.25 km in length.</p> <p>Gulf Place is classified as an Access road under the one network road classification (ONRC). Gulf Place is a two-lane undivided road. There are no pedestrian footpaths and no on-street parking along this road. There are no cycle lanes.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Gulf Place were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Gulf Place is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Gulf Place has a mean operating speed in the range of 34.63 km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Junction Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	250
Annual Daily Traffic (vpd)	156

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume	156	1

The Infrastructure Risk Rating Score is 2.00. For Urban areas this corresponds to an IRR band of **Low-Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Gulf Place.*

A proposed speed limit of 30km/h was selected for Gulf Place due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (34.63km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Gulf Place in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Gulf Place, the actual operating speeds from the MegaMaps tool are 34.63 km/h.

Engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hamilton Road (Surfdale)

Hamilton Road, Surfdale, is divided into the following sections and outlined as follows<sup>1</sup>:

1. Section 1: Hamilton Road between The Esplanade and Miami Avenue
2. Section 2: Hamilton Road between Miami Avenue and Ocean Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Hamilton Road, Surfdale have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Hamilton Road connects to The Esplanade to the south/west and Miami Avenue to the east. This road provides access to residential properties, some commercial activity, and Surfdale Beach.	Hamilton Road connects to Miami Avenue to the west and Ocean Road to the east. This road provides access to residential properties.
	This section of Hamilton Road is 0.51km in length. It is classified as an Arterial road under the one network road classification (ONRC). Hamilton Road is a two-lane undivided road.	This section of Hamilton Road is 0.44km in length. It is classified as an Secondary Collector road under the one network road classification (ONRC). Hamilton Road is a two-lane undivided road.
	This section is a two-way, two-lane, undivided road. There are footpaths along parts of this section. There are no cycle lanes.	This section is a two-way, two-lane, undivided road. There are footpaths along this section. There are no cycle lanes.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes for all road users and therefore the crash risk for all road users was considered.	
	CAS records 3 crashes between 2016 and 2020: 0 fatal, 1 serious, 1 minor and 1 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes.	CAS records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 2 minor and 0 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for Hamilton Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane and narrow shoulder</li> </ul> <p><b>Roadside hazards (in both directions):</b> Moderate</p>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane and very narrow shoulder</li> </ul> <p><b>Roadside hazards (in both directions):</b> Moderate</p>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10</li> </ul> <p><b>Access density:</b> &gt;20</p>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10</li> </ul> <p><b>Access density:</b> &gt;20</p>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/engineering measures for the area are planned, details of the measures for this road are still under investigation.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Hamilton Road are as follows: <ul style="list-style-type: none"> <li>50km/h Between The Esplanade and Miami Avenue</li> <li>50km/h Between Miami Avenue and Ocean Road</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Hamilton Road are as follows: <ul style="list-style-type: none"> <li>37.2km/h Between The Esplanade and Miami Avenue</li> <li>34km/h Between Miami Avenue and Ocean Road</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Ocean Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Beatty Parade:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Tetley Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Miami Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Blake Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Surfdale Road:</b> 50 km/h (proposed 50 km/h)</li> <li><b>Lannan Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>The Esplanade (Surfdale):</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	2	2
DSI crashes during the period	1	0
Corridor Length (m)	390	440
Annual Daily Traffic (vpd)	520	520

- Section 1
  - The Collective Risk score is 0.51. For Urban areas this corresponds to a Collective Risk band of **High**.
  - Personal Risk score is 270.19. A Personal Risk band of **High**.
- Section 2
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Curved	1.8
Carriageway width (road lane + shoulder)	Medium lane, Narrow shoulder	1.45	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43	Moderate	1.43
Adjacent land use	Urban residential	3	Urban residential	3
Intersection density (per km)	5 to <10	2.6	5 to <10	2.6
Access density (per km)	>20	1.3	>20	1.3
Traffic volume (vpd)	520	1	520	1

- Section 1: The Infrastructure Risk Rating Score is 2.15. For Urban areas this corresponds to an IRR band of **Medium**.
- Section 2: The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is:

- 40km/h Between The Esplanade and Miami Avenue (Section 1),
- 40km/h Between Miami Avenue and Ocean Road (Section 2).

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 30km/h on Between The Esplanade and Miami Avenue (Section 1),
- 30km/h on Between Miami Avenue and Ocean Road (Section 2).

Hamilton Road – Section 1. A proposed speed limit of 30km/h was selected, for Section 1 due to a multitude of factors. These being Medium lane width and Curved nature of the road, the Moderate roadside hazards, its Arterial function, and high place function with high volume of active road users. These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as High and High respectively due to the number of DSI crashes, making it a high-risk road<sup>2</sup>.

Crash history from WK NZTA's CAS database shows 3 crashes in the last 5 years including 0 fatal, 1 serious, 1 minor and 1 non-injury crashes.

Hamilton Road – Section 2, a proposed speed limit of 30km/h was selected, for Section 2 due to a multitude of factors. These being Medium lane width and Curved nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (34km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 2 minor and 0 non-injury crashes.

After considering all the above factors, the existing speed limit(s) on Hamilton Road in Surfdale, are not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hamilton Road – Section 1&2, the actual operating speeds from the MegaMaps tool are 34-37km/h .

Engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Hartley Avenue (Onetangi)

The speed limit on Hartley Avenue, Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Hartley Avenue connects to Sea View Road to the east. This road provides access to residential areas. Hartley Avenue is approximately 0.13 km in length.
	Hartley Avenue is classified as an Access road under the one network road classification (ONRC). Hartley Avenue is a two-lane undivided road. There are pedestrian footpaths and informal on-street parking provided along this road. There are no cycle lanes provided.
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hartley Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Hartley Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hartley Avenue has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Sea View Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	130
Annual Daily Traffic (vpd)	100

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	100	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Hartley Avenue.*

Hartley Avenue is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Hartley Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Hartley Avenue due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Hartley Avenue in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Hartley Avenue, the actual operating speeds from the MegaMaps tool are 20 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hauraki Road Oneroa

The speed limit on Hauraki Road Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hauraki Road connects to Queens Drive to the west and Cory Road to the east. This road provides access to residential areas. Hauraki Road is approximately 0.76 km in length.</p> <p>Hauraki Road is classified as an Secondary Collector road under the one network road classification (ONRC). Hauraki Road is a two-lane undivided road. There are no pedestrian footpaths and no on-street parking along this road (although some vehicles parallel park on the berm). There are no cycle lanes. Bus stops are provided on the western end of the road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hauraki Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,261 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (1,261vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Hauraki Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hauraki Road has a mean operating speed in the range of 40.8 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Queens Drive:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Karaka Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Coromandel Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Cory Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	760
Annual Daily Traffic (vpd)	1,261

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	1261	1.4

The Infrastructure Risk Rating Score is 2.38. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Hauraki Road.*

Hauraki Road is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Hauraki Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Hauraki Road due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (40.8km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Hauraki Road in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Hauraki Road is 40km/h which is aligned with the recommended safe and appropriate speed.

## Speed Limit Review – Hekerua Road (Oneroa)

The speed limit on Hekerua Road Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hekerua Road connects to Goodwin Avenue / Queens Drive to the north and Frank Street to the south. This road provides access to residential areas. Hekerua Road is approximately 0.69 km in length.</p> <p>Hekerua Road is classified as an Access road under the one network road classification (ONRC). Hekerua Road is a two-lane undivided road. There are no pedestrian footpaths and no formal on-street parking along this road (some vehicles were observed parking on the road or in the berm). There are no cycle lanes.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hekerua Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 150 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Hekerua Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hekerua Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Goodwin Avenue:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Queens Drive:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Frank Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	690
Annual Daily Traffic (vpd)	150

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Winding	3.5
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Urban residential	3
Intersection density (per km)	2 to <3	1.25
Access density (per km)	>20	1.3
Traffic volume	150	1

The Infrastructure Risk Rating Score is 2.41. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Hekerua Road.*

Hekerua Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Hekerua Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Hekerua Road due to a multitude of factors. These being the narrow and winding nature of the road, the high roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Hekerua Road in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Hekerua Road, the actual operating speeds from the MegaMaps tool are 20 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Hill Road (Palm Beach)

Hill Road, Palm Beach, is divided into the following sections and outlined as follows<sup>1</sup>:

1. Section 1: Hill Road between Te Toki Road and the northern intersection with Palm Road
2. Section 2: Hill Road between Cory Road and Te Toki Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Hill Road, Palm Beach have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	This section of Hill Road connects to Palm Road to the north and Te Toki Road to the west. This road provides access to residential properties.	This section of Hill Road connects to Cory Road to the west and Te Toki Road to the east. This road provides access to residential properties.
	This section of Hill Road is 1.07km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC). Hill Road is a two-lane undivided road.	This section of Hill Road is 0.42km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC). Hill Road is a two-lane undivided road.
	This section is a two-way, two-lane, undivided road. There are no footpaths or cycle lanes.	This section is a two-way, two-lane, undivided road. There are footpaths along this section. There are no cycle lanes.
	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes	

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	for all road users and therefore the crash risk for all road users was considered. CAS records 1 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.	CAS records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for Hill Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5</li> <li>• <b>Access density:</b> &gt;20</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5</li> <li>• <b>Access density:</b> &gt;20</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limits on Hill Road are as follows: <ul style="list-style-type: none"> <li>50km/h Between Te Toki Road and northern intersection with Palm Road</li> <li>50km/h Between Cory Road and Te Toki Road</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Hill Road are as follows: <ul style="list-style-type: none"> <li>32.42km/h Between Te Toki Road and northern intersection with Palm Road</li> <li>32.42km/h Between Cory Road and Te Toki Road</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Palm Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Matapana Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Te Toki Road:</b> 50 km/h (proposed 40 km/h)</li> <li><b>The View Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Junction Road:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Cory Road:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Tiri View Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (m)	1070	420
Annual Daily Traffic (vpd)	520	520

- Section 1
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.
- Section 2
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Winding	3.5	Curved	1.8
Carriageway width (road lane + shoulder)	Narrow lane, very narrow shoulder	2.01	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8	Moderate	1.43
Adjacent land use	Urban residential	3	Urban residential	3
Intersection density (per km)	3 to <5	1.5	3 to <5	1.5
Access density (per km)	>20	1.3	>20	1.3
Traffic volume (vpd)	520	1	520	1

- Section 1: The Infrastructure Risk Rating Score is 2.58. For Urban areas this corresponds to an IRR band of **Medium-High**.
- Section 2: The Infrastructure Risk Rating Score is 2.00. For Urban areas this corresponds to an IRR band of **Low-Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is:

- 40km/h Between Te Toki Road and the northern intersection with Palm Road (Section 1),
- 40km/h Between Cory Road and Te Toki Road (Section 2)

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 30km/h on Between Te Toki Road and the northern intersection with Palm Road (Section 1),
- 40km/h on Between Cory Road and Te Toki Road (Section 2).

Hill Road – Section 1, between Te Toki Road and the northern intersection with Palm Road, is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 30km/h was selected, for Section 1 due to a multitude of factors. These being the narrow and winding nature of the road, the severe roadside hazards, its Secondary Collector function and its existing mean operating speed (32.42km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road.<sup>2</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

Hill Road – Section 2, between Cory Road and Te Toki Road, is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 40km/h was selected, for Section 2 due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (32.42km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) on Hill Road in Palm Beach, are not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Hill Road – Section 2, is 40km/h which is aligned with the recommended safe and appropriate speed and consistent with the connected roads.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hill Road – Section 1, the actual operating speeds from the MegaMaps are 32.42km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Hillside Road (Ostend)

The speed limit on Hillside Road, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hillside Road connects to Wilma Road to the south. This road provides access to residential areas. Hillside Road is approximately 0.29 km in length.</p> <p>Hillside Road is classified as an Access road under the one network road classification (ONRC). Hillside Road is an unsealed road. There are no pedestrian footpaths and no formal on-street parking along this road. There are no cycle lanes.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hillside Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 94 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Hillside Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hillside Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Wilma Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	290
Annual Daily Traffic (vpd)	94

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Unsealed	10
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume	94	1

The Infrastructure Risk Rating Score is 2.43. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Hillside Road.*

Hillside Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Hillside Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Hillside Road due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Hillside Road in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Hillside Road, the actual operating speeds from the MegaMaps tool are 20 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Hobson Terrace (Onetangi)

The speed limit on Hobson Terrace Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hobson Terrace connects to Eden Terrace to the west and Victoria Road South to the east. This road provides access to residential areas. Hobson Terrace is approximately 0.53 km in length.</p> <p>Hobson Terrace is classified as an Access road under the one network road classification (ONRC). Hobson Terrace is an unsealed road. There are no pedestrian footpaths and no formal on-street parking along this road. There are no cycle lanes.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 1 non-injury crashes. There are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hobson Terrace were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 52 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Hobson Terrace is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hobson Terrace has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Eden Terrace:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Victoria Road South:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (m)	530
Annual Daily Traffic (vpd)	52

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Unsealed	10
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	52	1

The Infrastructure Risk Rating Score is 2.96. For Urban areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Hobson Terrace.*

Hobson Terrace is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Hobson Terrace was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Hobson Terrace due to a multitude of factors. These being the narrow and curved nature of the road, the severe roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Hobson Terrace in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Hobson Terrace, the actual operating speeds from the MegaMaps tool are 20 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Homai Street (Ostend)

The speed limit on Homai Street, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Homai Street connects to Te Toki Road / Crescent Road East / Wharf Road to the west and Whakarite Road to the east. This road provides access to residential areas. Homai Street is approximately 0.11 km in length.</p> <p>Homai Street is classified as an Secondary Collector road under the one network road classification (ONRC). Homai Street is a two-lane undivided road. There are pedestrian footpaths but no formal on-street parking along this road. There are no cycle lanes.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Homai Street were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Homai Street is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Homai Street has a mean operating speed in the range of 31 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Te Toki Road:</b> 60 km/h (proposed 40 km/h)</li> <li><b>Crescent Road East:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Wharf Road:</b> 50 km/h</li> <li><b>Whakarite Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	110
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume	520	1

The Infrastructure Risk Rating Score is 2.52. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Homai Street.*

Homai Street is a Self-Explaining road as the mean operating speed is near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Homai Street was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Homai Street due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (31km/h). These features also contribute to the road's "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Homai Street, the actual operating speeds from the MegaMaps tool are 31 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Hooks Lane (Surfdale)

The speed limit on Hooks Lane, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hooks Lane connects to Miami Avenue to . This road provides access to residential areas and a school. Hooks Lane is approximately 0.09 km in length.</p> <p>Hooks Lane is classified as an Access road under the one network road classification (ONRC). Hooks Lane is a two-lane undivided road. There are pedestrian footpaths but no formal on-street parking along this road. There are no cycle lanes.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hooks Lane were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Low</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities".</p> <p>Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Hooks Lane is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hooks Lane has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Miami Avenue:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	90
Annual Daily Traffic (vpd)	100

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Low	0.4
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume	100	1

The Infrastructure Risk Rating Score is 1.71. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Hooks Lane.*

Hooks Lane is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Hooks Lane was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Hooks Lane due to a multitude of factors. These being the narrow and straight nature of the road, the low roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the road's "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Hooks Lane in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Hooks Lane, the actual operating speeds from the MegaMaps tool are 20 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Huia Street (Oneroa)

The speed limit on Huia Street, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Huia Street connects to Tawa Street to the north and Makora Avenue to the south. This road provides access to residential areas. Huia Street is approximately 0.31 km in length.</p> <p>Huia Street is classified as an Access road under the one network road classification (ONRC). Huia Street is a two-lane undivided road. There are no pedestrian footpaths and no formal on-street parking along this road (however, vehicles were observed parking on the berm). There are no cycle lanes.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Huia Street were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 312 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Huia Street is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Huia Street has a mean operating speed in the range of 25.33 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Tawa Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Makora Avenue:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	310
Annual Daily Traffic (vpd)	312

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	312	1

The Infrastructure Risk Rating Score is 1.98. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Huia Street.*

Huia Street is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Huia Street was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Huia Street due to a multitude of factors. These being the narrow and straight nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (25.33km/h). These features also contribute to the road's "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Huia Street in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Huia Street, the actual operating speeds from the MegaMaps tool are 25.33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hunterville Road (Waiheke Island)

The speed limit on Hunterville Road Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hunterville Road connects to Neil Avenue to the east and Anzac Avenue to the west. This road provides access to residential properties.</p> <p>Hunterville Road is approximately 0.1 km in length. Hunterville Road is classified as an access road under the one network road classification (ONRC).</p> <p>Hunterville Road is a two-way, unsealed road. There are no pedestrian footpaths or cycle lanes along this road. There is no formal on-street parking.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hunterville Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using the drive over footage and the MegaMaps tool. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	No average daily traffic (ADT) was available.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Hunterville Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	No mean operating speed was available for this road
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Neil Avenue:</b> 50km/h (40km/h proposed)</li> <li><b>Anzac Avenue:</b> 50km/h (40km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	100
Annual Daily Traffic	n/a

The Collective Risk score is 0 and the Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Rural residential	1.5
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume	n/a	1

The Infrastructure Risk Rating Score is 2.9. For Rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Hunterville Road.*

Even though no mean operating speed data was available, given the function and nature of the road and the low operating speed of the adjoining road, Hunterville Road is likely to be a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds (despite the existing 50 km/h speed limit). Engineering up of Hunterville Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Hunterville Road due to a multitude of factors. These being the narrow and curved nature of the road and the severe roadside hazards. These features also contribute to the road's "High" IRR, making it a high risk road.<sup>1</sup> The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Hunterville Road in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests <80 km/h as the safe and appropriate speed for Hunterville Road, no data was readily available for the mean operating speed along this road. However, given the access nature of the road and the low mean operating speed of the adjoining road (20km/h) it is considered unlikely that mean operating speeds would exceed 30km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Huruhi Road (Oneroa)

The speed limit on Huruhi Road, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Huruhi Road connects to Tahatai Road to the east. This road provides access to residential areas. Huruhi Road is approximately 0.15 km in length.</p> <p>Huruhi Road is classified as an Access road under the one network road classification (ONRC). Huruhi Road is an unsealed road. There are no pedestrian footpaths and no formal on-street parking along this road. There are no cycle lanes.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Huruhi Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Huruhi Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Huruhi Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Tahatai Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	150
Annual Daily Traffic (vpd)	100

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Unsealed	10
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	100	1

The Infrastructure Risk Rating Score is 2.67. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Huruhi Road.*

Huruhi Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Huruhi Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Huruhi Road due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Huruhi Road in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Huruhi Road, the actual operating speeds from the MegaMaps tool are 20 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Jellicoe Parade (Surfdale)

The speed limit on Jellicoe Parade, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Jellicoe Parade connects to Ocean Road to the north and Alison Road to the south. This road provides access to residential areas. Jellicoe Parade is approximately 0.78 km in length.</p> <p>Jellicoe Parade is classified as an Secondary Collector road under the one network road classification (ONRC). Jellicoe Parade is a two-lane undivided road. There are pedestrian footpaths but no formal on-street parking along this road. There are no cycle lanes.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Jellicoe Parade were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Jellicoe Parade is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Jellicoe Parade has a mean operating speed in the range of 39.58 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Ocean Road:</b> 50 km/h (proposed 30 / 40 km/h)</li> <li><b>Kennedy Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Alison Road:</b> 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	780
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	520	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Jellicoe Parade.*

Jellicoe Parade is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Jellicoe Parade was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Jellicoe Parade due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (39.58km/h). These features also contribute to the road's "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Jellicoe Parade in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Jellicoe Parade is 40km/h which is aligned with the recommended safe and appropriate speed.

## Speed Limit Review – Junction Road (Oneroa/Palm Beach)

The speed limit on Junction Road, Oneroa/Palm Beach, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Junction Road connects to Queens Drive / Pacific Parade / Ocean Road to the west and Cory Road / Hill Road to the east. This road provides access to residential areas. Junction Road is approximately 0.77 km in length.</p> <p>Junction Road is classified as an Access road under the one network road classification (ONRC). Junction Road is a two-lane undivided road. There are footpaths provided on this road. No cyclist amenities or on-street parking provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 2 non-injury crashes. There are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Junction Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Junction Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Junction Road has a mean operating speed in the range of 34.63 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Queens Drive:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Gulf Place:</b> 50km/h (proposed 30km/h)</li> <li><b>Pacific Parade:</b> 50km/h (proposed 40 km/h)</li> <li><b>Ocean Road:</b> 50km/h (proposed 40 km/h)</li> <li><b>Cory Road:</b> 50km/h (proposed 40 km/h)</li> <li><b>Hill Road:</b> 50km/h (proposed 40 km/h)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	770
Annual Daily Traffic (vpd)	156

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume (vpd)	156	1

The Infrastructure Risk Rating Score is 2.29. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Junction Road.*

Junction Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Junction Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Junction Road due to a multitude of factors. These being the narrow and curved nature of the road, the severe roadside hazards, its Access function and its existing mean operating speed (34.63km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 3 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Junction Road in Oneroa/Palm Beach, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Junction Road is 40 km/h which is aligned with the recommended safe and appropriate speed.

## Speed Limit Review – Karaka Road (Oneroa)

Karaka Road, Oneroa, is divided into the following sections and outlined as follows<sup>1</sup>:

1. Section 1: Karaka Road between Hauraki Rd and Coromandel Rd
2. Section 2: Karaka Road between Hauraki Rd and Queens Dr

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Karaka Road, Oneroa have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	This section of Karaka Road connects to Coromandel Road to the north and Hauraki Road to the south. This road provides access to residential properties.	This section of Karaka Road connects to Hauraki Road to the north and Queens Drive to the south. This road provides access to residential properties.
	This section of Karaka Road is 0.41km in length. It is classified as an Secondary Collector road under the one network road classification (ONRC). Karaka Road is a two-lane undivided road.	This section of Karaka Road is 0.65km in length. It is classified as an Secondary Collector road under the one network road classification (ONRC). Karaka Road is a two-lane undivided road.
	This section is a two-way, two-lane, undivided road. There are no footpaths or cycle lanes along this section.	This section is a two-way, two-lane, undivided road. There are no footpath or cycle lanes along this section.
	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes	

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	for all road users and therefore the crash risk for all road users was considered. CAS records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.	
(e) the characteristics of the road and roadsides; and	The following characteristics for Karaka Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5</li> <li>• <b>Access density:</b> &gt;20</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5</li> <li>• <b>Access density:</b> &gt;20</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit(s) on Karaka Road are as follows: <ul style="list-style-type: none"> <li>50km/h Between Hauraki Rd and Coromandel Rd</li> <li>50km/h Between Hauraki Rd and Queens Dr</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Karaka Road are as follows: <ul style="list-style-type: none"> <li>34.9km/h Between Hauraki Rd and Coromandel Rd</li> <li>34.9km/h Between Hauraki Rd and Queens Dr</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Coromandel Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Hauraki Road:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Queens Drive:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (m)	410	650
Annual Daily Traffic (vpd)	520	520

- Section 1
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.
- Section 2
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Curved	1.8
Carriageway width (road lane + shoulder)	Narrow lane, very narrow shoulder	2.01	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8	Severe	2.8
Adjacent land use	Urban residential	3	Urban residential	3
Intersection density (per km)	3 to <5	1.5	3 to <5	1.5
Access density (per km)	>20	1.3	>20	1.3
Traffic volume (vpd)	520	1	520	1

- Section 1: The Infrastructure Risk Rating Score is 2.29. For Urban areas this corresponds to an IRR band of **Medium**.
- Section 2: The Infrastructure Risk Rating Score is 2.29. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is:

- 40km/h Between Hauraki Rd and Coromandel Rd (Section 1),
- 40km/h Between Hauraki Rd and Queens Dr (Section 2)

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 30km/h on Between Hauraki Rd and Coromandel Rd (Section 1),
- 30km/h on Between Hauraki Rd and Queens Dr (Section 2).

A proposed speed limit of 30km/h was selected, for Section 1 due to a multitude of factors. These being Narrow and Curved nature of the road, the Severe roadside hazards, its Secondary Collector function and its existing mean operating speed (34.9km/h). These features also contribute to the roads "Medium" IRR score the collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 2 non-injury crashes.

A proposed speed limit of 30km/h was selected, for Section 2 due to a multitude of factors. These being Narrow and Curved nature of the road, the Severe roadside hazards, its Secondary Collector function and its existing mean operating speed (34.9km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit(s) on Karaka Road in Oneroa, are not considered to be a safe and appropriate speed limit for this road.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Karu Street (Oneroa)

The speed limit on Karu Street, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Karu Street connects to Korora Road to the south. This road provides access to residential areas. Karu Street is approximately 0.21 km in length.</p> <p>Karu Street is classified as an Secondary Collector road under the one network road classification (ONRC). Karu Street is a two-lane undivided road. There are no footpaths or cycle lanes along this road. On-street parking provisions are not provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. There are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Karu Street were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Karu Street is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Karu Street has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Korora Road:</b> 50 km/h (proposed 30 / 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	210
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 1.74. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Karu Street.*

Karu Street is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Karu Street was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Karu Street due to a multitude of factors. These being the narrow and straight nature of the road, the moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (20km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Karu Street in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Karu Street, the actual operating speeds from the MegaMaps tool are 20 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kennedy Point Road (Surfdale)

The speed limit on Kennedy Point Road, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kennedy Point Road connects to Donald Bruce Road to the north. This road provides access to residential areas. Kennedy Point Road is approximately 0.57 km in length.</p> <p>Kennedy Point Road is classified as an Secondary Collector road under the one network road classification (ONRC). Kennedy Point Road is a two-lane undivided road. Footpaths are provided along this road. No cycle paths or on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 0 non-injury crashes. There are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kennedy Point Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Kennedy Point Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kennedy Point Road has a mean operating speed in the range of 22.82 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Donald Bruce Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (m)	570
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 2.52. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Kennedy Point Road.*

Kennedy Point Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Kennedy Point Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Kennedy Point Road due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (22.82km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor and 0 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Kennedy Point Road in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Kennedy Point Road, the actual operating speeds from the MegaMaps tool are 22.82 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Kennedy Road (Surfdale)

The speed limit on Kennedy Road, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kennedy Road connects to Jellicoe Parade to the north and Alison Road to the south. This road provides access to residential areas. Kennedy Road is approximately 0.63 km in length.</p> <p>Kennedy Road is classified as an Access road under the one network road classification (ONRC). Kennedy Road is Two-lane undivided. There are no footpaths or cycle paths/amenities provided. There are no on-street parking provisions.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kennedy Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Kennedy Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kennedy Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Jellicoe Parade:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Alison Road:</b> 50 km/h (proposed 50 km/h)</li> <li><b>Nelson Avenue:</b> 50km/h (proposed 30km/h)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	630
Annual Daily Traffic (vpd)	104

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume (vpd)	104	1

The Infrastructure Risk Rating Score is 2.00. For Urban areas this corresponds to an IRR band of **Low-Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Kennedy Road.*

Kennedy Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Kennedy Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Kennedy Road due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Kennedy Road in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Kennedy Road, the actual operating speeds from the MegaMaps tool are 20 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kiwi Street (Oneroa)

The speed limit on Kiwi Street, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kiwi Street connects to Moa Avenue to the north and The Esplanade to the south. This road provides access to residential areas. Kiwi Street is approximately 0.61 km in length.</p> <p>Kiwi Street is classified as an Access road under the one network road classification (ONRC). Kiwi Street is a Two-lane undivided road. There are no footpaths or cycle lanes/facilities along this road. Narrow on-street parking areas are provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kiwi Street were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 312 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Kiwi Street is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kiwi Street has a mean operating speed in the range of 25.33 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Moa Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li><b>The Esplanade:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Tawa Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Makora Avenue:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	610
Annual Daily Traffic (vpd)	312

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	312	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Kiwi Street.*

Kiwi Street is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Kiwi Street was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Kiwi Street due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its access function and its existing mean operating speed (25.33km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Kiwi Street in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Kiwi Street, the actual operating speeds from the MegaMaps tool are 25.33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Korora Road (Oneroa)

Korora Road, Oneroa, is divided into the following sections and outlined as follows<sup>1</sup>:

1. Section 1: Korora Road between Ocean View Road and 350m north of Karu Street
2. Section 2: Korora Road between 350m north of Karu Street and northern end of Korora Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Korora Road, Oneroa have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	This section of Korora Road connects to Ocean View Road to the south and Karu Street to the north. This road provides access to residential properties, beach access and early childcare centre.	This section of Korora Road connects to Karu Street to the south and ends at the northern end of Korora Road. This road provides access to residential properties.
	This section of Korora Road is 0.71km in length. It is classified as an Secondary Collector road under the one network road classification (ONRC). Korora Road is a two-lane undivided road.	This section of Korora Road is 0.84km in length. It is classified as an Secondary Collector road under the one network road classification (ONRC). Korora Road is a two-lane undivided road.
	This section is a two-way, two-lane, undivided road with a dashed centreline. There is on-street parking along this section. There is no footpath, or cycle lane.	This section is a two-way, two-lane, undivided road with a dashed centreline. There is on-street parking along this section. There is no footpath, or cycle lane.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	
(e) the characteristics of the road and roadsides; and	The following characteristics for Korora Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane, very narrow shoulder</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane, very narrow shoulder</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10</li> <li>• <b>Access density:</b> &gt;20</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10</li> <li>• <b>Access density:</b> 10 to &lt;20</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 550 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 550 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit(s) on Korora Road are as follows: <ul style="list-style-type: none"> <li>50km/h Between Ocean View Road and Karu Street</li> <li>50km/h Between Karu Street and northern end of Karu Street</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Korora Road are as follows: <ul style="list-style-type: none"> <li>30.23km/h Between Ocean View Road and Karu Street</li> <li>30.23km/h Between Karu Street and northern end of Karu Street</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Ocean View Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Tiri Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Waikare Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Karu Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (m)	700	857
Annual Daily Traffic (vpd)	550	550

- Section 1
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.
- Section 2
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Straight	1	Straight	1
Carriageway width (road lane + shoulder)	Medium lane, very narrow shoulder	1.79	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43	Moderate	1.43
Adjacent land use	Urban residential	3	Urban residential	3
Intersection density (per km)	5 to <10	2.6	5 to <10	2.6
Access density (per km)	>20	1.3	10 to <20	1.1
Traffic volume (vpd)	550	1	550	1

- Section 1: The Infrastructure Risk Rating Score is 1.98. For Urban areas this corresponds to an IRR band of **Low-Medium**.
- Section 2: The Infrastructure Risk Rating Score is 1.91. For Urban areas this corresponds to an IRR band of **Low-Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is:

- 40km/h Between Ocean View Road and 350m north of Karu Street (Section 1),
- 40km/h Between 350m north of Karu Street and northern end of Korora Road (Section 2)

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 30km/h on Between Ocean View Road and 350m north of Karu Street (Section 1),
- 40km/h on Between 350m north of Karu Street and northern end of Korora Street (Section 2).

Korora Road – Section 1, between Ocean View Road and 350m north of Karu Street, is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 30km/h was selected, for Section 1 due to a multitude of factors. These being the medium and straight nature of the road, the moderate roadside hazards, its Secondary Collector function and high pedestrian/cyclist demand on the street. These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Korora Road – Section 2, between 350m north of Karu Street and northern end of Korora Street, is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 40km/h was selected, for Section 2 due to a multitude of factors. These being Medium and Straight nature of the road, the Moderate roadside hazards, its Secondary Collector function. These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) on Korora Road in Oneroa, are not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Korora Road section 1, the actual operating speeds from the MegaMaps tool 30km/h.

Therefore we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

The proposed safe and appropriate speed limit(s) for Korora Road – Section 2 is 40km/h which is aligned with the recommended safe and appropriate speed.

## Speed Limit Review – Kuaka Road (Oneroa)

The speed limit on Kuaka Road, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kuaka Road connects to Ocean View Road to the north and Weka Road to the south/west. This road provides access to residential properties and Alison Park. Kuaka Road is approximately 0.47 km in length.</p> <p>Kuaka Road is classified as an Access road under the one network road classification (ONRC). Kuaka Road is a two-lane undivided road. There are no footpaths or cycle paths/facilities along this section. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kuaka Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Kuaka Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kuaka Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Ocean View Road:</b> 50 km/h (proposed 50 km/h)</li> <li><b>Oue Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Weka Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	470
Annual Daily Traffic (vpd)	104

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	104	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Kuaka Road.*

Kuaka Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Kuaka Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Kuaka Road due to a multitude of factors. These being the Narrow and Curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Kuaka Road in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Kuaka Road, the actual operating speeds from the Megamaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ladd Road (Ostend)

The speed limit on Ladd Road Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Ladd Road connects to Ostend Road to the north and to Natzka Road to the south. This road provides access residential properties and is approximately 0.13 km in length.
	Ladd Road is classified as a Secondary Collector road under the one network road classification (ONRC). Ladd Road is a two-lane undivided road. There are no footpaths or cycle paths/amenities along this road. No on-street parking is provided.
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ladd Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane and very narrow</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Ladd Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ladd Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Ostend Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Natzka Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	130
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 2.56. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Ladd Road.*

Ladd Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Ladd Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Ladd Road due to a multitude of factors. These being the narrow and straight nature of the road, the severe roadside hazards, its Secondary Collector function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Ladd Road in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Ladd Road, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Lannan Road (Surfdale)

The speed limit on Lannan Road, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lannan Road connects to Surfdale Road to the north and Hamilton Road to south. This road provides access to residential properties. This section of Lannan Road is 0.53km in length</p> <p>Lannan Road is classified as an Access road under the one network road classification (ONRC). Lannan Road is a two-lane undivided road. There are no footpaths or cycle lanes along this section.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lannan Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane, very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as <i>“Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day”</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10</li> <li><b>Access density:</b> &gt;20</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 144 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Lannan Road is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Lannan Road is in the range of 30 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Surfdale Road:</b> 50 km/h (proposed 50 km/h)</li> <li><b>Hamilton Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>The Esplanade:</b> 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	530
Annual Daily Traffic (vpd)	144

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width (road lane + shoulder)	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	144	1

The Infrastructure Risk Rating Score is 2.53. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Lannan Road.*

Lannan Road is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected due to a multitude of factors. These being narrow and curved nature of the road, the severe roadside hazards, its access function and its existing mean operating speed (30km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit(s) on Lannan Road in Surfdale, are not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lannan Road, the actual operating speeds from the MegaMaps tool are 30 km/h respectively.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Le Roy Road (Onetangi)

The speed limit on Le Roy Road, Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Le Roy Road connects to First Avenue to its eastern end and to Second Avenue to its western end. This road provides access to residential properties. Le Roy Road is approximately 0.24 km in length.</p> <p>Le Roy Road is classified as an Access road under the one network road classification (ONRC). Le Roy Road is a two-lane undivided road. There are no pedestrian amenities or on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Le Roy Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Le Roy Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Le Roy Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>First Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Second Avenue:</b> 50 km/h (proposed 30 km/h)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	240
Annual Daily Traffic (vpd)	104

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	104	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Le Roy Road.*

Le Roy Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Le Roy Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Le Roy Road due to a multitude of factors. These being the Narrow and Curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Le Roy Road in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Le Roy Road, the actual operating speeds from the Megamaps tool are 20 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mako Street (Oneroa)

Mako Street, Oneroa, is divided into the following sections and outlined as follows<sup>1</sup>:

1. Section 1: Mako Street Between Church Bay Road and Ocean View Road
2. Section 2: Mako Street Between Church Bay Road and Tui Street

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Mako Street, Oneroa have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	This section of Mako Street connects to Church Bay Road to the south and Ocean View Road to the north. This road provides access to residential properties and a vineyard.	This section of Mako Street connects to Church Bay Road to the west and Tui Street to the east. This road provides access to residential properties and Alison Park.
	This section of Mako Street is 0.16km in length. It is classified as an Access road under the one network road classification (ONRC). Mako Street is a two-lane undivided road.	This section of Mako Street is 0.66km in length. It is classified as an Secondary Collector road under the one network road classification (ONRC). Mako Street is a two-lane undivided road.
	This section is a two-way, two-lane, undivided road. There are footpaths along this section. There are no cycle lanes.	This section is a two-way, two-lane, undivided road. There are footpaths along this section. There are no cycle lanes.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes for all road users and therefore the crash risk for all road users was considered.	
	CAS records 0 crashes between 2016 and 2020. Therefore there are no Death and Serious Injury (DSI) crashes.	CAS records 1 crashes between 2016 and 2020. 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for Mako Street were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane, very narrow shoulder</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane, very narrow shoulder</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using the drive over footage. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements".	
	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".	
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10</li> <li>• <b>Access density:</b> &gt;20</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10</li> <li>• <b>Access density:</b> &gt;20</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 683 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 1601 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit(s) on Mako Street are as follows: <ul style="list-style-type: none"> <li>50km/h Between Church Bay Road and Ocean View Road</li> <li>50km/h Between Church Bay Road and Tui Street</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Mako Street are as follows: <ul style="list-style-type: none"> <li>38.59km/h Between Church Bay Road and Ocean View Road</li> <li>38.59km/h Between Church Bay Road and Tui Street</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Ocean View Road:</b> 50 km/h (proposed 50 km/h)</li> <li><b>Church Bay Road:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Weka Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Tui Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Wattle Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (m)	160	160
Annual Daily Traffic (vpd)	683	1601

- Section 1
  - The Collective Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.
- Section 2
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Curved	1.8
Carriageway width (road lane + shoulder)	Narrow lane, very narrow shoulder	2.01	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43	Moderate	1.43
Adjacent land use	Rural residential	1.5	Urban residential	3
Intersection density (per km)	5 to <10	2.6	5 to <10	2.6
Access density (per km)	>20	1.3	>20	1.3
Traffic volume (vpd)	683	1	1601	1.4

- Section 1: The Infrastructure Risk Rating Score is 1.94. For Rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2: The Infrastructure Risk Rating Score is 2.38. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is:

- <80km/h Between Church Bay Road and Ocean View Road (Section 1)

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is:

- 40km/h Between Church Bay Road and Tui Street (Section 2)

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 40km/h on Between Church Bay Road and Ocean View Road (Section 1),
- 30km/h on Between Church Bay Road and Tui Street (Section 2).

Mako Street – Section 1, between Church Bay Road and Ocean View Road, is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 40km/h was selected, for Section 1 due to a multitude of factors. These being narrow and curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (38.59km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>2</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

A proposed speed limit of 30km/h was selected, for Section 2 due to a multitude of factors. These being narrow and curved nature of the road, the moderate roadside hazards, its Secondary Collector function. These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 1 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) on Mako Street in Oneroa, are not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Mako Street – Section 1, is 40 km/h which is aligned with the recommended safe and appropriate speed.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Mako Street – Section 2.

Engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Makora Avenue (Oneroa)

The speed limit on Makora Avenue, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Makora Avenue connects to Tawa Street to the north and Kiwi Street to the south/west. This road provides access to residential properties. Makora Avenue is approximately 1.04 km in length.
	Makora Avenue is classified as an Access road under the one network road classification (ONRC). Makora Avenue is a two-lane undivided road. There are no footpaths or cycle paths along this road. No on-street parking is provided.
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Makora Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 312 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (207vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Makora Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Makora Avenue has a mean operating speed in the range of 25.33 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Tawa Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Huia Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Kiwi Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	1040
Annual Daily Traffic (vpd)	312

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume (vpd)	312	1

The Infrastructure Risk Rating Score is 2.00. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Makora Avenue.*

Makora Avenue is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Makora Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Makora Avenue due to a multitude of factors. These being the Narrow and Curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (25.33km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Makora Avenue in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Makora Avenue, the actual operating speeds from the traffic survey are 27.9km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Man O’War Bay Road (Waiheke Island)

Man O’War Bay Road, Waiheke Island has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Man O’War Bay Road connects to Waiheke Road to the southwest and Cowes Bay Road to the southeast. This road provides access to rural residential properties and vineyards. Man O’War Bay Road is approximately 10.190km in length.</p> <p>This section of Man O’War Bay Road is classified as an Access road under the one network road classification (ONRC). Man O’War Bay Road is Unsealed. There are no pedestrian and/or cyclist amenities provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA’s Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes for all road users and therefore the crash risk for all road users was considered.</p> <p>CAS records 9 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 8 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Man O’War Bay Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using the drive over footage. The IRR defines Remote rural as <i>Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry.</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1</li> <li><b>Access density:</b> 2 to &lt;5</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 224 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Man O’War Bay Road is 80km/h.
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Man O’War Bay Road is 35.05km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Waiheke Road:</b> 50km/h (60km/h proposed)</li> <li><b>Orapiu Road:</b> 80km/h (60km/h proposed)</li> <li><b>Stonybatter Road:</b> 50km/h (40km/h proposed)</li> <li><b>Cowes Bay Road:</b> 80km/h (40km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (m)	10190
Annual Daily Traffic	224

The Collective Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**. Personal Risk score is 0. A Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10
Road alignment	Tortuous	6
Carriageway width (road lane + shoulder)	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Remote rural	1
Intersection density (per km)	<1	1
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	224	1

The Infrastructure Risk Rating Score is 2.49. For Rural areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Man O'War Bay Road.*

Man O'War Bay Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 80km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected due to a multitude of factors. These being the narrow and tortuous nature of the road, the severe roadside hazards, its Access function and its existing mean operating speed (35.05km/h). These features also contribute to the roads "High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 9 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor and 8 non-injury crashes.

After considering all the above factors, the existing speed limit(s) on Man O'War Bay Road in Waiheke Island, are not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Man O'War Bay Road is 40km/h which is aligned with the recommended safe and appropriate speed.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Manuka Road (Oneroa)

The speed limit on Manuka Road, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Manuka Road connects to Tui Street / Mako Street to the west and Moa Avenue to the east. This road provides access to residential properties. Manuka Road is approximately 0.32 km in length.</p> <p>Manuka Road is classified as a Secondary Collector road under the one network road classification (ONRC). Manuka Road is a two-lane undivided road. There are no footpaths or cycle paths along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 1 serious, 0 minor and 0 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Manuka Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Manuka Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Manuka Road has a mean operating speed in the range of 35 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Tui Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Mako Street:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Moa Ave:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	1
Corridor Length (m)	320
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0.63 and the Personal Risk score is 329.30. For Urban areas this corresponds to a Collective Risk band of **High**, and a Personal Risk band of **High**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 1.98. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Manuka Road.*

A proposed speed limit of 30km/h was selected for Manuka Road due to a multitude of factors. These being the Narrow and Straight nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (35km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as High and High respectively due to the number of DSI crashes, making it a high-risk road<sup>1</sup>.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 1 serious, 0 minor and 0 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Manuka Road in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Manuka Road, the actual operating speeds from the MegaMaps tool are 35 km/h.

Engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30 km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Marama Avenue (Surfdale)

The speed limit on Marama Avenue, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Marama Avenue connects to Tetley Road / Beresford Avenue to the east and Surfdale Road to the west. This road provides access to residential properties. Marama Avenue is approximately 0.37 km in length.</p> <p>Marama Avenue is classified as an Access road under the one network road classification (ONRC). Marama Avenue is a two-lane undivided road. There are no footpaths or cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Marama Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Marama Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Marama Avenue has a mean operating speed in the range of 20.46 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Surfdale Road:</b> 50 km/h (proposed 50 km/h)</li> <li><b>Tetley Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Beresford Avenue:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	370
Annual Daily Traffic (vpd)	260

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	260	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Marama Avenue.*

Marama Avenue is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Marama Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Marama Avenue due to a multitude of factors. These being the Narrow and Curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20.46km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Marama Avenue in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Marama Avenue, the actual operating speeds from the MegaMaps tool are 20.46 km/h.

Therefore, we have determined 30 km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Marine View Road (Onetangi)

The speed limit on Marine View Road, Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Marine View Road connects to Onetangi Road to the west and Victoria Road South to the east. This road provides access to residential properties. Marine View Road is approximately 0.55 km in length.</p> <p>Marine View Road is classified as an Access road under the one network road classification (ONRC). Marine View Road is a two-lane undivided road. There are no footpaths or cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Marine View Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 245 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Marine View Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Marine View Road has a mean operating speed in the range of 25.74 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Trig Hill Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Eden Terrace:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Victoria Road South:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	550
Annual Daily Traffic (vpd)	245

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Winding	3.5
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	245	1

The Infrastructure Risk Rating Score is 2.53. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Marine View Road.*

Marine View Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Marine View Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Marine View Road due to a multitude of factors. These being the Narrow and Winding nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (25.74km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Marine View Road in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Marine View Road, the actual operating speeds from the MegaMaps tool are 25.74km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Matai Road (Oneroa)

The speed limit on Matai Road, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Matai Road connects to Tui Street to the west and Moa Avenue to the east. This road provides access to residential properties. Matai Road is approximately 0.39 km in length.</p> <p>Matai Road is classified as an Secondary Collector road under the one network road classification (ONRC). Matai Road is a two-lane undivided road. There are no footpaths or cycle lanes along this road. There is no on-street parking along this road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Matai Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Matai Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Matai Road has a mean operating speed in the range of 22.79 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Tui Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Moa Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Puriri Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	390
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Matai Road.*

Matai Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Matai Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Matai Road due to a multitude of factors. These being the Narrow and Curved nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (22.79km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Matai Road in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Matai Road, the actual operating speeds from the MegaMaps tool are 22.79km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Matapana Road (Palm Beach)

The speed limit on Matapana Road, Palm Beach, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Matapana Road connects to Hill Road to the south. This road provides access to residential properties. Matapana Road is approximately 0.65 km in length.</p> <p>Matapana Road is classified as an Access road under the one network road classification (ONRC). Matapana Road is a two-lane undivided road. There are no footpaths or cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Matapana Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Matapana Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Matapana Road has a mean operating speed in the range of 23.12 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Hill Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	650
Annual Daily Traffic (vpd)	100

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Tortuous	6
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume (vpd)	100	1

The Infrastructure Risk Rating Score is 2.81. For Urban areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Matapana Road.*

Matapana Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Matapana Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Matapana Road due to a multitude of factors. These being the Narrow and Tortuous nature of the road, the Severe roadside hazards, its Access function and its existing mean operating speed (23.12km/h). These features also contribute to the roads "High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Matapana Road in Palm Beach, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Matapana Road, the actual operating speeds from the MegaMaps tool are 23.12km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – McIntosh Road (Oneroa)

The speed limit on McIntosh Road, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>McIntosh Road connects to Queens Drive to the east. This road provides access to residential properties. McIntosh Road is approximately 0.09 km in length.</p> <p>McIntosh Road is classified as an Access road under the one network road classification (ONRC). McIntosh Road is a two-lane undivided road. There are no footpaths or cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for McIntosh Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on McIntosh Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of McIntosh Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Queens Drive:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	90
Annual Daily Traffic (vpd)	100

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume (vpd)	100	1

The Infrastructure Risk Rating Score is 2.52. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of McIntosh Road.*

McIntosh Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of McIntosh Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for McIntosh Road due to a multitude of factors. These being the Narrow and Curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on McIntosh Road in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for McIntosh Road, the actual operating speeds from the MegaMaps tool are 20 km/h.

Therefore, we have determined 30 km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – McMillan Road (Ōmiha)

The speed limit on McMillan Road, Ōmiha, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>McMillan Road connects to Wairau Road to the west and O'Brien Road to the east. This road provides access to residential properties and provides beach access. McMillan Road is approximately 0.41 km in length.</p> <p>McMillan Road is classified as an Access road under the one network road classification (ONRC). McMillan Road is a two-lane undivided road. There are no footpaths or cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 0 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for McMillan Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on McMillan Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of McMillan Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Wairau Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>O'Brien Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Valley Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (m)	412
Annual Daily Traffic (vpd)	156

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	10 to <20	1.1
Traffic volume (vpd)	156	1

The Infrastructure Risk Rating Score is 2.46. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of McMillan Road.*

McMillan Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of McMillan Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for McMillan Road due to a multitude of factors. These being the Narrow and Curved nature of the road, the Severe roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 1 minor and 0 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on McMillan Road in Ōmiha, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for McMillan Road, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Miami Avenue (Surfdale)

The speed limit on Miami Avenue, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Miami Avenue connects to Hamilton Road to the north and Mitchell Road to the south. This road provides access to residential properties and commercial activity. Miami Avenue is approximately 0.31 km in length.</p> <p>Miami Avenue is classified as an Arterial road under the one network road classification (ONRC). Miami Avenue is a two-lane undivided road. There are footpaths and shared paths along this road. On-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 3 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Miami Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane and narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 7832 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and the traffic survey (7,961 vpd).
(i) any planned modification to the road; and	There are currently no planned modifications.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Miami Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Miami Avenue has a mean operating speed in the range of 37.85 km/h. Mean operating speed is 35.4km/h from recent traffic surveys.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Hamilton Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Mitchell Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Alison Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Ocean Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	310
Annual Daily Traffic (vpd)	7832

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Medium lane, narrow shoulder	1.45
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume (vpd)	7832	2.2

The Infrastructure Risk Rating Score is 2.86. For Urban areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Miami Avenue.*

A proposed speed limit of 30km/h was selected for Miami Avenue due to a multitude of factors. These being the Medium lane width and Curved nature of the road, the Moderate roadside hazards, its Arterial function and its existing mean operating speed (35.4km/h). These features also contribute to the roads "High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 3 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 3 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Miami Avenue in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Miami Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Miro Road (Palm Beach)

The speed limit on Miro Road, Palm Beach, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Miro Road connects to Palm Road to its northern end. This road provides access to residential properties as well as Palm Beach. Miro Road is approximately 0.31 km in length.</p> <p>Miro Road is classified as a Secondary Collector road under the one network road classification (ONRC). Miro Road is a two-lane undivided road. There are no footpaths and cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Miro Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Miro Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Miro Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Palm Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	310
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 1.74. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Miro Road.*

Miro Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Miro Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Miro Road due to a multitude of factors. These being the Narrow and Straight nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (20km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Miro Road in Palm Beach, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Miro Road, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mitchell Road (Surfdale)

The speed limit on Mitchell Road, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mitchell Road connects to Miami Avenue to the west and to Alison Road to the east. This road provides access to residential properties and Mitchell Reserve. Mitchell Road is approximately 0.32 km in length.</p> <p>Mitchell Road is classified as a Secondary Collector road under the one network road classification (ONRC). Mitchell Road is a two-lane undivided road. There are footpaths and a cycle lane provided along this road. On-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mitchell Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8736 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey data (8790vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Mitchell Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Mitchell Road has a mean operating speed in the range of 31.59 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Miami Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Alison Road:</b> 50 km/h (proposed 50/30 km/h)</li> <li><b>Hooks Lane:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	320
Annual Daily Traffic (vpd)	8736

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume (vpd)	8736	2.2

The Infrastructure Risk Rating Score is 2.61. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Mitchell Road.*

A proposed speed limit of 30km/h was selected for Mitchell Road due to a multitude of factors. These being the Medium and Straight nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (31.59km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Mitchell Road in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Mitchell Road, the actual operating speeds from the MegaMaps tool are 31.59km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Moa Avenue (Oneroa)

The speed limit on Moa Avenue, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Moa Avenue connects to Ocean View Road to the north and The Esplanade to the south. This road provides access to residential properties, parks and beaches. Moa Avenue is approximately 0.57 km in length.</p> <p>Moa Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Moa Avenue is a two-lane undivided road. There are footpaths separated from the carriageway by grass berms along this road. There are no cycle lanes. On-street parking is not provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Moa Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1663 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Moa Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Moa Avenue has a mean operating speed in the range of 29.77 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>The Esplanade:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Rata Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Nikau Road:</b> 60 km/h (proposed 30 km/h)</li> <li><b>Manuka Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Matai Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Kiwi Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Ocean View Road:</b> 50 km/h (proposed 50 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	570
Annual Daily Traffic (vpd)	1663

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume (vpd)	1663	1.4

The Infrastructure Risk Rating Score is 2.41. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Moa Avenue.*

A proposed speed limit of 30km/h was selected for Moa Avenue due to a multitude of factors. These being the Medium and Straight nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (29.77km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Moa Avenue in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Moa Avenue, the actual operating speeds from the MegaMaps tool are 29.77km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Moana Avenue (Surfdale)

The speed limit on Moana Avenue, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Moana Avenue connects to Surfdale Road to the west and Park Road to the east. This road provides access to residential properties. Moana Avenue is approximately 0.28 km in length.</p> <p>Moana Avenue is classified as an Access road under the one network road classification (ONRC). Moana Avenue is a two-lane undivided road. There are no footpaths or cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Moana Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Moana Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Moana Avenue has a mean operating speed in the range of 20.46 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Surfdale Road:</b> 50 km/h (proposed 50 km/h)</li> <li><b>Park Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Burrell Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	280
Annual Daily Traffic (vpd)	260

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	260	1

The Infrastructure Risk Rating Score is 1.98. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Moana Avenue.*

Moana Avenue is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Moana Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Moana Avenue due to a multitude of factors. These being the Narrow and Straight nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20.46 km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Moana Avenue in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Moana Avenue, the actual operating speeds from the MegaMaps tool are 20.46 km/h.

Therefore, we have determined 30 km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Motukaha Road (Waiheke Island)

The speed limit on Motukaha Road, Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Motukaha Road connects to Nick Johnstone Drive to the north. This road provides access to residential properties. Motukaha Road is approximately 0.45 km in length.</p> <p>Motukaha Road is classified as an Access road under the one network road classification (ONRC). Motukaha Road is two-lane undivided road. No footpaths or cycle lanes are provided along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are 0 Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Motukaha Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane and Very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using the drive over footage and the MegaMaps tool. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 683 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Motukaha Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Motukaha Road has a mean operating speed in the range of 35.01 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Nick Johnstone Drive:</b> 50km/h (40km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	450
Annual Daily Traffic (vpd)	683

The Collective Risk score is 0 and the Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural residential	1.5
Intersection density (per km)	3 to <5	1.5
Access density (per km)	5 to <10	1.06
Traffic volume	683	1

The Infrastructure Risk Rating Score is 1.35. For Rural areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Motukaha Road.*

Motukaha Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Motukaha Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Motukaha Road due to a multitude of factors. These being the narrow and straight nature of the road, the moderate roadside hazards, its access function and its existing mean operating speed (35.01km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Motukaha Road in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Motukaha Road is 40 km/h which is lower than the speed limit recommended by the Speed Management Guide (80km/h); however, this is considered appropriate based on the function of the road and the mean operating speed supports the reduction.

## Speed Limit Review – Muritai Road (Ostend)

The speed limit on Muritai Road, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Muritai Road connects to Wharf Road to the west. This road provides access to residential properties. Muritai Road is approximately 0.16 km in length.</p> <p>Muritai Road is classified as an Access road under the one network road classification (ONRC). Muritai Road is Unsealed. There are no footpaths or cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Muritai Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Muritai Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Muritai Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Wharf Road:</b> 50 km/h (proposed 50 km/h)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	160
Annual Daily Traffic (vpd)	104

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	104	1

The Infrastructure Risk Rating Score is 2.67. For Urban areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Muritai Road.*

Muritai Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Muritai Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Muritai Road due to a multitude of factors. These being the Narrow and Curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Muritai Road in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Muritai Road, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Natzka Road (Ostend)

The speed limit on Natzka Road, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Natzka Road connects to Ostend Road to the north and Ladd Road to the south. This road provides access to residential properties. Natzka Road is approximately 0.67 km in length.</p> <p>Natzka Road is classified as an Access road under the one network road classification (ONRC). Natzka Road is a two-lane undivided road. There are footpaths along this road. There are no cycle lanes. On-street parking is not provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Natzka Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 208 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Natzka Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Natzka Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Ostend Road:</b> 50 km/h (proposed 50 km/h)</li> <li><b>Calais Terrace:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Ladd Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	670
Annual Daily Traffic (vpd)	208

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Winding	3.5
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	10 to <20	1.1
Traffic volume (vpd)	208	1

The Infrastructure Risk Rating Score is 2.75. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Natzka Road.*

Natzka Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Natzka Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Natzka Road due to a multitude of factors. These being the Narrow and Winding nature of the road, the Severe roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Natzka Road in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Natzka Road, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Neil Avenue (Waiheke Island)

The speed limit on Neil Avenue, Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Neil Avenue connects to Anzac Road to the west and Hunterville Road to the east. This road provides access to residential properties. Neil Avenue is approximately 0.04 km in length.</p> <p>Neil Avenue is unclassified under the one network road classification (ONRC). Neil Avenue is a two-way, unsealed, undivided road. There are no footpaths and cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are 0 Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Neil Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane and Very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using the drive over footage and the MegaMaps tool. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	No average daily traffic (ADT) data was available.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Neil Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This road has no available recorded mean operating speed.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Anzac Road:</b> 50km/h (40km/h proposed)</li> <li><b>Hunterville Road:</b> 50km/h (40km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	40
Annual Daily Traffic (vpd)	n/a

The Collective Risk score is 0 and the Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Unsealed	10
Road alignment	Straight	1
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural residential	1.5
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume	n/a	1

The Infrastructure Risk Rating Score is 2.4. For Rural areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Neil Avenue.*

Even though no mean operating speed data was available, given the function and nature of the road and the low operating speed of the adjoining road, Neil Avenue is likely to be a Self-Explaining road (despite the existing 50 km/h speed limit). Engineering up of Neil Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Neil Avenue due to a multitude of factors. These being the narrow and straight nature of the road and the moderate roadside hazards. These features also contribute to the roads "High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Neil Avenue in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Neil Avenue is 40km/h which is aligned with the recommended safe and appropriate speed.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Nelson Avenue (Surfdale)

The speed limit on Nelson Avenue, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nelson Avenue connects to Bryan Road to west and Kennedy Road to the east. This road provides access to residential properties. Nelson Avenue is approximately 0.35 km in length.</p> <p>Nelson Avenue is classified as an Access road under the one network road classification (ONRC). Nelson Avenue is a two-lane undivided road, with a section of unsealed road. There are no footpaths or cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Nelson Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 92 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road. The available traffic survey was 292vpd, which is higher than the MegaMaps volume but still indicates the road is lightly trafficked.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Nelson Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Nelson Avenue has a mean operating speed in the range of 22 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Bryan Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Wellington Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Kennedy Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	350
Annual Daily Traffic (vpd)	92

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	92	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Nelson Avenue.*

Nelson Avenue is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Nelson Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Nelson Avenue due to a multitude of factors. These being the Narrow and Curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (22 km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Nelson Avenue in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

The speed management guide suggests 40 km/h as the safe and appropriate speed for Nelson Avenue. and the actual operating speed from the traffic survey is 39 km/h. However, this is noticeably higher than the Megamaps speed (22km/h). It is considered that the location of the 39km/h speed is not reflective of entire length of the road.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Nepean Avenue (Waiheke Island)

The speed limit on Nepean Avenue, Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nepean Avenue connects to Anzac Avenue to the east. This road provides access to residential access. Nepean Avenue is approximately 0.43 km in length.</p> <p>Nepean Avenue is classified as an Access road under the one network road classification (ONRC). Nepean Avenue is a two-way, unsealed road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Nepean Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane and Very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using the drive over footage and the MegaMaps tool. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 52 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Nepean Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Nepean Avenue has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Anzac Road:</b> 50km/h (40km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	430
Annual Daily Traffic (vpd)	52

The Collective Risk score is 0 and the Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Unsealed	10
Road alignment	Winding	3.5
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Rural residential	1.5
Intersection density (per km)	2 to <3	1.25
Access density (per km)	>20	1.3
Traffic volume (vpd)	52	1

The Infrastructure Risk Rating Score is 2.63. For Rural areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Nepean Avenue.*

Nepean Avenue is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Nepean Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Nepean Avenue due to a multitude of factors. These being the narrow and winding nature of the road, the severe roadside hazards, its access function and its existing mean operating speed (20km/h). These features also contribute to the roads "High" IRR score, making it a high-risk road. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Nepean Avenue in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Nepean Avenue is 40km/h which is aligned with the recommended safe and appropriate speed.

## Speed Limit Review – Newton Road (Oneroa)

The speed limit on Newton Road, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Newton Road connects to Queens Drive to the south. This road provides access to residential properties and Newton Reserve. Newton Road is approximately 0.4 km in length.</p> <p>Newton Road is classified as an Access road under the one network road classification (ONRC). Newton Road is a two-lane undivided road. There are no footpaths or cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Newton Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 200 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Newton Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Newton Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Queens Drive:</b> 50 km/h (proposed 30 km/h)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	400
Annual Daily Traffic (vpd)	200

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	2 to <3	1.25
Access density (per km)	>20	1.3
Traffic volume (vpd)	200	1

The Infrastructure Risk Rating Score is 1.92. For Urban areas this corresponds to an IRR band of **Low-Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Newton Road.*

Newton Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Newton Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Newton Road due to a multitude of factors. These being the Narrow and Curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Newton Road in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Newton Road, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Nick Johnstone Drive (Waiheke Island)

The speed limit on Nick Johnstone Drive, Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nick Johnstone Drive connects to Church Bay Road to the east. This road provides access to residential properties and vineyards. Nick Johnstone Drive is approximately 1.86 km in length.</p> <p>Nick Johnstone Drive is classified as an Access road under the one network road classification (ONRC). Nick Johnstone Drive is a two-lane, undivided road. There are no footpaths or cycle lanes pedestrian along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Nick Johnstone Drive were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and Very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using the drive over footage and the MegaMaps tool. The IRR defines Rural residential as <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 683 vehicles per day (vpd), whilst available traffic survey data shows 304vpd. It is possible that the traffic volumes along this road may be subject to seasonal variation due to the access to vineyards and the associated accommodation. To be conservative, the larger traffic volume has been adopted.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Nick Johnstone Drive is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Nick Johnstone Drive has a mean operating speed in the range of 35 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Church Bay Road:</b> 50km/h (40km/h proposed)</li> <li><b>Motukaha Road:</b> 50km/h (40km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	1860
Annual Daily Traffic (vpd)	683

The Collective Risk score is 0 and the Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	683	1

The Infrastructure Risk Rating Score is 1.49. For Rural areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Nick Johnstone Drive.*

Nick Johnstone Drive is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Nick Johnstone Drive was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Nick Johnstone Drive due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its access function and its existing mean operating speed (35. km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as 'Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Nick Johnstone Drive in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Nick Johnstone Drive is 40 km/h which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed supports the reduction.

## Speed Limit Review – Nikau Road (Oneroa)

The speed limit on Nikau Road, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nikau Road connects to Tui Street to the west and Moa Avenue to the east. This road provides access to residential properties and a park. Nikau Road is approximately 0.51 km in length.</p> <p>Nikau Road is classified as an Secondary Collector road under the one network road classification (ONRC). Nikau Road is a two-lane undivided road. There are no footpaths or cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Nikau Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Nikau Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Nikau Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Tui Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Moa Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Ridge Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Tahatai Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	510
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 1.98. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Nikau Road.*

Nikau Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Nikau Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Nikau Road due to a multitude of factors. These being the Narrow and Straight nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (20km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Nikau Road in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Nikau Road, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## 2. Speed Limit Review – O'Brien Road (Ōmiha)

O'Brien Road, Ōmiha, is divided into the following sections and outlined as follows<sup>1</sup>:

1. Section 1: O'Brien Road Between Te Whau Drive and Glen Brook Road
2. Section 2: O'Brien Road Between Onetangi Road and Te Whau Drive

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of O'Brien Road, Ōmiha have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul>	
	Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	O'Brien Road connects to Te Whau Drive to the north and Pohutukawa Avenue / Glen Brook Road to the south. This road provides access to residential properties.	O'Brien Road connects to Onetangi Road to the north and Te Whau Drive to the south. This road provides access to residential properties, and Onetangi Sports Park.
	This section of O'Brien Road is 1.06km in length. It is classified as an Secondary Collector road under the one network road classification (ONRC). O'Brien Road is a two-lane undivided road.	This section of O'Brien Road is 1.72km in length. It is classified as an Secondary Collector road under the one network road classification (ONRC). O'Brien Road is a two-lane undivided road.
	This section is a two-way, two-lane, undivided road. There are no footpath or cycle lanes along this section.	This section is a two-way, two-lane, undivided road. There are no footpaths or cycle lanes along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes for all road users and therefore the crash risk for all road users was considered.	
	CAS records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.	CAS records 8 crashes between 2016 and 2020: 0 fatal, 1 serious, 3 minor and 4 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for O'Brien Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane, very narrow shoulder</li> </ul> <b>Roadside hazards (in both directions):</b> Severe	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane, very narrow shoulder</li> </ul> <b>Roadside hazards (in both directions):</b> Severe
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using the drive over footage. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements".	The adjacent land use is classified as Rural residential using the drive over footage. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements".
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3</li> </ul> <b>Access density:</b> 2 to <5	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3</li> </ul> <b>Access density:</b> 2 to <5
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 711 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 711 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit(s) on O'Brien Road are as follows: <ul style="list-style-type: none"> <li>50km/h Between Te Whau Drive and Glen Brook Road</li> <li>80km/h Between Onetangi Road and Te Whau Drive</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on O'Brien Road are as follows: <ul style="list-style-type: none"> <li>35.52km/h Between Te Whau Drive and Glen Brook Road</li> <li>43.22km/h Between Onetangi Road and Te Whau Drive</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Onetangi Road:</b> 60 km/h (proposed 60 km/h)</li> <li><b>Ostend Road:</b> 60 km/h (proposed 50 km/h)</li> <li><b>Gordons Road:</b> 80 km/h (proposed 50 km/h)</li> <li><b>Margaret Reeve Lane:</b> 50 km/h (proposed 50 km/h)</li> <li><b>Te Whau Drive:</b> 80 km/h (proposed 50 km/h)</li> <li><b>Okoka Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Valley Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>McMillan Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Pohutukawa Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Glenbrook Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	4
DSI crashes during the period	0	1
Corridor Length (m)	1060	1720
Annual Daily Traffic (vpd)	711	711

- Section 1
  - The Collective Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.
- Section 2
  - The Collective Risk score is 0.12. For Rural areas this corresponds to a Collective Risk band of **Medium-High**.
  - Personal Risk score is 44.81. A Personal Risk band of **High**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Winding	3.5	Curved	1.8
Carriageway width (road lane + shoulder)	Medium lane, very narrow shoulder	1.79	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	Severe	2.8	Severe	2.8
Adjacent land use	Rural residential	1.5	Rural residential	1.5
Intersection density (per km)	2 to <3	1.25	2 to <3	1.25
Access density (per km)	2 to <5	1.03	2 to <5	1.03
Traffic volume (vpd_)	711	1	711	1

- Section 1: The Infrastructure Risk Rating Score is 2.10. For Rural areas this corresponds to an IRR band of **High**.
- Section 2: The Infrastructure Risk Rating Score is 1.81. For Rural areas this corresponds to an IRR band of **Medium-High**.

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is:

- <80km/h between Te Whau Drive and Glen Brook Road (Section 1),
- <80km/h between Onetangi Road and Te Whau Drive (Section 2)

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 30km/h on Between Te Whau Drive and Glen Brook Road (Section 1),
- 50km/h on Between Onetangi Road and Te Whau Drive (Section 2).

O'Brien Road – Section 1, between Te Whau Drive and Glen Brook Road, is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 30km/h was selected, for Section 1 due to a multitude of factors. These being Medium lane width and Winding nature of the road, the Severe roadside hazards, its Secondary Collector function and its existing mean operating speed (35.52km/h). These features also contribute to the roads "High" IRR score making it a high-risk road<sup>2</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 2 non-injury crashes.

O'Brien Road – Section 2, between Onetangi Road and Te Whau Drive, is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 80km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 50km/h was selected, for Section 2 due to a multitude of factors. These being Medium lane width and Curved nature of the road, the Severe roadside hazards, its Secondary Collector function and its existing mean operating speed (43.22km/h). These features also contribute to the roads "Medium-High" IRR score. The collective and personal risk of this road are classified as Medium High and High due to the number of DSI crashes, making it a high-risk road<sup>3</sup>.

Crash history from WK NZTA's CAS database shows 8 crashes in the last 5 years including 0 fatal, 1 serious, 3 minor and 4 non-injury crashes.

After considering all the above factors, the existing speed limit(s) on O'Brien Road in Ōmiha, are not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for O'Brien Road – Section 2, is 50km/h which is aligned with the recommended safe and appropriate speed.

While the speed management guide suggests <80km/h as the safe and appropriate speed for O'Brien Road – Section 1, the actual operating speeds from the MegaMaps tool are 35.53km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

<sup>3</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Ocean Road (Surfdale)

Ocean Road, Surfdale, is divided into the following sections and outlined as follows<sup>1</sup>:

1. Section 1: Ocean Road between Jellicoe Parade and Miami Avenue
2. Section 2: Ocean Road between Jellicoe Parade and Junction Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Ocean Road, Surfdale have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul>	
	Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Ocean Road connects to Jellicoe Parade in the east and Miami Avenue in the west. This road provides access to residential properties.	Ocean Road connects to Jellicoe Parade in the west and Junction Road in the east. This road provides access to residential properties and some commercial activity.
	This section of Ocean Road is 1.1km in length. It is classified as an Access road under the one network road classification (ONRC). Ocean Road is a two-lane undivided road.	This section of Ocean Road is 0.67km in length. It is classified as an Secondary Collector road under the one network road classification (ONRC). Ocean Road is a two-lane undivided road.
	This section is a two-way, two-lane, undivided road. There are no footpaths or cycle lanes along this section.	This section is a two-way, two-lane, undivided road. There are no footpaths or cycle lanes along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes for all road users and therefore the crash risk for all road users was considered.	
	CAS records 1 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.	CAS records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for Ocean Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane, very narrow shoulder</li> </ul> <b>Roadside hazards (in both directions):</b> High	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane, very narrow shoulder</li> </ul> <b>Roadside hazards (in both directions):</b> Moderate
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5</li> </ul> <b>Access density:</b> 10 to <20	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5</li> </ul> <b>Access density:</b> 10 to <20
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 307 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 307 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit(s) on Ocean Road are as follows: <ul style="list-style-type: none"> <li>50km/h Between Jellicoe Parade and Miami Avenue</li> <li>50km/h Between Jellicoe Parade and Junction Road</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Ocean Road are as follows: <ul style="list-style-type: none"> <li>20km/h Between Jellicoe Parade and Miami Avenue</li> <li>32.57km/h Between Jellicoe Parade and Junction Road</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Junction Road:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Pacific Parade:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Queens Drive:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Jellicoe Parade:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Wellington Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Hamilton Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Bryan Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Miami Avenue:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	1
DSI crashes during the period	0	0
Corridor Length (m)	1100	670
Annual Daily Traffic (vpd)	307	307

- Section 1
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.
- Section 2
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Winding	3.5
Carriageway width (road lane + shoulder)	Narrow lane, very narrow shoulder	2.01	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28	Moderate	1.43
Adjacent land use	Urban residential	3	Urban residential	3
Intersection density (per km)	3 to <5	1.5	3 to <5	1.5
Access density (per km)	10 to <20	1.1	10 to <20	1.1
Traffic volume (vpd)	307	1	307	1

- Section 1: The Infrastructure Risk Rating Score is 2.13. For Urban areas this corresponds to an IRR band of **Medium**.
- Section 2: The Infrastructure Risk Rating Score is 2.22. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is:

- 40km/h Between Jellicoe Parade and Miami Avenue (Section 1),
- 40km/h Between Jellicoe Parade and Junction Road (Section 2)

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 30km/h on Between Jellicoe Parade and Miami Avenue (Section 1),
- 40km/h on Between Jellicoe Parade and Junction Road (Section 2).

Ocean Road – Section 1, between Jellicoe Parade and Miami Avenue, is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 30km/h was selected, for Section 1 due to a multitude of factors. These being Narrow and Curved nature of the road, the High roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 1 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

Ocean Road – Section 2, between Jellicoe Parade and Junction Road, is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 40km/h was selected, for Section 2 due to a multitude of factors. These being Medium lane width and Winding nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (33km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) on Ocean Road in Surfdale, are not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Ocean Road – Section 2, is 40km/h which is aligned with the recommended safe and appropriate speed.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ocean Road – Section 1, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ocean View Road (Oneroa)

Ocean View Road, Oneroa, is divided into the following section and outlined as follows<sup>1</sup>:

- Section 1: Ocean View Road Between the western end of Ocean View Road and 400m east of the western end of Ocean View Road
- Section 2: Ocean View Road Between 400m east of the western end of Ocean View Road and 50m south of Korora Road
- Section 3: Ocean View Road Between 50m south of Korora Road and Puriri Road
- Section 4: Ocean View Road Between Puriri Road and Pacific Parade

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Ocean View Road, Oneroa have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments			
	Section 1	Section 2	Section 3	Section 4
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.			
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.			
(c) the function and use of the road; and	Ocean View Road between its western end and 400m east of its western end.  This road provides access to the Waiheke ferry terminal and surrounding parking.	Ocean View Road between 400m east of its western end and connect to Korora Road to the east.  This road provides access to residential properties and acts as a connector route from the ferry terminal to Oneroa.	Ocean View Road connects Korora Road to the west and Puriri Road to the east.  This road provides access to commercial properties and the Oneroa town centre.	Ocean View Road connects Puriri Road to the west to Pacific Parade to the east.  This road provides access to residential properties.

	This section of Ocean View Road is classified as an Arterial road under the one network road classification (ONRC). Ocean View Road is Two-lane undivided. This section is 0.400km in length.	This section of Ocean View Road is classified as an Arterial road under the one network road classification (ONRC). Ocean View Road is Two-lane undivided. This section is 1.00km in length.	This section of Ocean View Road is classified as an Arterial road under the one network road classification (ONRC). Ocean View Road is Two-lane undivided. This section is 1.50km in length.	This section of Ocean View Road is classified as an Arterial road under the one network road classification (ONRC). Ocean View Road is Two-lane undivided. This section is 1.09km in length.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes for all road users and therefore the crash risk for all road users was considered.			
	CAS records 0 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 0 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.	CAS records 8 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 7 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.	CAS records 9 crashes between 2016 and 2020: 0 fatal, 0 serious, 2 minor and 7 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.	CAS records 17 crashes between 2016 and 2020: 0 fatal, 1 serious, 6 minor and 10 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for Ocean View Road were determined using a combination of site drive-over footage and geomaps information.			
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane and narrow shoulder</li> </ul> <b>Roadside hazards (in both directions):</b> Moderate	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane and very narrow shoulder</li> </ul> <b>Roadside hazards (in both directions):</b> Moderate	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane and very narrow shoulder</li> </ul> <b>Roadside hazards (in both directions):</b> High	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane and very narrow shoulder</li> </ul> <b>Roadside hazards (in both directions):</b> Severe

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as “Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day”.	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as “Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day”.	The adjacent land use is classified as Commercial strip shopping using the drive over footage and the MegaMaps tool. The IRR defines Commercial strip shopping as “Characterised by numerous shops facing the streetfront with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present.”.	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as “Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day”.
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information			
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1</li> <li><b>Access density:</b> 2 to &lt;5</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1</li> <li><b>Access density:</b> 10 to &lt;20</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1</li> <li><b>Access density:</b> 10 to &lt;20</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1</li> <li><b>Access density:</b> 10 to &lt;20</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4668 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 4668 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 7957 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 7957 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.			
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.			

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to

Current speed limit	The existing speed limit on Ocean View Road are as follows: <ul style="list-style-type: none"> <li>50km/h Between the western end of Ocean View Road and 400m east of the western end of Ocean View Road</li> <li>50km/h Between 400m east of the western end of Ocean View Road and 50m south of Korora Road</li> <li>50km/h Between 50m south of Korora Road and Puriri Road</li> <li>50km/h Between Puriri Road and Pacific Parade</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Ocean View Road are as follows: <ul style="list-style-type: none"> <li>41.67km/h Between the western end of Ocean View Road and 400m east of the western end of Ocean View Road</li> <li>41.67km/h Between 400m east of the western end of Ocean View Road and 50m south of Korora Road</li> <li>48.42km/h Between 50m south of Korora Road and Puriri Road</li> <li>48.42km/h Between Puriri Road and Pacific Parade</li> </ul>
Existing Speed limits on adjoining roads	Ocean View Road is a spine road and main arterial through Waiheke Island. The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Mako Street:</b> 50km/h (40km/h proposed)</li> <li><b>Kuaka Road:</b> 50km/h (30km/h proposed)</li> <li><b>Kororo Road:</b> 50km/h (30km/h proposed)</li> <li><b>Oue Road:</b> 50km/h (30km/h proposed)</li> <li><b>Oneroa Village Lane:</b> 50km/h (30km/h proposed)</li> <li><b>Weka Road:</b> 50km/h (30km/h proposed)</li> <li><b>Tui Street:</b> 50km/h (30km/h proposed)</li> <li><b>Puriri Road:</b> 50km/h (30km/h proposed)</li> <li><b>Moa Avenue:</b> 50km/h (30km/h proposed)</li> <li><b>Goodwin Avenue:</b> 50km/h (40km/h proposed)</li> <li><b>Pacific Parade:</b> 50km/h (40km/h proposed)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Section 1	Section 2	Section 3	Section 4
Crash Analysis Period (years)	5	5	5	5
Total injury crashes during period	0	1	2	7
DSI crashes during the period	0	0	0	1
Corridor Length (m)	400	1000	1500	1090
Annual Daily Traffic (vpd)	4668	4668	7957	7957

- Section 1
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.
- Section 2
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.
- Section 3
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.
- Section 4
  - The Collective Risk score is 0.18. For Urban areas this corresponds to a Collective Risk band of **Medium-High**.

- Personal Risk score is 6.3. A Personal Risk band of **Medium**.

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2		Section 3		Section 3	
	Category	Risk Score	Category	Category	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Curved	1.8	Curved	1.8	Curved	1.8
Carriageway width (road lane + shoulder)	Medium, Narrow	1.45	Medium, Very narrow	1.79	Medium, Very narrow	1.79	Medium, Very narrow	1.79
Roadside hazards (in both directions)	Moderate	1.43	Moderate	1.43	High	2.28	Severe	2.8
Adjacent land use	Urban residential	3	Urban residential	3	Commercial strip shopping	5	Urban residential	3
Intersection density (per km)	<1	1	<1	1	<1	1	<1	1
Access density (per km)	2 to <5	1.03	10 to <20	1.1	10 to <20	1.1	10 to <20	1.1
Traffic volume	4668	1.4	4668	1.4	7957	2.2	7957	2.2

- 30km/h on Between the western end of Ocean View Road and 400m east of the western end of Ocean View Road (Section 1),
- 50km/h on Between 400m east of the western end of Ocean View Road and 50m south of Korora Road (Section 2),
- 30km/h on Between 50m south of Korora Road and Puriri Road (Section 3).
- 50km/h on Between Puriri Road and Pacific Parade (Section 4).

A proposed speed limit of 30km/h was selected, for Section 1 due to a multitude of factors. These being medium lane width and curved nature of the road, the Moderate roadside hazards, its Arterial function and high pedestrian/cyclist demand near ferry terminal and carparks. These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

It's recommended to remain the 50km/h for Section 2 due to a multitude of factors. These being Medium lane width and Curved nature of the road, the Moderate roadside hazards, and its Arterial function. These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively. Crash history from WK NZTA's CAS database shows 8 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor and 7 non-injury crashes.

A proposed speed limit of 30km/h was selected, for Section 3 due to a multitude of factors. These being Medium lane width and Curved nature of the road, the High roadside hazards, its Arterial function and high pedestrian/cyclist demand at town centre. These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as 'Low and Low respectively. Crash history from WK NZTA's CAS database shows 9 crashes in the last 5 years including 0 fatal, 0 serious, 2 minor and 7 non-injury crashes.

Engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

It's recommended to remain the 50km/h, for Section 4 due to a multitude of factors. These being Medium lane width and Curved nature of the road, the High roadside hazards, its Arterial function and its existing mean operating speed (48.42km/h). These features also contribute to the roads "Medium" IRR score and due to adverse crash history on the road. The collective and personal risk of this road are classified as 'Medium-high and Medium respectively due to the number of DSI crashes, making it a high-risk road<sup>2</sup>. Crash history from WK NZTA's CAS database shows 17 crashes in the last 5 years including 0 fatal, 1 serious, 6 minor and 10 non-injury crashes.

After considering all the above factors, the existing speed limit(s) on Ocean View Road for section 1 and 3, are not considered to be a safe and appropriate speed limit for this road.

We have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

- Section 1: The Infrastructure Risk Rating Score is 1.87. For Urban areas this corresponds to an IRR band of **Low-Medium**.
- Section 2: The Infrastructure Risk Rating Score is 1.90. For Urban areas this corresponds to an IRR band of **Low-Medium**.
- Section 3: The Infrastructure Risk Rating Score is 2.52. For Urban areas this corresponds to an IRR band of **Medium-High**.
- Section 4: The Infrastructure Risk Rating Score is 2.30. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is:

- 40km/h Between the western end of Ocean View Road and 400m east of the western end of Ocean View Road (Section 1),
- 50km/h Between 400m east of the western end of Ocean View Road and 50m south of Korora Road (Section 2),
- 40km/h Between 50m south of Korora Road and Puriri Road (Section 3)
- 50km/h on Between Puriri Road and Pacific Parade (Section 4).

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation is

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Okoka Road (Ōmiha)

The speed limit on Okoka Road, Ōmiha, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Okoka Road connects to O'Brien Road to the north and Fairview Crescent / Glen Brook Road to the south. This road provides access to residential properties. Okoka Road is approximately 0.77 km in length.</p> <p>Okoka Road is classified as an Access road under the one network road classification (ONRC). Okoka Road is a two-lane undivided road. There are no footpaths or cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 2 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Okoka Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Okoka Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Okoka Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>O'Brien Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Fairview Crescent:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Glen Brook Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	2
DSI crashes during the period	0
Corridor Length (m)	770
Annual Daily Traffic (vpd)	156

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Tortuous	6
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	2 to <3	1.25
Access density (per km)	>20	1.3
Traffic volume (vpd)	156	1

The Infrastructure Risk Rating Score is 2.73. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Okoka Road.*

Okoka Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Okoka Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Okoka Road due to a multitude of factors. These being the Narrow and Tortuous nature of the road, the Severe roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 3 crashes in the last 5 years including 0 fatal, 0 serious, 2 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Okoka Road in Ōmiha, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Okoka Road, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Omiha Road (Ōmiha)

The speed limit on Omiha Road, Ōmiha, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Omiha Road connects to Glen Brook Road to the west and Upland Road to the east. This road provides access to residential properties and Omiha Beach Reserve. Omiha Road is approximately 0.42 km in length.</p> <p>Omiha Road is classified as a Secondary Collector road under the one network road classification (ONRC). Omiha Road is a two-lane undivided road. There are no footpaths or cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Omiha Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Omiha Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Omiha Road has a mean operating speed in the range of 20.5 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Glen Brook Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Upland Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	421
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Omiha Road.*

Omiha Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Omiha Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Omiha Road due to a multitude of factors. These being the Narrow and Curved nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (20.5km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Omiha Road in Omiha, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Omiha Road, the actual operating speeds from the MegaMaps tool are 20.5km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Oneroa Village Lane (Oneroa)

The speed limit on Oneroa Village Lane, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Oneroa Village Lane connects to Ocean View Road to the north and south. This road provides access to commercial activities. Oneroa Village Lane is approximately 0.21 km in length.</p> <p>Oneroa Village Lane is classified as an Access road under the one network road classification (ONRC). Oneroa Village Lane is a one-way road. There are no footpaths or cycle lanes along this road. There is car parking available behind the shops.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Oneroa Village Lane were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> One-way</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial strip shopping using the drive over footage and the MegaMaps tool. The IRR defines Commercial strip shopping as <i>“Characterised by numerous shops facing the streetfront with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present.”</i>
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 52 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Oneroa Village Lane is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Oneroa Village Lane has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Ocean View Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (m)	210
Annual Daily Traffic (vpd)	52

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	One-way	1
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Commercial strip shopping	5
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	52	1

The Infrastructure Risk Rating Score is 1.94. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Oneroa Village Lane.*

Oneroa Village Lane is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Oneroa Village Lane was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Oneroa Village Lane due to a multitude of factors. These being the Narrow and Curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Oneroa Village Lane in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Oneroa Village Lane is 30km/h which is below the recommended safe and appropriate speed from Speed Management Guide. The proposed speed limit is consistent with the adjoin street.

Therefore we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Onetangi Road (Waiheke Island)

Onetangi Road, Waiheke Island, is divided into the following sections and outlined as follows<sup>1</sup>:

1. Section 1: Onetangi Road Between O'Brien Road and Waiata Road
2. Section 2: Onetangi Road Between Waiata Road and Waiheke Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Onetangi Road, Waiheke Island have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Onetangi Road connects to connects to Ostend Road to the west and Waiata Road to the east. This road provides access to residential properties and some recreational/commercial activities.	Onetangi Road connects to connects to Waiata Road to the west and Waiheke Road to the east. This road provides access to residential properties and some recreational/commercial activities.
	This section of Onetangi Road is 1.78km in length. It is classified as a Primary Collector road under the one network road classification (ONRC). Onetangi Road is a two-lane undivided road.	This section of Onetangi Road is 0.95km in length. It is classified as a Primary Collector road under the one network road classification (ONRC). Onetangi Road is a two-lane undivided road
	This section is a two-way, two-lane, undivided road. There are pedestrian/cyclist amenities including footpath and a cycle lane.	This section is a two-way, two-lane, undivided road. There are pedestrian/cyclist amenities including footpath and a cycle lane.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes for all road users and therefore the crash risk for all road users was considered.	
	CAS records 17 crashes between 2016 and 2020: 0 fatal, 0 serious, 5 minor and 12 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.	CAS records 5 crashes between 2016 and 2020. 0 fatal, 0 serious, 2 minor and 3 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for Onetangi Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane, and very narrow shoulder</li> </ul> <p><b>Roadside hazards (in both directions):</b> Moderate</p>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane, and very narrow shoulder</li> </ul> <p><b>Roadside hazards (in both directions):</b> Moderate</p>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".	
	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3</li> </ul> <p><b>Access density:</b> 10 to &lt;20</p>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3</li> </ul> <p><b>Access density:</b> 10 to &lt;20</p>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 5616 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 5616 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit(s) on Onetangi Road are as follows: <ul style="list-style-type: none"> <li>60km/h Between O'Brien Road and Waiata Road</li> <li>50km/h Between Waiata Road and Waiheke Road</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Onetangi Road are as follows: <ul style="list-style-type: none"> <li>61.72km/h Between O'Brien Road and Waiata Road</li> <li>44.67km/h Between Waiata Road and Waiheke Road</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Ostend Road:</b> 50 km/h (proposed 50 km/h)</li> <li><b>O'Brien Road:</b> 80 km/h (proposed 50 km/h)</li> <li><b>Waiata Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Totara Road:</b> 50 km/h (proposed 50 km/h)</li> <li><b>Trig Hill Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Sea View Road:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Eden Terrace:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Fourth Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Waiheke Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	5	2
DSI crashes during the period	0	0
Corridor Length (m)	1780	950
Annual Daily Traffic (vpd)	5616	5616

- Section 1
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.
- Section 2
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Curved	1.8
Carriageway width (road lane + shoulder)	Medium lane, very narrow shoulder	1.79	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43	Moderate	1.43
Adjacent land use	Urban residential	3	Urban residential	3
Intersection density (per km)	2 to <3	1.25	2 to <3	1.25
Access density (per km)	10 to <20	1.1	10 to <20	1.1
Traffic volume (vpd_)	5616	1.4	5616	1.4

- Section 1: The Infrastructure Risk Rating Score is 1.99. For Urban areas this corresponds to an IRR band of **Low-Medium**.
- Section 2: The Infrastructure Risk Rating Score is 1.99. For Urban areas this corresponds to an IRR band of **Low-Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is:

- 50km/h Between O'Brien Road and Waiata Road (Section 1),
- 50km/h Between Waiata Road and Waiheke Road (Section 2)

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60km/h on Between O'Brien Road and Waiata Road (Section 1),
- 50km/h on Between Waiata Road and Waiheke Road (Section 2).

Onetangi Road – Section 1, between O'Brien Road and Waiata Road, is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 60km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 60km/h was selected, for Section 1 due to a multitude of factors. These being Medium lane width and Curved nature of the road, the Moderate roadside hazards, its Primary Collector function and its existing mean operating speed (61.72km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 17 crashes in the last 5 years including 0 fatal, 0 serious, 5 minor and 12 non-injury crashes.

Onetangi Road – Section 2, Between Waiata Road and Waiheke Road, is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 50km/h was selected, for Section 1 due to a multitude of factors. These being Medium lane width and Curved nature of the road, the Moderate roadside hazards, its Primary Collector function and its existing mean operating speed (44.67km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 5 crashes in the last 5 years including 0 fatal, 0 serious, 2 minor and 3 non-injury crashes.

After considering all the above factors, the existing speed limit(s) on Onetangi Road in Waiheke Island, are not considered to be a safe and appropriate speed limit for this road.

The recommended safe and appropriate speed limit for Onetangi Road – Section 1, is 60 km/h which is higher than the Speed Management Guide recommendation (50km/h) but is considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

The proposed safe and appropriate speed limit(s) for Onetangi Road – Section 2, is 50km/h which is aligned with the recommended safe and appropriate speed.

**Speed Limit Review – Orapiu Road (Waiheke Island)**

The speed limit on Orapiu Road, Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Orapiu Road connects to Awaawaroa Road to the west and Anzac Avenue to the east. This road provides access to residential properties and connects to other rural roads. Orapiu Road is approximately 7.97 km in length.</p> <p>Orapiu Road is classified as an Secondary Collector road under the one network road classification (ONRC). Orapiu Road is a two-lane undivided road. No pedestrian and/or cyclist amenities are provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 3 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Orapiu Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Medium lane and Very narrow shoulder</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using the drive over footage and the MegaMaps tool. The IRR defines Remote rural as "Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 600 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road. However, traffic survey data recorded 334vpd. It is possible that the traffic volumes along this road may be subject to seasonal variation due to the access to vineyards and the associated accommodation. To be conservative, the larger traffic volume has been adopted.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Orapiu Road is 80km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Orapiu Road has a mean operating speed in the range of 48.52 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Awaawaroa Road:</b> 80km/h (40km/h proposed)</li> <li>• <b>Anzac Road:</b> 50km/h (40km/h proposed)</li> <li>• <b>Cowes Bay Road:</b> 80km/h (40km/h proposed)</li> <li>• <b>Waiheke Road:</b> 50km/h (60km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	7970
Annual Daily Traffic (vpd)	600

The Collective Risk score is 0 and the Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Tortuous	6
Carriageway width	Medium lane, Very narrow lane	1.79
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Remote rural	1
Intersection density (per km)	<1	1
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	600	1

The Infrastructure Risk Rating Score is 2.06. For Rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60km/h for the full length of Orapiu Road.*

Orapiu Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Orapiu Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60km/h was selected for Orapiu Road due to a multitude of factors. These being the medium width and tortuous nature of the road, the severe roadside hazards, its Secondary Collector function and its existing mean operating speed (48.52km/h). These features also contribute to the roads "High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 3 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 3 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 80 km/h on Orapiu Road in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Orapiu Road is 60km/h which is aligned with the recommended safe and appropriate speed.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Ostend Road (Ostend)**

Ostend Road, Ostend, is divided into the following section and outlined as follows<sup>1</sup>:

1. Section 1: Ostend Road Between Belgium Street and Erua Road
2. Section 2: Ostend Road Between Wharf Road and Belgium Street
3. Section 3: Ostend Road Between Erua Road and O'Brien Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Ostend Road, Ostend have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Ostend Road – Section 1, connects to Belgium Street to the west and Erua Street to the east. This road provides access to residential properties and some services/commercial activities.	Ostend Road – Section 2, connects to Wharf Street to the west and Belgium Street to the east. This road provides access to residential properties.	Ostend Road – Section 3, connects to Erua Street to the west and O'Brien Street to the east. This road provides access to residential properties.
	This section of Ostend Road is 0.90km in length. It is classified as a Primary Collector road under the one network road classification (ONRC). Ostend Road is a two-lane undivided road.	This section of Ostend Road is 0.70km in length. It is classified as a Primary Collector road under the one network road classification (ONRC). Ostend Road is a two-lane undivided road.	This section of Ostend Road is 0.63km in length. It is classified as an Arterial road under the one network road classification (ONRC). Ostend Road is a two-lane undivided road.
	This section is a two-way, two-lane, undivided road. There are footpaths in some places along this section. There are no cycle lanes.	This section is a two-way, two-lane, undivided road. There are footpaths along this section. There are no cycle lanes.	This section is a two-way, two-lane, undivided road. There are footpaths along this section. There are no cycle lanes.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes for all road users and therefore the crash risk for all road users was considered.		
	CAS records 11 crashes between 2016 and 2020: 0 fatal, 1 serious, 2 minor and 8 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes.	CAS records 1 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.	CAS records 4 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 4 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for Ostend Road were determined using a combination of site drive-over footage and geomaps information.		
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane, very narrow shoulder</li> </ul> <p><b>Roadside hazards (in both directions):</b> Moderate</p>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane, very narrow shoulder</li> </ul> <p><b>Roadside hazards (in both directions):</b> Moderate</p>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane, narrow shoulder</li> </ul> <p><b>Roadside hazards (in both directions):</b> Moderate</p>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10</li> <li><b>Access density:</b> &gt;20</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10</li> <li><b>Access density:</b> &gt;20</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10</li> <li><b>Access density:</b> &gt;20</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4317 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 4317 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 7475 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.		

(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.
---	--

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Ostend Road are as follows: <ul style="list-style-type: none"> <li>50km/h Between Belgium Street and Eura Road</li> <li>50km/h Between Wharf Road and Belgium Street</li> <li>60km/h Between Erua Road and O'Brien Road</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Ostend Road are as follows: <ul style="list-style-type: none"> <li>50.47km/h Between Belgium Street and Eura Road</li> <li>29.15km/h Between Wharf Road and Belgium Street</li> <li>60.64km/h Between Erua Road and O'Brien Road</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Onetangi Road:</b> 60 km/h (proposed 60 km/h)</li> <li><b>O'Brien Road:</b> 80 km/h (proposed 50 km/h)</li> <li><b>Erua Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Tahi Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Calais Terrace:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Sea View Road:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Natzka Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Whakarite Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Belgium Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Putiki Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Ladd Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Albert Crescent:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Wharf Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	3	0	0
DSI crashes during the period	1	0	0
Corridor Length (m)	900	700	630
Annual Daily Traffic (vpd)	4317	4317	7475

- Section 1
  - The Collective Risk score is 0.22. For Urban areas this corresponds to a Collective Risk band of **High**.
  - Personal Risk score is 14.10. A Personal Risk band of **High**.
- Section 2
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.

- Section 3
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2		Section 3	
	Category	Risk Score	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Curved	1.8	Curved	1.8
Carriageway width (road lane + shoulder)	Narrow lane, very narrow shoulder	2.01	Medium lane, very narrow shoulder	1.79	Medium lane, narrow shoulder	1.45
Roadside hazards (in both directions)	Moderate	1.43	Moderate	1.43	Moderate	1.43
Adjacent land use	Urban residential	3	Urban residential	3	Urban residential	3
Intersection density (per km)	5 to <10	2.6	5 to <10	2.6	5 to <10	2.6
Access density (per km)	>20	1.3	>20	1.3	>20	1.3
Traffic volume (vpd)	4317	1.4	4317	1.4	7475	2.2

- Section 1: The Infrastructure Risk Rating Score is 2.38. For Urban areas this corresponds to an IRR band of **Medium**.
- Section 2: The Infrastructure Risk Rating Score is 2.38. For Urban areas this corresponds to an IRR band of **Medium**.
- Section 3: The Infrastructure Risk Rating Score is 2.58. For Urban areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is:

- 40km/h Between Belgium Street and Eura Road (Section 1),
- 50km/h Between Wharf Road and Belgium Street (Section 2),
- 50km/h Between Erua Road and O'Brien Road (Section 3)

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 50km/h on Between Belgium Street and Eura Road (Section 1),
- 30km/h on Between Wharf Road and Belgium Street (Section 2),
- 50km/h on Between Erua Road and O'Brien Road (Section 3).

Ostend Road – Section 1, between Belgium Street and Eura Road, is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50km/h was selected, for Section 1 due to a multitude of factors. These being Narrow lane width and Curved nature of the road, the Moderate roadside hazards, its Primary Collector function and its existing mean operating speed (50.47km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as High and High respectively due to the number of DSI crashes, making it a high-risk road<sup>2</sup>.

Crash history from WK NZTA's CAS database shows 11 crashes in the last 5 years including 0 fatal, 1 serious, 2 minor and 8 non-injury crashes.

Ostend Road – Section 2, between Wharf Road and Belgium Street, is a Self-Explaining road as the mean operating speed is already below or near the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 30km/h was selected, for Section 2 due to a multitude of factors. These being Medium lane width and Curved nature of the road, the Moderate roadside hazards, its Primary Collector function and its existing mean operating speed (29.15km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

Ostend Road – Section 3, between Erua Road and O'Brien Road, is a Self-Explaining road as the mean operating speed is already below or near the proposed safe and appropriate speeds, despite the existing 60km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 50km/h was selected, for Section 3 due to a multitude of factors. These being Medium lane width and Curved nature of the road, the Moderate roadside hazards, its Arterial function and its existing mean operating speed (60.64km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>3</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 4 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 4 non-injury crashes.

After considering all the above factors, the existing speed limit(s) on Ostend Road in Ostend, are not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Ostend Road – Section 3, is 50km/h which is aligned with the recommended safe and appropriate speed.

The recommended safe and appropriate speed limit for Ostend Road – Section 1, is 50km/h which is higher than the Speed Management Guide recommendation (40 km/h) but is considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds.

While the speed management guide suggests 50km/h as the safe and appropriate speed for Ostend Road – Section 2, the actual operating speeds from the MegaMaps tool are 29.15km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

<sup>3</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Oue Road (Oneroa)

The speed limit on Oue Road, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Oue Road connects to Ocean View Road to the north and Kuaka Road to the south. This road provides access to residential properties and some commercial activity. Oue Road is approximately 0.16 km in length.</p> <p>Oue Road is classified as a Secondary Collector road under the one network road classification (ONRC). Oue Road is a two-lane undivided road. There are no footpaths or cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Oue Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Oue Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Oue Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Ocean View Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Oneroa Village Lane:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Kuaka Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	160
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 2.27. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Oue Road.*

Oue Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Oue Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Oue Road due to a multitude of factors. These being the Narrow and Straight nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Oue Road in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Oue Road, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Pacific Parade (Oneroa/Surfdale)

The speed limit on Pacific Parade, Oneroa/Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Pacific Parade connects to Surfdale Road to the west and Junction Road / Queens Drive / Ocean Road to the east. This road provides access to residential properties. Pacific Parade is approximately 1.03 km in length.</p> <p>Pacific Parade is classified as a Secondary Collector road under the one network road classification (ONRC). Pacific Parade is a two-lane undivided road. There are footpaths provided on some parts of this road. There are cycle lanes along this road. On-street parking is not provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 4 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 4 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Pacific Parade were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Pacific Parade is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Pacific Parade has a mean operating speed in the range of 43.11 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Surfdale Road:</b> 50 km/h (proposed 50 km/h)</li> <li><b>Frank Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Park Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Short Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>George Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Queens Drive:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Junction Road:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Ocean Road:</b> 50 km/h (proposed 50 km/h)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	1030
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Pacific Parade.*

Pacific Parade is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Pacific Parade was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Pacific Parade due to a multitude of factors. These being the Narrow and Curved nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (43.11km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 4 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 4 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Pacific Parade in Oneroa/Surfdale, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Pacific Parade is 40 km/h which is aligned with the recommended safe and appropriate speed.

## Speed Limit Review – Pah Road (Onetangi)

The speed limit on Pah Road, Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Pah Road connects to Sea View Road to the west. This road provides access to residential properties. Pah Road is approximately 0.14 km in length.
	Pah Road is classified as an Access road under the one network road classification (ONRC). Pah Road is an Unsealed Road. There are no footpaths or cycle lanes along this road. On-street parking is not provided.
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Pah Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Pah Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Pah Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Sea View Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	140
Annual Daily Traffic (vpd)	104

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Unsealed	10
Road alignment	Straight	1
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	104	1

The Infrastructure Risk Rating Score is 2.41. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Pah Road.*

Pah Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Pah Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Pah Road due to a multitude of factors. These being the Narrow and Straight nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Pah Road in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Pah Road, the actual operating speeds from the MegaMaps tool are 20 km/h.

Therefore, we have determined 30 km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Palm Road (Palm Beach)

The speed limit on Palm Road, Palm Beach, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Palm Road connects to Miro Road to the north/west and to Hill Road to the south. This road provides access to residential properties, Palm Beach Reserve and provides beach access. Palm Road is approximately 0.79 km in length.</p> <p>Palm Road is classified as a Secondary Collector road under the one network road classification (ONRC). Palm Road is a two-lane undivided road. There are footpaths along and on-street parking provisions along this road. There are no cycle lanes provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. Therefore, there are 0 Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Palm Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 960 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (960vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Palm Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Palm Road has a mean operating speed in the range of 29.69 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Miro Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Tiri View Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Hill Road:</b> 50 km/h (proposed 30/40 km/h)</li> <li><b>Bay Road:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Te Toki Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	790
Annual Daily Traffic (vpd)	960

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	960	1

The Infrastructure Risk Rating Score is 2.53. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Palm Road.*

Palm Road is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Palm Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Palm Road due to a multitude of factors. These being the Narrow and Curved nature of the road, the Severe roadside hazards, its Secondary Collector function and its existing mean operating speed (29.69km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit of 50 km/h on Palm Road in Palm Beach, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Palm Road, the actual operating speeds from the MegaMaps tool are 29.69km/h.

Therefore we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Park Point Drive (Waiheke Island)

The speed limit on Park Point Drive, Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Park Point Drive connects to Walter Frank Drive to the north. This road provides access to residential properties. Park Point Drive is approximately 1.03 km in length.
	Park Point Drive is classified as an Access road under the one network road classification (ONRC). Park Point Drive is two-lane, undivided road. There are no footpaths or cycle lanes along this road. On-street parking is not provided.
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Park Point Drive were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane and Very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Minor</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using the drive over footage and the MegaMaps tool. The IRR defines Remote rural as "Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 54 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Park Point Drive is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Park Point Drive has a mean operating speed in the range of 30 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Walter Frank Drive:</b> 50km/h (40km/h proposed)</li> <li><b>Cable Bay Lane:</b> 50km/h (40km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	1030
Annual Daily Traffic (vpd)	54

The Collective Risk score is 0 and the Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Winding	3.5
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Minor	0.67
Adjacent land use	Remote rural	1
Intersection density (per km)	<1	1
Access density (per km)	5 to <10	1.06
Traffic volume	54	1

The Infrastructure Risk Rating Score is 1.22. For Rural areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Park Point Drive.*

Park Point Drive is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Park Point Drive was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Park Point Drive due to a multitude of factors. These being the narrow and winding nature of the road, the minor roadside hazards, its Access function and its existing mean operating speed (30km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Park Point Drive in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Park Point Drive is 40km/h which is aligned with the recommended safe and appropriate speed.

## Speed Limit Review – Park Road (Surfdale)

The speed limit on Park Road, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Park Road connects to Surfdale Road to the south and Pacific Parade to the north. This road provides access to residential properties. Park Road is approximately 0.47 km in length.</p> <p>Park Road is classified as an Access road under the one network road classification (ONRC). Park Road is a two-lane undivided road. There are no footpaths or cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Park Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Park Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Park Road has a mean operating speed in the range of 20.46 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Surfdale Road:</b> 50km/h (50km/h proposed)</li> <li><b>Tetley Road:</b> 50km/h (30km/h proposed)</li> <li><b>Fisher Street:</b> 50km/h (30km/h proposed)</li> <li><b>Moana Avenue:</b> 50km/h (30km/h proposed)</li> <li><b>Pacific Parade:</b> 50km/h (40km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	470
Annual Daily Traffic (vpd)	260

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume	260	1

The Infrastructure Risk Rating Score is 2.52. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Park Road.*

Park Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Park Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Park Road due to a multitude of factors. These being the narrow and curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20.46km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Park Road in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Park Road, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Pohutukawa Avenue (Ōmiha)

The speed limit on Pohutukawa Avenue, Ōmiha, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Pohutukawa Avenue connects to Glen Brook Road to the north. This road provides access to residential properties. Pohutukawa Avenue is approximately 0.32 km in length.</p> <p>Pohutukawa Avenue is classified as an Access road under the one network road classification (ONRC). Pohutukawa Avenue is an unsealed road. There are no footpaths or cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are 0 Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Pohutukawa Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and Very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Pohutukawa Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Pohutukawa Avenue has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Glen Brook Road:</b> 50km/h (30km/h proposed)</li> <li><b>O'Brien Road:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	315
Annual Daily Traffic (vpd)	50

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	5 to <10	1.06
Traffic volume	50	1

The Infrastructure Risk Rating Score is 2.63. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Pohutukawa Avenue.*

Pohutukawa Avenue is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Pohutukawa Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Pohutukawa Avenue due to a multitude of factors. These being the narrow and curved nature of the road, the Severe roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Pohutukawa Avenue in Ōmiha, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Pohutukawa Avenue, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Potai Street (Ostend)

The speed limit on Potai Street, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Potai Street connects to Crescent Road East to the west and Whakarite Road and Taraire Street to the east. This road provides access to residential properties and is a short connecting road. Potai Street is approximately 0.08 km in length.</p> <p>Potai Street is classified as an Access road under the one network road classification (ONRC). Potai Street is a two-lane undivided road. There are no footpaths or cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Potai Street were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane and Very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Potai Street is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Potai Street has a mean operating speed in the range of 34.81 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Crescent Road East:</b> 50km/h (30km/h proposed)</li> <li><b>Whakarite Road:</b> 50km/h (30km/h proposed)</li> <li><b>Taraire Street:</b> 50km/h (30km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	80
Annual Daily Traffic (vpd)	156

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume (vpd)	156	1

The Infrastructure Risk Rating Score is 2.27. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Potai Street.*

A proposed speed limit of 30km/h was selected for Potai Street due to a multitude of factors. These being the narrow and straight nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (34.81km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Potai Street in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Potai Street, the actual operating speeds from the MegaMaps tool are 35 km/h.

Engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30 km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Poto Road (Ostend)

The speed limit on Poto Road, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Poto Road connects to Tahi Road to the west and Erua Road to the east. This road provides access to commercial and industrial properties. Poto Road is approximately 0.1 km in length.</p> <p>Poto Road is classified as an Secondary Collector road under the one network road classification (ONRC). Poto Road is a two-lane undivided road. There are some footpaths and on-street parking provisions available. No cycle lanes are provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Poto Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane and Very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using the drive over footage and the MegaMaps tool. The IRR defines Commercial big box as <i>"Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Poto Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Poto Road has a mean operating speed in the range of 25 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Tahi Road:</b> 50km/h (30km/h proposed)</li> <li><b>Erua Road:</b> 50km/h (30km/h proposed)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	100
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Commercial big box	4
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 2.39. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Poto Road.*

Poto Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Poto Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Poto Road due to a multitude of factors. These being the Narrow and Straight nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (25km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Poto Road in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Poto Road, the actual operating speeds from the MegaMaps tool are 25km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Puriri Road (Oneroa)

The speed limit on Puriri Road, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Puriri Road connects to Beach Parade to the north and Matai Road to the south. This road provides access to residential properties and beach access. Puriri Road is approximately 0.27 km in length.
	Puriri Road is classified as an Access road under the one network road classification (ONRC). Puriri Road is a two-lane undivided road. Footpaths are provided along the road but there are no cycle paths. No on-street parking are provided.
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are 0 Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Puriri Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Puriri Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Puriri Road has a mean operating speed in the range of 23 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Matai Road:</b> 50km/h (30km/h proposed)</li> <li><b>Ocean View Road:</b> 50km/h (30/50km/h proposed)</li> <li><b>Beach Parade:</b> 50km/h (30km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	270
Annual Daily Traffic (vpd)	104

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume	104	1

The Infrastructure Risk Rating Score is 2.47. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Puriri Road.*

Puriri Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Puriri Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Puriri Road due to a multitude of factors. These being the narrow and straight nature of the road, the High roadside hazards, its Access function and its existing mean operating speed (23km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Puriri Road in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Puriri Road, the actual operating speeds from the MegaMaps tool are 23km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Putiki Road (Ostend)

The speed limit on Putiki Road, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Putiki Road connects to Wharf Road to the west and Ostend Road to the east. This road provides access to residential properties. Putiki Road is approximately 0.45 km in length.</p> <p>Putiki Road is classified as an Secondary Collector road under the one network road classification (ONRC). Putiki Road is a two-lane undivided road. Footpaths are provided along this road. No cycle lanes or on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Putiki Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 648 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (348vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Putiki Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Putiki Road has a mean operating speed in the range of 43.55 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Wharf Road:</b> 50km/h (50km/h proposed)</li> <li><b>Ostend Road:</b> 50km/h (30km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	450
Annual Daily Traffic (vpd)	648

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume (vpd)	648	1

The Infrastructure Risk Rating Score is 2.00. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Putiki Road.*

A proposed speed limit of 30km/h was selected for Putiki Road due to a multitude of factors. These being the narrow and curved nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (43.55km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Putiki Road in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Putiki Road, the actual operating speeds from the MegaMaps tool are 44km/h.

Engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Queens Drive (Oneroa)

Queens Drive, Oneroa, is divided into the following sections and outlined as follows<sup>1</sup>:

1. Section 1: Queens Drive Between Goodwin Avenue and eastern end of Goodwin Avenue
2. Section 2: Queens Drive Between the eastern end of Goodwin Avenue and Junction Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Queens Drive, Oneroa have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	This section of Queens Drive connects to the eastern end of Goodwin Avenue to the western end to the west. This road provides access to residential properties.	This section of Queens Drive connects to Goodwin Avenue to the west and Junction Road / Ocean Road / Pacific Parade to the east. This road provides access to residential properties.
	This section of Queens Drive is 0.8km in length. It is classified as an Secondary Collector road under the one network road classification (ONRC). Queens Drive is a two-lane undivided road.	This section of Queens Drive is 0.9km in length. It is classified as an Secondary Collector road under the one network road classification (ONRC). Queens Drive is a two-lane undivided road.
	This section is a two-way, two-lane, undivided road. There are no footpaths or cycle lanes along this section.	This section is a two-way, two-lane, undivided road. There are no footpaths or cycle lanes along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes for all road users and therefore the crash risk for all road users was considered.	
	CAS records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 3 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.	CAS records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 3 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for Queens Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane, very narrow shoulder</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane, very narrow shoulder</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".	
	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10</li> <li>• <b>Access density:</b> &gt;20</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10</li> <li>• <b>Access density:</b> &gt;20</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit(s) on Queens Drive are as follows: <ul style="list-style-type: none"> <li>50km/h Between Goodwin Avenue and eastern end of Goodwin Avenue</li> <li>50km/h Between the eastern end of Goodwin Avenue and Junction Road</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Queens Drive are as follows: <ul style="list-style-type: none"> <li>33.6km/h Between Goodwin Avenue and eastern end of Goodwin Avenue</li> <li>33.6km/h Between the eastern end of Goodwin Avenue and Junction Road</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Mcintosh Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Newton Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Goodwin Avenue:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Hekerua Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Hauraki Road:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Frank Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Karaka Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Pacific Parade:</b> 50 km/h (proposed 50 km/h)</li> <li><b>Ocean Road:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Junction Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (m)	800	900
Annual Daily Traffic (vpd)	520	520

- Section 1
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.
- Section 2
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Curved	1.8
Carriageway width (road lane + shoulder)	Narrow lane, very narrow shoulder	2.01	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8	Severe	2.8
Adjacent land use	Urban residential	3	Urban residential	3
Intersection density (per km)	5 to <10	2.6	5 to <10	2.6
Access density (per km)	>20	1.3	>20	1.3
Traffic volume (vpd)	520	1	520	1

- Section 1: The Infrastructure Risk Rating Score is 2.53. For Urban areas this corresponds to an IRR band of **Medium-High**.
- Section 2: The Infrastructure Risk Rating Score is 2.53. For Urban areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is:

- 40km/h Between Goodwin Avenue and eastern end of Goodwin Avenue (Section 1),
- 40km/h Between the eastern end of Goodwin Avenue and Junction Road (Section 2)

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation is

- 30km/h on Between Goodwin Avenue and eastern end of Goodwin Avenue (Section 1),
- 40km/h on Between the eastern end of Goodwin Avenue and Junction Road (Section 2).

Queens Drive – Section 1, between Goodwin Avenue and eastern end of Goodwin Avenue, is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 30km/h was selected, for Section 1 due to a multitude of factors. These being the narrow and curved nature of the road, the severe roadside hazards, its Secondary Collector function and its existing mean operating speed (33.6km/h). These features also contribute to the roads “Medium-High” IRR score, making it a high-risk road<sup>2</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA’s CAS database shows 3 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 3 non-injury crashes.

Queens Drive – Section 2, between Goodwin Avenue and Junction Road, is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 40km/h was selected, for Section 2 due to a multitude of factors. These being the narrow and curved nature of the road, the severe roadside hazards, its Secondary Collector function and its existing mean operating speed (33.6km/h). These features also contribute to the roads “Medium-High” IRR score, making it a high risk road. The collective and personal risk of this road are classified as Low and Low due to the number of DSI crashes.

Crash history from WK NZTA’s CAS database shows 3 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 3 non-injury crashes.

After considering all the above factors, the existing speed limit(s) on Queens Drive in Oneroa, are not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Queens Drive – Section 2 is 40km/h which is aligned with the recommended safe and appropriate speed.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Queens Drive – Section 1, the actual operating speeds from the MegaMaps tool are 33.6km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Quelch Road (Onetangi)**

The speed limit on Quelch Road, Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Quelch Road connects to Seventh Avenue to the west. This road provides access to residential properties. Quelch Road is approximately 0.13 km in length.</p> <p>Quelch Road is classified as an Access road under the one network road classification (ONRC). Quelch Road is unsealed. There are no footpaths or cycle lanes along this road. There are no on-street parking provisions.</p>
(d) crash risk for all road users; and	<p>WK NZTA’s Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Quelch Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as “Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day”.
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Quelch Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Quelch Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Seventh Avenue:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	130
Annual Daily Traffic (vpd)	4

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	4	1

The Infrastructure Risk Rating Score is 2.67. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Quelch Road.

Quelch Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Quelch Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Quelch Road due to a multitude of factors. These being the narrow and curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Quelch Road in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Quelch Road, the actual operating speeds from the MegaMaps tool are 20 km/h.

Therefore, we have determined 30 km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Rata Street (Oneroa)**

The speed limit on Rata Street, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rata Street connects to Tui Street the west and Moa Avenue to the east. This road provides access to residential properties. Rata Street is approximately 0.42 km in length.</p> <p>Rata Street is classified as an Secondary Collector road under the one network road classification (ONRC). Rata Street is a two-lane undivided road. There are no footpaths or cycle lanes on this road. On-street parking is not provided. However, there are bus stops located between Moa Avenue and Tui Street.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rata Street were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Rata Street is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Rata Street has a mean operating speed in the range of 20.7 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Tui Street:</b> 50km/h (30km/h proposed)</li> <li>• <b>Moa Avenue:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	420
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume	520	1

The Infrastructure Risk Rating Score is 1.74. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

## Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Rata Street.*

Rata Street is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Rata Street was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Rata Street due to a multitude of factors. These being the narrow and straight nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (20.7km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Rata Street in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Rata Street, the actual operating speeds from the MegaMaps tool are 21km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ridge Road (Oneroa)

The speed limit on Ridge Road, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ridge Road connects to Wattle Road to the west and Nikau Road to the east. This road provides access to residential properties. Ridge Road is approximately 0.5 km in length.</p> <p>Ridge Road is classified as an Secondary Collector road under the one network road classification (ONRC). Ridge Road is a two-lane undivided road. There are no footpaths or cycle lanes along this road. On-street parking is not provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ridge Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Ridge Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ridge Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Wattle Road:</b> 50km/h (30km/h proposed)</li> <li>• <b>Nikau Road:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	500
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 1.74. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Ridge Road.

Ridge Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Ridge Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Ridge Road due to a multitude of factors. These being the narrow and straight nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (20 km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Ridge Road in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Ridge Road, the actual operating speeds from the MegaMaps tool are 20 km/h.

Therefore, we have determined 30 km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Rothschild Terrace (Waiheke Island)**

The speed limit on Rothschild Terrace, Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rothschild Terrace connects to Te Whau Drive to the south. This road provides access to residential properties. Rothschild Terrace is approximately 0.33 km in length.</p> <p>Rothschild Terrace is classified as an Access road under the one network road classification (ONRC). Rothschild Terrace is a two-lane, undivided road. There are no footpaths or cycle lanes on this road. There are no on-street parking provisions.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rothschild Terrace were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane and Very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using the drive over footage and the MegaMaps tool. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Rothschild Terrace is 80km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Rothschild Terrace has a mean operating speed in the range of 27 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Te Whau Drive:</b> 80km/h (50km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	330
Annual Daily Traffic (vpd)	104

The Collective Risk score is 0 and the Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural residential	1.5
Intersection density (per km)	3 to <5	1.5
Access density (per km)	10 to <20	1.1
Traffic volume (vpd)	104	1

The Infrastructure Risk Rating Score is 1.63. For Rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 50km/h for the full length of Rothschild Terrace.*

Rothschild Terrace is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Rothschild Terrace was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50km/h was selected for Rothschild Terrace due to a multitude of factors. These being the Medium width and curved nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (27km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 80 km/h on Rothschild Terrace in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Rothschild Terrace is 50 km/h which is aligned with the speed limit recommended by the Speed Management Guide (<80km/h); however, this is considered appropriate based on the function of the road and the mean operating speed supports the reduction.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Scotts Terrace (Onetangi)**

The speed limit on Scotts Terrace, Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Scotts Terrace connects to Victoria Road North to the northwest and Victoria Road South to the southeast. This road provides access to residential properties. Scotts Terrace is approximately 0.33 km in length.</p> <p>Scotts Terrace is classified as an Access road under the one network road classification (ONRC). Scotts Terrace is an unsealed road. There are no footpaths or cycle lanes on this road. There are no on-street parking provisions.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Scotts Terrace were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Scotts Terrace is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Scotts Terrace has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Victoria Road North:</b> 50km/h (30km/h proposed)</li> <li>• <b>Victoria Road South:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	330
Annual Daily Traffic (vpd)	104

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	104	1

The Infrastructure Risk Rating Score is 2.96. For Urban areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Scotts Terrace.

Scotts Terrace is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Scotts Terrace was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Scotts Terrace due to a multitude of factors. These being the narrow and curved nature of the road, the Severe roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Scotts Terrace in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Scotts Terrace, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Sea View Road (Ostend)**

Sea View Road, Ostend, is divided into the following section and outlined as follows<sup>1</sup>:

1. Section 1: Sea View Road between Ostend Road and Erua Road
2. Section 2: Sea View Road between Erua Road and Onetangi Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Sea View Road, Ostend have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	This section of Sea View Road connects to Ostend Road to the south/west and Erua Road to the west. This road provides access to Waiheke Primary School, and residential properties.	This section of Sea View Road connects To Erua Road to the west and Onetangi Road / Eden Terrace to the east. This road provides access to residential properties.
	This section of Sea View Road is 0.88km in length. It is classified as an Access road under the one network road classification (ONRC). Sea View Road is a two-lane undivided road.	This section of Sea View Road is 3.53km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC). Sea View Road is a two-lane undivided road.
	This section is a two-way, two-lane, undivided road. There are footpaths along this section. There are no cycle lanes.	This section is a two-way, two-lane, undivided road. There are footpaths along some parts of this section. There are no cycle lanes.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes for all road users and therefore the crash risk for all road users was considered.	
	CAS records 4 crashes between 2016 and 2020: 0 fatal, 0 serious, 2 minor and 2 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.	CAS records 8 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 8 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

(e) the characteristics of the road and roadsides; and	The following characteristics for Sea View Road were determined using a combination of site drive-over footage and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane, very narrow shoulder</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane, very narrow shoulder</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as “Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day”.	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as “Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day”.
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3</li> <li>• <b>Access density:</b> 10 to &lt;20</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3</li> <li>• <b>Access density:</b> 10 to &lt;20</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1296 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and within the same range as the traffic survey (990vpd).	Average daily traffic (ADT) was determined from MegaMaps as 605 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit(s) on Sea View Road are as follows: <ul style="list-style-type: none"> <li>• 50km/h Between Ostend Road and Erua Road</li> <li>• 50km/h Between Erua Road and Onetangi Road</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Sea View Road are as follows: <ul style="list-style-type: none"> <li>• 39.98km/h Between Ostend Road and Erua Road</li> <li>• 37.43km/h Between Erua Road and Onetangi Road</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Ostend Road:</b> 50 km/h (proposed 50 km/h)</li> <li>• <b>Erua Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>View Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Te Makiri Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Brown Road:</b> 50 km/h (proposed 40 km/h)</li> <li>• <b>Seventh Avenue:</b> 50 km/h (proposed 30 km/h)</li> </ul>

<ul style="list-style-type: none"> <li>• <b>Pah Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Hartley Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Onetangi Road:</b> 50 km/h (proposed 50 km/h)</li> </ul>
--

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	2	0
DSI crashes during the period	0	0
Corridor Length (m)	880	3530
Annual Daily Traffic (vpd)	1296	605

- Section 1
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.
- Section 2
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.
  -

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Winding	3.5
Carriageway width (road lane + shoulder)	Narrow lane, very narrow shoulder	2.01	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	Severe	2.8
Adjacent land use	Urban residential	3	Urban residential	3
Intersection density (per km)	2 to <3	1.25	2 to <3	1.25
Access density (per km)	10 to <20	1.1	10 to <20	1.1
Traffic volume (vpd)	1296	1.4	605	1

- Section 1: The Infrastructure Risk Rating Score is 2.20. For Urban areas this corresponds to an IRR band of **Medium**.
- Section 2: The Infrastructure Risk Rating Score is 2.43. For Urban areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is:

- 40km/h Between Ostend Road and Erua Road (Section 1),
- 40km/h Between Erua Road and Onetangi Road (Section 2),

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 40km/h on Between Ostend Road and Erua Road (Section 1),
- 40km/h on Between Erua Road and Onetangi Road (Section 2),

Sea View Road – Section 1, between Ostend Road and Erua Road, is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 40km/h was selected, for Section 1 due to a multitude of factors. These being narrow and curved nature of the road, the high roadside hazards, its Access function and its existing mean operating speed (40km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 4 crashes in the last 5 years including 0 fatal, 0 serious, 2 minor and 2 non-injury crashes.

Sea View Road – Section 2, between Erua Road and Onetangi Road, is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 40km/h was selected, for Section 2 due to a multitude of factors. These being the narrow and winding nature of the road, the severe roadside hazards, its Secondary Collector function and its existing mean operating speed (37km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>2</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 8 non-injury crashes.

After considering all the above factors, the existing speed limit(s) on Sea View Road in Ostend/Onetangi, are not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Sea View Road – Sections 1 & 2, is 40km/h which is aligned with the recommended safe and appropriate speed.

**Speed Limit Review – Second Avenue (Onetangi)**

The speed limit on Second Avenue, Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Second Avenue connects to The Stand to the north and Le Roy Road to the south. This road provides access to residential properties and the beach front. Second Avenue is approximately 0.11 km in length.</p> <p>Second Avenue is classified as an Access road under the one network road classification (ONRC). Second Avenue is a two-lane undivided road. There are no footpaths or cycle lane on this road. There is some perpendicular on street parking.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Second Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li>• <b>Roadside hazards (in both directions):</b> Minor</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &gt;10 intersections per km</li> </ul>

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Second Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Second Avenue has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>The Strand:</b> 50km/h (30km/h proposed)</li> <li><b>Le Roy Road:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	110
Annual Daily Traffic (vpd)	104

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Minor	0.67
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume (vpd)	104	1

The Infrastructure Risk Rating Score is 1.94. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Second Avenue.*

Second Avenue is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Second Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Second Avenue due to a multitude of factors. These being the narrow and straight nature of the road, the minor roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Second Avenue in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Second Avenue, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Seventh Avenue (Onetangi)**

The speed limit on Seventh Avenue, Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Seventh Avenue connects to Sea View Road to the south and The Strand to the north. This road provides access to residential properties. Seventh Avenue is approximately 0.49 km in length.</p> <p>Seventh Avenue is classified as an Secondary Collector road under the one network road classification (ONRC). Seventh Avenue is a two-lane undivided road. There are no footpaths or cycle lanes along this road. There are no on-street parking provisions.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 1 serious, 0 minor and 1 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Seventh Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 301 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (301vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Seventh Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Seventh Avenue has a mean operating speed in the range of 23.28 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Sea View Road:</b> 50km/h (40km/h proposed)</li> <li>• <b>The Strand:</b> 50km/h (30km/h proposed)</li> <li>• <b>Quelch Road:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	1
Corridor Length (m)	490
Annual Daily Traffic (vpd)	301

The Collective Risk score is 0.40 and the Personal Risk score is 372. For Urban areas this corresponds to a Collective Risk band of **High**, and a Personal Risk band of **High**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Tortuous	6
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	301	1

The Infrastructure Risk Rating Score is 2.76. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Seventh Avenue.

Seventh Avenue is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Seventh Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Seventh Avenue due to a multitude of factors. These being the narrow and tortuous nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (23.28km/h). These features also contribute to the roads "Medium-High" IRR score and due to adverse crash history on the road, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as High and High respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 1 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Seventh Avenue in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Seventh Avenue, the actual operating speeds from the MegaMaps tool are 23km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Shelly Beach Road (Surfdale)**

The speed limit on Shelly Beach Road, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Shelly Beach Road connects to Causeway Road to the north. This road provides access to residential properties and the beach front. Shelly Beach Road is approximately 0.56 km in length.</p> <p>Shelly Beach Road is classified as an Secondary Collector road under the one network road classification (ONRC). Shelly Beach Road is a two-lane undivided road. There are no footpaths or cycle lanes on this road. There is a parking area at the southern end near the beachfront.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Shelly Beach Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Minor</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 60 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Shelly Beach Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Shelly Beach Road has a mean operating speed in the range of 20.61 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Causeway Road:</b> 50km/h (50km/h proposed)</li> <li>• <b>Shelly Beach Road Extension:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	560
Annual Daily Traffic (vpd)	60

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Minor	0.67
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	60	1

The Infrastructure Risk Rating Score is 1.91. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Shelly Beach Road.*

Shelly Beach Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Shelly Beach Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Shelly Beach Road due to a multitude of factors. These being the narrow and curved nature of the road, the Minor roadside hazards, its Secondary Collector function and its existing mean operating speed (20.61km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Shelly Beach Road in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Shelly Beach Road, the actual operating speeds from the MegaMaps tool are 21km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Short Street (Surfdale)**

The speed limit on Short Street, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Short Street connects to Pacific Parade to the north and Beresford Avenue to the south. This road provides access to residential properties. Short Street is approximately 0.11 km in length.</p> <p>Short Street is classified as an Access road under the one network road classification (ONRC). Short Street is a two-lane undivided road. There are no footpaths or cycle lanes along this road. There are no on-street parking provisions.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Short Street were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Short Street is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Short Street has a mean operating speed in the range of 20.46 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Pacific Parade:</b> 50km/h (40km/h proposed)</li> <li>• <b>Beresford Avenue:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	110
Annual Daily Traffic (vpd)	260

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Winding	3.5
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	10 to <20	1.1
Traffic volume (vpd)	260	1

The Infrastructure Risk Rating Score is 2.74. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Short Street.

Short Street is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Short Street was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Short Street due to a multitude of factors. These being the narrow and winding nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20.46km/h). These features also contribute to the roads "Medium-High" IRR score making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Short Street in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Short Street, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Sixth Avenue (Onetangi)**

The speed limit on Sixth Avenue, Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sixth Avenue connects to The Strand to the north. This road provides access to residential properties. Sixth Avenue is approximately 0.07 km in length.</p> <p>Sixth Avenue is classified as an Access road under the one network road classification (ONRC). Sixth Avenue is a two-lane undivided road. There are no footpaths or cycle lanes along this road. There are no on-street parking provisions.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sixth Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 26 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Sixth Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Sixth Avenue has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>The Strand:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	70
Annual Daily Traffic (vpd)	26

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume (vpd)	26	1

The Infrastructure Risk Rating Score is 2.52. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Sixth Avenue.*

Sixth Avenue is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Sixth Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Sixth Avenue due to a multitude of factors. These being the narrow and curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Sixth Avenue in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Sixth Avenue, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Stonybatter Road Waiheke Island

The speed limit on Stonybatter Road, Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Stonybatter Road connects to Man O War Bay Road to the west. This road provides access to residential properties and vineyards. Stonybatter Road is approximately 1.11 km in length.</p> <p>Stonybatter Road is unclassified under the one network road classification (ONRC). Stonybatter Road is an unsealed road. There are no footpaths or cycle lanes along this road. There are no on-street parking provisions.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Stonybatter Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane and Very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using the drive over footage and the MegaMaps tool. The IRR defines Remote rural as Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry.
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	No average daily traffic (ADT) was available for this road.

Requirement	Comments
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Stonybatter Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	Not available.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Man O War Bay Road: 80km/h (40km/h proposed)</li> </ul>

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	1110
Annual Daily Traffic (vpd)	n/a

The Collective Risk score is 0 and the Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

#### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10
Road alignment	Winding	3.5
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Remote rural	1
Intersection density (per km)	<1	1
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	n/a	1

The Infrastructure Risk Rating Score is 2.0 . For Rural areas this corresponds to an IRR band of **Medium-High**.

#### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide <80km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Stonybattery Road.

Stonybattery Road is a Self-Explaining road as the mean operating speed is already likely to be below or near the proposed safe and appropriate speeds given the unsealed nature of the road, despite the existing 50 km/h speed limit. Engineering up of Stonybattery Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Stonybattery Road due to a multitude of factors. These being the narrow and winding nature of the road and the moderate roadside hazards. These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Stonybattery Road in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Stonybattery Road is 40km/h which is aligned with the recommended safe and appropriate speed.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Surfdale Road (Surfdale)**

The speed limit on Surfdale Road, Surfdale, between Hamilton Road and Marama Avenue, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Surfdale Road connects to Hamilton Road to the south. This road provides access to residential properties and commercial activity. Surfdale Road, this section is approximately 0.07 km in length.</p> <p>Surfdale Road is classified as an Arterial road under the one network road classification (ONRC). Surfdale Road is a two-lane undivided road. There are footpaths and shared paths along this road. On-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 0 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Surfdale Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane and wide shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8016 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and the traffic survey.
(i) any planned modification to the road; and	There are currently no planned modifications.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Surfdale Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Surfdale Road has a mean operating speed in the range of 47km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Hamilton Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Marama Avenue:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (m)	70
Annual Daily Traffic (vpd)	8016

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Medium lane, wide shoulder	1
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume (vpd)	8016	2.2

The Infrastructure Risk Rating Score is 2.36. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h Surfdale Road, between Hamilton Road and Marama Avenue*

A proposed speed limit of 30km/h was selected for Surfdale Road due to network consistency with adjoining residential streets and a tight bend.

Crash history from WK NZTA’s CAS database shows 1 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor and 0 non-injury crashes.

While the speed management guide suggests 50 km/h as the safe and appropriate speed for Surfdale Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Tahatai Road (Oneroa)**

The speed limit on Tahatai Road, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tahatai Road connects to Wattle Road to the north and The Esplanade to the south. This road provides access to residential properties. Tahatai Road is approximately 0.67 km in length.</p> <p>Tahatai Road is classified as an Secondary Collector road under the one network road classification (ONRC). Tahatai Road is a two-lane undivided road. There are no footpaths or cycle lanes along this road. No on-street parking provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA’s Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tahatai Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>“Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day”</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Tahatai Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tahatai Road has a mean operating speed in the range of 27.09 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Wattle Road:</b> 50km/h (30km/h proposed)</li> <li>• <b>The Esplanade:</b> 50km/h (30km/h proposed)</li> <li>• <b>Huruhi Road:</b> 50km/h (30km/h proposed)</li> <li>• <b>Nikau Road:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	670
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Tahatai Road.

Tahatai Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Tahatai Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Tahatai Road due to a multitude of factors. These being the narrow and curved nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (27.09km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Tahatai Road in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Tahatai Road, the actual operating speeds from the MegaMaps tool are 27km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Tahī Road (Ostend)**

The speed limit on Tahī Road, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tahī Road connects to Erua Road to the north and Ostend Road to the south. This road provides access to commercial and industrial properties. Tahī Road is approximately 0.56 km in length.</p> <p>Tahī Road is classified as an Secondary Collector road under the one network road classification (ONRC). Tahī Road is a two-lane undivided road. There are no footpaths or cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 7 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 7 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tahī Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using the drive over footage and the MegaMaps tool. The IRR defines Commercial big box as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present".
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2321 vehicles per day (vpd), whilst available traffic survey data shows 1778vpd. This variation is consistent with the nature and land use of the road and fall within the same range.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Tahi Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tahi Road has a mean operating speed in the range of 22.86 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Erua Road:</b> 50km/h (30km/h proposed)</li> <li>• <b>Poto Road:</b> 50km/h (30km/h proposed)</li> <li>• <b>Ostend Road:</b> 50km/h (50km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	560
Annual Daily Traffic (vpd)	2321

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Commercial big box	4
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	2321	1.4

The Infrastructure Risk Rating Score is 2.25. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

## Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Tahī Road.*

Tahī Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Tahī Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Tahī Road due to a multitude of factors. These being the medium and straight nature of the road, the moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (22.86km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 7 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 7 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Tahī Road in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Tahī Road, the actual operating speeds from the MegaMaps tool are 23km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Taraira Street (Ostend)

The speed limit on Taraira Street, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Taraira Street connects to Potai Street and Whakarite Road to the south. This road provides access to residential properties. Taraira Street is approximately 0.3 km in length.</p> <p>Taraira Street is classified as an Access road under the one network road classification (ONRC). Taraira Street is an unsealed road. There are no pedestrian and/or cyclist amenities along this road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Taraira Street were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (176vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Taraire Street is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Taraire Street has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Potai Street:</b> 50km/h (30km/h proposed)</li> <li>• <b>Whakarite Road:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	300
Annual Daily Traffic (vpd)	100

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume	100	1

The Infrastructure Risk Rating Score is 2.43. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Taraire Street.

Taraire Street is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Taraire Street was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30 km/h was selected for Taraire Street due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 0 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 0 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Taraire Street in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Taraire Street, the actual operating speeds from the traffic surveys are 26 km/h.

Therefore, we have determined 30 km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Tawa Street Oneroa**

The speed limit on Tawa Street, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tawa Street connects to Kiwi Street to the west. This road provides access to residential properties. Tawa Street is approximately 0.52 km in length.</p> <p>Tawa Street is classified as an Secondary Collector road under the one network road classification (ONRC). Tawa Street is a two-lane undivided road. There are no footpaths or cycle lanes along this road. There are no on-street parking provisions.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tawa Street were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Tawa Street is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tawa Street has a mean operating speed in the range of 20.9 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Kiwi Street:</b> 50km/h (30km/h proposed)</li> <li>• <b>Huia Street:</b> 50km/h (30km/h proposed)</li> <li>• <b>Makora Avenue:</b> 50km/h (30km/h proposed)</li> <li>• <b>Burrell Road Ext:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	520
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	520	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Tawa Street.

Tawa Street is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Tawa Street was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Tawa Street due to a multitude of factors. These being the narrow and curved nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (20.9km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Tawa Street in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Tawa Street, the actual operating speeds from the MegaMaps tool are 21km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Te Makiri Road (Onetangi)**

The speed limit on Te Makiri Road, Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Te Makiri Road connects to Sea View Road to the north. This road provides access to residential properties. Te Makiri Road is approximately 0.31 km in length.</p> <p>Te Makiri Road is classified as an Access road under the one network road classification (ONRC). Te Makiri Road is a two-lane undivided road. There are no footpaths or cycle lanes along this road. There are no on-street parking provisions.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Te Makiri Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 362 vehicles per day (vpd), whilst available traffic survey data shows 119vpd. It is possible that the traffic volumes along this road may be subject to seasonal variation due to the access to holiday accommodation. To be conservative, the larger traffic volume has been adopted.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Te Makiri Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Te Makiri Road has a mean operating speed in the range of 22.69 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Sea View Road:</b> 50km/h (40km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	310
Annual Daily Traffic (vpd)	362

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Winding	3.5
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	362	1

The Infrastructure Risk Rating Score is 2.53. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

## Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Te Makiri Road.

Te Makiri Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Te Makiri Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Te Makiri Road due to a multitude of factors. These being the narrow and winding nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (22.69km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Te Makiri Road in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Te Makiri Road, the actual operating speeds from the Megamap are 23 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Te Toki Road (Ostend)

The speed limit on Te Toki Road, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Te Toki Road connects to Hill Road and Palm Road to the north and Wharf Road to the south. This road provides access to residential properties. Te Toki Road is approximately 0.97 km in length.</p> <p>Te Toki Road is classified as an Secondary Collector road under the one network road classification (ONRC). Te Toki Road is a two-lane undivided road. There are no footpaths or cycle lanes along this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 3 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Te Toki Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1436 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (1436vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Te Toki Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Te Toki Road has a mean operating speed in the range of 44.65 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Wilma Road:</b> 50km/h (30km/h proposed)</li> <li><b>Hill Road:</b> 50km/h (40km/h proposed)</li> <li><b>Bay Road:</b> 50km/h (30km/h proposed)</li> <li><b>Wharf Road:</b> 50km/h (50km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	970
Annual Daily Traffic (vpd)	1436

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	1436	1.4

The Infrastructure Risk Rating Score is 2.59. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Te Toki Road.

Te Toki Road is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Te Toki Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Te Toki Road due to a multitude of factors. These being the narrow and curved nature of the road, the High roadside hazards, its Secondary Collector function and its existing mean operating speed (44.65km/h). These features also contribute to the roads "Medium-High" IRR score making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 3 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 3 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Te Toki Road in Ostend, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Te Toki Road is 40km/h which is aligned with the recommended safe and appropriate speed.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Te Whau Drive (Waiheke Island)**

The speed limit on Te Whau Drive, Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Te Whau Drive connects to O'Brien Road to the north. This road provides access residential properties and local bays.</p> <p>Te Whau Drive is approximately 2.21 km in length. Te Whau Drive is classified as an Access road under the one network road classification (ONRC).</p> <p>Te Whau Drive is two-lane undivided road. There are no footpaths or cycle lanes along this road. There is no on-street parking.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadides; and	<p>The following characteristics for Te Whau Drive were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using the drive over footage and the MegaMaps tool. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements".

Requirement	Comments
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Te Whau Drive is 80km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Te Whau Drive has a mean operating speed in the range of 38.75 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>O'Brien Road:</b> 80km/h (50km/h proposed)</li> <li>• <b>Rothschild Terrace:</b> 80km/h (50km/h proposed)</li> <li>• <b>Vintage Lane:</b> 80km/h (50km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	2210
Annual Daily Traffic (vpd)	104

The Collective Risk score is 0 and the Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume	104	1

The Infrastructure Risk Rating Score is 1.49. For Rural areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 50km/h for the full length of Te Whau Drive.

Te Whau Drive is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Te Whau Drive was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50km/h was selected for Te Whau Drive due to a multitude of factors. These being the medium width and curved nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (38.75 km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 80 km/h on Te Whau Drive in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Te Whau Drive is 50 km/h which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed supports the reduction.

**Speed Limit Review – Tetley Road (Surfdale)**

The speed limit on Tetley Road, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tetley Road connects to Surfdale Road to the west and Hamilton Road to the east. This road provides access to residential properties. Tetley Road is approximately 0.44 km in length.</p> <p>Tetley Road is classified as an Access road under the one network road classification (ONRC). Tetley Road is a two-lane undivided road. There are no footpaths or cycle lanes along this road. There are no on-street parking provisions.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tetley Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Tetley Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tetley Road has a mean operating speed in the range of 20.46 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Surfdale Road:</b> 50km/h (50km/h proposed)</li> <li>• <b>Park Road:</b> 50km/h (30km/h proposed)</li> <li>• <b>Marama Avenue:</b> 50km/h (30km/h proposed)</li> <li>• <b>Beresford Avenue:</b> 50km/h (30km/h proposed)</li> <li>• <b>Hamilton Road:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	440
Annual Daily Traffic (vpd)	260

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	260	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Tetley Road.

Tetley Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Tetley Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Tetley Road due to a multitude of factors. These being the narrow and curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20.46 km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Tetley Road in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Tetley Road, the actual operating speeds from the MegaMaps tool are 21km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – The Esplanade Palm Beach**

The speed limit on The Esplanade Palm Beach, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>The Esplanade connects to Moa Avenue to the west to Lannan Road to the east. This road provides access to the beachfront. The Esplanade is approximately 1.57 km in length.</p> <p>The Esplanade is classified as an Secondary Collector road under the one network road classification (ONRC). The Esplanade is Unsealed for the majority of the length. There are no pedestrian and/or cyclist amenities provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 3 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for The Esplanade were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day.
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li>Access density: 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on The Esplanade is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of The Esplanade has a mean operating speed in the range of 20 km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Lannan Road:</b> 50km/h (30km/h proposed)</li> <li><b>Moa Avenue:</b> 50km/h (30km/h proposed)</li> <li><b>Kiwi Street:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	860
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	2 to <3	1.25
Access density (per km)	10 to <20	1.1
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 2.57. For Urban areas this corresponds to an IRR band of Medium-High.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of The Esplanade .

The Esplanade is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of The Esplanade was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for The Esplanade due to a multitude of factors. These being the narrow and curved nature of the road, the Severe roadside hazards, its Secondary Collector function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes, making it a high-risk road<sup>1</sup>.

Crash history from WK NZTA's CAS database shows 3 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 3 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on The Esplanade in Palm Beach, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for The Esplanade, the actual operating speeds from the Megamap are 20 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – The Esplanade Palm Beach**

The speed limit on The Esplanade Palm Beach, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>The Esplanade connects to Hill Road to the north. This road provides access to the beach. The Esplanade is approximately 0.06 km in length.</p> <p>The Esplanade is classified as an Access road under the one network road classification (ONRC). The Esplanade is a two-lane, undivided road. There are no pedestrian and/or cyclist amenities along the road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are 0 Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for The Esplanade were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day.
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li>Access density: &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 52 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on The Esplanade is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of The Esplanade has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Hill Road: 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	60
Annual Daily Traffic (vpd)	52

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume (vpd)	52	1

The Infrastructure Risk Rating Score is 2.06. For Urban areas this corresponds to an IRR band of Low-Medium.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of The Esplanade .*

The Esplanade is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of The Esplanade was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for The Esplanade due to a multitude of factors. These being the narrow and straight nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Low-Medium " IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on The Esplanade in Palm Beach, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for The Esplanade, the actual operating speeds from the Megamap are 20 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – The Esplanade (Surfdale)

The speed limit on The Esplanade, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>The Esplanade connects to Blake Street to the north. This road provides access to the beach. The Esplanade is approximately 0.125 km in length.</p> <p>The Esplanade is classified as an Access road under the one network road classification (ONRC). The Esplanade is a two-lane, undivided road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for The Esplanade were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Access density:</b> &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on The Esplanade is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of The Esplanade has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Blake Street:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	125
Annual Daily Traffic (vpd)	104

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	<20	1.3
Traffic volume (vpd)	104	1

The Infrastructure Risk Rating Score is 2.06. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of The Esplanade .*

The Esplanade is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of The Esplanade was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for The Esplanade due to a multitude of factors. These being the narrow lane width and straight nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20 km/h). These features also contribute to the roads "Low-Medium " IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on The Esplanade in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for The Esplanade, the actual operating speeds from the Megamap are 20 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – The Esplanade (Oneroa)**

The Esplanade, Oneroa, is divided into the following sections and outlined as follows<sup>1</sup>:

1. Section 1: The Esplanade, between Tui Street and Tahatai Road
2. Section 2: The Esplanade, between Tui Street and 54m east of Hamilton Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of The Esplanade, Oneroa have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WKNZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	The Esplanade connects to Hill Road to the west and Tui Street to the east. This road provides access to residential properties and the beach.	The Esplanade connects to Tui Street to the west and ends 54m to the east of Hamilton Road to the east. This road provides access to residential properties and the beach.
	This section of The Esplanade is 0.14km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section of The Esplanade is 1.57km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no footpaths or cycle lanes along this section.	This section is an unsealed road for the majority of the length. There are no footpaths or cycle lanes along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	CAS records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 3 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for The Esplanade were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &gt;10</li> <li>• <b>Access density:</b> &gt;20</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3</li> <li>• <b>Access density:</b> 10 to &lt;20</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

Requirement	Comments	
	Section 1	Section 2

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on The Esplanade are as follows: <ul style="list-style-type: none"> <li>• 50km/h Between Tui Street and Tahatai Road</li> <li>• 50km/h Between Tui Street and 54m east of Hamilton Road</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on The Esplanade are as follows: <ul style="list-style-type: none"> <li>• 20km/h Between Tui Street and Tahatai Road</li> <li>• 20km/h Between Tui Street and 54m east of Hamilton Road</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Tui Street:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Tahatai Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Hamilton Road:</b> 50km/h (30km/h proposed)</li> <li>• <b>Moa Avenue:</b> 50km/h (30km/h proposed)</li> <li>• <b>Kiwi Street:</b> 50km/h (30km/h proposed)</li> <li>• <b>Lannan Road:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (m)	140	1570
Annual Daily Traffic (vpd)	520	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score

Road stereotype	Two-lane undivided	3.7	Unsealed	10
Road alignment	Straight	1	Curved	1.8
Carriageway width (road lane + shoulder)	Narrow lanes and very narrow shoulders	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8	Severe	2.8
Adjacent land use	Urban residential	3	Urban residential	3
Intersection density (per km)	>10	5	2 to <3	1.25
Access density (per km)	>20	1.3	10 to <20	1.1
Traffic volume (vpd)	520	1	520	1

- Section 1: The Infrastructure Risk Rating Score is 2.56. For Urban areas this corresponds to an IRR band of **Medium-High**.
- Section 2: The Infrastructure Risk Rating Score is 2.57. For Urban areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is:

- 40km/h Between Tui Street and Tahatai Road (Section 1),
- 40km/h Between Tui Street and 54m east of Hamilton Road (Section 2),

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 30km/h on Between Tui Street and Tahatai Road (Section 1),
- 30km/h on Between Tui Street and 54m east of Hamilton Road (Section 2),

The Esplanade – Section 1, between Tui Street and Tahatai Road, is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 30km/h was selected, for Section 1 due to a multitude of factors. These being Narrow and Straight nature of the road, the Severe roadside hazards, its Secondary Collector function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>2</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Crash history from WK NZTA's CAS database shows zero crashes in the last 5 years.

A proposed speed limit of 30km/h was selected for The Esplanade – Section 2, due to a multitude of factors. These being the narrow and curved nature of the road, the Severe roadside hazards, its Secondary Collector function and its existing mean operating speed (37.8km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>3</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 3 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 3 non-injury crashes.

After considering all the above factors, the existing speed limit on The Esplanade in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for The Esplanade – Sections 1 & 2 is 30km/h which is lower than the recommended safe and appropriate speed.

Engineering measures are proposed to be implemented for Section 2, with the intention of achieving an operating speed of less than 33km/h.

We have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>3</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – The Strand (Onetangi)

The speed limit on The Strand, Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>The Strand connects to Fourth Avenue to the south. This road provides access to residential properties, small commercial properties, and the beachfront. The Strand is approximately 1.34 km in length.</p> <p>The Strand is classified as a Secondary Collector road under the one network road classification (ONRC). The Strand is a two-lane undivided road. There are footpaths and bus stops along this section. No cycle lanes or on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for The Strand were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on The Strand is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of The Strand has a mean operating speed in the range of 25.41 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Seventh Avenue:</b> 50km/h (30km/h proposed)</li> <li><b>Sixth Avenue:</b> 50km/h (30km/h proposed)</li> <li><b>Fourth Avenue:</b> 50km/h (30km/h proposed)</li> <li><b>Third Avenue:</b> 50km/h (30km/h proposed)</li> <li><b>Second Avenue:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	1340
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 2.04. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of The Strand.*

The Strand is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of The Strand was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for The Strand due to a multitude of factors. These being the narrow and straight nature of the road, the Severe roadside hazards, its Secondary Collector function and its existing mean operating speed (25.41km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on The Strand in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for The Strand, the actual operating speeds from the Megamap are 25 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Third Avenue (Onetangi)

The speed limit on Third Avenue, Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Third Avenue connects to The Strand to the north and Waiheke Road to the south. This road provides access to residential properties and small commercial properties. Third Avenue is approximately 0.32 km in length.</p> <p>Third Avenue is classified as an Access road under the one network road classification (ONRC). Third Avenue is a two-lane undivided road. There are footpaths and bus stops along this road. No cycle lanes or on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Third Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lanes and Narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Third Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Third Avenue has a mean operating speed in the range of 25.63 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>The Strand:</b> 50km/h (30km/h proposed)</li> <li><b>Waiheke Road:</b> 50km/h (40km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	320
Annual Daily Traffic (vpd)	104

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow lane, Narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	10 to <20	1.1
Traffic volume	104	1

The Infrastructure Risk Rating Score is 1.91. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Third Avenue.*

Third Avenue is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Third Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Third Avenue due to a multitude of factors. These being the narrow and straight nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (25.63km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Third Avenue in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Third Avenue, the actual operating speeds from the MegaMaps tool are 26km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tiri Road (Oneroa)

Tiri Road, Oneroa, is divided into the following sections and outlined as follows<sup>1</sup>:

- Section 1: Tiri Road Between Tiri Road and Tiri Road (i.e. the loop road section from RP 0.09 to 0.82)
- Section 2: Tiri Road Between Delamore Drive and Korora Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Tiri Road, Oneroa have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	This section of Tiri Road is a loop road that connects to Tiri Road to the north. This road provides access to residential properties.	This section of Tiri Road connects to Kokora Road to the south/east and Delamore Drive to the north. This road provides access to residential properties.
	This section of Tiri Road is 0.73km in length. It is classified as an Access road under the one network road classification (ONRC). Tiri Road is a two-lane undivided road.	This section of Tiri Road is 0.22km in length. It is classified as an Secondary Collector road under the one network road classification (ONRC). Tiri Road is a two-lane undivided road.
	This section is a two-way, two-lane, undivided road. There is no footpath or cycle lane along this section.	This section is a two-way, two-lane, undivided road. There is no footpath or cycle lane along this section.
	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes	

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	for all road users and therefore the crash risk for all road users was considered. CAS records 1 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.	
(e) the characteristics of the road and roadsides; and	The following characteristics for Tiri Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3</li> <li><b>Access density:</b> &gt;20</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3</li> <li><b>Access density:</b> 10 to &lt;20</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 217 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 472 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit(s) on Tiri Road are as follows: <ul style="list-style-type: none"> <li>50km/h Between Tiri Road and Tiri Road (i.e. the loop road section from RP 0.09 to 0.82)</li> <li>50km/h Between Delamore Drive and Korora Road</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Tiri Road are as follows: <ul style="list-style-type: none"> <li>24.66km/h Between Tiri Road and Tiri Road (i.e. the loop road section from RP 0.09 to 0.82)</li> <li>34.54km/h Between Delamore Drive and Korora Road</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Kokora Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Delamore Drive:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (m)	730	220
Annual Daily Traffic (vpd)	217	472

- Section 1
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.
- Section 2
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Winding	3.5	Straight	1
Carriageway width (road lane + shoulder)	Narrow lane and very narrow shoulder	2.01	Narrow lane and very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	Moderate	1.43
Adjacent land use	Urban residential	3	Urban residential	3
Intersection density (per km)	2 to <3	1.25	2 to <3	1.25
Access density (per km)	>20	1.3	10 to <20	1.1
Traffic volume	217	1	472	1

- Section 1: The Infrastructure Risk Rating Score is 2.41. For Urban areas this corresponds to an IRR band of **Medium-High**.
- Section 2: The Infrastructure Risk Rating Score is 1.59. For Urban areas this corresponds to an IRR band of **Low**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is:

- 40km/h Between Tiri Road and Tiri Road (i.e. the loop road section from RP 0.09 to 0.82) (Section 1),
- 40km/h Between Delamore Drive and Korora Road (Section 2).

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 30km/h on Between Tiri Road and Tiri Road (i.e. the loop road section from RP 0.09 to 0.82) (Section 1),
- 30km/h on Between Delamore Drive and Korora Road (Section 2).

A proposed speed limit of 30km/h was selected, for Section 1 due to a multitude of factors. These being the narrow and winding nature of the road, the high roadside hazards, its Access function and its existing mean operating speed (24.66km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>2</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

Tiri Road – Section 2, between Delamore Drive and Korora Road, is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 30km/h was selected, for Section 2 due to a multitude of factors. These being the narrow and straight nature of the road, the moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (34.54km/h). These features also contribute to the roads "Low" IRR score. The collective and personal risk of this road are classified as Low and Low due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) on Tiri Road in Oneroa, are not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tiri Road – Sections 1 & 2, the actual operating speeds from the MegaMaps tool are 24.66km/h and 34.54km/h respectively.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Tiri View Road (Palm Beach)

The speed limit on Tiri View Road, Palm Beach, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tiri View Road connects to Palm Road to the north and Hill Road to the south. This road provides access to residential properties. Tiri View Road is approximately 0.62 km in length.</p> <p>Tiri View Road is classified as a Secondary Collector road under the one network road classification (ONRC). Tiri View Road is a two-lane undivided road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tiri View Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Tiri View Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tiri View Road has a mean operating speed in the range of 26.48 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Palm Road:</b> 50km/h (30km/h proposed)</li> <li><b>Hill Road:</b> 50km/h (40km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	620
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Winding	3.5
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 2.53. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Tiri View Road.*

Tiri View Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Tiri View Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Tiri View Road due to a multitude of factors. These being the narrow and winding nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (26.48km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Tiri View Road in Palm Beach, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Tiri View Road, the actual operating speeds from the MegaMaps tool are 26km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Trig Hill Road (Onetangi)

The speed limit on Trig Hill Road, Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Trig Hill Road connects to Onetangi Road to the north. This road provides access to residential properties. Trig Hill Road is approximately 1.84 km in length.</p> <p>Trig Hill Road is classified as an Access road under the one network road classification (ONRC). Trig Hill Road is a two-lane undivided road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 5 crashes between 2016 and 2020: 0 fatal, 2 serious, 0 minor and 3 non-injury crashes. This resulted in 2 Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Trig Hill Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 245 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (122vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Trig Hill Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Trig Hill Road has a mean operating speed in the range of 37.63 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Marine View Road:</b> 50km/h (30km/h proposed)</li> <li><b>Waiaata Road:</b> 50km/h (30km/h proposed)</li> <li><b>Eden Terrace:</b> 50km/h (30km/h proposed)</li> <li><b>Woollams Road:</b> 50km/h (30km/h proposed)</li> <li><b>Onetangi Road:</b> 50km/h (50km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	2
DSI crashes during the period	2
Corridor Length (m)	1840
Annual Daily Traffic (vpd)	245

The Collective Risk score is 0.22 and the Personal Risk score is 243. For Urban areas this corresponds to a Collective Risk band of **High**, and a Personal Risk band of **High**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Tortuous	6
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume (vpd)	245	1

The Infrastructure Risk Rating Score is 2.52. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Trig Hill Road.*

A proposed speed limit of 30km/h was selected for Trig Hill Road due to a multitude of factors. These being the narrow and tortuous nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (37.63km/h). These features also contribute to the roads "Medium-High" IRR score. The collective and personal risk of this road are classified as High and High respectively due to the number of DSI crashes. This along with the Medium High IRR score mak it a high-risk road<sup>1</sup>.

Crash history from WK NZTA's CAS database shows 5 crashes in the last 5 years including 0 fatal, 2 serious, 0 minor and 3 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Trig Hill Road in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Trig Hill Road, the operating speeds from the Megamap are 38km/h.

Engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Tui Street (Oneroa)

The speed limit on Tui Street, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tui Street connects to Ocean View Road to the north and The Esplanade to the south. This road provides access to residential properties. Tui Street is approximately 0.65 km in length.</p> <p>Tui Street is classified as an Secondary Collector road under the one network road classification (ONRC). Tui Street is a two-lane undivided road. There are footpaths along this road but no cycle lanes. Bus stops are present and on street parallel parking is allowed.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tui Street were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1206 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (1026vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Tui Street is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tui Street has a mean operating speed in the range of 28.62 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Ocean View Road:</b> 50km/h (30km/h proposed)</li> <li><b>Matai Road:</b> 50km/h (30km/h proposed)</li> <li><b>Manuka Road:</b> 50km/h (30km/h proposed)</li> <li><b>Nikau Road:</b> 50km/h (30km/h proposed)</li> <li><b>Rata Street:</b> 50km/h (30km/h proposed)</li> <li><b>The Esplanade:</b> 50km/h (30km/h proposed)</li> <li><b>Mako Street:</b> 50km/h (30km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (m)	650
Annual Daily Traffic (vpd)	1206

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	1206	1.4

The Infrastructure Risk Rating Score is 2.13. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Tui Street.*

A proposed speed limit of 30km/h was selected for Tui Street due to a multitude of factors. These being the medium and straight nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (28.62km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Tui Street in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Tui Street, the actual operating speeds from the MegaMaps tool are 29km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Upland Road (Ōmiha)

The speed limit on Upland Road, Ōmiha, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Upland Road connects to Watson Road and Fairview Crescent to the north and Ōmiha Road to the south. This road provides access to residential properties. Upland Road is approximately 0.45 km in length.</p> <p>Upland Road is classified as an Access road under the one network road classification (ONRC). Upland Road is a two-lane undivided road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Upland Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 208 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Upland Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Upland Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Ōmiha Road:</b> 50km/h (30km/h proposed)</li> <li><b>Watson Road:</b> 50km/h (30km/h proposed)</li> <li><b>Fairview Crescent:</b> 50km/h (30km/h proposed)</li> <li><b>Bella Vista Road:</b> 50km/h (30km/h proposed)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	450
Annual Daily Traffic (vpd)	208

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	208	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Upland Road.*

Upland Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Upland Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Upland Road due to a multitude of factors. These being the narrow and curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Upland Road in Ōmiha, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Upland Road, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Valley Road (Ōmiha)

The speed limit on Valley Road, Ōmiha, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Valley Road connects to O'Brien Road to the northeast and McMillan Road to the south. This road provides access to residential properties. Valley Road is approximately 0.48 km in length.</p> <p>Valley Road is classified as an Access road under the one network road classification (ONRC). Valley Road is a two-lane undivided road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Valley Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Valley Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Valley Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>O'Brien Road:</b> 50km/h (30km/h proposed)</li> <li><b>McMillan Road:</b> 50km/h (30km/h proposed)</li> <li><b>Wairua Road:</b> 50km/h (30km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	479
Annual Daily Traffic (vpd)	156

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	156	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Valley Road.*

Valley Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Valley Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Valley Road due to a multitude of factors. These being the narrow and curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Valley Road in Ōmiha, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Valley Road, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Victoria Road North (Onetangi)

The speed limit on Victoria Road North, Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Victoria Road North connects to Waiheke Road to the north and Victoria Road South &amp; Scotts Terrace to the south. This road provides access to residential properties. Victoria Road North is approximately 0.42 km in length.</p> <p>Victoria Road North is classified as an Access road under the one network road classification (ONRC). Victoria Road North is a two-lane undivided road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Victoria Road North were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Victoria Road North is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Victoria Road North has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Waiheke road:</b> 50km/h (40km/h proposed)</li> <li><b>Scotts Terrace:</b> 50km/h (30km/h proposed)</li> <li><b>Victoria Road South:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	420
Annual Daily Traffic (vpd)	100

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (adt)	100	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Victoria Road North.*

Victoria Road North is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Victoria Road North was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Victoria Road North due to a multitude of factors. These being the narrow and curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Victoria Road North in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Victoria Road North, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Victoria Road South (Onetangi)

The speed limit on Victoria Road South, Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Victoria Road South connects Victoria Road North &amp; Scotts Terrace to the north and Eden Terrace to the south. This road provides access to residential properties. Victoria Road South is approximately 0.96 km in length.</p> <p>Victoria Road South is classified as an Secondary Collector road under the one network road classification (ONRC). Victoria Road South is a two-lane undivided road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Victoria Road South were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is considered quite high for the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Victoria Road South is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Victoria Road South has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Eden Terrace:</b> 50km/h (30km/h proposed)</li> <li><b>Hobson Terrace:</b> 50km/h (30km/h proposed)</li> <li><b>Victoria Road North:</b> 50km/h (30km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	960
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Winding	3.5
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	520	1

The Infrastructure Risk Rating Score is 2.82. For Urban areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Victoria Road South.*

Victoria Road South is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Victoria Road South was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Victoria Road South due to a multitude of factors. These being the Narrow and Winding nature of the road, the Severe roadside hazards, its Secondary Collector function and its existing mean operating speed (20km/h). These features also contribute to the roads "High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Victoria Road South in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Victoria Road South, the actual operating speeds from the MegaMaps tool are 20 km/h.

Therefore, we have determined 30 km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – View Road (Ostend)

The speed limit on View Road, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>View Road connects to Crescent Road East &amp; Crescent Road West to the west and Sea View Road to the east. This road provides access to residential properties. View Road is approximately 0.77 km in length.</p> <p>View Road is classified as an Access road under the one network road classification (ONRC). View Road is a two-lane undivided road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 5 crashes between 2016 and 2020: 0 fatal, 0 serious, 2 minor and 3 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for View Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on View Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of View Road has a mean operating speed in the range of 34.81 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Sea View Road:</b> 50km/h (40km/h proposed)</li> <li><b>Crescent Road East:</b> 50km/h (30km/h proposed)</li> <li><b>Crescent Road West:</b> 50km/h (30km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	2
DSI crashes during the period	0
Corridor Length (m)	770
Annual Daily Traffic (vpd)	156

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Tortuous	6
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume	156	1

The Infrastructure Risk Rating Score is 2.81. For Urban areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of View Road.*

A proposed speed limit of 30km/h was selected for View Road due to a multitude of factors. These being the narrow and tortuous nature of the road, the Severe roadside hazards, its Access function and its existing mean operating speed (34.81km/h). These features also contribute to the roads "High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 5 crashes in the last 5 years including 0 fatal, 0 serious, 2 minor and 3 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on View Road in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for View Road, the actual operating speeds from the MegaMaps tool are 35km/h.

Engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Vintage Lane (Waiheke Island)

The speed limit on Vintage Lane Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Vintage Lane connects to Te Whau Drive to the east. This road provides access to residential properties.</p> <p>Vintage Lane is approximately 0.87 km in length. Vintage Lane is classified as an Access road under the one network road classification (ONRC).</p> <p>Vintage Lane is a two-lane, two-way, undivided road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Vintage Lane were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow and Very narrow</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using the drive over footage and the MegaMaps tool. The IRR defines Rural residential as <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Vintage Lane is 80km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Vintage Lane has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Te Whau Drive:</b> 80km/h (50km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	870
Annual Daily Traffic (vpd)	104

The Collective Risk score is 0 and the Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.1
Traffic volume (vpd)	104	1

The Infrastructure Risk Rating Score is 1.51. For Rural areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 50km/h for the full length of Vintage Lane.*

Vintage Lane is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Vintage Lane was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50km/h was selected for Vintage Lane due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crash.

After considering all the above factors, the existing speed limit(s) of 80 km/h on Vintage Lane in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Vintage Lane is 50 km/h which is lower than the speed limit recommended by the Speed Management Guide (80km/h); however, this is considered appropriate based on the function of the road and the mean operating speed supports the reduction. It will be consistent with the adjoining road.

## Speed Limit Review – Waiata Road (Onetangi)

The speed limit on Waiata Road, Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waiata Road connects to Trig Hill Road to the east and Onetangi Road to the west. This road provides access to residential properties. Waiata Road is approximately 0.3 km in length.</p> <p>Waiata Road is classified as an Secondary Collector road under the one network road classification (ONRC). Waiata Road is a two-lane undivided road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Waiata Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 580 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (415vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Waiata Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Waiata Road has a mean operating speed in the range of 46 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Trig Hill Road:</b> 50km/h (30km/h proposed)</li> <li><b>Onetangi Road:</b> 60km/h (60km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	300
Annual Daily Traffic (vpd)	580

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	580	1

The Infrastructure Risk Rating Score is 2.53. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Waiata Road.*

A proposed speed limit of 30km/h was selected for Waiata Road due to a multitude of factors. These being the Narrow and Curved nature of the road, the Severe roadside hazards, its Secondary Collector function and its existing mean operating speed (46km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Waiata Road in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Waiata Road, the actual operating speeds from the MegaMaps tool are 46km/h.

Engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Waiheke Road (Onetangi/Waiheke Island)

Waiheke Road, Onetangi/Waiheke Island, is divided into the following section and outlined as follows<sup>1</sup>:

1. Section 1: Waiheke Road Between Onetangi Road and 70m south of Belle Terrace
2. Section 2: Waiheke Road Between the 70m south of Belle Terrace and Fisher Road
3. Section 3: Waiheke Road South of Fisher Road to Man O War Bay Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Waiheke Road, Onetangi/Waiheke Island have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Waiheke Road connects to Onetangi Road to the west and Orapiu Road to the east. This road provides access to rural residential properties and the wider road network.		
	This section of Waiheke Road is classified as an Secondary Collector road under the one network road classification (ONRC). Waiheke Road is Two-lane undivided. This section is 1.67km in length.	This section of Waiheke Road is classified as an Access road under the one network road classification (ONRC). Waiheke Road is Two-lane undivided. This section is 1.00km in length.	This section of Waiheke Road is classified as an Access road under the one network road classification (ONRC). Waiheke Road is Unsealed. This section is 1.82km in length.
	There are no pedestrian and/or cyclist amenities along this route.		
	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes for all road users and therefore the crash risk for all road users was considered.		

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

(d) crash risk for all road users; and	CAS records 6 crashes between 2016 and 2020: 0 fatal, 1 serious, 1 minor and 4 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes.	CAS records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 3 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.	CAS records 4 crashes between 2016 and 2020: 0 fatal, 1 serious, 1 minor and 2 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for Waiheke Road were determined using a combination of site drive-over footage and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium and Narrow</li> </ul> <b>Roadside hazards (in both directions):</b> Severe	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium and Narrow</li> </ul> <b>Roadside hazards (in both directions):</b> High	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium and Narrow</li> </ul> <b>Roadside hazards (in both directions):</b> Severe
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day.	The adjacent land use is classified as Rural residential using the drive over footage. The IRR defines Rural residential as Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.	The adjacent land use is classified as Rural residential using the drive over footage. The IRR defines Rural residential as Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information		
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2</li> </ul> <b>Access density:</b> 10 to <20	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2</li> </ul> <b>Access density:</b> 10 to <20	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2</li> </ul> <b>Access density:</b> 10 to <20
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1399 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 1196 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 999 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Waiheke Road are as follows: <ul style="list-style-type: none"> <li>50km/h Between Onetangi Road and 70m south of Belle Terrace</li> <li>50km/h Between the 70m south of Belle Terrace and Fisher Road</li> <li>80km/h South of Fisher Road to Man O War Bay Road</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Waiheke Road are as follows: <ul style="list-style-type: none"> <li>46.19km/h Between Onetangi Road and 70m south of Belle Terrace</li> <li>49.25km/h Between the 70m south of Belle Terrace and Fisher Road</li> <li>45.84km/h South of Fisher Road to Man O War Bay Road</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Third Avenue:</b> 50km (30km/h proposed)</li> <li><b>Victoria Road North:</b> 50km (30km/h proposed)</li> <li><b>Garrett Road:</b> 50km (30km/h proposed)</li> <li><b>Belle Terrace:</b> 50km (30km/h proposed)</li> <li><b>Fisher Road:</b> 80km (40km/h proposed)</li> <li><b>Man O War Bay Road:</b> 80km (40km/h proposed)</li> <li><b>Awaawaroa Road:</b> 80km (40km/h proposed)</li> <li><b>Orapiu Road:</b> 80km (60km/h proposed)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	1	0	1
DSI crashes during the period	1	0	1
Corridor Length (m)	1670	1000	1820
Annual Daily Traffic (vpd)	1399	1196	999

- Section 1
  - The Collective Risk score is 0.12. For Urban areas this corresponds to a Collective Risk band of Medium-High.
  - Personal Risk score is 23.45. A Personal Risk band of High.
- Section 2
  - The Collective Risk score is 0. For Rural areas this corresponds to a Collective Risk band of Low.
  - Personal Risk score is 0. A Personal Risk band of Low.
- Section 3
  - The Collective Risk score is 0.11. For Rural areas this corresponds to a Collective Risk band of Medium-High.
  - Personal Risk score is 30.14. A Personal Risk band of High.

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2		Section 3	
	Category	Risk Score	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7	Unsealed	10
Road alignment	Curved	1.8	Winding	3.5	Winding	3.5
Carriageway width (road lane + shoulder)	Medium, Narrow	1.45	Medium, Narrow	1.45	Medium, Narrow	1.45
Roadside hazards (in both directions)	Severe	2.8	High	2.28	Severe	2.8
Adjacent land use	Urban residential	3	Rural residential	1.5	Rural residential	1.5
Intersection density (per km)	1 to <2	1.15	1 to <2	1.15	1 to <2	1.15
Access density (per km)	10 to <20	1.1	10 to <20	1.1	10 to <20	1.1
Traffic volume	1399	1.4	1196	1.4	999	1

- Section 1: The Infrastructure Risk Rating Score is 2.25. For Urban areas this corresponds to an IRR band of Medium.
- Section 2: The Infrastructure Risk Rating Score is 2.15. For Rural areas this corresponds to an IRR band of High.
- Section 3: The Infrastructure Risk Rating Score is 2.52. For Rural areas this corresponds to an IRR band of High.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 for section 1 and Table 2.2 for section 2&3of the Speed Management Guide is:

- 40km/h Between Onetangi Road and 70m south of Belle Terrace (Section 1),
- <80km/h Between the 70m south of Belle Terrace and Fisher Road (Section 2),
- <80km/h South of Fisher Road to Man O War Bay Road (Section 3)

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation is

- 40km/h on Between Onetangi Road and 70m south of Belle Terrace (Section 1),
- 60km/h on Between the 70m south of Belle Terrace and Fisher Road (Section 2),
- 60km/h on South of Fisher Road to Man O War Bay Road (Section 3).

A proposed speed limit of 40km/h was selected, for Section 1 due to a multitude of factors. These being medium and Curved nature of the road, the Severe roadside hazards, its Secondary Collector function. These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Medium-High and High respectively due to the number of DSI crashes, making it a high-risk road<sup>2</sup>.

Crash history from WK NZTA's CAS database shows 6 crashes in the last 5 years including 0 fatal, 1 serious, 1 minor and 4 non-injury crashes.

Waiheke Road Between the 70m south of Belle Terrace and Fisher Road , is a Self-Explaining road as the mean operating speed is already below or near the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 60km/h was selected, for Section 2 due to a multitude of factors. These being medium and winding nature of the road, the high roadside hazards, its Access function and its existing mean operating speed (49.25km/h). These features also contribute to the roads "High" IRR score, making it a high-risk road. The collective and personal risk of this road are classified as 'Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 3 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 3 non-injury crashes.

Waiheke Road South of Fisher Road to Man O War Bay Road, is a Self-Explaining road as the mean operating speed is already below or near the proposed safe and appropriate speeds, despite the existing 80km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 60km/h was selected, for Section 3 due to a multitude of factors. These being medium and winding nature of the road, the severe roadside hazards, its Access function and its existing mean operating speed (45.84km/h). These features also contribute to the roads "High" IRR score and due to adverse crash history on the road. The collective and personal risk of this road are classified as Medium-High and High respectively due to the number of DSI crashes, making it a high-risk road.

Crash history from WK NZTA's CAS database shows 4 crashes in the last 5 years including 0 fatal, 1 serious, 1 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit(s) on Waiheke Road in Onetangi/Waiheke Island, are not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Waiheke Road is 40km/h for section 1 and 60km/h for section 2&3 km/h which is aligned with the recommended safe and appropriate speed.

## **Speed Limit Review – Waikare Road (Oneroa)**

Waikare Road, Oneroa, is divided into the following sections and outlined as follows<sup>1</sup>:

1. Section 1: Waikare Road Between 120m northeast of Ocean View Road and Ocean View Road
2. Section 2: Waikare Road Between 120m northeast of Ocean View Road and Korora Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Waikare Road, Oneroa have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Waikare Road connects to Korora Road to the north and Ocean View Road to the south. This road provides access to residential properties and some commercial activity.	Waikare Road connects to Korora Road to the north and Ocean View Road to the south. This road provides access to residential properties.
	This section of Waikare Road is 0.12km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC). Waikare Road is a two-lane undivided road.	This section of Waikare Road is 0.23km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC). Waikare Road is a two-lane undivided road.
	This section is a two-way, two-lane, undivided road. There are footpaths in some sections. There are no cyclist amenities.	This section is a two-way, two-lane, undivided road. There are footpaths in some sections. There are no cyclist amenities.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes for all road users and therefore the crash risk for all road users was considered.	
	CAS records 1 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.	CAS records 1 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for Waikare Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane, very narrow shoulder</li> </ul> <b>Roadside hazards (in both directions):</b> Moderate	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane, very narrow shoulder</li> </ul> <b>Roadside hazards (in both directions):</b> Moderate
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .	
	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10</li> </ul> <b>Access density:</b> >20	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10</li> </ul> <b>Access density:</b> >20
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2080 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	
	Average daily traffic (ADT) was determined from MegaMaps as 2080 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 2080 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit(s) on Waikare Road are as follows: <ul style="list-style-type: none"> <li>• 50km/h Between 120m northeast of Ocean View Road and Ocean View Road</li> <li>• 50km/h Between 120m northeast of Ocean View Road and Korora Road</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Waikare Road are as follows: <ul style="list-style-type: none"> <li>• 26.15km/h Between 120m northeast of Ocean View Road and Ocean View Road</li> <li>• 26.15km/h Between 120m northeast of Ocean View Road and Korora Road</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Korora Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Ocean View Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (m)	120	230
Annual Daily Traffic (vpd)	2080	2080

- Section 1
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.
- Section 2
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Straight	1	Straight	1
Carriageway width (road lane + shoulder)	Medium lane, very narrow shoulder	1.79	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43	Moderate	1.43
Adjacent land use	Urban residential	3	Urban residential	3
Intersection density (per km)	5 to <10	2.6	5 to <10	2.6
Access density (per km)	>20	1.3	>20	1.3
Traffic volume (vpd)	2080	1	2080	1

- Section 1: The Infrastructure Risk Rating Score is 1.98. For Urban areas this corresponds to an IRR band of **Low-Medium**.
- Section 2: The Infrastructure Risk Rating Score is 1.98. For Urban areas this corresponds to an IRR band of **Low-Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is:

- 40km/h between 120m northeast of Ocean View Road and Ocean View Road (Section 1),
- 40km/h between 120m northeast of Ocean View Road and Korora Road (Section 2)

## Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 30km/h on Between 120m northeast of Ocean View Road and Ocean View Road (Section 1),
- 30km/h on Between 120m northeast of Ocean View Road and Korora Road (Section 2).

Waikare Road – Section 1, between 120m northeast of Ocean View Road and Ocean View Road, is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 30km/h was selected, for Section 1 due to a multitude of factors. These being Medium and Straight nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (26.15km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 1 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

Waikare Road – Section 2, between 120m northeast of Ocean View Road and Korora Road, is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 30km/h was selected, for Section 2 due to a multitude of factors. These being Medium and Straight nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (26.15km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 1 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) on Waikare Road in Oneroa, are not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Waikare Road – Sections 1 & 2, the actual operating speeds from the MegaMaps tool are 26.15km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Waimangu Road (Waiheke Island)

The speed limit on Waimangu Road, Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waimangu Road connects to Gordons Road to the south. This road provides access to residential properties.</p> <p>Waimangu Road is approximately 0.59 km in length. Waimangu Road is classified as an Access road under the one network road classification (ONRC).</p> <p>Waimangu Road is a two-way, unsealed road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Waimangu Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane and Very narrow shoulder</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using the drive over footage and the MegaMaps tool. The IRR defines Remote rural as "Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 58 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey volumes (27vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Waimangu Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Waimangu Road has a mean operating speed in the range of 21 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Gordons Road:</b> 80km/h (40km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	590
Annual Daily Traffic (vpd)	58

The Collective Risk score is 0 and the Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Remote rural	1
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.1
Traffic volume (vpd)	58	1

The Infrastructure Risk Rating Score is 1.97. For Rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Waimangu Road.*

Waimangu Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Waimangu Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Waimangu Road due to a multitude of factors. These being the narrow and curved nature of the road, the high roadside hazards, its Access function and its existing mean operating speed (21km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Waimangu Road in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Waimangu Road is 40km/h which is aligned with the recommended safe and appropriate speed.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

### Speed Limit Review – Wairua Road (Ōmiha)

The speed limit on Wairua Road Ōmiha, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

#### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wairua Road connects to Valley Road to the north and McMillan Road to the south. This road provides access to residential properties. Wairua Road is approximately 0.28 km in length.</p> <p>Wairua Road is classified as an Access road under the one network road classification (ONRC). Wairua Road is an unsealed road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wairua Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 40 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (36vpd)
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Wairua Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Wairua Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Valley Road:</b> 50km/h (30km/h proposed)</li> <li>• <b>McMillan Road:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	282
Annual Daily Traffic (vpd)	40

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume	40	1

The Infrastructure Risk Rating Score is 3.16. For Urban areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Wairua Road.

Wairua Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Wairua Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Wairua Road due to a multitude of factors. These being the narrow and curved nature of the road, the High roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Wairua Road in Ōmiha, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Wairua Road, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Waitai Road (Ostend)**

The speed limit on Waitai Road, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waitai Road connects to Wharf Road to the west and Whakarite Road to the east. This road provides access to residential properties. Waitai Road is approximately 0.27 km in length.</p> <p>Waitai Road is classified as a Secondary Collector road under the one network road classification (ONRC). Waitai Road is a two-lane undivided road. There are footpaths along this road. No cycle lanes are provided. On-street parking is permitted with recessed parking bays provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Waitai Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Waitai Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Waitai Road has a mean operating speed in the range of 29.46 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Wharf Road:</b> 50km/h (50km/h proposed)</li> <li>• <b>Whakarite Road:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	270
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Waitai Road.*

Waitai Road is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Waitai Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Waitai Road due to a multitude of factors. These being the narrow and curved nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (29.46km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Waitai Road in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Waitai Road, the actual operating speeds from the MegaMaps tool are 29km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Wallingford Avenue (Waiheke Island)**

The speed limit on Wallingford Avenue, Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wallingford Avenue connects to Anzac Road to the north. This road provides access residential properties.</p> <p>Wallingford Avenue is approximately 0.15 km in length. Wallingford Avenue is classified as an Access road under the one network road classification (ONRC).</p> <p>Wallingford Avenue is a two-way, unsealed road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wallingford Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane, very narrow shoulder</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using the drive over footage and the MegaMaps tool. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements".

Requirement	Comments
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Wallingford Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Wallingford Avenue has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Anzac Road:</b> 50km/h (40km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	150
Annual Daily Traffic (vpd)	50

The Collective Risk score is 0 and the Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural residential	1.5
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	50	1

The Infrastructure Risk Rating Score is 2.37. For Rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide <80km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Wallingford Avenue.*

Wallingford Avenue is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Wallingford Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Wallingford Avenue due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Wallingford Avenue in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Wallingford Avenue is 40km/h which is aligned with the recommended safe and appropriate speed.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

### Speed Limit Review – Walter Frank Drive (Waiheke Island)

The speed limit on Walter Frank Drive, Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

#### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Walter Frank Drive connects to Park Point Drive to the south and Church Bay Road to the north. This road provides access to residential properties and vineyards.  Walter Frank Drive is approximately 0.45 km in length. Walter Frank Drive is classified as an Access road under the one network road classification (ONRC).  Walter Frank Drive is two-lane undivided road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.  This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Walter Frank Drive were determined using a combination of site drive-over footage and geomaps information. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two-lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Narrow lane, very narrow shoulder</li><li>• <b>Roadside hazards (in both directions):</b> Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using the drive over footage and the MegaMaps tool. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements".

Requirement	Comments
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 683 vehicles per day (vpd). This level of traffic volume appears inconsistent with the nature of this road and may be as a result of the vineyards along this road. No survey data is available.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Walter Frank Drive is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Walter Frank Drive has a mean operating speed in the range of 35.01 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Church Bay Road:</b> 50km/h (40km/h proposed)</li> <li>• <b>Park Point Drive:</b> 50km/h (40km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	450
Annual Daily Traffic (vpd)	683

The Collective Risk score is 0 and the Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural residential	1.5
Intersection density (per km)	3 to <5	1.5
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	683	1

The Infrastructure Risk Rating Score is 1.61. For Rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Walter Frank Drive.

Walter Frank Drive is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Walter Frank Drive was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Walter Frank Drive due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (35.01km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Walter Frank Drive in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Walter Frank Drive is 40km/h which is aligned with the recommended safe and appropriate speed.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Watson Road (Ōmiha)**

The speed limit on Watson Road, Ōmiha, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Watson Road connects to Glen Brook Road to the north and Upland Road to the south. This road provides access to residential properties. Watson Road is approximately 0.18 km in length.</p> <p>Watson Road is classified as an Secondary Collector road under the one network road classification (ONRC). Watson Road is a two-lane undivided road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Watson Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Watson Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Watson Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Glen Brook Road:</b> 50km/h (30km/h proposed)</li> <li>• <b>Upland Road:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	178
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 2.52. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

## Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Watson Road.

Watson Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Watson Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30 km/h was selected for Watson Road due to a multitude of factors. These being the narrow and curved nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (20 km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Watson Road in Ōmiha, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Watson Road, the actual operating speeds from the MegaMaps tool are 20 km/h.

Therefore, we have determined 30 km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Wattle Road (Oneroa)

The speed limit on Wattle Road, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wattle Road connects to Mako Street to the north and Tahatai Road to the south. This road provides access to residential properties. Wattle Road is approximately 0.16 km in length.</p> <p>Wattle Road is classified as an Secondary Collector road under the one network road classification (ONRC). Wattle Road is a two-lane undivided road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wattle Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Wattle Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Wattle Road has a mean operating speed in the range of 22.5 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Mako Street:</b> 50km/h (30km/h proposed)</li> <li>• <b>Ridge Road:</b> 50km/h (30km/h proposed)</li> <li>• <b>Tahatai Road:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	160
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume	520	1

The Infrastructure Risk Rating Score is 2.52. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Wattle Road.

Wattle Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Wattle Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Wattle Road due to a multitude of factors. These being the narrow and curved nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (22.5km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Wattle Road in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Wattle Road, the actual operating speeds from the MegaMaps tool are 23km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Weka Road (Oneroa)**

The speed limit on Weka Road, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Weka Road connects to Ocean View Road to the north and Mako Street to the south. This road provides access to residential properties. Weka Road is approximately 0.34 km in length.</p> <p>Weka Road is classified as an Secondary Collector road under the one network road classification (ONRC). Weka Road is a two-lane undivided road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Weka Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Weka Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Weka Road has a mean operating speed in the range of 23.18 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Ocean View Road:</b> 50km/h (30km/h proposed)</li> <li>• <b>Kuaka Road:</b> 50km/h (30km/h proposed)</li> <li>• <b>Mako Street:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	340
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume	520	1

The Infrastructure Risk Rating Score is 2.52. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Weka Road.

Weka Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Weka Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Weka Road due to a multitude of factors. These being the narrow and curved nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (23.18km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Weka Road in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Weka Road, the actual operating speeds from the MegaMaps tool are 23km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Wellington Road (Surfdale)**

The speed limit on Wellington Road, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wellington Road connects to Ocean Road to the north and Nelson Avenue to the south. This road provides access to residential properties. Wellington Road is approximately 0.45 km in length.</p> <p>Wellington Road is classified as an Secondary Collector road under the one network road classification (ONRC). Wellington Road is a Two-lane undivided road. Pedestrian amenities including footpaths and a pedestrian refuge island are provided. Bus stops are also provided. However, there are no cyclist amenities. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wellington Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Wellington Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Wellington Road has a mean operating speed in the range of 22 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Ocean Road:</b> 50km/h (30km/h proposed)</li> <li>• <b>Nelson Avenue:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	450
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume	520	1

The Infrastructure Risk Rating Score is 2.00. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Wellington Road.*

Wellington Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Wellington Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Wellington Road due to a multitude of factors. These being the narrow and curved nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (22km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crash.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Wellington Road in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Wellington Road, the actual operating speeds from the MegaMaps tool are 22km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Whakarite Road (Ostend)**

The speed limit on Whakarite Road, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Whakarite Road connects to Taraire Street to the north and Ostend Road to the south. This road provides access to residential properties. Whakarite Road is approximately 0.74 km in length.</p> <p>Whakarite Road is classified as an Secondary Collector road under the one network road classification (ONRC). Whakarite Road is a two-lane undivided road. Footpaths are provided along this road. No cyclist amenities are provided. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 2 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Whakarite Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1241 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (1070vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Whakarite Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Whakarite Road has a mean operating speed in the range of 34.94 km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Tarairé Street:</b> 50km/h (30km/h proposed)</li> <li>• <b>Waitai Road:</b> 50km/h (30km/h proposed)</li> <li>• <b>Ostend Road:</b> 50km/h (50km/h proposed)</li> <li>• <b>Homai Street:</b> 50km/h (30km/h proposed)</li> <li>• <b>Potai Road:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (m)	740
Annual Daily Traffic (vpd)	1241

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	1241	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Whakarite Road.*

A proposed speed limit of 30km/h was selected for Whakarite Road due to a multitude of factors. These being the narrow and curved nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (34.94km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low-Low and Low respectively.

Crash history from WK NZTA's CAS database shows 3 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Whakarite Road in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Whakarite Road, the actual operating speeds from the MegaMaps tool are 35km/h.

Engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Wharf Road (Ostend)**

Wharf Road, Ostend, is divided into the following sections and outlined as follows<sup>1</sup>:

1. Section 1: Wharf Road Between Causeway Road and Homai Street
2. Section 2: Wharf Road Between Causeway Road and the southern end of Wharf Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Wharf Road, Ostend have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	This section of Wharf Road connects to Causeway Road to the south and Homai Street / Crescent Road East to the north. This road provides access to residential properties and some commercial activities.	This section of Wharf Road connects to Causeway Road to the north and continues to the southern end of Wharf Road. This road provides access to residential properties and the boat docks/carpark area.
	This section of Wharf Road is 0.96km in length. It is classified as an Arterial road under the one network road classification (ONRC). Wharf Road is a two-lane undivided road.	This section of Wharf Road is 0.95km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC). Wharf Road is a two-lane undivided road.
	This section is a two-way, two-lane, undivided road. There are footpaths and a bus stop along this section. There are no cycle lanes.	This section is a two-way, two-lane, undivided road. There are footpaths along this section. There are no cycle lanes.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes for all road users and therefore the crash risk for all road users was considered.	
	CAS records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	CAS records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 2 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for Wharf Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane and very narrow shoulder</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane and very narrow shoulder</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".	
	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10</li> <li>• <b>Access density:</b> 10 to &lt;20</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2</li> <li>• <b>Access density:</b> 10 to &lt;20</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8369 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and within range of the traffic survey (5250vpd).	Average daily traffic (ADT) was determined from MegaMaps as 8369 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.

Requirement	Comments	
	Section 1	Section 2
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit(s) on Wharf Road are as follows: <ul style="list-style-type: none"> <li>• 50km/h Between Causeway Road and Homai Street</li> <li>• 50km/h Between Causeway Road and the southern end of Wharf Road</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Wharf Road are as follows: <ul style="list-style-type: none"> <li>• 43.25km/h Between Causeway Road and Homai Street</li> <li>• 28.36km/h Between Causeway Road and the southern end of Wharf Road</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Ostend Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Causeway Road:</b> 50 km/h</li> <li>• <b>Putiki Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Belgium Street:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Waitai Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Muritai Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Crescent Road East:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Te Toki Road:</b> 50 km/h (proposed 40 km/h)</li> <li>• <b>Homai Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	1
DSI crashes during the period	0	0
Corridor Length (m)	960	950
Annual Daily Traffic (vpd)	8369	8369

- Section 1
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.
- Section 2
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Curved	1.8
Carriageway width (road lane + shoulder)	Medium lane, very narrow shoulder	1.79	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43	Severe	2.8
Adjacent land use	Urban residential	3	Urban residential	3
Intersection density (per km)	5 to <10	2.6	1 to <2	1.15
Access density (per km)	10 to <20	1.1	10 to <20	1.1
Traffic volume	8369	2.2	8369	2.2

- Section 1: The Infrastructure Risk Rating Score is 2.51. For Urban areas this corresponds to an IRR band of **Medium-High**.
- Section 2: The Infrastructure Risk Rating Score is 2.45. For Urban areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is:

- 50km/h Between Causeway Road and Homai Street (Section 1),
- 50km/h Between Causeway Road and the southern end of Wharf Road (Section 2)

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 50km/h on Between Causeway Road and Homai Street (Section 1),
- 30km/h on Between Causeway Road and the southern end of Wharf Road (Section 2).

Wharf Road – Section 1 between Causeway Road and Homai Street, is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 50km/h was selected, for Section 1 due to a multitude of factors. These being the medium and curved nature of the road, the moderate roadside hazards, its Arterial function and its existing mean operating speed (43km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>2</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Wharf Road – Section 2, between Causeway Road and the southern end of Wharf Road, is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 30km/h was selected, for Section 2 due to a multitude of factors. These being the medium and curved nature of the road, the Severe roadside hazards, its Secondary Collector function and its existing mean operating speed (28km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>3</sup>. The collective and personal risk of this road are classified as Low and Low due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 3 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit(s) on Wharf Road in Ostend, are not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Wharf Road – Section 1, is 50km/h which is aligned with the recommended safe and appropriate speed.

While the speed management guide suggests 50km/h as the safe and appropriate speed for Wharf Road – Section 2, the actual operating speeds from the MegaMaps tool are 28km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

<sup>3</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## roadSpeed Limit Review – Wilma Road (Surfdale/Ostend)

The speed limit on Wilma Road Surfdale/Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wilma Road connects to Te Toki Road to the north and Causeway Road to the south. This road provides access to residential properties. Wilma Road is approximately 2.39 km in length.</p> <p>Wilma Road is classified as an Access road under the one network road classification (ONRC). Wilma Road is a two-lane undivided road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 1 serious, 0 minor and 1 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wilma Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 289 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and the traffic survey (289vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Wilma Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Wilma Road has a mean operating speed in the range of 32.09 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Te Toki Road:</b> 50km/h (40km/h proposed)</li> <li><b>Causeway Road:</b> 50km/h (50km/h proposed)</li> <li><b>Hillside Road:</b> 50km/h (50km/h proposed)</li> <li><b>Dickson Road:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	1
Corridor Length (m)	2390
Annual Daily Traffic (vpd)	289

The Collective Risk score is 0.08 and the Personal Risk score is 79.33. For Urban areas this corresponds to a Collective Risk band of **Medium**, and a Personal Risk band of **High**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Tortuous	6
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	2 to <3	1.25
Access density (per km)	>20	1.3
Traffic volume	289	1

The Infrastructure Risk Rating Score is 2.73. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Wilma Road.*

Wilma Road is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Wilma Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Wilma Road due to a multitude of factors. These being the narrow and tortuous nature of the road, the Severe roadside hazards, its Access function and its existing mean operating speed (32.09km/h). These features also contribute to the roads "Medium-High" IRR score. The collective and personal risk of this road are classified as Medium and High respectively due to the number of DSI crashes, making it a high-risk road<sup>1</sup>.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 1 serious, 0 minor and 1 non-injury crash.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Wilma Road in Surfdale/Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Wilma Road, the actual operating speeds from the MegaMaps tool are 32km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Woodside Bay Road (Waiheke Island)

The speed limit on Woodside Bay Road, Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Woodside Bay Road connects Gordons Road to the north. This road provides access to residential properties.</p> <p>Woodside Bay Road is approximately 0.47 km in length. Woodside Bay Road is classified as an Access road under the one network road classification (ONRC).</p> <p>Woodside Bay Road is a two-way, unsealed road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Woodside Bay Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane, very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using the drive over footage and the MegaMaps tool. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 32 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (28vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Woodside Bay Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Woodside Bay Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Gordons Road:</b> 60km/h (40km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	470
Annual Daily Traffic (vpd)	32

The Collective Risk score is 0 and the Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Unsealed	10
Road alignment	Curved	1.8
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural residential	1.5
Intersection density (per km)	2 to <3	1.25
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	32	1

The Infrastructure Risk Rating Score is 1.96. For Rural areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Woodside Bay Road.*

Woodside Bay Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Woodside Bay Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Woodside Bay Road due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Woodside Bay Road in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Woodside Bay Road is 40km/h which is aligned with the recommended safe and appropriate speed.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Woollams Road (Onetangi)

The speed limit on Woollams Road Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Woollams Road connects to Trig Hill Road to the east. This road provides access to residential properties. Woollams Road is approximately 0.16 km in length.</p> <p>Woollams Road is classified as an Access road under the one network road classification (ONRC). Woollams Road is a two-lane undivided road. There are no footpaths or cycle lanes on this road. No on-street parking is provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Woollams Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 245 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Woollams Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Woollams Road has a mean operating speed in the range of 37.63 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Trig Hill Road:</b> 50km/h (30km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	160
Annual Daily Traffic (vpd)	245

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	245	1

The Infrastructure Risk Rating Score is 1.98. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Woollams Road.*

A proposed speed limit of 30km/h was selected for Woollams Road due to a multitude of factors. These being the narrow and straight nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (37.63km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Woollams Road in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Woollams Road, the actual operating speeds from the MegaMaps tool are 38km/h.

Engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Aio Wira Road (Waitakere)

The speed limit on Aio Wira Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Aio Wira Road connects to Te Henga Road to the east and is a no-exit road at the western end. This road provides access to rural residential properties.</p> <p>This section is approximately 1.1 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Aio Wira Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 39 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 41 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Te Henga Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.10
Annual Daily Traffic	39

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.34. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Aio Wira Road.*

Aio Wira Road is a self-explaining road as the mean operating speeds (41 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Aio Wira Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Aio Wira Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, winding road alignment, high roadside hazards, and low mean operating speed of 41 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Aio Wira Road in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate

speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Anawhata Road (Piha)

The speed limit on Piha Road, Anawhata has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Anawhata Road connects to Piha Road to the south-east and is a no-exit road at the north-western end. This road provides access to the Waitakere Ranges Regional Park and Anawhata Beach.</p> <p>This section is approximately 9.89 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 5 crashes between 2016 and 2020: 0 fatal, 1 serious, 2 minor and 2 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Anawhata Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote Rural using on-site information and geomaps. The IRR defines Remote Rural as: "Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> &lt;1 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 208 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 32 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Piha Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	3
DSI crashes during the period	1
Corridor Length (km)	9.89
Annual Daily Traffic	208

- The Collective Risk score is 0.02. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 26.64. For rural areas this corresponds to a Personal Risk band of **High**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Tortuous	6.00
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Remote Rural	1.00
Intersection density (per km)	<1	1.00
Access density (per km)	<1	1.00
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.39. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Anawhata Road.*

Anawhata Road is a self-explaining road as the mean operating speeds (32 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Anawhata Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Anawhata Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, tortuous road alignment, high roadside hazards, and low mean operating speed of 32 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup> Furthermore, crash history from NZTA's CAS database shows 5 crashes in the last 5 years including 1 serious, 2 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit of 100 km/h on Anawhata Road in Piha is not considered to be a safe and appropriate speed limit for this road. The proposed safe and

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Anzac Valley Road (Waitakere)

Anzac Valley Road, Waitakere, is divided into two sections as follows:<sup>1</sup>

- Section 1: Anzac Valley Road between Bethells Road and 170m south of Bethells Road
- Section 2: Anzac Valley Road between 170m south of Bethells Road and the southern end of Anzac Valley Road

These sections were chosen as Section 1 covers an entrance to Waitakere School with an associated pick-up and drop-off area. Given the presence of the school access, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Anzac Valley Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Anzac Valley Road connects to Bethells Road to the north and is a no-exit road at the southern end. This road provides access to rural residential properties.	
	This section is approximately 0.17 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 1.85 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities. There is a pick-up and drop off area that provide car parks for Waitakere School on this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Anzac Valley Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 539 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 539 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.

Requirement	Comments	
	Section 1	Section 2
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is: <ul style="list-style-type: none"> <li>50 km/h between Bethells Road and 20m south of Bethells Road.</li> <li>70 km/h between 20m south of Bethells Road and 170m south of Bethells Road.</li> </ul>	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 56 km/h.	This section has a mean operating speed of 56 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Bethells Road:</b> 50 km/h</li> <li><b>Wendy Road:</b> 70 km/h (proposed 60 km/h)</li> <li><b>Streed Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>	

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	0.17	1.85
Annual Daily Traffic	539	539

- Section 1

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Two Lane Undivided	3.70
Road alignment	Curved	1.80	Curved	1.80
Carriageway width	Narrow lane, very narrow shoulder	2.01	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural Residential	1.50	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15	1 to <2	1.15
Access density (per km)	5 to <10	1.06	5 to <10	1.06
Traffic volume (vpd)	<1,000	1.00	<1,000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 1.70. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.70. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h for both sections.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 50 km/h on Anzac Valley Road between Bethells Road and 170m south of Bethells Road
- 60 km/h on Anzac Valley Road between 170m south of Bethells Road and the southern end of the road.

Anzac Valley Road is a self-explaining road as the mean operating speeds (56 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. It is also noted that the operating speed is measured for the length of the road but is likely to be below 50 km/h outside the school entrance where the 50 km/h speed limit is proposed. Engineering up of Anzac Valley Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Anzac Valley Road between Bethells Road and 170m south of Bethells Road due to the school access and hence the likely presence of high numbers of children and turning vehicles on the road. A proposed speed limit of 60 km/h was selected for the remainder of Anzac Valley Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, curved road alignment, high roadside hazards, and low mean operating speed of 56 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>2</sup>

After considering all the above factors, the existing speed limit of 70 km/h on Anzac Valley Road in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limits of 50 km/h and 60 km/h for the sections outlined above are aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Arrowsmith Road (Waitakere)

The speed limit on Arrowsmith Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Arrowsmith Road connects to Wairere Road to the south and is a no-exit road to the north. This road provides access to rural residential properties.</p> <p>This section is approximately 1.05 km in length. It is classified as a Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 non-injury crash between 2016 and 2020. Therefore, there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Arrowsmith Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 152 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Wairere Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.05
Annual Daily Traffic	152

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Tortuous	6.00
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.61. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Arrowsmith Road.*

Arrowsmith Road is a self-explaining road as the mean operating speeds (20 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Arrowsmith Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Arrowsmith Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, tortuous road alignment, high roadside hazards, and low mean operating speed of 20 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road. <sup>1</sup>

After considering all the above factors, the existing speed limit of 80 km/h on Arrowsmith Road in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Atarua Gardens (Oratia)**

The speed limit on Atarua Gardens, Oratia has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Atarua Gardens connects to Bush Road to the west and is a no-exit road at the eastern end. This road provides access to rural residential properties.</p> <p>This section is approximately 0.37 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There is a footpath on the road but there are no cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Atarua Gardens were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 388 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 29 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Bush Road:</b> 70 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.37
Annual Daily Traffic	388

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	2 to <3	1.25
Access density (per km)	20+	1.30
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 1.82. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Atarua Gardens.*

Atarua Gardens is a self-explaining road as the mean operating speeds (29 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Atarua Gardens was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Atarua Gardens due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, curved road alignment, high roadside hazards, and low mean operating speed of 29 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 70 km/h on Atarua Gardens in Oratia is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Bendalls Lane (Oratia)**

The speed limit on Bendalls Lane, Oratia has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bendalls Lane connects to West Coast Road to the south and is a no-exit road at the northern end. This road provides access to rural residential properties.</p> <p>This section is approximately 0.37 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There is a footpath on the road but no cycle amenities, and no on-street parking is provided along the road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 non-injury crash between 2016 and 2020. Therefore, there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Bendalls Lane were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 394 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>West Coast Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.37
Annual Daily Traffic	394

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	2 to <3	1.25
Access density (per km)	20+	1.30
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 1.82. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Bendalls Lane.*

Bendalls Lane is a self-explaining road as the mean operating speeds (20 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Bendalls Lane was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Bendalls Lane due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, curved road alignment, high roadside hazards, and low mean operating speed of 20 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 70 km/h on Bendalls Lane in Oratia is not considered to be a safe and appropriate speed limit for this road. The proposed safe and

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Bethells Road (Waitakere)**

Bethells Road, Waitakere, is divided into four sections as follows: <sup>1</sup>

- Section 1: Bethells Road between Waitakere Road and 75m west of Waitakere Road
- Section 2: Bethells Road between 75m west of Waitakere Road and 85m east of Wairere Road
- Section 3: Bethells Road between 85m east of Wairere Road 360m east of Tasman View Road
- Section 4: Bethells Road between 360m east of Tasman View Road and the western end of the road.

These sections were chosen based on the existing speed limits on the road. They also create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Bethells Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2)) – Section 1 and Section 2*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Bethells Road connects to Waitakere Road to the east and is a no-exit road at Bethells Beach at the western end. This road provides access to rural residential properties.	
	This section is approximately 0.08 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 0.47 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There is a footpath on the road, but no cycle amenities. There is no on-street parking provided along this section.	This section is a two-way, two-lane, undivided road. There is a footpath on the road, but no cycle amenities. There is no on-street parking provided available on this section of road.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 non-injury crash between 2016 and 2020. Therefore, there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 1 non-injury crash between 2016 and 2020. Therefore, there were zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
	A section of Bethells Road is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Bethells Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2,785 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 2,785 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

Table 2: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2)) – Section 3 and Section 4

Requirement	Comments	
	Section 3	Section 4
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Bethells Road connects to Waitakere Road to the east and is a no-exit road at Bethells Beach at the western end. This road provides access to rural residential properties.	
	This section is approximately 9.64 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 2.06 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.

(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 18 crashes between 2016 and 2020: 0 fatal, 1 serious, 9 minor and 8 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 1 non-injury crash between 2016 and 2020. Therefore, there were zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
	A section of Bethells Road is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Bethells Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural Town using on-site information and geomaps. The IRR defines Rural Town as: "Rural town with mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersection per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersection per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,309 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 1,367 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.

(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1 and 2, further relevant information was sought as summarised in Table 3 and 4 below.

Table 3: Additional Relevant Factors – Section 1 and 2

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 70 km/h.	The existing speed limit is 50 km/h. There is a 40 km/h variable school speed limit between 40m west of Anzac Valley Road and 360m west of Anzac Valley Road.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 48 km/h.	This section has a mean operating speed of 48 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Waitakere Road:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Anzac Valley Road:</b> 70 km/h (proposed 50 km/h)</li> </ul>	

Table 4: Additional Relevant Factors – Section 3 and 4

AT also had regard to	Section 3	Section 4
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 56 km/h.	This section has a mean operating speed of 34 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Wairere Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Duffy Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Steam Hauler Track:</b> 100 km/h (proposed 40 km/h)</li> <li>• <b>Stoney Creek Drive:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Te Henga Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Long Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Te Auta Ridge Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>	

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	0.08	0.47
Annual Daily Traffic	2,785	2,785

Required Information for safety metrics calculations	Data	
	Section 3	Section 4
Crash Analysis Period (years)	5	5
Total injury crashes during period	10	0
DSI crashes during the period	1	0
Corridor Length (km)	9.64	2.06
Annual Daily Traffic	1,309	1,367

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 3
  - The Collective Risk score is 0.02. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 4.34. For rural areas this corresponds to a Personal Risk band of **Low-Medium**
- Section 4
  - The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Two Lane Undivided	3.70
Road alignment	Straight	1.00	Straight	1.00
Carriageway width	Medium lane, narrow shoulder	1.45	Medium lane, narrow shoulder	1.45
Roadside hazards (in both directions)	Moderate	1.43	Moderate	1.43
Adjacent land use	Rural Residential	1.50	Rural Residential	1.50
Intersection density (per km)	5 to <10	2.60	<1	1.00
Access density (per km)	5 to <10	1.06	20+	1.30
Traffic volume (vpd)	1,000 to <6,000	1.40	1,000 to <6,000	1.40

Feature	Section 3		Section 4	
	Category	Risk Score	Category	Risk Score

- Section 1
  - The Infrastructure Risk Rating Score is 1.74. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.41. For rural areas this corresponds to an IRR band of **Medium**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.06. For rural areas this corresponds to an IRR band of **High**.
- Section 4
  - The Infrastructure Risk Rating Score is 2.31. For urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is:

- Less than 80 km/h for Bethells Road between Waitakere Road 75m west of Waitakere Road (Section 1)
- 80 km/h for Bethells Road between 75m west of Waitakere Road and 85m east of Wairere Road (Section 2)
- Less than 80 km/h between 85m east of Wairere Road and 360m east of Tasman View Road (Section 3)
- 50 km/h for Bethells Road between 360m east of Tasman View Road and the western end of the road (Section 4).

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- *60 km/h on Bethells Road between Waitakere Road and 75m west of Waitakere Road (Section 1)*
- *50 km/h on Bethells Road between 75m west of Waitakere Road and 85m east of Wairere Road (Section 2) with a 40 km/h school speed zone between 40m west of Anzac Valley Road and 360m west of Anzac Valley Road.*
- *60 km/h on Bethells Road between 85m east of Wairere Road and 360m east of Tasman View Road (Section 3)*
- *50 km/h on Bethells Road between 360m east of Tasman View Road and the western end of the road (Section 4)*

Bethells Road is a self-explaining road as the mean operating speeds on all sections of the road are below or near the proposed safe and appropriate speeds, despite the higher existing speed limits. Engineering up of Bethells Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Bethells Road between Waitakere Road and 75m west of Waitakere Road (Section 1) to match the proposed speed limit on the adjacent section of Waitakere Road.

It is proposed to maintain the existing speed limit of 50 km/h for Bethells Road between 75m west of Waitakere Road and 85m east of Wairere Road (Section 2) including the existing 40 km/h variable school speed zone between 40m west of Anzac Valley Road and 360m west of Anzac Valley Road.

This existing permanent and variable speed limit are considered appropriate given the presence of a school on the road.

A proposed speed limit of 60 km/h was selected for Bethells Road between 85m east of Wairere Road and 360m east of Tasman View Road (Section 3) due to a multitude of factors. These included the winding road alignment, high roadside hazards, and low mean operating speed of 56 km/h. All these factors contribute to the road's 'High' IRR score, making this section a high-risk road.<sup>2</sup>

It is proposed to maintain the existing speed limit of 50 km/h for Bethells Road between 360m east of Tasman View Road and the western end of the road (Section 4) due to the 'Rural Town' classification of the road and the likely presence of active road users.

Where speed limit changes are proposed, the proposed safe and appropriate speed limit is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Brabant Road (Waiatarua)

The speed limit on Brabant Road, Waiatarua has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Brabant Road connects to Scenic Drive to the north and is a no-exit road at the southern end. This road provides access to rural residential properties.</p> <p>This section is approximately 0.1 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Brabant Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt; 3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote Rural using on-site information and geomaps. The IRR defines Remote Rural as: "Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 25 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 37km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Scenic Drive:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.10
Annual Daily Traffic	25

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Curved	1.80
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Remote Rural	1.00
Intersection density (per km)	5 to <10	2.60
Access density (per km)	20+	1.30
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.39. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Brabant Road.*

Brabant Road is a self-explaining road as the mean operating speeds (37 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Brabant Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Brabant Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, curved road alignment, high roadside hazards, and low mean operating speed of 37 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Brabant Road in Waitarua is not considered to be a safe and appropriate speed limit for this road. The proposed safe

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed. Given the very short length of the road it was also considered appropriate to match the speed limit to the proposed speed limit on the adjacent road.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Bush Road (Waiatarua)

The speed limit on Bush Road, Waiatarua has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bush Road connects to West Coast Road to the north and is a no-exit road at the southern end. This road provides access to rural residential properties.</p> <p>This section is approximately 0.78 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Bush Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 392 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 27 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>West Coast Road:</b> 70 km/h (proposed 60 km/h)</li> <li><b>Atarua Gardens:</b> 70 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.78
Annual Daily Traffic	392

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	2 to <3	1.25
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.04. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Bush Road.*

Bush Road is a self-explaining road as the mean operating speeds (27 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Bush Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Bush Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, winding road alignment, high roadside hazards, and low mean operating speed of 27 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 70 km/h on Bush Road in Waiatarua is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Candia Road (Henderson Valley)

Candia Road, Henderson Valley, is divided into two sections as follows:<sup>1</sup>

- Section 1: Candia Road between 20m north of the northern end of Coulter Road and the Urban Traffic Boundary (Auckland Isthmus)
- Section 2: Candia Road between the Urban Traffic Boundary (Auckland Isthmus) and Henderson Valley Road

These sections were separated as Section 1 is within the Urban Traffic Area (Auckland Isthmus) and Section 2 is not.

The speed limit on Candia Road, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Candia Road connects to Pooks Road and North Candia Road to the north and to Henderson Valley Road to the south. This road provides access to rural residential properties.	
	This section is approximately 0.39 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 2.81 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There is a footpath on a section of the road near Henderson Valley Road. There are no cycle amenities, and no on-street parking is provided along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 30 crashes between 2016 and 2020: 0 fatal, 1 serious, 13 minor and 16 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Candia Road is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Candia Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	
	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>

(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3,909 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 3,909 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 70 km/h.	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 59 km/h.	This section has a mean operating speed of 59 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Candia Road (north of a point 20m north of the northern end of Coulter Road):</b> 50 km/h</li> <li>• <b>Coulter Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Simpson Road:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Sturges Road:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Vineyard Road:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Henderson Valley Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>	

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	14
DSI crashes during the period	0	1
Corridor Length (km)	0.39	2.81
Annual Daily Traffic	3,909	3,909

- Section 1

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.07. For rural areas this corresponds to a Collective Risk band of **Medium**
  - The Personal Risk score is 5.0. For rural areas this corresponds to a Personal Risk band of **Low-Medium**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Two Lane Undivided	3.70
Road alignment	Curved	1.80	Winding	3.50
Carriageway width	Medium lane, very narrow shoulder	1.79	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural Residential	1.50	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15	2 to <3	1.25
Access density (per km)	5 to <10	1.06	5 to <10	1.06
Traffic volume (vpd)	1,000 to <6,000	1.4	1,000 to <6,000	1.4

- Section 1
  - The Infrastructure Risk Rating Score is 1.84. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.17. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h for both sections of Candia Road.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is:

- 60 km/h on Candia Road between 20m north of the northern end of Coulter Road and the Urban Traffic Area Boundary (Auckland Isthmus)
- 60 km/h on Candia Road between the Urban Traffic Area Boundary (Auckland Isthmus) and Henderson Valley Road

Candia Road is a self-explaining road as the mean operating speeds (59 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Candia Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Candia Road due to a multitude of factors. These included the winding road alignment, high roadside hazards, and low mean operating speed of 59 km/h. All these factors contribute to the road's 'Medium-High' to 'High' IRR score, making it a high-risk road<sup>2</sup>. Furthermore, crash history from NZTA's CAS database shows 30 crashes in the last 5 years on the road including 0 fatal, 1 serious, 13 minor and 16 non-injury crashes.

After considering all the above factors, the existing speed limit of 70 km/h on Candia Road in Henderson Valley is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Carter Road (Oratia)

The speed limit on Carter Road, Oratia has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Carter Road connects to West Coast Road to the north and to Shaw Road to the south. This road provides access to rural residential properties.</p> <p>This section is approximately 4.04 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 5 crashes between 2016 and 2020: 0 fatal, 1 serious, 2 minor and 2 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Carter Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 781 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 46 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>West Coast Road:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Cochran Road:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Shaw Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	3
DSI crashes during the period	1
Corridor Length (km)	4.04
Annual Daily Traffic	781

- The Collective Risk score is 0.05. For rural areas this corresponds to a Collective Risk band of **Low-Medium**

- The Personal Risk score is 17.36. For rural areas this corresponds to a Personal Risk band of **High**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 1.94. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Carter Road.*

Carter Road is a self-explaining road as the mean operating speeds (49 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Carter Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Carter Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, winding road alignment, high roadside

hazards, and low mean operating speed of 49 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup> Furthermore, crash history from NZTA's CAS database shows 5 crashes in the last 5 years including 0 fatal, 1 serious, 2 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit of 70 km/h on Carter Road in Oratia is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Cascade Avenue (Waiatarua)

The speed limit on Cascade Avenue, Waiatarua has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cascade Avenue connects to West Coast Road to the west and is a no-exit road at the eastern end. This road provides access to rural residential properties.</p> <p>This section is approximately 0.36 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Cascade Avenue were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 218 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 28 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>West Coast Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.36
Annual Daily Traffic	218

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Tortuous	6.00
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.22. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Cascade Avenue.*

Cascade Avenue is a self-explaining road as the mean operating speeds (28 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Cascade Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Cascade Avenue due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, tortuous road alignment, high roadside hazards, and low mean operating speed of 28 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 70 km/h on Cascade Avenue in Waitatarua is not considered to be a safe and appropriate speed limit for this road. The proposed safe

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Caton Road (Waitakere)**

The speed limit on Caton Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Caton Road connects to Wairere Road to the south and is a no-exit road to the north. This road provides access to rural residential properties.</p> <p>This section is approximately 1.79 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Caton Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 239 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 32 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Wairere Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.79
Annual Daily Traffic	239

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.36. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Caton Road.*

Caton Road is a self-explaining road as the mean operating speeds (32 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Caton Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Caton Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, winding road alignment, high roadside hazards, and low mean operating speed of 32 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 80 km/h on Caton Road in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Cochran Road (Oratia)**

The speed limit on Cochran Road, Oratia has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cochran Road connects to Carter Road to the north and is a no-exit road at the southern end.</p> <p>This section is approximately 0.52 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Road Name were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 360 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 30 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Carter Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.52
Annual Daily Traffic	360

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	20+	1.30
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.07. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Cochran Road.*

Cochran Road is a self-explaining road as the mean operating speeds (30 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Cochran Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Cochran Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, winding road alignment, high roadside hazards, and low mean operating speed of 30 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 70 km/h on Cochran Road in Oratia is not considered to be a safe and appropriate speed limit for this road. The proposed safe and

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Cornwallis Road (Cornwallis)**

Cornwallis Road, Cornwallis, is divided into two sections as follows: <sup>1</sup>

- Section 1: Cornwallis Road between Huia Road and 990m south of Huia Road
- Section 2: Cornwallis Road between 990m south of Huia Road and the southern end of the road

These sections were chosen based on the existing speed limits on the road. They also create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Cornwallis Road, Cornwallis has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Cornwallis Road connects to Huia Road to the north and is a no-exit road at the southern end. This road provides access to rural residential properties and to Cornwallis Beach.	
	This section is approximately 0.99 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 1.43 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Cornwallis Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote Rural using on-site information and geomaps. The IRR defines Remote Rural as: <i>"Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."</i>	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 327 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 218 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	

(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.
---	---

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 50 km/h.	This section has a mean operating speed of 35 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Huia Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>	

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	0.99	1.43
Annual Daily Traffic	327	218

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

#### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Two Lane Undivided	3.70
Road alignment	Curved	1.80	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43	High	2.28
Adjacent land use	Remote Rural	1.00	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15	<1	1.00
Access density (per km)	1 to <2	1.01	10 to <20	1.10
Traffic volume (vpd)	<1,000	1.00	<1,000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 1.30. For rural areas this corresponds to an IRR band of **Medium**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.94. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h for Section 1 and less than 80 km/h for Section 2.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60 km/h on Cornwallis Road between Huia Road and 990m south of Huia Road (Section 1)
- 40 km/h on Cornwallis Road between 990m south of Huia Road and the southern end of the road (Section 2)

Cornwallis Road is a self-explaining road as the mean operating speeds (58 km/h and 35 km/h for Section 1 and Section 2 respectively) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h and 50 km/h speed limits. Engineering up of Cornwallis Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Section 1 of Cornwallis Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, curved road alignment, moderate roadside hazards, and low mean operating speed of 58 km/h. All these factors contribute to the road's 'Medium' IRR score.

After considering all the above factors, the existing speed limit of 100 km/h on Section 1 of Cornwallis Road in Cornwallis is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit for Cornwallis Road is 60 km/h, which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the nature and function of the road and the mean operating speed (58 km/h) supports the reduction. It also aligns with the proposed speed limit of the adjacent section of Huia Road.

A proposed speed limit of 40 km/h was selected for Section 2 of Cornwallis Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, winding road alignment, high roadside hazards, and low mean operating speed of 35 km/h.

After considering all the above factors, the existing speed limit of 50 km/h on Section 2 of Cornwallis Road in Cornwallis is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Coulter Road (Henderson Valley)

The speed limit on Coulter Road, Henderson Valley has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Coulter Road is a loop road that connects to Candia Road at both ends. This road provides access to rural residential properties.</p> <p>This section is approximately 3.81 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 4 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 3 non-injury crashes. Therefore, there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Coulter Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 225 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Candia Road:</b> 70 km/h (proposed 60 km/h)</li> <li><b>Perris Road:</b> 100km/h (proposed 40 km/h)</li> <li><b>Vineyard Road:</b> 70 km/h (proposed 60 km/h)</li> <li><b>Drower Road:</b> 100km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	3.81
Annual Daily Traffic	225

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**

- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 1.97. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Coulter Road.*

Coulter Road is a self-explaining road as the mean operating speeds (42 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Coulter Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Coulter Road due to a multitude of factors. These included the winding road alignment, high roadside hazards, and low mean operating speed of 42 km/h.

All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup> Furthermore, crash history from NZTA's CAS database shows 4 crashes in the last 5 years on the road including 0 fatal, 0 serious, 1 minor and 3 non-injury crashes.

After considering all the above factors, the existing speed limit of 100 km/h on Coulter Road in Henderson Valley is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Crows Road (Swanson)

The speed limit on Crows Road (section between 545m south-west of Birdwood Road and Sunnyvale Road), Swanson, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Crows Road connects to Birdwood Road to the east and Sunnyvale Road to the north-west. This road provides access to rural residential properties.</p> <p>This section is approximately 2.07 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 3 minor and 0 non-injury crashes. Therefore, there were zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Crows Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and wide narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>

(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2,015 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 45 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Crows Road (east of a point 545m south-west of Birdwood Road):</b> 50 km/h</li> <li><b>Sunnyvale Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	3
DSI crashes during the period	0
Corridor Length (km)	2.07
Annual Daily Traffic	2,015

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two Lane Undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	1,000 to <6,000	1.40

The Infrastructure Risk Rating Score is 2.12. For rural areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the section of Crows Road between 545m south-west of Birdwood Road and Sunnyvale Road.*

Crows Road is a self-explaining road as the mean operating speeds (45 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Crows Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Crows Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, winding road alignment, high roadside hazards, and low mean operating speed of 45 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road<sup>1</sup>.

After considering all the above factors, the existing speed limit of 80 km/h on Crows Road in Swanson is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Drower Road (Swanson)

The speed limit on Drower Road, Swanson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Drower Road connects to O'Neills Road to the north and to Coulter Road to the south. This road provides access to rural residential properties.</p> <p>This section is approximately 0.81 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Drower Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 47 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 33 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>O'Neills Road:</b> 60 km/h</li> <li><b>Coulter Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.81
Annual Daily Traffic	47

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	2 to <3	1.25
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.44. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Drower Road.*

Drower Road is a self-explaining road as the mean operating speeds (33 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Drower Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Drower Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, winding road alignment, high roadside hazards, and low mean operating speed of 33 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Drower Road in Swanson is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Duffy Road (Waitakere)

The speed limit on Duffy Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Duffy Road connects to Bethells Road to the south and Wairere Road to the north. This road provides access to rural residential properties.</p> <p>This section is approximately 1.21 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 2 non-injury crashes between 2016 and 2020. Therefore, there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Duffy Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 136 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 44 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Wairere Road:</b> 80 km/h (proposed 60 km/h)</li> <li><b>Tyndel Road:</b> 80 km/h (proposed 60 km/h)</li> <li><b>Bethells Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.21
Annual Daily Traffic	136

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**

- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	2 to <3	1.25
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.02. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Duffy Road.*

Duffy Road is a self-explaining road as the mean operating speeds (44 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Duffy Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Duffy Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, winding road alignment, high roadside

hazards, and low mean operating speed of 44 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 80 km/h on Duffy Road in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Falls Road (Waitakere)

Falls Road, Waitakere, is divided into two sections as follows:<sup>1</sup>

- Section 1: Falls Road between Te Henga Road and 970m south of Te Henga Road
- Section 2: Falls Road between 970m south of Te Henga Road and the southern end of the road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Falls Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Falls Road connects to Te Henga Road to the north and is a no-exit road at the southern end. This road provides access to rural residential properties, a golf course and Scenic Reserve.	
	This section is approximately 0.97 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 1.03 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Falls Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 170 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 170 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	

(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.
---	---

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 70 km/h.	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 34 km/h.	This section has a mean operating speed of 26 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Te Henga Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>	

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	0.97	1.03
Annual Daily Traffic	170	170

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Unsealed	10.00
Road alignment	Tortuous	6.00	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural Residential	1.50	Rural Residential	1.50
Intersection density (per km)	<1	1.00	<1	1.00
Access density (per km)	5 to <10	1.06	1 to <2	1.01
Traffic volume (vpd)	<1,000	1.00	<1,000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.16. For rural areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.34. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Falls Road.*

Falls Road is a self-explaining road as the mean operating speeds (26 to 34 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Falls Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Falls Road due to a multitude of factors. These included the unsealed road surface on part of the road, narrow lane widths and very narrow shoulders, winding / tortuous road alignment, high roadside hazards, and low mean operating speed of 26 to 34 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>2</sup>

After considering all the above factors, the existing speed limit of 70 km/h on Falls Road in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h for the full length of the road, which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Forest Hill Road (Henderson / Waiaatarua)**

Forest Hill Road, Henderson / Waiaatarua, is divided into two sections as follows: <sup>1</sup>

- Section 1: Forest Hill Road between Pine Avenue and 35m south of Holdens Road
- Section 2: Forest Hill Road between 35m south of Holdens Road and West Coast Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). They also have different existing posted speed limits. Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Forest Hill Road, Henderson / Waiaatarua has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Forest Hill Road connects to Henderson Valley Road to the north-east and to West Coast Road south-west. This road provides access to rural residential properties.	
	This section is approximately 0.73 km in length. It is classified as an Arterial road under the one network road classification (ONRC).	This section is approximately 4.49 km in length. It is classified as an Arterial road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There is a footpath on this section of road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 7 crashes between 2016 and 2020: 0 fatal, 1 serious, 1 minor and 5 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 16 crashes between 2016 and 2020: 0 fatal, 1 serious, 7 minor and 8 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Forest Hill Road is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Forest Hill Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>

(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2,539 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 1,682 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h. However, it is noted the speed limit is currently posted as 50 km/h on this section.	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 53 km/h.	This section has a mean operating speed of 57 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Forest Hill Road (west of Pine Avenue):</b> 50 km/h</li> <li>• <b>Holdens Road:</b> 50 km/h (posted speed limit)</li> <li>• <b>Kellys Road:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Old Forest Hill Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>West Coast Road:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Cascade Avenue:</b> 70 km/h (proposed 60 km/h)</li> </ul>	

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	2	8
DSI crashes during the period	1	1
Corridor Length (km)	0.73	4.49
Annual Daily Traffic	2,539	1,682

- Section 1

- o The Collective Risk score is 0.27. For urban areas this corresponds to a Collective Risk band of **High**
- o The Personal Risk score is 29.56. For urban areas this corresponds to a Personal Risk band of **High**
- Section 2
  - o The Collective Risk score is 0.04. For rural areas this corresponds to a Collective Risk band of **Low-Medium**
  - o The Personal Risk score is 7.26. For rural areas this corresponds to a Personal Risk band of **Medium-High**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Two Lane Undivided	3.70
Road alignment	Curved	1.80	Winding	3.50
Carriageway width	Medium lane, narrow shoulder	1.45	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Urban Residential	3.00	Rural Residential	1.50
Intersection density (per km)	2 to <3	1.25	1 to <2	1.15
Access density (per km)	20+	1.30	5 to <10	1.06
Traffic volume (vpd)	1,000 to <6,000	1.40	1,000 to <6,000	1.40

- Section 1
  - o The Infrastructure Risk Rating Score is 2.27. For urban areas this corresponds to an IRR band of **Medium**.
- Section 2
  - o The Infrastructure Risk Rating Score is 2.13. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h for the section of Forest Hill Road between Pine Avenue and 35m south of Holdens Road 40 km/h.

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h for the section of Forest Hill Road between 35m south of Holdens Road and West Coast Road.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 50 km/h on Forest Hill Road between Pine Avenue and 35m south of Holdens Road
- 60 km/h on Forest Hill Road between 35m south of Holdens Road and West Coast Road

Forest Hill Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit on most of the road. Engineering up of Forest Hill Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Forest Hill Road between Pine Avenue and 35m south of Holdens Road due to a multitude of factors. These included the fact the road is already signed with a 50 km/h speed limit, the curved road alignment, high roadside hazards, and low mean operating speed of 53 km/h.

A proposed speed limit of 60 km/h was selected for Forest Hill Road between 35m south of Holdens Road and West Coast Road due to a multitude of factors. These included the winding road alignment, high roadside hazards, and low mean operating speed of 57 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>2</sup> Furthermore, crash history from NZTA's CAS database shows 16 crashes in the last 5 years on this section of road including 0 fatal, 1 serious, 7 minor and 8 non-injury crashes.

After considering all the above factors, the existing speed limits of 70 km/h and 100 km/h on Forest Hill Road in Henderson / Waiatarua are not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limits are 50 km/h (for Section 1) and 60 km/h (for Section 2), which are aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Grassmere Road (Henderson Valley)

The speed limit on Grassmere Road, Henderson Valley has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Grassmere Road connects to Opanuku Road to the north-west and is a no-exit road at the south-eastern end. This road provides access to rural residential properties.
	This section is approximately 1.17 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There is a footpath on part of the road, but there are no cycle amenities, and no on-street parking is provided along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Grassmere Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,305 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 38 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Opanuku Road:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Napuka Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.17
Annual Daily Traffic	1,305

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	>20	1.30
Traffic volume (vpd)	1,000 to <6,000	1.40

The Infrastructure Risk Rating Score is 1.73. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Grassmere Road.*

Grassmere Road is a self-explaining road as the mean operating speeds (38 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Grassmere Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Grassmere Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, curved road alignment, and low mean operating speed of 38 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup> A 40 km/h speed limit also matches the proposed speed limit on the adjacent road, which is appropriate given Grassmere Road is a no-exit road.

After considering all the above factors, the existing speed limit of 50 km/h on Grassmere Road in Henderson Valley is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Gregory Road (Waitakere)

The speed limit on Gregory Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Gregory Road connects to Wairere Road to the south and is a no-exit road to the north. This road provides access to rural residential properties.</p> <p>This section is approximately 1.19 km in length. It is classified as a Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Gregory Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 114 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 30 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Wairere Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.19
Annual Daily Traffic	114

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.34. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Gregory Road.*

Gregory Road is a self-explaining road as the mean operating speeds (30 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Gregory Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Gregory Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, winding road alignment, high roadside hazards, and low mean operating speed of 30 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 80 km/h on Gregory Road in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe and

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Gum Road (Henderson Valley)

The speed limit on Gum Road, Henderson Valley has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Gum Road connects to Henderson Valley Road to the north and is a no-exit road to the south. This road provides access to rural residential properties.</p> <p>This section is approximately 0.99 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 non-injury crash between 2016 and 2020. Therefore, there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Gum Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 188 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h. There is also a 40 km/h variable school speed limit on the section of Gum Road from Henderson Valley Road to 40m south of Henderson Valley Road.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 34 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Henderson Valley Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.99
Annual Daily Traffic	188

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**

- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 1.70. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Gum Road (with a 40 km/h variable school speed limit on the section of Gum Road from Henderson Valley Road to 40m south of Henderson Valley Road)*

Gum Road is a self-explaining road as the mean operating speeds (34 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Gum Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Gum Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, curved road alignment, high roadside

hazards, and low mean operating speed of 34 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 70 km/h on Gum Road in Henderson Valley is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Haszard Road (Massey)

The speed limit on Haszard Road, Massey has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Haszard Road connects to Sunnyvale Road to the east and is a no-exit road at the western end of the road. This road provides access to rural residential properties.</p> <p>This section is approximately 0.18 km in length. It is classified as a Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Haszard Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 73 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Sunnyvale Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.18
Annual Daily Traffic	73

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	5 to <10	2.60
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 1.85. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Haszard Road.*

Haszard Road is a self-explaining road as the mean operating speeds (20 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Haszard Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Haszard Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, curved road alignment, moderate roadside hazards, and low mean operating speed of 20 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Haszard Road in Massey is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Hayes Road (Henderson Valley)

The speed limit on Hayes Road, Henderson Valley has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hayes Road connects to Mountain Road to the north and is a no-exit road at the southern end. This road provides access to rural residential properties.</p> <p>This section is approximately 0.29 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Hayes Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Mountain Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.29
Annual Daily Traffic	104

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	3 to <5	1.50
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.53. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Hayes Road.*

Hayes Road is a self-explaining road as the mean operating speeds (20 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Hayes Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Hayes Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, winding road alignment, high roadside hazards, and low mean operating speed of 20 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 70 km/h on Hayes Road in Henderson Valley is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Henderson Valley Road (Henderson Valley)

Henderson Valley Road, Henderson Valley, is divided into two sections as follows: <sup>1</sup>

- Section 1: Henderson Valley Road between 710m west of Pine Avenue and the Urban Traffic Area Boundary (Auckland Isthmus)
- Section 2: Henderson Valley Road between the Urban Traffic Area Boundary (Auckland Isthmus) and Opanuku Road

These sections were chosen as Section 1 is within the Urban Traffic Area whereas Section 2 is outside the Urban Traffic Area.

The speed limit on Henderson Valley Road, Henderson Valley has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Henderson Valley Road connects to Great North Road to the north-east and to Mountain Road and Opanuku Road to the south-west. This road provides access to residential properties.	
	This section is approximately 0.14 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 2.73 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There is a footpath on the road but no cycle amenities. On-street parking is provided for along most of this section of road.	This section is a two-way, two-lane, undivided road. There is a footpath on the road but no cycle amenities. There is some on-street parking provision in the vicinity of Henderson Valley School.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 23 crashes between 2016 and 2020: 0 fatal, 2 serious, 9 minor and 12 non-injury crashes. This resulted in 2 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Henderson Valley Road is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Henderson Valley Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and wide shoulder (&gt;1.0 to 2.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and wide shoulder (&gt;1.0 to 2.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>

(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 6,162 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 3,295 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 70 km/h.	The existing speed limit is 70 km/h. There is a variable 40 km/h school speed limit between 100m west of Candia Road and 330m west of Gum Road.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 59 km/h.	This section has a mean operating speed of 59 to 61 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Candia Road:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Gum Road:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Opanuku Road:</b> 70 km/h (proposed 40 km/h)</li> <li>• <b>Mountain Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>	

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	11
DSI crashes during the period	0	2
Corridor Length (km)	0.14	2.73
Annual Daily Traffic	6,162	3,295

- Section 1

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score for part of this section is 0.28. For rural areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score for part of the section is 23.4. For rural areas this corresponds to a Personal Risk band of **High**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Two Lane Undivided	3.70
Road alignment	Curved	1.80	Curved	1.80
Carriageway width	Medium lane, wide shoulder	1.00	Medium lane, wide shoulder	1.00
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural Residential	1.50	Rural Residential	1.50
Intersection density (per km)	<1	1.00	1 to <2	1.15
Access density (per km)	5 to <10	1.06	5 to <10	1.06
Traffic volume (vpd)	6,000 to <12,000	2.20	1,000 to <6,000	1.40

- Section 1
  - The Infrastructure Risk Rating Score is 1.81. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.68. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h for both sections of road.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation = 60 km/h for Henderson Valley Road between 710m west of Pine Avenue and Opanuku Road (Sections 1 and 2). It is also proposed to maintain the existing 40 km/h variable school speed zone between 100m west of Candia Road and 330m west of Gum Road.

Henderson Valley Road is a self-explaining road as the mean operating speeds (59 to 61 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Henderson Valley Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Henderson Valley Road due to a multitude of factors. These included the curved road alignment, high roadside hazards, and low mean operating speed. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>2</sup> Furthermore, crash history from NZTA's CAS database shows 23 crashes on the road in the last 5 years including 0 fatal, 2 serious, 9 minor and 12 non-injury crashes.

After considering all the above factors, the existing speed limit of 70 km/h on Henderson Valley Road in Henderson Valley is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h, (with a 40 km/h variable school speed zone between 100m west of Candia and 330m west of Gum Road), which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Holdens Road (Henderson)

The speed limit on Holdens Road, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Holdens Road connects to Forest Hill Road to the south-west and to Parrs Cross Road to the north-east. This road provides access to rural residential properties.</p> <p>This section is approximately 1.06 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Holdens Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 480 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h although it is noted the posted speed limit on the road is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 47 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Parrs Cross Road:</b> 50 km/h</li> <li>• <b>Forest Hill Road:</b> posted speed limit 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.06
Annual Daily Traffic	480

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**

- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 1.71. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 50 km/h for the full length of Holdens Road.*

Holdens Road is a self-explaining road as the mean operating speeds (47 km/h) are below or near the proposed safe and appropriate speeds. Engineering up of Holdens Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Holdens Road due to a multitude of factors. These included the curved road alignment, high roadside hazards, low mean operating speed of 47 km/h, and

the fact the road has been posted with a 50 km/h speed limit for some time. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing bylaw speed limit of 100 km/h for Holdens Road in Henderson is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed, and it is also the current posted speed limit on the road.

## **Speed Limit Review – Horsman Road (Waitakere)**

The speed limit on Horsman Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Horsman Road connects to Jonkers Road and Wairere Road to the south-east and is a no-exit road at the north-western end. This road provides access to rural residential properties.</p> <p>This section is approximately 1.69 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Horsman Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 216 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 34 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Wairere Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Jonkers Road:</b> 80 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.69
Annual Daily Traffic	216

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.36. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Horsman Road.*

Horsman Road is a self-explaining road as the mean operating speeds (34 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Horsman Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Horsman Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, winding road alignment, high roadside hazards, and low mean operating speed of 34 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 80 km/h on Horsman Road in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Huia Road (Laingholm and Huia)**

The section of Huia Road, Laingholm / Huia, between 425m west of Victory Road and Whatipu Road is divided into six sections as follows:<sup>1</sup>

- Section 1: Huia Road between 425m west of Victory Road and 1,020m north of Staley Road
- Section 2: Huia Road between 1,020m north of Staley Road and 90m west of Shirley Road
- Section 3: Huia Road between 90m west of Shirley Road and 630m east of Foster Avenue
- Section 4: Huia Road between 630m east of Foster Avenue and 70m south of Huia Dam Road
- Section 5: Huia Road between 70m south of Huia Dam Road and 1,260m south of Huia Dam Road
- Section 6: Huia Road between 1,260m south of Huia Dam Road and Whatipu Road

These sections are all within the Rural Traffic Area and were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on the section of Huia Road, Laingholm / Huia between 425m west of Victory Road and Whatipu Road has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2)) – Sections 1, 2 and 3*

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Huia Road connects to Titirangi Road to the east and Whatipu Road to the west. This road provides access to rural residential properties.		
	This section is approximately 1.03 km in length. It is classified as an Arterial road under the one network road classification (ONRC).	This section is approximately 1.78 km in length. It is classified as an Arterial road under the one network road classification (ONRC).	This section is approximately 5.37 km in length. It is classified as an Arterial road under the one network road classification (ONRC).

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e. tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There is a footpath along sections of this road. There are no cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 7 crashes between 2016 and 2020: 0 fatal, 1 serious, 0 minor and 6 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 10 crashes between 2016 and 2020: 0 fatal, 3 serious, 1 minor and 6 non-injury crashes. This resulted in 3 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 11 crashes between 2016 and 2020: 0 fatal, 0 serious, 6 minor and 5 non-injury crashes. Therefore, there were zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
	A part of Huia Road is identified as one of the top 10% DSI saving network sections for New Zealand.		
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Huia Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> </ul>

Requirement	Comments		
	Section 1	Section 2	Section 3
	<ul style="list-style-type: none"> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "	The adjacent land use is classified as Rural Town using on-site information and geomaps. The IRR defines Rural Town as: " <i>Rural town with a mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> "	The adjacent land use is classified as Remote Rural using on-site information and geomaps. The IRR defines Remote Rural as: " <i>Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3,344 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 1,966 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 1,671 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.

Requirement	Comments		
	Section 1	Section 2	Section 3
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.		

Table 2: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2)) – Sections 4, 5 and 6

Requirement	Comments		
	Section 4	Section 5	Section 6
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Huia Road connects to Titirangi Road to the east and Whatipu Road to the west. This road provides access to rural residential properties.		
	This section is approximately 1.68 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 1.19 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 1.11 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There is a footpath on the road. There are no cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.

(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 2 minor injury crashes between 2016 and 2020. Therefore, there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 1 minor injury crash between 2016 and 2020. Therefore, there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Huia Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Town using on-site information and geomaps. The IRR defines Rural Town as: "Rural town with a mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present."	The adjacent land use is classified as Rural Town using on-site information and geomaps. The IRR defines Rural Town as: "Rural town with a mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present."	The adjacent land use is classified as Rural Town using on-site information and geomaps. The IRR defines Rural Town as: "Rural town with a mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present."

(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 707 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 440 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 440 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.		

In addition to the factors outlined in Table 1 and 2, further relevant information was sought as summarised in Table 3 and 4 below.

Table 3: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
Current speed limit	The existing speed limit is 70 km/h.	The existing speed limit is 50 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 56 km/h.	This section has a mean operating speed of 64 km/h.	This section has a mean operating speed of 65 km/h.

Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Rauhuia Crescent:</b> 50 km/h</li> <li><b>Staley Road Crescent:</b> 50 km/h</li> <li><b>Armour Road:</b> 50 km/h</li> <li><b>Rauhuia Crescent:</b> 50 km/h</li> <li><b>Shirley Road:</b> 50 km/h</li> <li><b>Cornwallis Road:</b> 100 km/h (proposed 60 km/h)</li> <li><b>Foster Avenue:</b> 50 km/h</li> <li><b>Upland Road:</b> 50 km/h</li> <li><b>Huia Dam Road:</b> 50 km/h</li> <li><b>Whatipu Road:</b> 70 km/h (proposed 40 km/h)</li> </ul>
---------------------------------	---

  - The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium-High**.
- Section 6
  - The Infrastructure Risk Rating Score is 2.45. For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is:

- Less than 80 km/h (Section 1)
- 50 km/h (Section 2)
- 80 km/h (Section 3)
- 50 km/h (Section 4 and 5)
- Less than 50 km/h (Section 6)

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60 km/h on Huia Road between 425m west of Victory Road and 1,020m north of Staley Road (Section 1)
- 50 km/h on Huia Road between 1,020m north of Staley Road and 90m west of Shirley Road (Section 2)
- 60 km/h on Huia Road between 90m west of Shirley Road and 630m east of Foster Avenue (Section 3)
- 50 km/h on Huia Road between 630m east of Foster Avenue and 70m south of Huia Dam Road (Section 4)
- 60 km/h on Huia Road between 70m south of Huia Dam Road and 1,260m south of Huia Dam Road (Section 5)
- 40 km/h on Huia Road between 1,260m south of Huia Dam Road and Whatipu Road (Section 6)

No change to the existing speed limit is proposed on Section 2 and Section 4 of Huia Road as the current 50 km/h speed limits are considered to be a safe and appropriate speed limit.

Sections 1, 5 and 6 of Huia Road are self-explaining roads as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing speed limits. The mean operating speed of Section 3 (65 km/h) is slightly higher than the proposed safe and appropriate speed (60 km/h); however, this is considered acceptable as the section of road still has several bends with a lower operating speed. Engineering up of Huia Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Section 1, Section 3, and Section 5 of Huia Road due to a multitude of factors. These included the curved / winding road alignment, moderate / high roadside hazards, and generally low mean operating speeds. All these factors contribute to the road's 'Medium' to 'Medium-High' IRR score.

A proposed speed limit of 40 km/h was selected for Section 6 of Huia Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, tortuous road alignment, severe roadside hazards, and low mean operating speed of 38 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk section of road.

After considering all the above factors, the existing speed limits of 70 and 100 km/h on Sections 1, 3, 5 and 6 of Huia Road in Laingholm / Huia are not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Section 1 of Huia Road is 60 km/h which is aligned with the recommended safe and appropriate speed.

The proposed safe and appropriate speed limit for Section 3 of Huia Road is 60 km/h, which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the nature and function of the road. It is also noted that the mean operating speed (65 km/h) is slightly higher than the proposed speed limit, but there are still several sections of the road where the operating speed is lower.

The proposed safe and appropriate speed limit for Section 5 of Huia Road is higher than the Speed Management Guide recommendation (50 km/h) but is considered appropriate given the nature and function of the road. While this section of road is classified as a 'Rural Town', the development along it is sporadic, and a 50 km/h speed limit is unlikely to be credible or supported by the public due.

The proposed safe and appropriate speed limit for Section 6 of Huia Road is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limits on Huia Road improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Jonkers Road (Waitakere)**

The speed limit on Jonkers Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Jonkers Road connects to Horsman Road and Wairere Road to the north-east and is a no-exit road at the south-western end. This road provides access to rural residential properties.</p> <p>This section is approximately 1.45 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Road Name were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 93 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 30 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Wairere Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Horsman Road:</b> 80 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.45
Annual Daily Traffic	93

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Tortuous	6.00
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.58. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Jonkers Road.*

Jonkers Road is a self-explaining road as the mean operating speeds (30 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Jonkers Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Jonkers Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, tortuous road alignment, high roadside hazards, and low mean operating speed of 30 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 80 km/h on Jonkers Road in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Karekare Road (Karekare)**

Karekare Road, Karekare, is divided into two sections as follows:<sup>1</sup>

- Section 1: Karekare Road between Piha Road and 880m north of Watchmans Road
- Section 2: Karekare Road between 880m north of Watchmans Road and Lone Kauri Road

These sections were chosen based on the existing speed limits on the road. They also create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Karekare Road, Karekare has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Karekare Road connects to Piha Road to the north and to Lone Kauri Road to the south. This road provides access to rural residential properties and Karekare Beach.	
	This section is approximately 1.76 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 1.07 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section. There are traffic calming devices (speed humps) on this section of road.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Karekare Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural Town using on-site information and geomaps. The IRR defines Rural Town as: "Rural town with a mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> &lt;1 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 827 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 383 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.

Requirement	Comments	
	Section 1	Section 2
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 28 km/h.	This section has a mean operating speed of 27 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Piha Road:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Watchmans Road:</b> 50km/h (proposed 40 km/h)</li> <li>• <b>Lone Kauri Road:</b> 100 km/h (proposed 40 km/h)</li> </ul>	

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	1.76	1.07
Annual Daily Traffic	827	383

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2

- o The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**
- o The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Two Lane Undivided	3.70
Road alignment	Tortuous	6.00	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.80	High	2.28
Adjacent land use	Rural Residential	1.50	Rural Town	2.50
Intersection density (per km)	<1	1.00	1 to <2	1.15
Access density (per km)	<1	1.00	10 to <20	1.10
Traffic volume (vpd)	<1,000	1.00	<1,000	1.00

- Section 1
  - o The Infrastructure Risk Rating Score is 2.22. For rural areas this corresponds to an IRR band of **High**.
- Section 2
  - o The Infrastructure Risk Rating Score is 2.22. For urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h for Section 1 and less than 50 km/h for Section 2.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is 40 km/h for the full length of Karekare Road (Section 1 and 2)*

Karekare Road is a self-explaining road as the mean operating speeds (27 and 28 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 50 and 100 km/h speed limits. Engineering up of Karekare Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Karekare Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, winding / tortuous road alignment, high / severe roadside hazards, and low mean operating speed. All these factors contribute to the road's 'High' IRR score on Section 1, making it a high-risk road.<sup>2</sup>

After considering all the above factors, the existing speed limits of 50 and 100 km/h on Karekare Road in Karekare are not considered to be safe and appropriate speed limits for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Kauri Loop Road (Oratia)

The speed limit on Kauri Loop Road, Oratia has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kauri Loop Road is a crescent that connects to West Coast Road and its north-eastern and south-western ends. This road provides access to rural residential properties.</p> <p>This section is approximately 0.79 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Kauri Loop Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 203 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 23 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>West Coast Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.79
Annual Daily Traffic	203

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Tortuous	6.00
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.80
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	2 to <3	1.25
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.36. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Kauri Loop Road.*

Kauri Loop Road is a self-explaining road as the mean operating speeds (23 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Kauri Loop Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Kauri Loop Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, tortuous road alignment, severe roadside hazards, and low mean operating speed of 23 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 70 km/h on Kauri Loop Road in Oratia is not considered to be a safe and appropriate speed limit for this road. The proposed safe and

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Kay Road (Swanson)

The speed limit on Kay Road, Swanson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kay Road connects to Sunnyvale Road and McEntee Road to the north and Waitakere Road to the south. This road provides access to rural residential properties.</p> <p>This section is approximately 1.37 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There is a footpath on a section of the road. There are no cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 4 crashes between 2016 and 2020: 0 fatal, 1 serious, 2 minor and 1 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Kay Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 638 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 47 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Waitakere Road:</b> 80 km/h (proposed 60 km/h)</li> <li><b>Sunnyvale Road:</b> 80 km/h (proposed 60 km/h)</li> <li><b>McEntee Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	3
DSI crashes during the period	1
Corridor Length (km)	1.37
Annual Daily Traffic	638

- The Collective Risk score is 0.15. For rural areas this corresponds to a Collective Risk band of **Medium-High**
- The Personal Risk score is 62.7. For rural areas this corresponds to a Personal Risk band of **High**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 1.97. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Kay Road.*

Kay Road is a self-explaining road as the mean operating speeds (47 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Kay Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Kay Road due to a multitude of factors. These included the very narrow shoulders, winding road alignment, high roadside hazards, and low mean operating speed of 47 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup> Furthermore, crash history from NZTA's CAS database shows 4 crashes in the last 5 years on the road including 0 fatal, 1 serious, 2 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on Kay Road in Swanson is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Kellys Road (Oratia)

The speed limit on Kellys Road, Oratia has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kellys Road connects to Forest Hill Road to the north and West Coast Road to the south. This road provides access to residential properties.</p> <p>This section is approximately 1.06 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 2 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Kellys Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,802 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Forest Hill Road:</b> 70 km/h (proposed 60 km/h)</li> <li><b>West Coast Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	1.06
Annual Daily Traffic	1,802

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Tortuous	6.00
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	1,000 to <6,000	1.40

The Infrastructure Risk Rating Score is 2.37. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Kellys Road.

Kellys Road is a self-explaining road as the mean operating speeds (42 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Kellys Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Kellys Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, tortuous road alignment, high roadside hazards, and low mean operating speed of 42 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road<sup>1</sup>. Furthermore, the crash history from NZTA's CAS database shows 3 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit of 70 km/h on Kellys Road in Oratia is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Kokako Grove (Bethells Beach)

The speed limit on Kokako Grove, Bethells Beach has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kokako Grove connects to Te Aute Ridge Road to the east and is a no-exit road to the west. This road provides access to rural residential properties.</p> <p>This section is approximately 0.55 km in length. It is classified as a Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Kokako Grove were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 52 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 27 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Te Aute Ridge Road:</b> 100 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.55
Annual Daily Traffic	52

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Curved	1.80
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.12. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Kokako Grove.*

Kokako Grove is a self-explaining road as the mean operating speeds (27 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Kokako Grove was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Kokako Grove due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, curved road alignment, high roadside hazards, and low mean operating speed of 27 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Kokako Grove in Bethells Beach is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – La Trobe Track (Karekare)

The speed limit on La Trobe Track, Karekare has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>La Trobe Track connects to Lone Kauri Road to the north-east and is a no-exit road to the south-west. This road provides access to rural residential properties.</p> <p>This section is approximately 0.96 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of La Trobe Track were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was estimated at 20 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Lone Kauri Road:</b> 100 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.96
Annual Daily Traffic	20

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.43. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of La Trobe Track.*

La Trobe Track is a self-explaining road as the mean operating speeds (20 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of La Trobe Track was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for La Trobe Track due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, winding road alignment, high roadside hazards, and low mean operating speed of 20 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on La Trobe Track in Karekare is not considered to be a safe and appropriate speed limit for this road. The proposed safe

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Lone Kauri Road (Karekare)

Lone Kauri Road, Karekare, is divided into two sections as follows:<sup>1</sup>

- Section 1: Lone Kauri Road between Piha Road and 390m south of Watchmans Road
- Section 2: Lone Kauri Road between 390m south of Watchmans Road and Karekare Road

These sections were chosen based on the existing speed limits on the road. They also create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Lone Kauri Road, Karekare has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Lone Kauri Road connects to Piha Road to the north-east and to Karekare Road to the south-west. This road provides access to residential properties.	
	This section is approximately 8.36 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 0.2 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 1 non-injury crashes. Therefore, there were zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Lone Kauri Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote Rural using on-site information and geomaps. The IRR defines Remote Rural as: "Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."	The adjacent land use is classified as Rural Town using on-site information and geomaps. The IRR defines Rural Town as: "Rural town with a mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> &lt;1 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 222 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 358 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	

(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.
---	---

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 35 km/h.	This section has a mean operating speed of 26 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Karekare Road:</b> 50 km/h (proposed 40 km/h)</li> <li>• <b>Waikarekare Lane:</b> 100 km/h (proposed 40 km/h)</li> <li>• <b>La Trobe Track:</b> 100 km/h (proposed 40 km/h)</li> <li>• <b>Piha Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>	

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	1	0
DSI crashes during the period	0	0
Corridor Length (km)	8.36	0.20
Annual Daily Traffic	222	358

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Two Lane Undivided	3.70
Road alignment	Tortuous	6.00	Tortuous	6.00
Carriageway width	Narrow lane, very narrow shoulder	2.01	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.80	Severe	2.80
Adjacent land use	Remote Rural	1.00	Rural Town	2.50
Intersection density (per km)	<1	1.00	<1	1.00
Access density (per km)	<1	1.00	1 to <2	1.01
Traffic volume (vpd)	<1,000	1.00	<1,000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.05. For rural areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.45. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h for Section 1 and less than 50 km/h for Section 2.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Lone Kauri Road.*

Lone Kauri Road is a self-explaining road as the mean operating speeds (26 to 35 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 50 and 100 km/h speed limits. Engineering up of Lone Kauri Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Lone Kauri Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, tortuous road alignment, severe

roadside hazards, and low mean operating speeds. All these factors contribute to the road's 'Medium-High' to 'High' IRR score, making it a high-risk road.<sup>2</sup>

After considering all the above factors, the existing speed limits of 50 and 100 km/h on Lone Kauri Road in Karekare are not considered to be safe and appropriate speed limits for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Long Road (Waitakere)

The speed limit on Long Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Long Road connects to Bethells Road to the north and is a no-exit road at the southern end. This road provides access to rural residential properties.</p> <p>This section is approximately 1.02 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Road Name were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 638 vehicles per day (vpd). This level of traffic volume is considered relatively high for a rural no-exit road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 30 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Bethells Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.02
Annual Daily Traffic	638

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 1.62. For rural areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Long Road.*

Long Road is a self-explaining road as the mean operating speeds (30 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Long Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Long Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, curved road alignment, high roadside hazards, and low mean operating speed of 30 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Long Road in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – McEntee Road (Waitakere)**

McEntee Road, Waitakere, is divided into two sections as follows:<sup>1</sup>

- Section 1: McEntee Road between Township Road and 140m east of Amreins Road
- Section 2: McEntee Road between 140m east of Amreins Road and Kay Road

These sections were chosen as they currently have different speed limits. They also create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on McEntee Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	McEntee Road connects to Township Road to the west and to Kay Road and Sunny vale Road to the east. This road provides access to rural residential properties.	
	This section is approximately 1.54 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.7 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There is a footpath on this section of road. There are no cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 1 non-injury crashes. Therefore, there were zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 1 non-injury crashes. Therefore, there were zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of McEntee Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,452 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 1,452 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.

Requirement	Comments	
	Section 1	Section 2
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 50 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 55 km/h.	This section has a mean operating speed of 60 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Township Road (south of McEntee Road):</b> 70 km/h (proposed 50 km/h)</li> <li>• <b>Township Road (north of McEntee Road):</b> 50 km/h</li> <li>• <b>Northfield Road:</b> 50 km/h</li> <li>• <b>Amreins Road:</b> 50 km/h</li> <li>• <b>Kay Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Sunnyvale Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>	

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	1	1
DSI crashes during the period	0	0
Corridor Length (km)	1.54	0.70
Annual Daily Traffic	1,452	1,452

- Section 1

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Two Lane Undivided	3.70
Road alignment	Curved	1.80	Curved	1.80
Carriageway width	Medium lane, narrow shoulder	1.45	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural Residential	1.50	Rural Residential	1.50
Intersection density (per km)	2 to <3	1.25	1 to <2	1.15
Access density (per km)	20+	1.30	5 to <10	1.06
Traffic volume (vpd)	1,000 to <6,000	1.40	1,000 to <6,000	1.40

- Section 1
  - The Infrastructure Risk Rating Score is 1.97. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.84. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 50 km/h on McEntee Road between Township Road and 140m east of Amreins Road
- 60 km/h on McEntee Road between 140m east of Amreins Road and Kay Road

McEntee Road is a self-explaining road as the mean operating speeds (55 and 60 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 50 and 70 km/h speed limits. Engineering up of McEntee Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

Maintaining the existing speed limit of 50 km/h for McEntee Road between Township Road and 140m east of Amreins Road is considered appropriate due to the number of residential properties on this section of road. A proposed speed limit of 60 km/h was selected for McEntee Road between 140m east of Amreins Road and Kay Road due to a multitude of factors. These included the curved road alignment, high roadside hazards, and mean operating speed of 60 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>2</sup>

After considering all the above factors, the existing speed limit of 80 km/h on the section of McEntee Road between 140m east of Amreins Road and Kay Road in Waitakere is not considered to be a safe and appropriate speed limit for this section of road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Mildon Road (Waitakere)

The speed limit on Mildon Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mildon Road connects to Wairere Road to the east and is a no-exit road at the western end of the road. This road provides access to rural residential properties.</p> <p>This section is approximately 0.4 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 non-injury crash between 2016 and 2020. Therefore, there have been zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Mildon Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 57 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Wairere Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.40
Annual Daily Traffic	57

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Curved	1.80
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	2 to <3	1.25
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.18. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Mildon Road.*

Mildon Road is a self-explaining road as the mean operating speeds (20 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Mildon Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Mildon Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, curved road alignment, high roadside hazards, and low mean operating speed of 20 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 80 km/h on Mildon Road in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Mount Donald McLean Road (Huia)

The speed limit on Mount Donald McLean Road, Huia has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mount Donald McLean Road connects to Whatipu Road to the south and is a no-exit road at the northern end. This road provides access to the Waitakere Ranges Regional Park.</p> <p>This section is approximately 0.99 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Mount Donald McLean Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote Rural using on-site information and geomaps. The IRR defines Remote Rural as: "Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> &lt;1 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 18 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 21 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Whatipu Road:</b> 100 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.99
Annual Daily Traffic	18

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.80
Adjacent land use	Remote Rural	1.00
Intersection density (per km)	1 to <2	1.15
Access density (per km)	<1	1.00
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.30. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Mount Donald McLean Road.*

Mount Donald McLean Road is a self-explaining road as the mean operating speeds (21 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Mount Donald McLean Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Mount Donald McLean Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, winding road alignment, severe roadside hazards, and low mean operating speed of 21 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Mount Donald McLean Road in Huia is not considered to be a safe and appropriate speed limit for this road. The proposed

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Mountain Road (Henderson Valley)

Mountain Road, Henderson Valley, is divided into three sections as follows:<sup>1</sup>

- Section 1: Mountain Road between Scenic Drive and 50m north of Scenic Drive
- Section 2: Mountain Road between 50m north of Scenic Drive and 1,860m east of Turanga Road
- Section 3: Mountain Road between 1,860m east of Turanga Road and Opanuku Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Mountain Road, Henderson Valley has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Mountain Road connects to Scenic Drive to the west and to Opanuku Road and Henderson Valley Road to the east. This road provides access to rural residential properties.		
	This section is approximately 0.05 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 2.20 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 1.88 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).

	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 2 non-injury crashes between 2016 and 2020. Therefore, there were zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 1 serious crash between 2016 and 2020. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Road Name is identified as one of the top 10% DSI saving network sections for New Zealand.		
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Mountain Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &lt;1 access per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> &lt;1 access per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 access per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 472 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 472 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 472 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is: <ul style="list-style-type: none"> <li>70 km/h between 50m east of Scenic Drive and 325m east of Turanga Road</li> <li>100 km/h between 325m east of Turanga Road and 1,860m east of Turanga Road</li> </ul>	The existing speed limit is: <ul style="list-style-type: none"> <li>100 km/h between 1,860m east of Turanga Road and 920m west of Hayes Road</li> <li>70 km/h between 920m west of Hayes Road and Opanuku Road</li> </ul>
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 45 km/h.	This section has a mean operating speed of 38 km/h.	This section has a mean operating speed of 50 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Scenic Drive:</b> 100 km/h (proposed 60 km/h)</li> <li><b>Turanga Road:</b> 70 km/h (proposed 40 km/h)</li> <li><b>Walker Road:</b> 100 km/h (proposed 40 km/h)</li> <li><b>Hayes Road:</b> 70 km/h (proposed 40 km/h)</li> <li><b>Opanuku Road:</b> 70 km/h (proposed 40 km/h)</li> <li><b>Henderson Valley Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>		

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data		
	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	0	0	1
DSI crashes during the period	0	0	1
Corridor Length (km)	0.05	2.20	1.88
Annual Daily Traffic	472	472	472

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 3
  - The Collective Risk score is 0.15. For rural areas this corresponds to a Collective Risk band of **Medium-High**
  - The Personal Risk score is 85.4. For rural areas this corresponds to a Personal Risk band of **High**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Two Lane Undivided	3.70
Road alignment	Straight	1.00	Tortuous	6.00
Carriageway width	Medium lane, very narrow shoulder	1.79	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28

Traffic volume (vpd)	<1,000	1.00	<1,000	1.00

Feature	Section 1	
	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Tortuous	6.00
Carriageway width	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1,000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.05. For rural areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.13. For rural areas this corresponds to an IRR band of **High**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.21. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h for the length of Mountain Road.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 40km/h on Mountain Road between Scenic Drive and 50m east of Scenic Drive
- 40 km/h on Mountain Road between 50m east of Scenic Drive and 1,860m east of Turanga Road
- 60 km/h on Mountain Road between 1,860m east of Turanga Road and Opanuku Road

Mountain Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 70 and 100 km/h speed limits on the road. Engineering up of Mountain Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Mountain Road between Scenic Drive and 1,860m east of Turanga Road due to a multitude of factors. These included the narrow lane widths, (including several sections where there is only a single lane) and very narrow shoulders, tortuous road alignment, high roadside hazards, and low mean operating speed of 38 km/h. All these factors contribute to this section of road's 'High' IRR score, making it a high-risk section of road.<sup>2</sup>

A proposed speed limit of 60 km/h was selected for Mountain Road between 1,860m east of Turanga Road and Opanuku Road due to a multitude of factors. These included the tortuous road alignment, high roadside hazards, and low mean operating speed of 50 km/h. All these factors contribute to this section of road's 'High' IRR score, also making it a high-risk section of road.

After considering all the above factors, the existing speed limits of 70 and 100 km/h on Mountain Road in Henderson Valley are not considered to be safe and appropriate speed limits for this road. The proposed safe and appropriate speed limits are 60 km/h (Section 1 and Section 3) and 40 km/h (Section 2), which are aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Napuka Road (Henderson Valley)

The speed limit on Napuka Road, Henderson Valley has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Napuka Road connects to Grassmere Road to the south-west and is a no-exit road at the north-eastern end. This road provides access to rural residential properties.</p> <p>This section is approximately 0.51 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Napuka Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,179 vehicles per day (vpd). This level of traffic volume is considered relatively high of a short, rural, no-exit road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Grassmere Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.51
Annual Daily Traffic	1,179

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.80
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	20+	1.30
Traffic volume (vpd)	1,000 to <6,000	1.40

The Infrastructure Risk Rating Score is 2.31. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Napuka Road.*

Napuka Road is a self-explaining road as the mean operating speeds (20 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Napuka Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Napuka Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, winding road alignment, severe roadside hazards, and low mean operating speed of 20 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup> A 40 km/h speed limit also matches the proposed speed limit on the adjacent road, which is appropriate given Napuka Road is a short, no-exit road.

After considering all the above factors, the existing speed limit of 50 km/h on Napuka Road in Henderson Valley is not considered to be a safe and appropriate speed limit for this road. The proposed

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Nola Road (Oratia)

The speed limit on Nola Road, Oratia has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nola Road connects to Shaw Road to the south and is a no-exit road at the northern end. This road provides access to rural residential properties.</p> <p>This section is approximately 0.2 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Nola Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 39 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Shaw Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.20
Annual Daily Traffic	39

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Straight	1.00
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	5 to <10	2.60
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.24. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Nola Road.*

Nola Road is a self-explaining road as the mean operating speeds (20 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Nola Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Nola Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, high roadside hazards, and low mean operating speed of 20 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 70 km/h on Nola Road in Oratia is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – North Way (Titirangi)**

The speed limit on North Way, Titirangi has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>North Way connects to Scenic Drive to the south and is a no-exit north at the northern end. This road provides access to rural residential properties.</p> <p>This section is approximately 0.23 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of North Way were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 283 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Scenic Drive:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.23
Annual Daily Traffic	283

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	3 to <5	1.50
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 1.57. For rural areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of North Way.*

North Way is a self-explaining road as the mean operating speeds (20 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of North Way was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for North Way due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, high roadside hazards, and low mean operating speed of 20 km/h. All these factors contribute to the road's 'Medium' IRR score.

After considering all the above factors, the existing speed limit of 70 km/h on North Way in Titirangi is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit for North Way is 60 km/h, which is lower than the speed limit recommended by the Speed Management Guide (80 km/h). However, this is considered appropriate based on the nature and function of the road and the mean operating speed (20 km/h) supports the reduction. It also matches the proposed speed limit on the adjacent road, which is desirable given the very short length of the road.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Northfield Road (Waitakere)**

Northfield Road, Waitakere, is divided into two sections as follows: <sup>1</sup>

- Section 1: Northfield Road between Waitakere Road and 35m north of Waitakere Road
- Section 2: Northfield Road between 35m north of Waitakere Road and McEntee Road

These sections were chosen as they currently have different speed limits.

The speed limit on Northfield Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Northfield Road connects to Waitakere Road to the south and McEntee Road to the north. This road provides access to residential properties.	
	This section is approximately 0.04 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 0.51 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There is a footpath on the road, but no cycle facilities. On-street parking on the unsealed shoulder is provided for in places.	This section is a two-way, two-lane, undivided road. There is a footpath on the road, but no cycle facilities. On-street parking on the unsealed shoulder is provided for in places.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e. tortuous vs curved) as specified within the IRR.

(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Northfield Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &gt;10 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 645 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 645 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	

(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.
---	---

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 80 km/h.	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 39 km/h.	This section has a mean operating speed of 39 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Waitakere Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Burnham Road:</b> 50 km/h</li> <li>• <b>McEntee Road:</b> 50 km/h</li> </ul>	

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	0.04	0.51
Annual Daily Traffic	645	645

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Two Lane Undivided	3.70
Road alignment	Straight	1.00	Curved	1.80
Carriageway width	Medium lane, very narrow shoulder	1.79	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43	High	2.28
Adjacent land use	Rural Residential	1.50	Rural Residential	1.50
Intersection density (per km)	>10	5.00	5 to <10	2.60
Access density (per km)	5 to <10	1.06	5 to <10	1.06
Traffic volume (vpd)	<1,000	1.00	<1,000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 1.88. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.05. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation =50 km/h for the full length of Northfield Road*

Northfield Road is a self-explaining road as the mean operating speeds (39 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h and 50 km/h speed limits on the road. Engineering up of Northfield Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for the short section of Northfield Road between Waitakere Road and 35m north of Waitakere Road to match the remaining Northfield Road.

No change to the existing speed limit is proposed for the section of Northfield Road between 35m north of Waitakere Road and McEntee Road as the existing speed limit of 50 km/h is already aligned with the recommended safe and appropriate speed.

After considering all the above factors, the existing speed limit of 80 km/h on Northfield Road between Waitakere Road and 35m north of Waitakere Road is not considered to be a safe and appropriate speed limit for this section of road. The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Old Forest Hill Road (Waiatarua)

The speed limit on Old Forest Hill Road, Waiatarua has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Old Forest Hill Road is a crescent and connects to Forest Hill Road at the northern and southern ends. This road provides access to rural residential properties.</p> <p>This section is approximately 0.65 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Old Forest Hill Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 17 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 27 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Forest Hill Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.65
Annual Daily Traffic	17

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	3 to <5	1.50
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.53. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Old Forest Hill Road.*

Old Forest Hill Road is a self-explaining road as the mean operating speeds (27 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Old Forest Hill Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Old Forest Hill Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, winding road alignment, high roadside hazards, and low mean operating speed of 27 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Old Forest Hill Road in Waitatarua is not considered to be a safe and appropriate speed limit for this road. The proposed safe

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed. It also matches the proposed speed limit on the adjacent section of Forest Hill Road, which is considered appropriate given its short length.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Opanuku Road (Henderson Valley)

Opanuku Road, Henderson Valley, is divided into four sections as follows:<sup>1</sup>

- Section 1: Opanuku Road between Mountain Road and 90m south of Mountain Road
- Section 2: Opanuku Road between 90m south of Mountain Road and 550m south of Grassmere Road
- Section 3: Opanuku Road between 550m south of Grassmere Road and 2,420m south of Grassmere
- Section 4: Opanuku Road between 2,420m south of Grassmere Road and the southern end of the road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Opanuku Road, Henderson Valley has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2)) – Sections 1 and 2

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Opanuku Road connects to Henderson Valley Road and Mountain Road to the north and is a no-exit road at the southern end. This road provides access to rural residential properties.	
	This section is approximately 0.09 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 0.57 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 1 non-injury crash between 2016 and 2020. Therefore, there were zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Opanuku Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &gt;10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>

(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 334 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 334 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

Table 2: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2)) – Sections 3 and 4

Requirement	Comments	
	Section 3	Section 4
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Opanuku Road connects to Henderson Valley Road and Mountain Road to the north and is a no-exit road at the southern end. This road provides access to rural residential properties.	
	This section is approximately 1.87 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 1.60 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.

(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Opanuku Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 177 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 70 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	

(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.
---	---

In addition to the factors outlined in Table 1 and 2, further relevant information was sought as summarised in Table 3 below.

Table 3: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3	Section 4
Current speed limit	The existing speed limit is 70 km/h.	The existing speed limit is 50 km/h.	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 35 km/h.	This section has a mean operating speed of 35 km/h.	This section has a mean operating speed of 27 km/h.	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Mountain Road: 70 km/h (proposed 60 km/h)</li> <li>Henderson Valley Road: 70 km/h (proposed 60 km/h)</li> <li>Grassmere Road: 50 km/h (proposed 40 km/h)</li> </ul>

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Opanuku Road.*

Opanuku Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 50 km/h, 70 km/h and 100 km/h speed limits. Engineering up of Opanuku Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Opanuku Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, winding / tortuous road alignment, high / severe roadside hazards, and low mean operating speeds. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>2</sup>

After considering all the above factors, the existing speed limits of 50 km/h, 70 km/h and 100 km/h on Opanuku Road in Henderson Valley are not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit and providing a consistent speed limit for the length of the road improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Parker Road (Oratia)

The speed limit on Parker Road, Oratia has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Parker Road connects to West Coast Road to the north and is a no-exit road at the southern end. This road provides access to rural residential properties.
	This section is approximately 2.85 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 4 crashes between 2016 and 2020: 1 fatal, 0 serious, 2 minor and 1 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Parker Road is identified as one of the top 10% DSI saving network sections for New Zealand.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Parker Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>

(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,101 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 46 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>West Coast Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	3
DSI crashes during the period	1
Corridor Length (km)	2.85
Annual Daily Traffic	1,101

- The Collective Risk score is 0.07. For rural areas this corresponds to a Collective Risk band of **Medium**
- The Personal Risk score is 17.46. For rural areas this corresponds to a Personal Risk band of **High**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	1,000 to <6,000	1.40

The Infrastructure Risk Rating Score is 1.80. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than the 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Parker Road.*

Parker Road is a self-explaining road as the mean operating speeds (46 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Parker Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Parker Road due to a multitude of factors. These included the curved road alignment, high roadside hazards, and low mean operating speed of 46 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup> Furthermore, crash history from NZTA's CAS database shows 4 crashes in the last 5 years including 1 fatal, 0 serious, 2 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit of 70 km/h on Parker Road in Oratia is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Perris Road (Henderson Valley)

The speed limit on Perris Road, Henderson Valley has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Perris Road connects to Coulter Road to the south and is a no-exit road. This road provides access to rural residential properties.
	This section is approximately 0.48 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Perris Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 62 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 22 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Coulter Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.48
Annual Daily Traffic	62

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.28
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.40. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Perris Road.*

Perris Road is a self-explaining road as the mean operating speeds (22 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Perris Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Perris Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, winding road alignment, high roadside hazards, and low mean operating speed of 22 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Perris Road in Henderson

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Valley is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Piha Road (Piha)

Piha Road, Piha, is divided into four sections as follows:<sup>1</sup>

- Section 1: Piha Road between Quinns Road and 300m west of Quinns Road
- Section 2: Piha Road between 300m west of Quinns Road and 50m east of Anawhata Road
- Section 3: Piha Road between 50m east of Anawhata Road and 450m west of Karekare Road
- Section 4: Piha Road between 450m west of Karekare Road and Seaview Road

These sections were chosen based on the existing speed limits on the road. They also create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Piha Road, Piha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2)) – Section 1 and 2

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Piha Road connects to Scenic Drive to the east and to Seaview Road to the west. This road provides access to rural residential properties.	
	This section is approximately 0.3 km in length. It is classified as an Arterial road under the one network road classification (ONRC).	This section is approximately 4.58 km in length. It is classified as an Arterial road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 9 crashes between 2016 and 2020: 0 fatal, 0 serious, 3 minor and 6 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Piha Road is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Piha Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and narrow shoulder (0.5 to 1.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and narrow shoulder (0.5 to 1.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Remote Rural using on-site information and geomaps. The IRR defines Remote Rural as: "Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> &lt;1 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2,427 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 4,883 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.

(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

Table 2: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2)) – Section 3 and 4

Requirement	Comments	
	Section 3	Section 4
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Piha Road connects to Scenic Drive to the east and to Seaview Road to the west. This road provides access to rural residential properties.	
	This section is approximately 6.3 km in length. It is classified as an Arterial road under the one network road classification (ONRC).	This section is approximately 2.47 km in length. It is classified as an Arterial road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 41 crashes between 2016 and 2020: 0 fatal, 3 serious, 11 minor and 27 non-injury crashes. This resulted in 3 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 7 crashes between 2016 and 2020: 0 fatal, 0 serious, 3 minor and 4 non-injury crashes. Therefore, there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Piha Road is identified as one of the top 10% DSI saving network sections for New Zealand.	

Requirement	Comments	
	Section 3	Section 4
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Piha Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and narrow shoulder (0.5 to 1.0 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote Rural using on-site information and geomaps. The IRR defines Remote Rural as: "Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."	The adjacent land use is classified as Rural Town using on-site information and geomaps. The IRR defines Rural Town as: "Rural town with a mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2,312 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 2,126 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1 and 2, further relevant information was sought as summarised in Table 3 and 4below.

Table 3: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 70 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 61 km/h.	This section has a mean operating speed of 78 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Scenic Drive:</b> 760 km/h (proposed 60 km/h)</li> <li>• <b>Anawhata Road:</b> 100 km/h (proposed 40 km/h)</li> <li>• <b>La Trobe Track:</b> 100 km/h (proposed 40 km/h)</li> <li>• <b>Karekare Road:</b> 100 km/h (proposed 40 km/h)</li> <li>• <b>Te Ahuahu Road:</b> 50 km/h</li> <li>• <b>Seaview Road:</b> 50 km/h</li> <li>• <b>Pendrell Road:</b> 50 km/h</li> </ul>	

Table 4: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 70 km/h.	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 61 km/h.	This section has a mean operating speed of 47 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Scenic Drive:</b> 760 km/h (proposed 60 km/h)</li> <li>• <b>Anawhata Road:</b> 100 km/h (proposed 40 km/h)</li> <li>• <b>La Trobe Track:</b> 100 km/h (proposed 40 km/h)</li> <li>• <b>Karekare Road:</b> 100 km/h (proposed 40 km/h)</li> <li>• <b>Te Ahuahu Road:</b> 50 km/h</li> <li>• <b>Seaview Road:</b> 50 km/h</li> <li>• <b>Pendrell Road:</b> 50 km/h</li> </ul>	

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	3
DSI crashes during the period	0	0
Corridor Length (km)	0.30	4.58
Annual Daily Traffic	2,427	4,883

Required Information for safety metrics calculations	Data	
	Section 3	Section 4
Crash Analysis Period (years)	5	5
Total injury crashes during period	14	3
DSI crashes during the period	3	0
Corridor Length (km)	6.30	2.47
Annual Daily Traffic	2,312	2,126

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 3
  - The Collective Risk score is 0.10. For rural areas this corresponds to a Collective Risk band of **Medium**
  - The Personal Risk score is 11.29. For rural areas this corresponds to a Personal Risk band of **High**
- Section 4
  - The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Two Lane Undivided	3.70
Road alignment	Curved	1.80	Curved	1.80
Carriageway width	Medium lane, narrow shoulder	1.45	Medium lane, narrow shoulder	1.45
Roadside hazards (in both directions)	Moderate	1.43	Moderate	1.43
Adjacent land use	Rural Residential	1.50	Remote Rural	1.00
Intersection density (per km)	2 to <3	1.25	<1	1.00
Access density (per km)	<1	1.00	1 to <2	1.01
Traffic volume (vpd)	1,000 to <6,000	1.40	1,000 to <6,000	1.40

Feature	Section 3		Section 4	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Two Lane Undivided	3.70
Road alignment	Winding	3.50	Tortuous	6.00
Carriageway width	Medium lane, narrow shoulder	1.45	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43	High	2.28
Adjacent land use	Remote Rural	1.00	Rural Town	2.50
Intersection density (per km)	<1	1.00	<1	1.00
Access density (per km)	1 to <2	1.01	10 to <20	1.10
Traffic volume (vpd)	1,000 to <6,000	1.40	1,000 to <6,000	1.40

- Section 1
  - The Infrastructure Risk Rating Score is 1.65. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.38. For rural areas this corresponds to an IRR band of **Medium**.
- Section 3
  - The Infrastructure Risk Rating Score is 1.67. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 4
  - The Infrastructure Risk Rating Score is 2.54. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is:

- Less than 80 km/h (Section 1)
- 80 km/h (Section 2)
- Less than 80 km/h (Section 3)
- 50 km/h (Section 4)

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 60 km/h on Piha Road between Quinns Road and 300m west of Quinns Road
- 80 km/h on Piha Road between 300m west of Quinns Road and 50m east of Anawhata Road
- 60 km/h on Piha Road between 50m east of Anawhata Road and 450m west of Karekare Road
- 50 km/h on Piha Road between 450m west of Karekare Road and Seaview Road

Piha Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 50, 70 and 100 km/h speed limits. Engineering up of Piha Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Section 1 of Piha Road due to a multitude of factors. These included the curved road alignment, moderate roadside hazards, and mean operating speed of 61 km/h. This speed limit also matches the proposed speed limit on the adjacent section of Scenic Drive. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>2</sup>

A proposed speed limit of 80 km/h was selected for Section 2 of Piha Road due to a multitude of factors. These included the curved road alignment, moderate roadside hazards, and relatively high mean operating speed of 78 km/h, which means a lower speed limit is unlikely to be credible to motorists.

A proposed speed limit of 60 km/h was selected for Section 3 of Piha Road due to a multitude of factors. These included the winding road alignment, moderate roadside hazards, and low mean operating speed of 61 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

No change is proposed to the existing 50 km/h speed limit on Section 4 of Piha Road as this speed limit is considered appropriate given the Rural Town nature of the road and the likely presence of a high number of active road users.

After considering all the above factors, the existing speed limits of 70 and 100 km/h on Piha Road in Piha are not considered to be safe and appropriate speed limits for this road. The proposed safe and appropriate speed limits are 60 km/h (Section 1 and 3), 80 km/h (Section 2), and 50 km/h (Section 4), which are aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Quinns Road (Waiatarua)

The speed limit on Quinns Road, Waiatarua has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Quinns Road connects to Scenic Drive to the north and is a no-exit road at the southern end. This road provides access to rural residential properties.</p> <p>This section is approximately 1.45 km in length. It is classified as a Secondary Collector Road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Quinns Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 25 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 26 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Scenic Drive:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.45
Annual Daily Traffic	25

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Tortuous	6.00
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.16. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Quinns Road.*

Quinns Road is a self-explaining road as the mean operating speeds (26 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Quinns Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Quinns Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, tortuous road alignment, high roadside hazards, and low mean operating speed of 26 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 70 km/h on Quinns Road in Waitarua is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Raroa Terrace (Oratia)**

The speed limit on Raroa Terrace, Oratia has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Raroa Terrace connects to West Coast Road to the north and is a no-exit road at the southern end. This road provides access to rural residential properties.</p> <p>This section is approximately 0.36 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Raroa Terrace were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 618 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 31 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>West Coast Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.36
Annual Daily Traffic	618

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	2 to <3	1.25
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 1.75. For rural areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Raroa Terrace.*

Raroa Terrace is a self-explaining road as the mean operating speeds (31 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Raroa Terrace was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Raroa Terrace due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, curved road alignment, high roadside hazards, and low mean operating speed of 31 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 70 km/h on Raroa Terrace in Oratia is not considered to be a safe and appropriate speed limit for this road. The proposed safe and

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Rimu Road (Oratia)**

The speed limit on Rimu Road, Oratia has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rimu Road connects to West Coast Road to the north and is a no-exit road. This road provides access to residential properties.</p> <p>This section is approximately 0.56 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Rimu Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 496 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 28 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>West Coast Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.56
Annual Daily Traffic	496

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Tortuous	6.00
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	>20	1.30
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.31. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Rimu Road.*

Rimu Road is a self-explaining road as the mean operating speeds (28 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Rimu Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Rimu Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, tortuous road alignment, high roadside hazards, and low mean operating speed of 28 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 70 km/h on Rimu Road in Oratia is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Scenic Drive (Titirangi / Waiaatarua / Henderson Valley)**

The speed limit on the section of Scenic Drive, Titirangi / Waiaatarua / Henderson Valley between 60m west of Tawini Road and Te Henga Road has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Scenic Drive connects to Titirangi Road and Atkinson Road to the south-east and to Scenic Drive North and Te Henga Road to the north-west. This road provides access to rural residential properties.</p> <p>This section is approximately 18.15 km in length. It is classified as a Primary Collector or Arterial road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There is a footpath on sections of the road but there are generally no pedestrian or cycle amenities, and no on-street parking is provided along the road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 66 crashes between 2016 and 2020: 1 fatal, 7 serious, 25 minor and 33 non-injury crashes. This resulted in 8 Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Road Name is identified as one of the top 10% DSI saving network sections for New Zealand.</p>
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Scenic Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as between 291 and 3,260 vehicles per day (vpd) at various locations along the road. This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	<p>The existing speed limit is:</p> <ul style="list-style-type: none"> <li>• 70 km/h between 60m west of Tawini Road and 120m west of Quinns Road</li> <li>• 100 km/h between 120m west of Quinns Road and 70m north of Brabant Road</li> <li>• 70 km/h between 70m north of Brabant Road and 3,645m southeast of Tawari Road</li> <li>• 100 km/h between 3,645m southeast of Tawari Road and 465m north of Mountain Road</li> <li>• 70 km/h between 465m north of Mountain Road and 3,210m south of Te Henga Road</li> <li>• 100 km/h between 3,210m south of Te Henga Road and Te Henga Road</li> </ul>
MegaMaps Mean Operating Speed (km/h)	This road has a mean operating speed of between 46 to 58 km/h.

Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>• <b>Scenic Drive (east of a point 60m west of Tawini Road):</b> 50 km/h</li> <li>• <b>Shaw Road (north of Scenic Drive):</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Shaw Road (south of Scenic Drive):</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>North Way:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>West Coast Road:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Quinns Road:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Piha Road:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Brabant Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Tawari Road:</b> 100 km/h (proposed 40 km/h)</li> <li>• <b>Mountain Road:</b> 100 km/h (proposed 40 km/h)</li> <li>• <b>Te Henga Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Scenic Drive North:</b> 100 km/h (proposed 60 km/h)</li> </ul>
---------------------------------	---

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	33
DSI crashes during the period	8
Corridor Length (km)	18.15
Annual Daily Traffic	291 to 3,260

- The Collective Risk score is up to 0.33. For rural areas this corresponds to a Collective Risk band of **High**
- The Personal Risk score is up to 165.12. For rural areas this corresponds to a Personal Risk band of **High**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two Lane Undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 1.99. For rural areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for Scenic Drive between 60m west of Tawini Road and Te Henga Road.*

Scenic Drive is a self-explaining road as the mean operating speeds (46 to 58 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 and 100 km/h speed limit. Engineering up of Scenic Drive was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Scenic Drive due to a multitude of factors. These included the curved / winding road alignment, high roadside hazards, and low mean operating speed. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup> Furthermore, the crash history from NZTA's CAS database shows 66 crashes in the last 5 years including 1 fatal, 7 serious, 25 minor and 33 non-injury crashes.

After considering all the above factors, the existing speed limit of 70 and 100 km/h on Scenic Drive between 60m west of Tawini Road and Te Henga Road is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Scenic Drive North (Swanson)

Scenic Drive North, Swanson, is divided into three sections as follows: <sup>1</sup>

- Section 1: Scenic Drive North between Te Henga Road and 120m east of Te Henga Road
- Section 2: Scenic Drive North between 120m east of Te Henga Road and 400m east of Awhiorangi Promenade
- Section 3: Scenic Drive North between 400m east of Awhiorangi Promenade and Waitakere Road

These sections were chosen based on the existing speed limits on the road. They also create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Scenic Drive North, Swanson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Scenic Drive North connects to Swanson Road and Waitakere Road to the north-east and to the Te Henga Road and Scenic Drive to the south-west. This road provides access to rural residential properties.		
	This section is approximately 0.12 km in length. It is classified as an Arterial road under the one network road classification (ONRC).	This section is approximately 2.34 km in length. It is classified as an Arterial road under the one network road classification (ONRC).	This section is approximately 0.48 km in length. It is classified as an Arterial road under the one network road classification (ONRC).

	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There is a footpath on parts of the road. There are no cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There is a footpath on parts of the road. There are no cycle amenities, and no on-street parking is provided along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 5 crashes between 2016 and 2020: 0 fatal, 0 serious, 2 minor and 3 non-injury crashes. Therefore, there were zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 7 crashes between 2016 and 2020: 0 fatal, 1 serious, 1 minor and 5 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Scenic Drive North were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3,824 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 3,824 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 3,824 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 50 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 57 km/h.	This section has a mean operating speed of 57 km/h.	This section has a mean operating speed of 57 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Swanson Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Waitakere Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Awhiorangi Promenade:</b> 50 km/h</li> <li>• <b>Rangimarie Road:</b> 50 km/h</li> <li>• <b>Puketaha Road:</b> 50 km/h</li> <li>• <b>Range Road:</b> 50 km/h</li> <li>• <b>Kitewaho Road:</b> 50 km/h</li> <li>• <b>Te Henga Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Scenic Drive:</b> 100 km/h (proposed 60 km/h)</li> </ul>		

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data		
	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	0	2	2
DSI crashes during the period	0	0	1

Access density (per km)	1 to <2	1.01	>20	1.30
Traffic volume (vpd)	1,000 to <6,000	1.40	1,000 to <6,000	1.40

Feature	Section 3	
	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Medium lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	1,000 to <6,000	1.40

- Section 1
  - The Infrastructure Risk Rating Score is 2.11. For rural areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.26. For rural areas this corresponds to an IRR band of **High**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.12. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h for the full length of Scenic Drive North.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60 km/h on Scenic Drive North between Te Henga Road and 120m east of Te Henga Road
- 50 km/h on Scenic Drive North between 120m east of Te Henga Road and 400m east of Awhiorangi Promenade
- 60 km/h on Scenic Drive North between 400m east of Awhiorangi Promenade and Waitakere Road

Scenic Drive North is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds on the sections of road where a speed limit change is proposed, despite the existing 80 and 100 km/h speed limits. Engineering up of Scenic Drive North was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

No change to the existing speed limit of 50 km/h is proposed for Section 2 of Scenic Drive North as the current speed limit is considered appropriate based on the number of rural residential properties and the likely presence of high numbers of active users on the road.

A proposed speed limit of 60 km/h was selected for Section 1 and 3 of Scenic Drive North due to a multitude of factors. These included the winding road alignment, high roadside hazards, and low mean operating speed of 57 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>2</sup>

After considering all the above factors, the existing speed limits of 80 and 100 km/h on Sections 1 and 3 of Scenic Drive North in Swanson are not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit for these sections is 60 km/h which is aligned with the recommended safe and appropriate speed. This also aligns with the proposed speed limits on the adjacent sections of Scenic Drive and Swanson Road, so provides a more consistent speed limit across the network.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Seibel Road (Henderson Valley)

The speed limit on Seibel Road, Henderson Valley has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Seibel Road connects to Vineyard Road to the east and is a no-exit road. This road provides access to rural residential properties.</p> <p>This section is approximately 0.61 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Seibel Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2,731 vehicles per day (vpd). However, the actual traffic volume is likely to be significantly lower than this given the road is a minor, no-exit rural road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 33 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Vineyard Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.61
Annual Daily Traffic	2,731

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	1,000 to <6,000	1.40

The Infrastructure Risk Rating Score is 1.84. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Seibel Road.*

Seibel Road is a self-explaining road as the mean operating speeds (33 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Seibel Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Seibel Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, curved road alignment, high roadside hazards, and low mean operating speed of 33 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road<sup>1</sup>.

After considering all the above factors, the existing speed limit of 70 km/h on Seibel Road in Henderson Valley is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Shaw Road (Oratia)

Shaw Road, Oratia, is divided into three sections as follows: <sup>1</sup>

- Section 1: Shaw Road between West Coast Road and 375m south of West Coast Road
- Section 2: Shaw Road between 375m south of West Coast Road and Scenic Drive
- Section 3: Shaw Road between Scenic Drive and the south-eastern end of the road

These sections were chosen based on the existing speed limits on the road. They also create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Shaw Road, Oratia has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	<p>Shaw Road connects to West Coast Road to the north and is a no-exit road at the south-eastern end. This road provides access to rural residential properties.</p> <p>This section is approximately 0.38 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p>	<p>This section is approximately 3.32 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p>	<p>This section is approximately 0.3 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p>

	This section is a two-way, two-lane, undivided road. There is a footpath on this section of road but no cycle amenities. On-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There is a footpath on part of the road but generally there are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 5 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 4 non-injury crashes. Therefore, there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 6 crashes between 2016 and 2020: 0 fatal, 1 serious, 0 minor and 5 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Shaw Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and wide shoulder (&gt;1.0 to 2.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,328 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 1,223 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 1,108 vehicles per day (vpd). This level of traffic volume is considered relatively high given the fact this section is a minor no-exit road.
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
Current speed limit	The existing speed limit is 50 km/h.	The existing speed limit is 70 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 57 km/h.	This section has a mean operating speed of 49 km/h.	This section has a mean operating speed of 33 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>West Coast Road:</b> 50 km/h</li> <li><b>Nola Road:</b> 70 km/h (proposed 40 km/h)</li> <li><b>Carter Road:</b> 70 km/h (proposed 60 km/h)</li> <li><b>Scenic Drive:</b> 70 km/h (proposed 60 km/h)</li> </ul>		

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data		
	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	1	1	0
DSI crashes during the period	0	1	0
Corridor Length (km)	0.38	3.32	0.30
Annual Daily Traffic	1,328	1,223	1,108

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.06. For rural areas this corresponds to a Collective Risk band of **Low-Medium**
  - The Personal Risk score is 13.49. For rural areas this corresponds to a Personal Risk band of **High**
- Section 3
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Two Lane Undivided	3.70
Road alignment	Straight	1.00	Winding	3.50
Carriageway width	Medium lane, wide shoulder	1.00	Medium lane, very narrow shoulder	1.779
Roadside hazards (in both directions)	Moderate	1.43	High	2.28
Adjacent land use	Rural Residential	1.50	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15	1 to <2	1.15
Access density (per km)	10 to <20	1.10	2 to <5	1.03
Traffic volume (vpd)	1,000 to <6,000	1.40	1,000 to <6,000	1.40

Feature	Section 3	
	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	2 to <3	1.25
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	1,000 to <6,000	1.40

- Section 1

- The Infrastructure Risk Rating Score is 1.23. For rural areas this corresponds to an IRR band of **Medium**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.12. For rural areas this corresponds to an IRR band of **High**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.18. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h for the full length of Shaw Road.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 50 km/h on Shaw Road between West Coast Road and 375m south of West Coast Road (Section 1)
- 60 km/h on Shaw Road between 375m south of West Coast Road and the south-eastern end of the road (Sections 2 and 3)

Shaw Road is a self-explaining road as the mean operating speeds are generally below or near the proposed safe and appropriate speeds, despite the existing 50, 70 and 100 km/h speed limits. Engineering up of Shaw Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

It is proposed to maintain the existing speed limit of 50 km/h for Shaw Road between West Coast Road and 375m south of West Coast Road as this is considered appropriate due to the presence of a school on this section of road.

A proposed speed limit of 60 km/h was selected for Shaw Road between 375m south of West Coast Road and the south-eastern end of the road due to a multitude of factors. These included the winding road alignment, high roadside hazards, and low mean operating speed of 33 to 49 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>2</sup> Furthermore, crash history from NZTA's CAS database shows 6 crashes in the last 5 years including 1 serious and 5 non-injury crashes on this section of road.

After considering all the above factors, the existing speed limit of 70 and 100 km/h on Shaw Road between 375m south of West Coast Road and the southern end of the road in Oratia is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Steam Hauler Track (Waitakere)

The speed limit on Steam Hauler Track, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Steam Hauler Track connects to Bethells Road to the north-east and is a no-exit road and the south-western end. This road provides access to rural residential properties.
	This section is approximately 1.32 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Road Name were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 98 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 41 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Bethells Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.32
Annual Daily Traffic	98

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.34. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Steam Hauler Track.*

Steam Hauler Track is a self-explaining road as the mean operating speeds (41 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Steam Hauler Track was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Steam Hauler Track due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, winding road alignment, high roadside hazards, and low mean operating speed of 41 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Steam Hauler Track in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Steed Road (Waitakere)

The speed limit on Steed Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Steed Road connects to Anzac Valley Road to the north and is a no-exit road at the south end. This road provides access to rural residential properties.</p> <p>This section is approximately 0.93 km in length. It is classified as a Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Steed Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 83 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 30 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Anzac Valley Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.93
Annual Daily Traffic	83

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 1.49. For rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Steed Road.*

Steed Road is a self-explaining road as the mean operating speeds (30 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Steed Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Steed Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, curved road alignment and low mean operating speed of 30 km/h. All these factors contribute to the road's 'Medium' IRR score.

After considering all the above factors, the existing speed limit of 70 km/h on Steed Road in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit for Steed Road is 60 km/h, which is lower than the speed limit recommended by the Speed Management Guide (80 km/h). However, this is considered appropriate based on the nature and function of the road and the mean operating speed (30 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Stoney Creek Drive (Waitakere)

The speed limit on Stoney Creek Drive, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Stoney Creek Drive connects to Bethells Road to the south and is a no-exit road to the north. This road provides access to rural residential properties.</p> <p>This section is approximately 1.61 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Road Name were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 83 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 37 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Bethells Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.61
Annual Daily Traffic	83

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Tortuous	6.00
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 1.94. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Stoney Creek Drive.*

Stoney Creek Drive is a self-explaining road as the mean operating speeds (37 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Stoney Creek Drive was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Stoney Creek Drive due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, tortuous road alignment and low mean operating speed of 37 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Stoney Creek Drive in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Sturges Road (Henderson Valley)

Sturges Road, Henderson Valley, is divided into two sections as follows:<sup>1</sup>

- Section 1: Sturges Road between the Urban Traffic Area (Auckland Isthmus) boundary and 595m east of Candia Road
- Section 2: Sturges Road between 595m east of Candia Road and Candia Road.

These sections were chosen to identify sections of road where the existing speed limit is different.

The speed limit on Sturges Road, Henderson Valley has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Sturges Road connects to Palomino Drive and Summerland Drive to the east and to Candia Road to the west. This road provides access to rural residential properties.	
	This section is approximately 0.14 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.6 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There is a footpath along the length of the road. There are no cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There is a footpath along the length of the road. There are no cycle amenities, and no on-street parking is provided along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e. tortuous vs curved) as specified within the IRR.

(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 1 non-injury crash between 2016 and 2020. Therefore, there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Sturges Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using on-site information and geomaps. The IRR defines Urban Residential as: " <i>Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day.</i> "	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 960 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 960 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	

(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.
---	---

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h. However, it is noted this is an oversight in the existing bylaw and existing signage indicates the road has a 70 km/h speed limit.	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 46 km/h.	This section has a mean operating speed of 45 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Sturges Road (within the Urban Traffic Area):</b> 50 km/h</li> <li>• <b>Candia Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>	

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	0.14	0.60
Annual Daily Traffic	960	960

- Section 1
  - The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Two Lane Undivided	3.70
Road alignment	Winding	3.5	Winding	3.5
Carriageway width	Medium lane, very narrow shoulder	1.79	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Urban Residential	3.00	Rural Residential	1.50
Intersection density (per km)	<1	1.00	1 to <2	1.15
Access density (per km)	10 to <20	1.10	5 to <10	1.06
Traffic volume (vpd)	<1,000	1.00	<1,000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.24. For urban areas this corresponds to an IRR band of **Medium**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.99. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 and 2.2 of the Speed Management Guide is 50 km/h for Section 1 and less than 80 km/h for section 2.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h for Sturges Road between the Urban Traffic Area Boundary (Auckland Isthmus) and Candia Road.*

Sturges Road is a self-explaining road as the mean operating speeds (45 to 46 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Sturges Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Sturges Road due to a multitude of factors. These included the winding road alignment, high roadside hazards, and low mean operating speed of 45 to 46

km/h. All these factors contribute to the road's 'Medium' to 'Medium-High' IRR score, making a section of the road a high-risk road<sup>2</sup>.

After considering all the above factors, the existing speed limits of 70 and 100 km/h on Sturges Road in Henderson Valley are not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is generally aligned with the recommended safe and appropriate speed for the road. It is noted that the recommended safe and appropriate speed for a short section is 50 km/h; however, a 60 km/h speed limit for this section is more aligned with the rural appearance of the road.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Sunnyvale Road (Waitakere / Massey)**

Sunnyvale Road, Waitakere / Massey, is divided into two sections as follows: <sup>1</sup>

- Section 1: Sunnyvale Road between Red Hills Road and 907m south of Red Hills Road
- Section 2: Sunnyvale Road between 907m south of Red Hills Road and Kay Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Sunnyvale Road, Waitakere / Massey has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Sunnyvale Road connects to Red Hills Road to the north and to McEntee Road and Kay Road in the south. This road provides access to rural residential properties.	
	This section is approximately 0.91 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 1.84 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There is a section of footpath on the western side of the road. There are no cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 non-injury crash between 2016 and 2020. Therefore, there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 14 crashes between 2016 and 2020: 0 fatal, 1 serious, 5 minor and 8 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Sunnyvale Road is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Sunnyvale Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulders (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulders (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>

(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2,454 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 2,454 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 80 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 58 km/h.	This section has a mean operating speed of 58 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Red Hills Road:</b> 80 km/h</li> <li>• <b>Haszard Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Crows Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Kay Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>McEntee Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>	

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	6
DSI crashes during the period	0	1
Corridor Length (km)	0.91	1.84
Annual Daily Traffic	2,454	2,454

- Section 1

- o The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- o The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - o The Collective Risk score is 0.11. For rural areas this corresponds to a Collective Risk band of **Medium**
  - o The Personal Risk score is 12.1. For rural areas this corresponds to a Personal Risk band of **High**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Two Lane Undivided	3.70
Road alignment	Curved	1.80	Winding	3.50
Carriageway width	Medium lane, very narrow shoulder	1.79	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural Residential	1.50	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15	1 to <2	1.15
Access density (per km)	>20	1.30	2 to <5	1.03
Traffic volume (vpd)	1,000 to <6,000	1.40	1,000 to <6,000	1.40

- Section 1
  - o The Infrastructure Risk Rating Score is 1.93. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - o The Infrastructure Risk Rating Score is 2.12. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h for the full length of the road.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Sunnyvale Road.*

Sunnyvale Road is a self-explaining road as the mean operating speeds (58 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Sunnyvale Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Sunnyvale Road due to a multitude of factors. These included the curved / winding road alignment, high roadside hazards, and low mean operating speed of 58 km/h. All these factors contribute to the road's 'Medium-High' to 'High' IRR score, making it a high-risk road.<sup>2</sup> Furthermore, crash history from NZTA's CAS database shows 15 crashes in the last 5 years including 0 fatal, 1 serious, 5 minor and 9 non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on Sunnyvale Road in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Swanson Road (Swanson)

The speed limit on the section of Swanson Road, Swanson, between 45m west of Parklands Avenue and Waitakere Road has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Swanson Road connects to Great North Road to the east and to Scenic Drive and Waitakere Road to the west. This road provides access to residential properties.</p> <p>This section is approximately 0.2 km in length. It is classified as an Arterial road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There is a footpath on this section of road but there are no cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 minor crash between 2016 and 2020. Therefore, there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Swanson Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and narrow shoulder (0.5 to 1.0 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>

(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 9,417 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 59 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Scenic Drive North:</b> 80 km/h (proposed 60 km/h)</li> <li><b>Waitakere Road:</b> 80 km/h (proposed 60 km/h)</li> <li><b>Swanson Road (east of a point 45m west of Parklands Avenue):</b> 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	0.20
Annual Daily Traffic	9,417

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Medium lane, narrow shoulder	1.45
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	2 to <3	1.25
Access density (per km)	>20	1.30
Traffic volume (vpd)	6,000 to <12,000	2.20

The Infrastructure Risk Rating Score is 1.91. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the section of Swanson Road between 45m west of Parklands Avenue and Waitakere Road.*

This section of Swanson Road is a self-explaining road as the mean operating speeds (59 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Swanson Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for this section of Swanson Road to match the speed limit on the adjacent section of Scenic Drive. A 60 km/h speed limit is considered more appropriate than 50 km/h, given the rural residential nature of the road and the existing operating speeds (59 km/h) do not support a 50 km/h speed limit.

After considering all the above factors, the existing speed limit of 80 km/h on Swanson Road in Swanson is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed. The mean operating speed (59 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Tawari Road (Henderson Valley)

The speed limit on Tawari Road, Henderson Valley has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tawari Road connects to Scenic Drive to the west and is a no-exit road at the eastern end. This road provides access to rural residential properties.</p> <p>This section is approximately 0.2 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Tawari Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 30 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Scenic Drive:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.20
Annual Daily Traffic	30

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	3 to <5	1.50
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.35. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Tawari Road.*

Tawari Road is a self-explaining road as the mean operating speeds (20 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Tawari Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Tawari Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, winding road alignment, and low mean operating speed of 20 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Tawari Road in Henderson Valley is not considered to be a safe and appropriate speed limit for this road.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Te Aute Ridge Road (Waitakere)

Te Aute Ridge Road, Waitakere, is divided into three sections as follows: <sup>1</sup>

- Section 1: Te Aute Ridge Road between the western intersection with Bethells Road and 510m south-east of the western intersection with Bethells Road
- Section 2: Te Aute Ridge Road between 510m south-east of the western intersection with Bethells Road and 2,965m south-east of the western intersection with Bethells Road
- Section 3: Te Aute Ridge Road between 2,965m south-east of the western intersection with Bethells Road and the eastern intersection with Bethells Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Te Aute Ridge Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Te Aute Ridge Road is a crescent that connects to Bethells Road at its eastern and western ends. This road provides access to rural residential properties.		
	This section is approximately 0.51 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 2.45 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.85 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).

Requirement	Comments		
	Section 1	Section 2	Section 3
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 1 non-injury crash between 2016 and 2020. Therefore there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Te Aute Ridge Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 64 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 20 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 36 km/h.	This section has a mean operating speed of 31 km/h.	This section has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Bethells Road:</b> 100 km/h (proposed 60 km/h)</li> <li><b>Kokako Grove:</b> 100 km/h (proposed 40 km/h)</li> </ul>		

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data		
	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	0	0	0
DSI crashes during the period	0	0	0
Corridor Length (km)	0.51	2.45	0.85
Annual Daily Traffic	64	50	20

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 3
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Unsealed	10.00
Road alignment	Winding	3.50	Tortuous	6.00
Carriageway width	Narrow lane, very narrow shoulder	2.01	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural Residential	1.50	Rural Residential	1.50
Intersection density (per km)	2 to <3	1.25	<1	1.00
Access density (per km)	2 to <5	1.03	2 to <5	1.03
Traffic volume (vpd)	<1,000	1.00	<1,000	1.00

Feature	Section 3	
	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1,000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.01. For rural areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.58. For rural areas this corresponds to an IRR band of **High**.
- Section 3
  - The Infrastructure Risk Rating Score is 1.97. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h for all sections of the road.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60 km/h on Te Aute Road between the western intersection with Bethells Road and 510m south-east of the western intersection with Bethells Road
- 40 km/h on Te Aute Road between 510m south of the western intersection with Bethells Road and 2,965m south-east of the western intersection with Bethells Road
- 60 km/h on Te Aute Road between 2,965m south-east of the western intersection with Bethells Road and the eastern intersection with Bethells Road

Te Aute Ridge Road is a self-explaining road as the mean operating speeds (27 to 42 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Te Aute Ridge Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for both ends of Te Aute Ridge Road (Section 1 and 3) due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, winding road alignment, high roadside hazards, and low mean operating speed. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>2</sup> The 60 km/h speed limit also matches the proposed speed limit on the adjacent road so provides better speed limit consistency across the network.

A proposed speed limit of 40 km/h was selected for Te Aute Ridge Road between 510m south-east of the western intersection with Bethells Road and 2,965m south-east of the western intersection with Bethells Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, tortuous road alignment, high roadside hazards, and low mean operating speed of 31 km/h.

After considering all the above factors, the existing speed limit of 100 km/h on Te Aute Ridge Road in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h (Section 2) and 60 km/h (Section 1 and 3) which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Te Henga Road (Waitakere)

Te Henga Road, Waitakere, is divided into three sections as follows:<sup>1</sup>

- Section 1: Te Henga Road between Scenic Drive and 260m west of Unity Road.
- Section 2: Te Henga Road between 260m west of Unity Road and 335m north of Falls Road.
- Section 3: Te Henga Road between 335m north of Falls Road and Bethells Road.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Te Henga Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Te Henga Road connects to Scenic Drive to the south and Bethells Road to the north. This road provides access to rural residential properties.		
	This section is approximately 1.17 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 0.66 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 2.03 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).

	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 4 non-injury crashes between 2016 and 2020. Therefore, there were zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 1 non-injury crash between 2016 and 2020. Therefore, there were zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Te Henga Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Remote Rural using on-site information and geomaps. The IRR defines Remote Rural as: "Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersection per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersection per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersection per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,011 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 1,011 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 1,011 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 70 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 50 km/h.	This section has a mean operating speed of 54 km/h.	This section has a mean operating speed of 59 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Scenic Drive:</b> 100 km/h (proposed 60 km/h)</li> <li><b>Scenic Drive North:</b> 100 km/h (proposed 60 km/h)</li> <li><b>Unity Road:</b> 100 km/h (proposed 40 km/h)</li> <li><b>Falls Road:</b> 70 km/h (proposed 40 km/h)</li> <li><b>Aio Wira Road:</b> 70 km/h (proposed 40 km/h)</li> <li><b>Bethells Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>		

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data		
	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	0	0	0
DSI crashes during the period	0	0	0
Corridor Length (km)	1.17	0.66	2.03
Annual Daily Traffic	1,011	1,011	1,011

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 3
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Two Lane Undivided	3.70
Road alignment	Winding	3.50	Winding	3.50
Carriageway width	Medium lane, very narrow shoulder	1.79	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural Residential	1.50	Rural Residential	1.50
Intersection density (per km)	<1	1.00	2 to <3	1.25
Access density (per km)	2 to <5	1.03	10 to <20	1.10
Traffic volume (vpd)	1,000 to <6,000	1.40	1,000 to <6,000	1.40

Feature	Section 3	
	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Remote Rural	1.00
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	1,000 to <6,000	1.40

- Section 1
  - The Infrastructure Risk Rating Score is 2.06. For rural areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.18. For rural areas this corresponds to an IRR band of **High**.
- Section 3
  - The Infrastructure Risk Rating Score is 1.39. For rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h for Section 1 and 2, and 80 km/h for Section 3.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Te Henga Road.*

Te Henga Road is a self-explaining road as the mean operating speeds (50 to 59 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 and 100 km/h speed limits. Engineering up of Te Henga Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Te Henga Road due to a multitude of factors. These included the curved / winding road alignment, moderate / high roadside hazards, and low mean operating speed of 50 to 59 km/h. All these factors contribute to the road's 'Medium' to 'High' IRR score, making it a high-risk road.<sup>2</sup>

After considering all the above factors, the existing speed limits of 70 and 100 km/h on Te Henga Road in Waitakere are not considered to be safe and appropriate speed limits for this road. The proposed safe and appropriate speed limit is 60 km/h which is generally aligned with the recommended safe and appropriate speed.

For the section of Te Henga Road between 335m north of Falls Road and Bethells Road the proposed safe and appropriate speed limit is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the nature and function of the road and the mean operating speed (59 km/h) supports the reduction. It also provides a consistent speed limit along the road.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Township Road (Waitakere)

The speed limit on Township Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Township Road connects to Waitakere Road to the south and is a no-exit road. This road provides access to residential properties as well as the Waitakere Train Station.
	This section is approximately 0.41 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are footpaths provided on both sides of the road and on-street parking is provided for on the road. There are no cycle amenities along this section of road.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Township Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulders (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>

(f) adjacent land use; and	The adjacent land use is classified as Rural Town using on-site information and geomaps. The IRR defines Rural Town as: "mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present"
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1079 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is: <ul style="list-style-type: none"> <li>70 km/h between Waitakere Road and 30m north of Waitakere Road.</li> <li>50 km/h between 30m north of Waitakere Road and the northern end of the road</li> </ul>
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 27 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Waitakere Road:</b> 70 km/h (proposed 60 km/h)</li> <li><b>McEntee Road:</b> 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.41
Annual Daily Traffic	1,079

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural towns	2.50
Intersection density (per km)	5 to <10	2.60
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	1,000 to <6,000	1.40

The Infrastructure Risk Rating Score is 1.96. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 50 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 50 km/h for the full length of Township Road.*

Township Road is a self-explaining road as the mean operating speeds (27 km/h) are below or near the proposed safe and appropriate speeds. Engineering up of Township Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for Township Road to provide a consistent speed limit along the full length of the road given most of the road already has a 50 km/h speed limit. The low mean operating speed of 27 km/h supports this speed limit.

After considering all the above factors, the existing speed limit of 70 km/h for the short 30m section of Township Road between Waitakere Road and 30m north of Waitakere Road is not considered to be a safe and appropriate speed limit for this road or in alignment with the Speed Limit Rule. The proposed safe and appropriate speed limit is 50 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Tui Crescent (Waiatarua)

The speed limit on Tui Crescent, Waiatarua has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tui Crescent connects to West Coast Road to the south and is a no-exit road at the northern end. This road provides access to rural residential properties.</p> <p>This section is approximately 0.29 km in length. It is classified as a Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Tui Crescent were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: <i>"Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 150 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 23 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>West Coast Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.29
Annual Daily Traffic	150

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	3 to <5	1.50
Access density (per km)	20+	1.30
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.19. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Tui Crescent.*

Tui Crescent is a self-explaining road as the mean operating speeds (23 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Tui Crescent was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Tui Crescent due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, winding road alignment, high roadside hazards, and low mean operating speed of 23 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 70 km/h on Tui Crescent in Waiatarua is not considered to be a safe and appropriate speed limit for this road. The proposed safe and

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Turanga Road (Henderson Valley)

The speed limit on Turanga Road, Henderson Valley has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Turanga Road connects to Mountain Road to the south and is a no-exit road at the northern end. This road provides access to rural residential properties.</p> <p>This section is approximately 0.76 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Turanga Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 592 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 23 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Mountain Road:</b> 70 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.76
Annual Daily Traffic	592

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 1.99. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Turanga Road.*

Turanga Road is a self-explaining road as the mean operating speeds (23 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Turanga Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Turanga Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, winding road alignment, high roadside hazards, and low mean operating speed of 23 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 70 km/h on Turanga Road in Henderson Valley is not considered to be a safe and appropriate speed limit for this road. The proposed

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Tyndel Road (Waitakere)

The speed limit on Tyndel Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tyndel Road connects to Duffy Road to the east and is a no-exit road to the west. This road provides access to rural residential properties.</p> <p>This section is approximately 0.05 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Tyndel Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 60 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Duffy Road:</b> 80 km/h (proposed 60km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.05
Annual Daily Traffic	60

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	5 to <10	2.60
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 1.81. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Tyndel Road.*

Tyndel Road is a self-explaining road as the mean operating speeds (20 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Tyndel Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Tyndel Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, high roadside hazards, and low mean operating speed of 20 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 80 km/h on Tyndel Road in Waitakere

is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Unity Road (Waitakere)

The speed limit on Unity Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Unity Road connects to Te Henga Road to the south and is a no-exit road to the north. This road provides access to rural residential properties.</p> <p>This section is approximately 0.4 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Unity Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 707 vehicles per day (vpd). This traffic volume is significantly higher than what would be expected on a short, rural, no-exit road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Te Henga Road:</b> 100 km/h (proposed 60km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.40
Annual Daily Traffic	707

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Curved	1.80
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.12. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Unity Road.*

Unity Road is a self-explaining road as the mean operating speeds (42 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Unity Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Unity Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, curved road alignment and high roadside hazards. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Unity Road in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Vineyard Road (Henderson Valley)

The speed limit on Vineyard Road, Henderson Valley has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Vineyard Road connects to Coulter Road to the north and Candia Road to the south. This road provides access to rural residential properties.
	This section is approximately 1.57 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 non-injury crash between 2016 and 2020. Therefore, there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Vineyard Road is identified as one of the top 10% DSI saving network sections for New Zealand.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Vineyard Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>

(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 830 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 31 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Candia Road:</b> 70 km/h (proposed 60 km/h)</li> <li><b>Seibel Road:</b> 70 km/h (proposed 60 km/h)</li> <li><b>Coulter Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.57
Annual Daily Traffic	830

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Tortuous	6.00
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.2. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Vineyard Road.*

Vineyard Road is a self-explaining road as the mean operating speeds (31 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Vineyard Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Vineyard Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, tortuous road alignment, high roadside hazards, and low mean operating speed of 31 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road<sup>1</sup>.

After considering all the above factors, the existing speed limit of 70 km/h on Vineyard Road in Henderson Valley is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Waikarekare Lane (Karekare)

The speed limit on Waikarekare Lane, Karekare has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waikarekare Lane connects to Lone Kauri Road to the north and is a no-exit road at the southern end. This road provides access to rural residential properties.</p> <p>This section is approximately 0.18 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Waikarekare Lane were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 11 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Lone Kauri Road:</b> 100 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.18
Annual Daily Traffic	11

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Straight	1.00
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	3 to <5	1.50
Access density (per km)	20+	1.30
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.08. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Waikarekare Lane.*

Waikarekare Lane is a self-explaining road as the mean operating speeds (42 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Waikarekare Lane was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Waikarekare Lane due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, high roadside hazards, and low mean operating speed of 42 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Waikarekare Lane in Karekare is not considered to be a safe and appropriate speed limit for this road. The proposed safe

and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Wairere Road (Waitakere)

The speed limit on Wairere Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Wairere Road connects to Bethells Road to the east and Horsman Road and Jonkers Road to the west. This road provides access to rural residential properties.
	This section is approximately 5.19 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 7 crashes between 2016 and 2020: 0 fatal, 0 serious, 4 minor and 3 non-injury crashes. Therefore, there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Wairere Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,552 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 54 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Bethells Road:</b> 100 km/h (proposed 60 km/h)</li> <li><b>Arrowsmith Road:</b> 80 km/h (proposed 40 km/h)</li> <li><b>Duffy Road:</b> 80 km/h (proposed 60 km/h)</li> <li><b>Gregory Road:</b> 80 km/h (proposed 40 km/h)</li> <li><b>Caton Road:</b> 80 km/h (proposed 40 km/h)</li> <li><b>Mildon Road:</b> 80 km/h (proposed 40 km/h)</li> <li><b>Jonkers Road:</b> 80 km/h (proposed 40 km/h)</li> <li><b>Horsman Road:</b> 80 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	4
DSI crashes during the period	0
Corridor Length (km)	5.19
Annual Daily Traffic	1,552

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	1,000 to < 6,000	3.0

The Infrastructure Risk Rating Score is 2.12. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Wairere Road.*

Wairere Road is a self-explaining road as the mean operating speeds (54 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Wairere Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Wairere Road due to a multitude of factors. These included the winding road alignment, high roadside hazards, and low mean operating speed of 54 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup> Furthermore, crash history from NZTA's CAS database shows 7 crashes in the last 5 years including 4 minor and 3 non-injury crashes.

After considering all of the above factors, the existing speed limit of 80 km/h on Wairere Road in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Walker Road (Henderson Valley)

The speed limit on Walker Road, Henderson Valley has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Walker Road connects to Mountain Road to the south-west and is a no-exit road and the north-eastern end. This road provides access to rural residential properties.</p> <p>This section is approximately 0.29 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Walker Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 33 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 38 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Mountain Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.29
Annual Daily Traffic	33

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Curved	1.80
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	3 to <5	1.50
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.24. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Walker Road.*

Walker Road is a self-explaining road as the mean operating speeds (38 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Walker Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Walker Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, curved road alignment, high roadside hazards, and low mean operating speed of 38 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Walker Road in Henderson Valley is not considered to be a safe and appropriate speed limit for this road. The proposed

safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Watchmans Road (Karekare)

The speed limit on Watchmans Road, Karekare has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Watchmans Road connects to Karekare Road to the east and is a no-exit road to the west. This road provides access to rural residential properties.</p> <p>This section is approximately 0.25 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Watchmans Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Town using on-site information and geomaps. The IRR defines Rural Town as: "Rural town with a mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 39 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Karekare Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.25
Annual Daily Traffic	39

- The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Curved	1.80
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.80
Adjacent land use	Rural Town	2.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Watchmans Road.*

Watchmans Road is a self-explaining road as the mean operating speeds (20 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Watchmans Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Watchmans Road due to a multitude of factors. These included the unsealed road surface, narrow lane widths and very narrow shoulders, curved road alignment, severe roadside hazards, and low mean operating speed of 20 km/h. All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 50 km/h on Watchmans Road in

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Karekare is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Wendy Road (Waitakere)

The speed limit on Wendy Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wendy Road connects to Anzac Valley Road to the north-west and is a no-exit road at the south-eastern end. This road provides access to rural residential properties.</p> <p>This section is approximately 0.92 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Wendy Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 168 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 22 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Anzac Valley Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.92
Annual Daily Traffic	168

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1,000	1.00

The Infrastructure Risk Rating Score is 1.51. For rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Wendy Road.*

Wendy Road is a self-explaining road as the mean operating speeds (22 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h speed limit. Engineering up of Wendy Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Wendy Road due to a multitude of factors. These included the narrow lane widths and very narrow shoulders, curved road alignment, and low mean operating speed of 22 km/h. All these factors contribute to the road's 'Medium' IRR score.

After considering all the above factors, the existing speed limit of 70 km/h on Wendy Road in Waitakere is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit for Wendy Road is 60 km/h, which is lower than the speed limit recommended by the Speed Management Guide (80 km/h). However, this is considered appropriate based on the nature and function of the road, and the mean operating speed (22 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – West Coast Road (Waiatarua)

West Coast Road, Henderson Valley, is divided into two sections as follows:<sup>1</sup>

- Section 1: West Coast Road between 145m east of Shaw Road and 340m west of Shaw Road
- Section 2: West Coast Road between 340m west of Shaw Road and Scenic Drive

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on West Coast Road, Henderson Valley has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	West Coast Road connects to Great North Road to the east and Scenic Drive to the west. This road provides access to rural residential properties.	
	This section is approximately 0.48 km in length. It is classified as an Arterial road under the one network road classification (ONRC).	This section is approximately 5.12 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There is a footpath on this section of road. There are no cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities along most of this section of road, and no on-street parking is provided along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 59 crashes between 2016 and 2020: 0 fatal, 0 serious, 20 minor and 39 non-injury crashes. Therefore, there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
	West Coast Road is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of West Coast Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and wide shoulder (&gt;1.0 to 2.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>

(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 6,611 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 1,905 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 50 km/h. There is a 40 km/h variable school speed limit between 145m east of Shaw Road and 285m west of Shaw Road.	The existing speed limit is 70 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 55 km/h.	This section has a mean operating speed of 54 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Carter Road:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Parker Road:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Kellys Road:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Kauri Loop Road:</b> 70 km/h (proposed 40 km/h)</li> <li>• <b>Bendalls Lane:</b> 70 km/h (proposed 40 km/h)</li> <li>• <b>Rimu Road:</b> 70 km/h (proposed 40 km/h)</li> <li>• <b>Raroa Terrace:</b> 70 km/h (proposed 40 km/h)</li> <li>• <b>Bush Road:</b> 70 km/h (proposed 40 km/h)</li> <li>• <b>Tui Crescent:</b> 70 km/h (proposed 40 km/h)</li> <li>• <b>Forest Hill Road:</b> 70 km/h (proposed 60 km/h)</li> <li>• <b>Old Forest Hill Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Cascade Avenue:</b> 70 km/h (proposed 40 km/h)</li> <li>• <b>Scenic Drive:</b> 70 km/h (proposed 60 km/h)</li> </ul>	

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	20
DSI crashes during the period	0	0
Corridor Length (km)	0.48	5.12
Annual Daily Traffic	6,611	1,905

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Two Lane Undivided	3.70
Road alignment	Curved	1.80	Winding	3.50
Carriageway width	Medium lane, wide shoulder	1.00	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43	High	2.28
Adjacent land use	Rural Residential	1.50	Rural Residential	1.50
Intersection density (per km)	2 to <3	1.25	2 to <3	1.25
Access density (per km)	10 to <20	1.10	5 to <10	1.06

Traffic volume (vpd)	6,000 to <12,000	2.20	1,000 to <6,000	1.40
----------------------	------------------	------	-----------------	------

- Section 1
  - The Infrastructure Risk Rating Score is 1.72. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.17. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is less than 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 50 km/h on West Coast Road between 145m east of Shaw Road and 340m west of Shaw Road (with a 40 km/h variable school speed zone between 145m east of Shaw Road and 285m west of Shaw Road)
- 60 km/h on West Coast Road between 340m west of Shaw Road and Scenic Drive

West Coast Road is a self-explaining road as the mean operating speeds (54 and 55 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 50 and 70 km/h speed limit. Engineering up of West Coast Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

It is proposed to maintain the existing 50 km/h speed limit (with 40 km/h variable school speed zone) on Section 1 as this speed limit is considered appropriate given the presence of a school on the road. A proposed speed limit of 60 km/h was selected for the remainder of West Coast Road (Section 2) due to a multitude of factors. These included the winding road alignment, high roadside hazards, and low mean operating speed of 54 km/h. All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>2</sup> Furthermore, crash history from NZTA's CAS database shows 59 crashes in the last 5 years including 0 fatal, 0 serious, 20 minor and 39 non-injury crashes.

After considering all the above factors, the existing speed limit of 70 km/h on West Coast Road between 340m west of Shaw Road and Scenic Drive in Henderson Valley is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Whatipu Road (Huia)**

Whatipu Road, Huia, is divided into two sections as follows:<sup>1</sup>

- Section 1: Whatipu Road between Huia Road and 950m west of Huia Road
- Section 2: Whatipu Road between 950m west of Huia Road and the western end of the road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Whatipu Road, Huia has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Whatipu Road connects to Huia Road to the east and is a no-exit road to the west. This road provides access to rural residential properties and to Whatipu Beach.	
	This section is approximately 0.95 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 6.07 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e. tortuous vs curved) as specified within the IRR.

(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 4 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 3 non-injury crashes. Therefore, there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Whatipu Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Town using on-site information and geomaps. The IRR defines Rural Town as: "Rural town with a mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present."	The adjacent land use is classified as Remote Rural using on-site information and geomaps. The IRR defines Remote Rural as: "Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;1 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 517 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 175 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	

(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.
---	---

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 70 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 29 km/h.	This section has a mean operating speed of 25 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Huia Road:</b> 70 km/h (proposed 40 km/h)</li> <li>• <b>Mount Donald McLean Road:</b> 100 km/h (proposed 40 km/h)</li> </ul>	

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	1
DSI crashes during the period	0	0
Corridor Length (km)	0.95	6.07
Annual Daily Traffic	517	175

- Section 1
  - The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two Lane Undivided	3.70	Unsealed	10.00
Road alignment	Winding	3.50	Tortuous	6.00
Carriageway width	Narrow lane, very narrow shoulder	2.01	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural Town	2.50	Remote Rural	1.00
Intersection density (per km)	1 to <2	1.15	<1	1.00
Access density (per km)	10 to <20	1.10	<1	1.00
Traffic volume (vpd)	<1,000	1.00	<1,000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.22. For urban areas this corresponds to an IRR band of **Medium**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.48. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <50 km/h for Section 1 and <80 km/h for Section 2.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Whatipu Road.*

Whatipu Road is a self-explaining road as the mean operating speeds (25 to 29 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 and 100 km/h speed limit. Engineering up of Whatipu Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Whatipu Road due to a multitude of factors. These included the unsealed road surface on most of the road, narrow lane widths and very narrow shoulders,

winding / tortuous road alignment, high roadside hazards, and low mean operating speed. All these factors contribute to the road's 'Medium' to 'Medium-High' IRR score, making it a high-risk road. <sup>2</sup>

After considering all the above factors, the existing speed limits of 70 and 100 km/h on Whatipu Road in Huia is not considered to be a safe and appropriate speed limit for this road. The proposed safe and appropriate speed limit is 40 km/h for the full length of the road which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Alison Avenue (Takapuna)

The speed limit on Alison Avenue, Takapuna has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Alison Avenue connects to Earnoch Avenue to the north and The Promenade to the south. This road provides access to residential properties and is approximately 0.18 km in length.</p> <p>Alison Avenue is classified as an Access road under the one network road classification (ONRC). Alison Avenue is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: four non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Alison Avenue were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0m to 3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 132 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Alison Avenue has a mean operating speed in the range of 20-24 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Earnoch Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li><b>The Promenade:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Alison Avenue** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Alison Avenue, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Anne Street (Devonport)**

The speed limit on Anne Street, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Anne Street connects to Clarence Street to the north and Queens Parade to the south. This road provides access to residential properties and is approximately 0.21 km in length.</p> <p>Anne Street is classified as a Secondary Collector road under the one network road classification (ONRC). Anne Street is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor injury and one non-injury crash.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Anne Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 799 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Anne Street has a mean operating speed in the range of 20-24 km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Clarence Street:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Queens Parade:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From on-site information assessment, **Anne Street** has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 2.0. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Anne Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Anzac Street (Takapuna)

The speed limit on Anzac Street, Takapuna between Hurstmere Road and 30m southwest of Hurstmere Road has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Anzac Street connects to Hurstmere Road to the East and Auburn Street to the West. This road provides access to commercial and industrial properties and is approximately 0.55 km in length.</p> <p>Anzac Street is classified as an Arterial road under the one network road classification (ONRC). Anzac Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 19 crashes between 2016 and 2020: one serious, six minor and 12 non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Anzac Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazard:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Big Box using MegaMaps tool. The IRR defines Commercial Big Box as "large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from Traffic Survey as 10,422 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Anzac Street has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Auburn Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Campbell Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Hurstmere Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Lake Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>The Terrace:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From the desktop information assessment, **Anzac Street** has the following information:

- Collective Risk band of **High**, and a Personal Risk band of **High**
- The Infrastructure Risk Rating Score is 2.4 For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### Step 4: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed Anzac Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Apirana Avenue (Glen Innes)**

The speed limit on Apirana Avenue, Glen Innes between 30m south of Point England Road and 220m north of Omaru Lane has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Apirana Avenue connects to Point England Road to the south and the road ends on Apirana Avenue to the North. This road provides access to commercial properties and is approximately 0.67 km in length.</p> <p>Apirana Avenue is classified as an Arterial road under the one network road classification (ONRC). Apirana Avenue is a two-way, two-lane, undivided road. There are pedestrian amenities and partial on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 28 crashes between 2016 and 2020: four minor and 24 non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Apirana Avenue were determined using desktop information assessment.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (&lt;0.5m)</li><li>• <b>Roadside hazards:</b> Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as " <i>characterised by numerous shops facing the street front with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present.</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	From desktop information assessment: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to 10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 15,808 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Apirana Avenue has a mean operating speed in the range of 35-39km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>• <b>Point England Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Omaru Lane:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Taniwha Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Apirana Avenue** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.7 For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed Apirana Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Auburn Street (Takapuna)

The speed limit on Auburn Street, Takapuna between 30m south of Killarney Street and Northcroft Street has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Auburn Street connects to Killarney Street to the north and Burns Avenue to the south. This road provides access to residential, commercial and industrial properties and is approximately 0.47 km in length.</p> <p>Auburn Street is classified as an Arterial road under the one network road classification (ONRC). Auburn Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 11 crashes between 2016 and 2020: 11 non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Auburn Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as "characterised by numerous shops facing the street front with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,185 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Auburn Street has a mean operating speed in the range of 25-29km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Anzac Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Como Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Huron Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Killarney Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Lomond Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Northcroft Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Auburn Street** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.4 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### Step 4: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Auburn Street, the actual operating speeds from the MegaMaps ranges from 25-29km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Bartley Terrace (Devonport)**

The speed limit on Bartley Terrace, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bartley Terrace connects to Clarence Street to the south and Fleet Street to the north. This road provides access to commercial properties and is approximately 0.11 km in length.</p> <p>Bartley Terrace is classified as a Secondary Collector road under the one network road classification (ONRC). Bartley Terrace is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bartley Terrace were determined using desktop information assessment.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li><li>• <b>Roadside hazards:</b> Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Big Box using MegaMaps tool. The IRR defines Commercial Strip Shopping as <i>"Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present"</i> .
(g) the number of intersections and property accessways; and	<p>From on-site information:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 10+ intersections per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1704 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bartley Terrace has a mean operating speed in the range of 20-24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Clarence Street:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Fleet Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Bartley Terrace** has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 2.5. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bartley Terrace, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Blomfield Spa (Takapuna)**

The speed limit on Blomfield Spa, Takapuna has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Blomfield Spa connects to Gibbons Road to the east and Lake Road to the west. This road provides access to residential properties and is approximately 0.29 km in length.</p> <p>Blomfield Spa is classified as a Secondary Collector road under the one network road classification (ONRC). Blomfield Spa is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Blomfield Spa were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to 10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from Traffic Survey as 917 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Blomfield Spa has a mean operating speed in the range of 20-24km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Gibbons Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Lake Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Blomfield Spa** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.0 For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Blomfield Spa, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bradley Lane (Glen Innes)

The speed limit on Bradley Lane, Glen Innes has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bradley Lane connects to Line Road to the east and the road ends on Bradley Lane to the west. This road provides access to industrial properties and is approximately 0.16 km in length.</p> <p>Bradley Lane is classified as an Access road under the one network road classification (ONRC). Bradley Lane is a one-way, one-lane, undivided road. There are no pedestrian amenities, and there is no on-street parking along this road. There are also no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bradley Lane were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> One-way</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Industry using MegaMaps tool. The IRR defines Industry as "large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Bradley Lane has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Line Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Taniwha Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Bradley Lane** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.0. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bradley Lane, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Buchanan Street (Devonport)

The speed limit on Buchanan Street, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Buchanan Street connects to Rattray Street to the north, Flagstaff Terrace to the west and King Edward Parade to the south. This road provides access to residential properties and is approximately 0.23km in length.</p> <p>Buchanan Street is classified as a Secondary Collector road under the one network road classification (ONRC). Buchanan Street is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records no crashes between 2016 and 2020.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Buchanan Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	From desktop information assessment: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 349 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Buchanan Street has a mean operating speed in the range of 20-24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Ratray Street:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Flagstaff Terrace:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>King Edward Parade:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Buchanan Street** has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Buchanan Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Burns Avenue (Takapuna)

The speed limit on Burns Avenue, Takapuna between Northcroft Street and 30m north of Bracken Avenue has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Burns Avenue connects to Auburn Street to the north and Byron Avenue to the south. This road provides access to residential properties and is approximately 0.21 km in length.</p> <p>Burns Avenue is classified as an Arterial road under the one network road classification (ONRC). Burns Avenue is a two-lane, undivided road. There are pedestrian amenities with no on-street parking. There are also no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crashes between 2016 and 2020: one non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Burns Avenue were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 9,568 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Burns Avenue has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Auburn Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Byron Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Northcroft Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Burns Avenue** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.5 For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed Burns Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Byron Avenue (Takapuna)**

Byron Avenue, Takapuna is divided into two sections as outlined below: <sup>1</sup>

- Section 1: Byron Avenue between Lake Road and Burns Avenue
- Section 2: Byron Avenue between Burns Avenue and the western end of Byron Avenue

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Byron Avenue, Takapuna has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	This road connects to Lake Road to the east and Burns Avenue to the west. This road provides access to commercial and residential properties and is approximately 0.25 km in length.	This road connects to Burns Avenue to the east and the road ends at Byron Avenue to the west. This road provides access to residential properties and is approximately 0.25 km in length.
(c) the function and use of the road; and	This section of Byron Avenue is classified as an Arterial road under the one network road classification (ONRC). Byron Avenue is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.	This section of Byron Avenue is classified as an Access road under the one network road classification (ONRC). Byron Avenue is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: one serious and five non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data	

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	includes crashes for all road users and therefore crash risk for all road users were considered.	
(e) the characteristics of the road and roadsides; and	The following characteristics for this section of Byron Avenue were determined using desktop information assessment:	
	<b>Road stereotype:</b> Two lane undivided <b>Road alignment:</b> Straight <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (<0.5m) <b>Roadside hazards:</b> Moderate	<b>Road stereotype:</b> Two lane undivided <b>Road alignment:</b> Straight <b>Carriageway width:</b> Narrow lane (<3.0m) and very narrow shoulder (<0.5m) <b>Roadside hazards:</b> Moderate
(f) adjacent land use; and	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as <i>"characterised by numerous shops facing the street front with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present."</i>	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	From desktop information assessment:	
	<b>Intersection density:</b> 5 to 10 intersections per km <b>Access density:</b> 20+ accesses per km	<b>Intersection density:</b> 3 to 5 intersections per km <b>Access density:</b> 20+ accesses per km
(h) traffic volume; and	Average daily traffic (ADT) was determined from Traffic Survey as 636 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.	
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

<b>AT also had regard to</b>
------------------------------

Current speed limit	The existing speed limit is 50 km/h for both sections of Byron Avenue.
MegaMaps Mean Operating Speed (km/h)	Byron Avenue has a mean operating speed in the range of 20-24km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Burns Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Lake Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Byron Avenue** has the following information:

- Section 1
  - Collective Risk band of **High**, and a Personal Risk band of **High**
  - The Infrastructure Risk Rating Score is 2.2 For urban areas this corresponds to an IRR band of **Medium**.
  - High risk road.<sup>2</sup>
- Section 2
  - Collective Risk band of **Low**, and a Personal Risk band of **Low**
  - The Infrastructure Risk Rating Score is 1.7 For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h (for both sections).

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation for both sections = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Byron Avenue Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Calliope Road (Devonport)

The speed limit on Calliope Road, Devonport between Victoria Road and High Street has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Calliope Road connects to Victoria Road to the east. This road provides access to residential properties and is approximately 0.09 km in length.</p> <p>Calliope Road is classified as an Arterial road under the one network road classification (ONRC). Calliope Road is a two-way, two-lane, undivided road. There are pedestrian and cyclist amenities and on-street parking along this road.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records no crashes between 2016 and 2020.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Calliope Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 10 to 20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 5232 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Calliope Road has a mean operating speed in the range of 35-39 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Victoria Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Calliope Road** has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 2.5. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Calliope Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Campbell Road (Takapuna)

The speed limit on Campbell Road, Takapuna between 30m south of Killarney Street and Anzac Street has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Campbell Road connects to Killarney Street to the north and Anzac Street to the south. This road provides access to residential properties and is approximately 0.19 km in length.</p> <p>Campbell Road is classified as a Secondary Collector road under the one network road classification (ONRC). Campbell Road is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crashes between 2016 and 2020: one non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Campbell Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to 5 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,357 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Campbell Road has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Anzac Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Killarney Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Campbell Road** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.8 For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Campbell Road, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Clarence Street (Devonport)**

Clarence Street, Devonport, is divided into two sections as follows: <sup>1</sup>

- Section 1: Between Victoria Road and 250m northwest of Victoria Road
- Section 2: Between Calliope Road and 160m southeast of Calliope Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Clarence Street, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Clarence Street connects to Victoria Road to the east, and Bartley Terrace to the north, and Anne Street to the south, and Wynyard Street to the south. This road provides access to commercial properties and is approximately 0.25 km in length.	Clarence Street Calliope Road to the west This road provides access to residential properties and is approximately 0.16 km in length.
	Clarence Street is classified as a Secondary Collector road under the one network road classification (ONRC). Clarence Street is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.	Clarence Street is classified as an Access road under the one network road classification (ONRC). Clarence Street is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments			
	Section 1	Section 2		
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>			
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Clarence Street were determined using desktop information.</p> <table border="0"> <tr> <td style="vertical-align: top;"> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide lane (&gt;3.5m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul> </td> <td style="vertical-align: top;"> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul> </td> </tr> </table>		<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide lane (&gt;3.5m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>
<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide lane (&gt;3.5m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>			
(f) adjacent land use; and	<p>The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as "Characterised by numerous shops facing the streetfront with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present".</p>	<p>The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".</p>		
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>			
(h) traffic volume; and	<p>Average daily traffic (ADT) was determined from MegaMaps as 3372 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.</p>	<p>Average daily traffic (ADT) was determined from MegaMaps as 132 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.</p>		
(i) any planned modification to the road; and	<p>Modification/Engineering measures for the area are planned, details of the measures are still under investigation.</p>			
(j) the views of interested persons and groups.	<p>Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.</p>			

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Clarence Street has a mean operating speed in the range of 20-24 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>• <b>Victoria Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Bartley Terrace:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Anne Street:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Wynyard Street:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Calliope Road:</b> 50 km/h</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Clarence Street** has the following information:

- Section 1
  - Collective Risk band of **Low**, and Personal Risk of **Low**.
  - The Infrastructure Risk Rating Score is 2.5. For urban areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - Collective Risk band of **Low**, and Personal Risk of **Low**.
  - The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Clarence Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Club Lane (Takapuna)

The speed limit on Club Lane, Takapuna has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Club Lane connects to Blomfield Spa to the South and the road ends at Club Lane to the north. This road provides access to commercial and properties and is approximately 0.10 km in length.</p> <p>Club Lane is classified as a Secondary Collector road under the one network road classification (ONRC). Club Lane is a two-lane, undivided road. There are pedestrian amenities and no public parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crashes between 2016 and 2020: one minor crash. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Club Lane were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as "characterised by numerous shops facing the street front with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 10 to 20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 450 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Club Lane has a mean operating speed in the range of 20-24 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Blomfield Spa:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Club Lane** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**
- The Infrastructure Risk Rating Score is 2.1 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Club Lane, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Collins Street (Takapuna)**

The speed limit on Collins Street, Takapuna has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Collins Street connects to The Terrace to the east and the road ends on Collins Street to the west. This road provides access to residential properties and is approximately 0.13 km in length.</p> <p>Collins Street is classified as an Access road under the one network road classification (ONRC). Collins Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Collins Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 127 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Collins Street has a mean operating speed in the range of 20-24km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>The Terrace:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Collins Street** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**
- The Infrastructure Risk Rating Score is 2.0 For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Collins Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Como Street (Takapuna)

The speed limit on Como Street, Takapuna has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Como Street connects to Lake Road to the east and Auburn Street to the west. This road provides access to commercial properties and is approximately 0.24 km in length.</p> <p>Como Street is classified as a Primary Collector road under the one network road classification (ONRC). Como Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Como Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as "characterised by numerous shops facing the street front with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from traffic survey as 1,683 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Como Street has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Auburn Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Lake Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Como Street** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.4 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Como Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Delwyn Lane (Glen Innes)**

The speed limit on Delwyn Lane, Glen Innes has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructures Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Delwyn Lane connects to Apirana Avenue to the west and the road ends on Delwyn Lane to the east. This road provides access to industrial properties and is approximately 0.06 km in length.</p> <p>Delwyn Lane is classified as an Access road under the one network road classification (ONRC). Delwyn Lane is a two-lane undivided road. There are no pedestrian amenities and there is no on-street parking along this road. There are also no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Delwyn Lane were determined using desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Industry using MegaMaps tool. The IRR defines Industry as "large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 78 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Delwyn Lane has a mean operating speed in the range of 20-24km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Apirana Avenue:</b> 50 km/h (proposed 50 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Delwyn Lane** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.4 For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Delwyn Lane, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Devon Lane (Devonport)

The speed limit on Devon Lane, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Devon Lane connects to Fleet Street to the north. This road provides access to residential properties and is approximately 0.05 km in length.</p> <p>Devon Lane is classified as a Secondary Collector road under the one network road classification (ONRC). Devon Lane is a one-way, one-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records no crashes between 2016 and 2020.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Devon Lane were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> One-way</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2518 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Devon Lane has a mean operating speed in the range of 20-24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Fleet Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Devon Lane** has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 1.8. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Devon Lane, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Earnoch Avenue (Takapuna)

The speed limit on Earnoch Avenue, Takapuna has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Earnoch Avenue connects to Hurstmere Road to the west and the road ends at Earnoch Avenue to the east. This road provides access to residential properties and is approximately 0.26 km in length.</p> <p>Earnoch Avenue is classified as an Access road under the one network road classification (ONRC). Earnoch Avenue is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Earnoch Avenue were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from traffic survey as 132 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Earnoch Avenue has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Alison Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Hurstmere Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Earnoch Avenue** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**
- The Infrastructure Risk Rating Score is 2.0 For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Earnoch Avenue, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Flagstaff Terrace (Devonport)**

The speed limit on Flagstaff Terrace, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Flagstaff Terrace connects to Victoria Road to the west and Buchanan Street to the east. This road provides access to residential properties and is approximately 0.13 km in length.</p> <p>Flagstaff Terrace is classified as a Secondary Collector road under the one network road classification (ONRC). Flagstaff Terrace is a one-way, one-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Flagstaff Terrace were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> One-way</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i> .
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 10 to 20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1400 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Flagstaff Terrace has a mean operating speed in the range of 20-24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Victoria Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Buchanan Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Flagstaff Terrace** has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 1.7. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Flagstaff Terrace, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Fleet Street (Devonport)**

The speed limit on Fleet Street, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fleet Street connects to Victoria Road to the east and Bartley Terrace to the west and Devon Lane to the south. This road provides access to commercial properties and is approximately 0.1 km in length.</p> <p>Fleet Street is classified as a Secondary Collector road under the one network road classification (ONRC). Fleet Street is a two-way, two-lane, undivided road. There is pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fleet Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as "Characterised by numerous shops facing the streetfront with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present."

Requirement	Comments
(g) the number of intersections and property accessways; and	From desktop information assessment: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to 10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3331 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Fleet Street has a mean operating speed in the range of 20-24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Victoria Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Devon Lane:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Bartley Terrace:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Fleet Street** has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 2.4. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Fleet Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Garden Terrace (Devonport)

The speed limit on Garden Terrace, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Garden Terrace connects to Kapa Road to the north and to Queens Parade to the south. This road provides access to residential properties and is approximately 0.13 km in length.</p> <p>Garden Terrace is classified as an Access road under the one network road classification (ONRC). Garden Terrace is a two-way, two-lane, undivided road. There is pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Garden Terrace were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 127 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Garden Terrace has a mean operating speed in the range of 20-24 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Kapai Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Queens Parade:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Garden Terrace** has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Garden Terrace, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Gibbons Road (Takapuna)

The speed limit on Gibbons Road, Takapuna has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Gibbons Road connects to The Strand to the north and Blomfield Spa to the south. This road provides access to residential properties and is approximately 0.17 km in length.</p> <p>Gibbons Road is classified as a Secondary Collector road under the one network road classification (ONRC). Gibbons Road is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Gibbons Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from Traffic Survey as 600 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Gibbons Road has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Blomfield Spa:</b> 50 km/h (proposed 30 km/h)</li> <li><b>The Strand:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Gibbons Road** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.3 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Gibbons Road, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Huia Street (Devonport)**

The speed limit on Huia Street, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Huia Street connects to Calliope Road to the north and to Queens Parade to the south. This road provides access to residential properties and is approximately 0.21 km in length.</p> <p>Huia Street is classified as a Secondary Collector road under the one network road classification (ONRC). Huia Street is a one-way, one-lane, undivided road. There is pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Huia Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> One way</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i> .
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to 10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1438 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Huia Street has a mean operating speed in the range of 20-24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Calliope Road:</b> 50 km/h</li> <li>• <b>Queens Parade:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Huia Street** has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 1.6. For urban areas this corresponds to an IRR band of **Low**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Huia Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Huron Street (Takapuna)**

Huron Street, Takapuna is divided into two sections as outlined below:<sup>1</sup>

- Section 1: Huron Street between Lake Road and Auburn Street
- Section 2: Huron Street between Auburn Street and the western end of Huron Street

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Huron Street, Takapuna has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	This road connects to Lake Road to the east and Auburn Street to the west. This road provides access to commercial properties and is approximately 0.24 km in length.	This road connects to Auburn Street to the east and the road ends at Huron Street to the west. This road provides access to residential properties and is approximately 0.19 km in length.
(c) the function and use of the road; and (d) crash risk for all road users; and	This section of Huron Street is classified as a Primary Collector road under the one network road classification (ONRC). Huron Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.	This section of Huron Street is classified as an Access road under the one network road classification (ONRC). Huron Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for	

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e. tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	all road users and therefore crash risk for all road users were considered.	
(e) the characteristics of the road and roadsides; and	The following characteristics for this section of Huron Street were determined using desktop information assessment:	
	<b>Road stereotype:</b> Two lane undivided <b>Road alignment:</b> Straight <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (<0.5m) <b>Roadside hazards:</b> Moderate	<b>Road stereotype:</b> Two lane undivided <b>Road alignment:</b> Straight <b>Carriageway width:</b> Narrow lane (<3.0m) and very narrow shoulder (<0.5m) <b>Roadside hazards:</b> Moderate
(f) adjacent land use; and	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as <i>"characterised by numerous shops facing the street front with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present."</i>	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	From desktop information assessment:	
	<b>Intersection density:</b> 5 to 10 intersections per km <b>Access density:</b> 20+ accesses per km	<b>Intersection density:</b> 3 to 5 intersections per km <b>Access density:</b> 20+ accesses per km
(h) traffic volume; and	Average daily traffic (ADT) was determined from Traffic Survey as 2,774 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 280 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.	
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Huron Street has a mean operating speed in the range of 20-24km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Auburn Street:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Lake Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Huron Street** has the following information:

- Section 1
  - Collective Risk band of **Low**, and a Personal Risk band of **Low**
  - The Infrastructure Risk Rating Score is 2.4 For urban areas this corresponds to an IRR band of **Medium**.
- Section 2
  - Collective Risk band of **Low**, and a Personal Risk band of **Low**
  - The Infrastructure Risk Rating Score is 1.7 For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h (for both sections).

### Step 4: Conclusion

*Proposed safe and appropriate speed limit recommendation for both sections = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Huron Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hurstmere Road (Takapuna)

The speed limit on Hurstmere Road, Takapuna between 30m south of Brett Avenue and Lake Road has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hurstmere Road is connected from Lake Road to the south and the road ends at Hurstmere Road to north. This road provides access to commercial and residential properties and is approximately 0.85 km in length.</p> <p>Hurstmere Road is classified as an Arterial road under the one network road classification (ONRC). Hurstmere Road is a one-way, one-lane, undivided road. There are pedestrian and cycle amenities with no on-street parking along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 25 crashes between 2016 and 2020: two serious, five minor and 18 non-injury crashes. This resulted in two Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hurstmere Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> One-way</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as "characterised by numerous shops facing the street front with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to 5 intersections per km</li> <li><b>Access density:</b> 5 to 10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from Traffic Survey as 6,871 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Hurstmere Road has a mean operating speed in the range of 25-29km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Anzac Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Earnoch Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Killarney Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Lake Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>The Promenade:</b> 50 km/h (proposed 30 km/h)</li> <li><b>The Strand:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Hurstmere Road** has the following information:

- Collective Risk band of **High**, and a Personal Risk band of **High**
- The Infrastructure Risk Rating Score is 1.7 For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

**Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hurstmere Road, the actual operating speeds from the MegaMaps ranges from 25-29km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Kapai Road (Devonport)**

The speed limit on Kapai Road, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kapai Road connects to Garden Terrace to the south. This road provides access to residential properties and is approximately 0.06 km in length.</p> <p>Kapai Road is classified as an Access road under the one network road classification (ONRC). Kapai Road is a two-way, two-lane, undivided road. There is pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kapai Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i> .
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 127 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kapai Road has a mean operating speed in the range of 20-24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Garden Terrace:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Kapai Road** has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kapai Road, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kerr Street (Devonport)

The speed limit on Kerr Street, Devonport between Victoria Road and Church Street has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kerr Street connects to Victoria Road to the west, to St Aubyn Street to the north, to Mays Street to the south, and to Church Street to the east. This road provides access to residential properties and is approximately 0.45 km in length.</p> <p>Kerr Street is classified as an access road under the one network road classification (ONRC). Kerr Street is a two-way, two-lane, undivided road. There is pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records no crashes between 2016 and 2020.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kerr Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From desktop information assessment: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to 10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 995 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kerr Street has a mean operating speed in the range of 20-24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Victoria Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Mays Street:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>St Aubyn Street:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Church Street:</b> 50 km/h</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Kerr Street** has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 2.0. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kerr Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Killarney Street (Takapuna)

The speed limit on Killarney Street, Takapuna between Hurstmere Road and 30m west of The Promenade has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• WK New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Killarney Street connects to Hurstmere Road to the north-east and the road ends at Killarney Street to the south-west. This road provides access to commercial and residential properties and is approximately 0.17 km in length.</p> <p>Killarney Street is classified as an Arterial road under the one network road classification (ONRC). Killarney Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Killarney Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide lane (&gt;3.5m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as "Characterised by numerous shops facing the street front with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 9,744 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Killarney Street has a mean operating speed in the range of 40-44km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>• <b>Hurstmere Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>The Promenade:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Killarney Street** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.7 For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed Killarney Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – King Edwards Parade (Devonport)**

The speed limit on King Edwards Parade, Devonport between Victoria Road and Church Street has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>King Edwards Parade connects to Victoria Road to the west, and to Buchanan Street, Mays Street, Church Street to the north. This road provides access to residential properties and is approximately 0.67 km in length.</p> <p>King Edwards Parade is classified as a Primary Collector road under the one network road classification (ONRC). King Edwards Parade is a two-way, two-lane, undivided road. There is pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: three non-injury crashes and three minor injury crashes.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for King Edwards Parade were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide lane (&gt;3.5m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”.

Requirement	Comments
(g) the number of intersections and property accessways; and	From desktop information assessment: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to 10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4404 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of King Edwards Parade has a mean operating speed in the range of 30-34 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Victoria Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Buchanan Street:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Mays Street:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Church Street:</b> 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **King Edwards Parade** has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 2.0. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for King Edwards Parade, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lake Road (Takapuna)

The speed limit on Lake Road, Takapuna between Anzac Street and 25m south of Blomfield Spa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lake Road connects to The Terrace in the north and the road ends at Lake Road to the south. This road provides access to commercial properties and is approximately 0.49 km in length.</p> <p>Lake Road is classified as a Regional road under the one network road classification (ONRC). Lake Road is a two-lane, undivided road. There are pedestrian amenities and no on-street parking along this road. There are also cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: one serious, two minor and three non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lake Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as " <i>characterised by numerous shops facing the street front with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present.</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 2 to 5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from Traffic Survey as 7,513 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Lake Road has a mean operating speed in the range of 25-29km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Anzac Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Blomfield Spa:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Como Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Huron Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Hurstmere Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Northcroft Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>The Strand:</b> 50 km/h (proposed 30 km/h)</li> <li><b>The Terrace:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Lake Road** has the following information:

- Collective Risk band of **High**, and a Personal Risk band of **High**.
- The Infrastructure Risk Rating Score is 2.7. For urban areas this corresponds to an IRR band of **Medium-High**.
- High risk road.<sup>1</sup>

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

**Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lake Road, the actual operating speeds from the MegaMaps ranges from 25-29km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Line Road (Glen Innes)**

Line Road, Glen Innes, is divided into two sections as follows:<sup>1</sup>

- Section 1: Line Road between 230m north of Taniwha Street and Taniwha Street
- Section 2: Line Road between Taniwha Street and Point England Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Line Road, Glen Innes has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Line Road connects to Taniwha Street to the south and the road ends on Line Road to the north. This road provides access to residential properties and is approximately 0.23 km in length.	Line Road connects to Point England Road to the south and the road ends on Taniwha Street to the north. This road provides access to commercial properties and is approximately 0.35 km in length.
	Line Road is classified as an Arterial road under the one network road classification (ONRC). Line Road is a two-lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.	
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 42 crashes between 2016 and 2020: seven minor and 35 non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e. tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(e) the characteristics of the road and roadsides; and	The following characteristics for Line Road were determined using desktop information assessment:	
	<b>Road stereotype:</b> Two lane undivided <b>Road alignment:</b> Straight <b>Carriageway width:</b> Narrow lane (<3.0m) and very narrow shoulder (<0.5m) <b>Roadside hazards:</b> Moderate	<b>Road stereotype:</b> Two lane undivided <b>Road alignment:</b> Straight <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (<0.5m) <b>Roadside hazards:</b> Moderate
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."</i>	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as <i>"Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."</i>
(g) the number of intersections and property accessways; and	From desktop information assessment:	
	<b>Intersection density:</b> 3 to 5 intersections per km <b>Access density:</b> 20+ accesses per km	<b>Intersection density:</b> 10+ intersections per km <b>Access density:</b> 10 to <20 accesses per km
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8,299 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 8,260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.	
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to		
Current speed limit	The existing speed limit is 50 km/h.	
MegaMaps Mean Operating Speed (km/h)	Line Road has a mean operating speed in the range of 40-44km/h.	Line Road has a mean operating speed in the range of 30-34km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.	
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Bradley Lane:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Maybury Street:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Point England Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Stratton Lane:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Taniwha Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>	

#### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Line Road** has the following information:

- Section 1
  - Collective Risk band of **Low**, and a Personal Risk band of **Low**.
  - The Infrastructure Risk Rating Score is 2.1 For urban areas this corresponds to an IRR band of **Medium**.
- Section 2
  - Collective Risk band of **Low**, and a Personal Risk band of **Low**.
  - The Infrastructure Risk Rating Score is 2.8 For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed Line Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lomond Street (Takapuna)

The speed limit on Lomond Street, Takapuna between Auburn Street and 30m southwest of Auburn Street has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lomond Street connects to Auburn Street to the east and the road ends on Lomond Street to the west. This road provides access to residential properties and is approximately 0.03 km in length.</p> <p>Lomond Street is classified as an Access road under the one network road classification (ONRC). Lomond Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lomond Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 280 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Lomond Street has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Auburn Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Lomond Street** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.3 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lomond Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Marine Square (Devonport)

The speed limit on Marine Square, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Marine Square connects to Victoria Road to the north and to Queens Parade to the north. This road provides access to residential properties and is approximately 0.16 km in length.</p> <p>Marine Square is classified as a Primary Collector road under the one network road classification (ONRC). Marine Square is a two-way, two-lane, undivided road. There is pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two minor injury crashes.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Marine Square were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> One-way</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Big Box using MegaMaps tool. The IRR defines Urban Residential as " <i>Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2323 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Marine Square has a mean operating speed in the range of 20-24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Victoria Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Queens Parade:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Marine Square** has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 2.2. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Marine Square, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Maybury Street (Glen Innes)**

The speed limit on Maybury Street, Glen Innes between Line Road and 60m east of Line Road has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Maybury Street connects to Line Road to the west and the road ends on Maybury Street to the east. This road provides access to residential properties and is approximately 0.06 km in length.</p> <p>Maybury Street is classified as a Secondary Collector road under the one network road classification (ONRC). Maybury Street is a two-lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Maybury Street were determined using desktop information assessment:</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,001 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Maybury Street has a mean operating speed in the range 25-29km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Line Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Maybury Street** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.4 For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Maybury Street, the actual operating speeds from the MegaMaps ranges from 25-29km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mayfair Place (Glen Innes)

The speed limit on Mayfair Place, Glen Innes has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mayfair Place only connects to Taniwha Street to the north. This road provides access to commercial properties and is approximately 0.11 km in length.</p> <p>Mayfair Place is classified as a Secondary Collector road under the one network road classification (ONRC). Mayfair Place is a one-way, one-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 12 crashes between 2016 and 2020: two minor and 10 non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mayfair Place were determined using desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> One-Way</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as "characterised by numerous shops facing the street front with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> &lt;1 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,040 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Mayfair Place has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Taniwha Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Mayfair Place** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.1. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Mayfair Place, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Mays Street (Devonport)

The speed limit on Mays Street, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Mays Street connects to King Edwards Parade to the south and to Kerr Street to the north. This road provides access to residential properties and is approximately 0.33 km in length.</p> <p>Mays Street is classified as an Access road under the one network road classification (ONRC). Mays Street is a two-way, two-lane, undivided road. There is pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records no crashes between 2016 and 2020.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Mays Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i> .
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 266 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Mays Street has a mean operating speed in the range of 20-24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>King Edwards Parade:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Kerr Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Mays Street** has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 2.2. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Mays Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

Requirement	Comments
(g) the number of intersections and property accessways; and	From desktop information assessment: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 9,556 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Merton Road has a mean operating speed in the range of 40-44km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Apirana Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Line Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Point England Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Merton Road** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.5 For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed Merton Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Northcroft Street (Takapuna)

Northcroft Street, Takapuna is divided into two sections as outlined below:

1. Section 1: Northcroft Street between Lake Road and Auburn Street
2. Section 2: Northcroft Street between Auburn Street and the western end of Northcroft Street

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Northcroft Street, Takapuna has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	This road connects to Lake Road to the east and Auburn Street to the west. This road provides access to commercial properties and is approximately 0.24 km in length.	This road connects to Auburn Street to the east and the road ends at Northcroft Street to the west. This road provides access to residential properties and is approximately 0.14 km in length.
(c) the function and use of the road; and (d) crash risk for all road users; and	This section of Northcroft Street is classified as a Primary Collector road under the one network road classification (ONRC). Northcroft Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.	This section of Northcroft Street is classified as a Secondary Collector under the one network road classification (ONRC). Northcroft Street is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
	WK NZTA's Crash Analysis System (CAS) records one crashes between 2016 and 2020: one non-injury crashe. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	
(e) the characteristics of the road and roadsides; and	The following characteristics for this section of Northcroft Street were determined using desktop information assessment:	

Requirement	Comments	
	Section 1	Section 2
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>	
(f) adjacent land use; and	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as "characterised by numerous shops facing the street front with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present."	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	From desktop information assessment: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to 10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>	
(h) traffic volume; and	Average daily traffic (ADT) was determined from Traffic Survey as 2,445 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 696 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.	
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Northcroft Street has a mean operating speed in the range of 20-24km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.

Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Auburn Street:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Burns Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Lake Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>
---------------------------------	---

### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Northcroft Street** has the following information:

- Section 1
  - Collective Risk band of **Low**, and a Personal Risk band of **Low**
  - The Infrastructure Risk Rating Score is 2.4 For urban areas this corresponds to an IRR band of **Medium**.
- Section 2
  - Collective Risk band of **Low**, and a Personal Risk band of **Low**
  - The Infrastructure Risk Rating Score is 2.0 For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h (for both sections).

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation for both sections = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Northcroft Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Omaru Lane (Glen Innes)

The speed limit on Omaru Lane, Glen Innes has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Omaru Lane connects to Taniwha Street to the south and Apirana Avenue to the west. This road provides access to commercial and industrial properties and is approximately 0.25 km in length.</p> <p>Omaru Lane is classified as an Access road under the one network road classification (ONRC). Omaru Lane is a two-lane undivided road. There are no pedestrian amenities and cyclist amenities along this road. On-street parking is available on one side.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: four non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Omaru Lane were determined using desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Big Box using MegaMaps tool. The IRR defines Commercial Big Box as "large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Omaru Lane has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Apirana Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Taniwha Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Omaru Lane** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.4 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Omaru Lane, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Point England Road (Glen Innes)**

Point England Road, Glen Innes, is divided into two sections as follows:<sup>1</sup>

- Section 1: Point England Road between Elstree Ave and the eastern end of Point England Rd
- Section 2: Point England Road between Apirana Ave and 100m east of Apirana Ave

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Point England Road, Glen Innes has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Point England Road connects to Elstree Avenue to the west and the road ends on Point England Road to the east. This road provides access to residential properties and is approximately 0.5 km in length.	Point England Road connects to Apirana Avenue to the west and the road ends on Point England Road to the east. This road provides access to residential properties and is approximately 0.1 km in length.
	This section is classified as a Primary Collector road under the one network road classification (ONRC). Point England Road is a two-lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.	This section is classified as an Arterial road under the one network road classification (ONRC). Point England Road is a two-lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records eight crashes between 2016 and 2020: two serious, four minor	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor and one non-

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e. tortuous vs curved) as specified within the IRR.

Requirement	Comments					
	Section 1	Section 2				
	and two non-injury crashes. This resulted in two Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.				
(e) the characteristics of the road and roadsides; and	The following characteristics for Point England Road were determined using desktop information assessment: <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>					
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”					
(g) the number of intersections and property accessways; and	From desktop information assessment: <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50%;"><b>Intersection density:</b> 3 to 5 intersections per km</td> <td style="width: 50%;"><b>Intersection density:</b> 10+ intersections per km</td> </tr> <tr> <td><b>Access density:</b> 20+ accesses per km</td> <td><b>Access density:</b> 20+ accesses per km</td> </tr> </table>		<b>Intersection density:</b> 3 to 5 intersections per km	<b>Intersection density:</b> 10+ intersections per km	<b>Access density:</b> 20+ accesses per km	<b>Access density:</b> 20+ accesses per km
<b>Intersection density:</b> 3 to 5 intersections per km	<b>Intersection density:</b> 10+ intersections per km					
<b>Access density:</b> 20+ accesses per km	<b>Access density:</b> 20+ accesses per km					
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8,617 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 5,843 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.				
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.					
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.					

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.

MegaMaps Mean Operating Speed (km/h)	Point England Road has a mean operating speed in the range of 25-29km/h.	Point England Road has a mean operating speed in the range of 40-44km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.	
Speed limits on adjoining roads	The existing speed limits on adjoining roads are:	
	<b>Elstree Avenue:</b> 50 km/h <b>Erima Avenue:</b> 50 km/h	<b>Apirana Avenue:</b> 50 km/h (proposed 30 km/h) <b>Line Road:</b> 50 km/h (proposed 30 km/h) <b>Merton Road:</b> 50 km/h (proposed 30 km/h)

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Point England Road** has the following information:

- Section 1
  - Collective Risk band of **High**, and a Personal Risk band of **High**.
  - The Infrastructure Risk Rating Score is 2.2 For urban areas this corresponds to an IRR band of **Medium**.
  - High risk road<sup>2</sup>
- Section 2
  - Collective Risk band of **Low**, and a Personal Risk band of **Low**.
  - The Infrastructure Risk Rating Score is 2.3 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

*Proposed safe and appropriate speed limit recommendation for both sections = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Point England Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Queens Parade (Devonport)

The speed limit on Queens Parade, Devonport between Victoria Road and Spring Street has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Queens Parade connects to Victoria Road to the east, to Marine Square to the south, and to Wynyard Street, Anne Street, Garden Terrace, Huia Street, Spring Street to the north. This road provides access to residential properties and is approximately 0.53 km in length.</p> <p>Queens Parade is classified as a Primary Collector road under the one network road classification (ONRC). Queens Parade is a two-way, two-lane, undivided road. There is pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records five crashes between 2016 and 2020: one serious, one minor and three non-injury crashes.</p> <p>This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Queens Parade were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Urban Residential as "Characterised by numerous shops facing the streetfront with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2323 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Queens Parade has a mean operating speed in the range of 20-24 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Victoria Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Marine Square:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Wynyard Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Anne Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Garden Terrace:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Huia Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Spring Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Queens Parade** has the following information:

- Collective Risk band of **High**, and Personal Risk of **High**.
- The Infrastructure Risk Rating Score is 2.6. For urban areas this corresponds to an IRR band of **Medium-High**.
- High risk road<sup>1</sup>

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Queens Parade, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Rattray Street (Devonport)**

The speed limit on Rattray Street, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Rattray Street connects to Victoria Road to the west and to Buchanan Street to the south. This road provides access to residential properties and is approximately 0.17 km in length.</p> <p>Rattray Street is classified as a Secondary Collector road under the one network road classification (ONRC). Rattray Street is a two-way, two-lane, undivided road. There is pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Rattray Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i> .
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 525 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Rattray Street has a mean operating speed in the range of 20-24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Victoria Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Buchanan Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Rattray** Street has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 2.3. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Rattray Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Sanders Avenue (Takapuna)**

The speed limit on Sanders Avenue, Takapuna has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sanders Avenue connects to Killarney Street to the north and Anzac Street Road to the south. This road provides access to residential properties and is approximately 0.29 km in length.</p> <p>Sanders Avenue is classified as an Access road under the one network road classification (ONRC). Sanders Avenue is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Sanders Avenue were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to 5 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 132 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Sanders Avenue has a mean operating speed in the range of 20-24km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Lake Road:</b> 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Sanders Avenue** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.7 For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Sanders Avenue, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Spring Street (Devonport)

The speed limit on Spring Street, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Spring Street connects to Queens Parade to the south. This road provides access to residential properties and is approximately 0.11 km in length.</p> <p>Spring Street is classified as an Access road under the one network road classification (ONRC). Spring Street is a two-way, two-lane, undivided road. There is pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records no crashes between 2016 and 2020.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Spring Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 127 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Spring Street has a mean operating speed in the range of 20-24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Queens Parade:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Spring Street** has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 2.0. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Spring Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – St Aubyn Street (Devonport)

The speed limit on St Aubyn Street, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>St Aubyn Street connects to Church Street to the east and to Kerr Street to the south. This road provides access to residential properties and is approximately 0.21 km in length.</p> <p>St Aubyn Street is classified as a Secondary Collector road under the one network road classification (ONRC). St Aubyn Street is a two-way, two-lane, undivided road. There is pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for St Aubyn Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 286 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of St Aubyn Street has a mean operating speed in the range of 25-29km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Church Street:</b> 50 km/h</li> <li><b>Kerr Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **St Aubyn Street** has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 2.2. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for St Aubyn Street, the actual operating speeds from the MegaMaps ranges from 25-29km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Stratton Lane (Glen Innes)

The speed limit on Stratton Lane, Glen Innes has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Stratton Lane connects to Line Road to the east and the road ends on Stratton Lane to the west. This road provides access to industrial properties and is approximately 0.13 km in length.</p> <p>Stratton Lane is classified as an Access road under the one network road classification (ONRC). Stratton Lane is a two-lane undivided road. There is on-street parking along this road. There are no cyclist nor pedestrian amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Stratton Lane were determined using desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Industry using MegaMaps tool. The IRR defines Industry as "large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 52 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>Stratton Lane has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Line Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Stratton Lane** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.4 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for Stratton Lane, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Taniwha Street (Glen Innes)**

Taniwha Street, Glen Innes, is divided into two sections as follows:<sup>1</sup>

- Section 1: Taniwha Street between Apirana Ave and Line Road
- Section 2: Taniwha Street between Line Road and Heatherbank St

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Taniwha Street, Glen Innes has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	This section connects to Apirana Avenue to the west and Line Road to the east. This road provides access to commercial properties and is approximately 0.23 km in length.	This section connects to Line Road to the west and the road ends on Taniwha Street to the east. This road provides access to residential properties and is approximately 0.27 km in length.
	This section is classified as an Arterial road under the one network road classification (ONRC). Taniwha Street is a divided-traversable road. There are pedestrian amenities and some angled parking. There are no cyclist amenities.	This section is classified as an Arterial road under the one network road classification (ONRC). Taniwha Street is a two-lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 15 crashes between 2016 and 2020: one serious, one minor and 13 non-injury crashes. This resulted in one Death and Serious Injury (DSI). This	

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	data includes crashes for all road users and therefore crash risk for all road users were considered.	
(e) the characteristics of the road and roadsides; and	The following characteristics for Taniwha Street were determined using desktop information assessment:	
	<b>Road stereotype:</b> Divided-traversable <b>Road alignment:</b> Straight <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (<0.5 m) <b>Roadside hazards (in both directions):</b> Moderate	<b>Road stereotype:</b> Two lane undivided <b>Road alignment:</b> Straight <b>Carriageway width:</b> Wide lane (>3.5m) and very narrow shoulder (<0.5m) <b>Roadside hazards:</b> Moderate
(f) adjacent land use; and	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as "characterised by numerous shops facing the street front with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present."	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	From desktop information assessment:	
	<b>Intersection density:</b> 10+ intersections per km <b>Access density:</b> 10 to 20 accesses per km	<b>Intersection density:</b> 5 to 10 intersections per km <b>Access density:</b> 20+ accesses per km
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8,583 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 8,690 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.	
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to		
Current speed limit	The existing speed limit is 50 km/h.	
MegaMaps Mean Operating Speed (km/h)	This section of Taniwha Street has a mean operating speed in the range of 35-39 km/h.	This section of Taniwha Street has a mean operating speed in the range of 40-44 km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.	
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Apirana Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Line Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Mayfair Place:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Omaru Lane:</b> 50 km/h (proposed 30 km/h)</li> </ul>	

#### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Taniwha Street** has the following information:

- Section 1
  - Collective Risk band of **High**, and a Personal Risk band of **High**.
  - The Infrastructure Risk Rating Score is 2.9 For urban areas this corresponds to an IRR band of **High**.
  - High risk road<sup>2</sup>
- Section 2
  - Collective Risk band of **Low**, and a Personal Risk band of **Low**.
  - The Infrastructure Risk Rating Score is 2.2 For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation for both sections = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Taniwha Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – The Promenade (Takapuna)**

The speed limit on The Promenade, Takapuna between Killarney Street and the eastern end of The Promenade has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>The Promenade connects to Killarney Street to the west and the road ends on The Promenade to the east. This road provides access to commercial and residential properties and is approximately 0.30 km in length.</p> <p>The Promenade is classified as a Secondary Collector road under the one network road classification (ONRC). The Promenade is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records seven crashes between 2016 and 2020: one serious, two minor and four non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for The Promenade were determined using MegaMaps tool and desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as " <i>characterised by numerous shops facing the street front with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present.</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	From desktop information assessment: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to 10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from Traffic Survey as 576 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	The Promenade has a mean operating speed in the range of 20-24 km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Alison Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Hurstmere Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Killarney Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Alison Avenue** has the following information:

- Collective Risk band of **High**, and a Personal Risk band of **High**.
- The Infrastructure Risk Rating Score is 2.2 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for The Promenade, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – The Strand (Takapuna)

The speed limit on The Strand, Takapuna has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>The Strand connects to Lake Road to the south and Hurstmere Road to the west. This road provides access to commercial and industrial properties and is approximately 0.56 km in length.</p> <p>The Strand is classified as a Primary Collector road under the one network road classification (ONRC). The Strand is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records seven crashes between 2016 and 2020: seven non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for The Strand were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Big Box using MegaMaps tool. The IRR defines Commercial Big Box as "large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 10 to 20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from Traffic Survey as 3,583 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>The Strand has a mean operating speed in the range of 20-24km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Hurstmere Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Lake Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **The Strand** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.4 For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40km/h as the safe and appropriate speed for The Strand, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and

regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – The Terrace (Takapuna)**

The speed limit on The Terrace, Takapuna 20m south of Killarney Street and Anzac Street has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>The Terrace connects to Killarney Street to the north and Anzac Street Road to the south. This road provides access to residential properties and is approximately 0.18 km in length.</p> <p>The Terrace is classified as a Secondary Collector road under the one network road classification (ONRC). The Terrace is a two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crashes between 2016 and 2020: one non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for The Terrace were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Wide lane (&gt;3.5 m) and very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 696 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	The Terrace has a mean operating speed in the range of 30-34km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Anzac Street:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Collins Street:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Killarney Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **The Terrace** has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.2 For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed The Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Tudor Street (Devonport)

The speed limit on Tudor Street, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tudor Street connects to Church Street to the east. This road provides access to residential properties and is approximately 0.13 km in length.</p> <p>Tudor Street is classified as an access road under the one network road classification (ONRC). Tudor Street is a two-way, two-lane, undivided road. There is pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records no crashes between 2016 and 2020.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Tudor Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to 10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 127 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Tudor Street has a mean operating speed in the range of 20-24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Church Street:</b> 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, **Tudor Street** has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 2.0. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Tudor Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Victoria Road (Devonport)

The speed limit on Victoria Road, Devonport between 60m north of Calliope Road and the southern end of Victoria Road has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Victoria Road connects to Queens Parade to the south, and Calliope Street, Clarence Street, Fleet Street to the west, and King Edward Parade, Flagstaff Terrace, Rattray Street, Kerr Street to the east. This road provides access to commercial properties and is approximately 0.54 km in length.</p> <p>Victoria Road is classified as an Arterial road under the one network road classification (ONRC). Victoria Road is a two-way, two-lane, undivided road. There is pedestrian and cyclist amenities and on-street parking along this road.</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records 20 crashes between 2016 and 2020: one serious, six minor and 13 non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Victoria Road is identified as one of the top 10% DSI saving network sections for New Zealand.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Victoria Road were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Wide lane (&gt;3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as "Characterised by numerous shops facing the streetfront with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements

Requirement	Comments
	<i>to and from the road. Regular intersections and accesses will also be present."</i>
(g) the number of intersections and property accessways; and	<p>From desktop information assessment:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 9864 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Victoria Road has a mean operating speed in the range of 25-29 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Queens Parade:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Calliope Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Clarence Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Fleet Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>King Edward Parade:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Flagstaff Terrace:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Rattray Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Kerr Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From desktop information assessment, Victoria Road has the following information:

- Collective Risk band of **High**, and Personal Risk of **High**.
- The Infrastructure Risk Rating Score is 3.0. For urban areas this corresponds to an IRR band of **High**.
- High risk road<sup>1</sup>

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 30 km/h.

**Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 30km/h*

We have determined 30km/h to be safer and more appropriate and align with the recommended speed by the Speed Management Guide. This will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Wynyard Street (Devonport)**

The speed limit on Wynyard Street, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wynyard Street connects to Queens Parade to the south and Clarence Street to the north. This road provides access to residential properties and is approximately 0.18 km in length.</p> <p>Wynyard Street is classified as a Primary Collector road under the one network road classification (ONRC). Wynyard Street is a two-way, two-lane, undivided road. There is pedestrian amenities and on-street parking along this road. There are no cyclist amenities</p>
(d) crash risk for all road users; and	<p>NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes.</p> <p>This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wynyard Street were determined using desktop information assessment.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards:</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Strip Shopping using MegaMaps tool. The IRR defines Commercial Strip Shopping as " <i>Characterised by numerous shops facing the streetfront with high levels of activity, particularly pedestrians, cyclists and high occupancy on-street parking resulting in many vehicle movements to and from the road. Regular intersections and accesses will also be present.</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From desktop information assessment: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1261 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures are still under investigation.
(j) the views of interested persons and groups.	Potential changes to a speed limit of 30km/h in this area were presented to the Local Board meeting on 10/08/21. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Wynyard Street has a mean operating speed in the range of 20-24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Queens Parade:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Clarence Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From desktop information assessment, **Wynyard Street** has the following information:

- Collective Risk band of **Low**, and Personal Risk of **Low**.
- The Infrastructure Risk Rating Score is 2.6. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

*Proposed safe and appropriate speed limit recommendation: 30km/h*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wynyard Street, the actual operating speeds from the MegaMaps ranges from 20-24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Evans Road (South Head)

The speed limit on Evans Road, South Head has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Evans Road connects to South Head Road to the north. This road provides access to residential properties.</p> <p>This road is approximately 4.15 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This road is a two-way, two-lane, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics of Evans Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed.</li> <li><b>Road alignment:</b> Winding.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> Severe.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km.</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 23 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 8 September 2021. The proposed speed limit reduction from 100km/h to 80km/h for South Head Road was discussed as well as the speed limit on the side roads being reduced to either 60km/h or 40km/h based on the speed limit review. The Local Board was supportive of the proposed speed limit changes being taken to public consultation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	Evans Road has a mean operating speed in the range of 30-34 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>South Head Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	4.15
Annual Daily Traffic	23

- The Collective Risk score is **0.00**. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is **0.00**. For rural areas this corresponds to a Personal Risk band of **Low**

## Speed Limit Review – Green Road (Parakai)

The speed limit on Green Road, Parakai has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Green Road connects to South Head Road, and Parkhurst Road to the west. This road provides access to residential properties.
	This road is approximately 0.82 km in length. It is classified as an Access road under the one network road classification (ONRC).
(c) the function and use of the road; and	This road is a two-way, two-lane, unsealed undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one minor injury crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics of Green Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage and geomaps information.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.0
Road alignment	Winding	3.5
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	Severe	2.80
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	5 to <10	1.06
Traffic volume	<1000	1.00

The Infrastructure Risk Rating Score is **2.50**. For Rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Evans Road.

Evans Road is a self-explaining road as the mean operating speeds (35 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Evans Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Evans Road due to a multitude of factors. These being the unsealed road surface, narrow lane and shoulder width, winding nature of the road, severe road-side hazards and low mean operating speed (<40 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Evans Road in South Head, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Formatted: Not Highlight

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km.</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 169 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 8 September 2021. The proposed speed limit reduction from 100km/h to 80km/h for South Head Road was discussed as well as the speed limit on the side roads being reduced to either 60km/h or 40km/h based on the speed limit review. The Local Board was supportive of the proposed speed limit changes being taken to public consultation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	Green Road has a mean operating speed in the range of 35-39 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>South Head Road:</b> 100 km/h (proposed to be lowered at 80 km/h, discussed separately).</li> <li>• <b>Parkhurst Road:</b> 100 km/h (proposed to be lowered at 80 km/h, discussed separately).</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	0.82
Annual Daily Traffic	169

- The Collective Risk score is **0.00**. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is **0.00**. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.0
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2
Access density (per km)	2 to <5	1.03
Traffic volume	<1000	1.00

The Infrastructure Risk Rating Score is **1.90**. For Rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation= 40 km/h for the full length of Green Road.*

Green Road is a self-explaining road as the mean operating speeds (35 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Green Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Green Road due to a multitude of factors. These being the unsealed road surface, narrow lane and very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (<40 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows one minor crash in the last 5 years.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

After considering all the above factors, the existing speed limit of 100 km/h on Green Road in Parakai, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Haranui Road (South Head)**

Haranui Road, South Head, is divided into two sections as follows:<sup>1</sup>

1. Section 1: Haranui Road between South Head Road and 717m east of South Head Road.
2. Section 2: Haranui Road between 717m east of South Head Road and eastern end of Haranui Road.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Haranui Road, South Head has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Haranui Road connects to South Head Road to the west. This road provides access to residential properties and Haranui Marae.	
	This section is approximately 0.72 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 1.07 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, two-lane, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: zero fatal, zero serious, one minor	WK NZTA's Crash Analysis System (CAS) records zero crashes for this section of Haranui Road between 2016 and

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	and zero non-injury crashes. This resulted in zero Deaths and Serious Injuries (DSI). This data includes crashes for all road users and therefore the crash risk for all road users was considered.	2020. Therefore, there are no DSI's on this section.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Haranui Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided.</li> <li>• <b>Road alignment:</b> Straight.</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li>• <b>Roadside hazards (in both directions):</b> High.</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed.</li> <li>• <b>Road alignment:</b> Curved.</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li>• <b>Roadside hazards (in both directions):</b> High.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km.</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km.</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km.</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 140 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	
(i) any planned modification to the road; and	Engineering / modification measures for the area are planned. Details of the measures for this road are still under investigation	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 8 September 2021. The proposed speed limit reduction from 100km/h to 80km/h for South Head Road	

Requirement	Comments	
	Section 1	Section 2
	was discussed as well as the speed limit on the side roads being reduced to either 60km/h or 40km/h based on the speed limit review. The Local Board suggested that the speed limit on this road should be consistent along its length. The Local Board was supportive of the proposed speed limit changes being taken to public consultation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regards to		
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	Haranui Road has a mean operating speed of 37 km/h.	Haranui Road has a mean operating speed of 37 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>South Head Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>	

#### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	1	0
DSI crashes during the period	0	0
Corridor Length (km)	0.72	1.07
Annual Daily Traffic	140	140

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**

- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score	Category	Risk Score
Road stereotype	Two-Lane undivided.	3.7	Unsealed	10.0
Road alignment	Straight	1.0	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28	High	2.28
Adjacent land use	Rural residential	1.5	Rural residential	1.5
Intersection density (per km)	2 to <3	1.3	<1	1.0
Access density (per km)	2 to <5	1.03	2 to <5	1.03
Traffic volume	<1000	1.0	<1000	1.0

- Section 1:
  - The Infrastructure Risk Rating Score is **1.5**. For Rural areas this corresponds to an IRR band of **Medium**.
- Section 2:
  - The Infrastructure Risk Rating Score is **2.1**. For Rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

- Section 1: The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation:*

- 40 km/h Haranui Road between South Head Road and 717m east of South Head Road. (Section 1).
- 40 km/h Haranui Road between 717m east of South Head Road and eastern end of Haranui Road. (Section 2).

Haranui Road is a self-explaining road as the mean operating speeds (37 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Haranui

Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Section 1 of this road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width and high road-side hazards. All of these factors contribute to the section's 'Medium' IRR score.

Crash history from WK NZTA's CAS database shows one crash in the last 5 years including zero fatal, zero serious, one minor and zero non-injury crashes for Section 1 of this road.

A proposed speed limit of 40 km/h was selected for Section 2 of this road due to a multitude of factors. These being the unsealed surface, narrow lane width, very narrow shoulder width, curved nature of this section of road and high road-side hazards. All of these factors contribute to the road's 'High' IRR score, making it a high-risk section of road.<sup>2</sup>

After considering all the above factors and the presence of a marae on this road, the existing speed limit of 100 km/h on Haranui Road in South Head, is not considered to be a safe and appropriate speed limit for both sections of Haranui Road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Kawa Road (Great Barrier Island)

The speed limit on Kawa Road, Great Barrier Island has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Kawa Road connects to Motairehe Road to the north. This road provides access to residential properties and Kawa Marae.
	This road is approximately 2.62 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This road is a two-way, two-lane, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for Kawa Road were determined using a combination of site drive-over footage, on-site information and Geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed.</li> <li><b>Road alignment:</b> Tortuous.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> Severe.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using MegaMaps tool. The IRR defines Remote Rural as "Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."
(g) the number of intersections and property accessways; and	From MegaMaps tool/ a combination of site drive-over footage and geomaps information. <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersection per km.</li> <li><b>Access density:</b> 1 to &lt;2 accesses per km.</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 92 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification / engineering measures for the area are planned. Details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 7 October 2021. Responses were received and considered for investigation. The local board was supportive of the proposed speed limit change to 40km/h being taken to public consultation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to.	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This road has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Motairehe Road: 100 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	2.624
Annual Daily Traffic	92

- The Collective Risk score is **0.00**. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is **0.00**. For rural areas this corresponds to a Personal Risk band of **Low**

## Speed Limit Review – Motairehe Road (Great Barrier Island)

Motairehe Road (Great Barrier Island), is divided into two sections as follows:<sup>1</sup>

- Section 1: Motairehe Road between Mabey Road and 2.46 km west of Mabey Road.
- Section 2: Motairehe Road between 2.46 km west of Mabey Road and western end of Motairehe Road.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Motairehe Road, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Motairehe Road connects to Mabey Road and Kawa Road to the east. This road provides access to, a marae, residential properties, playground, community hub, boat ramp and beach.	
	This section is approximately 2.46 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 0.39 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	Motairehe Road is a two-way, two-lane, undivided sealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.0
Road alignment	Tortuous	6.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	Severe	2.80
Adjacent land use	Remote rural	1.0
Intersection density (per km)	<1	1.00
Access density (per km)	1 to <2	1.01
Traffic volume	<1000	1.00

The Infrastructure Risk Rating Score is **2.48**. For Rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Kawa Road*

Kawa Road is a self-explaining road as the mean operating speeds (42 km/h) are already near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Kawa Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Kawa Road due to a multitude of factors. These being the unsealed road surface, narrow lane and shoulder width, tortuous nature of the road, severe road-side hazards and low mean operating speed (<50 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Kawa Road in Great Barrier Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e. tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: zero fatal, zero serious, one minor and zero injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for Motairehe Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using MegaMaps tool. The IRR defines Remote Rural as " <i>Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry.</i> "	The adjacent land use is classified as Remote rural using MegaMaps tool. The IRR defines Remote Rural as " <i>Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersection per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersection per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 72 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 70 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 7 October 2021. Responses were received and considered for investigation. The local board was supportive of the proposed speed limit changes to 40km/h for section 1 and 30km/h for section 2 going to public consultation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to		
Current speed limit	The existing speed limit is 100 km/h.	
MegaMaps Mean Operating Speed (km/h)	This section of Motairehe Road has a mean operating speed of 42 km/h.	This section of Motairehe Road has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Mabey Road:</b> 100 km/h.</li> <li>• <b>Kawa Road:</b> 100 km/h (proposed 40 km/h)</li> </ul>	

**Step 2: Determine the road safety metrics and IRR score**

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	1	0
DSI crashes during the period	0	0
Corridor Length (km)	2.456	0.386
Annual Daily Traffic	72	70

- Section 1

- The Collective Risk score is **0.00** while the Personal Risk score is **0.00**. For Rural areas this corresponds to a Collective Risk band of **Low** and a Personal Risk band of **Low**.
- Section 2
  - The Collective Risk score is **0.00** while the Personal Risk score is **0.00**. For Rural areas this corresponds to a Collective Risk band of **Low** and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Unsealed	10.0	Two-lane undivided	3.7
Road alignment	Tortuous	6.0	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	Severe	2.80	Severe	2.80
Adjacent land use	Remote rural	1.0	Remote rural	1.0
Intersection density (per km)	<1	1.00	<1	1.00
Access density (per km)	1 to <2	1.01	2 to <5	1.03
Traffic volume	<1000	1.00	<1000	1.00

- Section 1: The Infrastructure Risk Rating Score is **2.48**. For Rural areas this corresponds to an IRR band of **High**.
- Section 2: The Infrastructure Risk Rating Score is **1.53**. For Rural areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is:

- <80 km/h between Mabey Road and 2.46 km west of Mabey Road.
- <50 km/h between 2.46 km west of Mabey Road and western end of Motairehe Road.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation:*

- 40 km/h between Mabey Road and 2.46 km west of Mabey Road.
- 30 km/h between 2.46 km west of Mabey Road and western end of Motairehe Road.

Motairehe Road is a self-explaining road as the mean operating speeds (42 km/h) are near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Motairehe Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. Engineering down interventions are required for Section 2 of Motairehe Road in order to lower operating speeds such that it is safe for the new proposed speed limit.

The proposed speed limit of 40 km/h was selected for Section 1 of this road due to a multitude of factors. These being the unsealed road surface, narrow lane and shoulder width, tortuous nature of the road, severe road-side hazards and low mean operating speeds (<50 km/h). All of these factors contribute to this section of Motairehe Road having a 'High' IRR score, making it a high-risk section of road.

A proposed speed limit of 30 km/h was selected for the Section 2 of this road due to a multitude of factors. These being the high presence of vulnerable road users and lack of pedestrian facilities. This includes large events at the marae such as tangihanga, where many people congregate on foot in this area. The marae is also used as community hub with regular pedestrian movement on the road and there is also a playground near to the marae. The sealed surface, curved alignment, narrow lane width, very narrow shoulder width and severe road-side hazards all contribute to the road's 'Medium' IRR score.

Crash history from NZTA's CAS database shows one crash in the last 5 years including zero fatal, zero serious, one minor and zero non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Motairehe Road in Great Barrier Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h for Section 1 of Motairehe Road and 30 km/h for Section 2 of Motairehe Road, which is aligned with the recommended safe and appropriate speed.

The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Oruarangi Road (Mangere)

Oruarangi Road, Mangere, is divided into three sections as outlined below: <sup>1</sup>

1. Section 1: Oruarangi Road Between Ascot Road and 680 m north of Ruaiti Road.
2. Section 2: Oruarangi Road Between 680m north of Ruaiti Road and 128 m south of Waipouri Road.
3. Section 3: Oruarangi Road Between 128 m south of Waipouri Road and Ihumatao Road.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Oruarangi Road, Mangere, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Oruarangi Road connects to Mark Ford Drive, Ascot Road and Montgomerie Road to the north, Ruaiti Road, Waipouri Road, and Landing Drive to the east, Ihumatao Quarry Road to the west, and Ihumatao Road to the south. This road provides access to residential and commercial properties.		
	This section is approximately 1.55 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).	This section is approximately 0.68 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).	This section is approximately 0.82 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
			road classification (ONRC).
	Oruarangi Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	Oruarangi Road is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.	Oruarangi Road is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records seven crashes between 2016 and 2020: one fatal, two serious, zero minor and four non-injury crashes. This resulted in three Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records five crashes between 2016 and 2020: zero fatal, one serious, three minor and one non-injury. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: zero fatal, zero serious, zero minor and one non-injury. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Oruarangi Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Wide shoulder (1.0 to 2.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Very wide shoulder (&gt;2.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Wide shoulder (1.0 to 2.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "area with	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential

Requirement	Comments		
	Section 1	Section 2	Section 3
	"area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	as "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2,028 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 2,033 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 2,033 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Engineering / modification measures for the area are planned. Details of the measures for this road are still under investigation		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 13 October 2021. Responses were received and considered for investigation. The local board was supportive of the proposed speed limit changes to 60km/h for section 1, 40km/h for section 2 and 60km/h for section 3 going to public consultation.		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to			
Current speed limit	The existing speed limit is 80 km/h.	The existing speed limit is 50 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean	Oruarangi Road has a mean operating speed of 55 km/h.	Oruarangi Road has a mean operating speed of 49 km/h.	Oruarangi Road has a mean operating speed of 52 km/h.

Operating Speed (km/h)			
Speed limits on adjoining roads	The existing speed limits on adjoining roads are:		
	<ul style="list-style-type: none"> <li><b>Mark Ford Drive:</b> 50 km/h</li> <li><b>Ascot Road:</b> 50 km/h</li> <li><b>Montgomerie Road:</b> 50 km/h</li> </ul>	<ul style="list-style-type: none"> <li><b>Ruaiti Road:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Waipouri Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>	<ul style="list-style-type: none"> <li><b>Ihumatao Quarry Road:</b> 100 km/h (proposed 60 km/h)</li> <li><b>Landing Drive:</b> 50 km/h</li> <li><b>Ihumatao Road:</b> 100 km/h (proposed 60km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data		
	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	3	4	0
DSI crashes during the period	3	1	0
Corridor Length (km)	1.55	0.68	0.82
Annual Daily Traffic	2,028	2,033	2,033

- Section 1
  - The Collective Risk score is **0.38**. For rural areas this corresponds to a Collective Risk band of **High**.
  - The Personal Risk score is **52.32**. For rural areas this corresponds to a Personal Risk band of **High**.
- Section 2
  - The Collective Risk score is **0.33**. For rural areas this corresponds to a Collective Risk band of **High**.
  - The Personal Risk score is **45.37**. For rural areas this corresponds to a Personal Risk band of **High**.
- Section 3
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**.
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Straight	1.0	Curved	1.8	Straight	1.0
Carriageway width	Medium lane, Wide shoulder	1.0	Medium lane, Very wide shoulder	0.78	Medium lane, Wide shoulder	1.0
Roadside hazards	High	2.28	High	2.28	High	2.28
Adjacent land use	Rural residential	1.5	Rural residential	1.5	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2	5 to <10	2.6	1 to <2	1.2
Access density (per km)	5 to <10	1.06	10 to <20	1.10	10 to <20	1.10
Traffic volume	1000 to <6000	1.40	1000 to <6000	1.40	1000 to <6000	1.40

- Section 1:
  - The Infrastructure Risk Rating Score is **1.42**. For Rural areas this corresponds to an IRR band of **Medium**.
- Section 2:
  - The Infrastructure Risk Rating Score is **2.21**. For Rural areas this corresponds to an IRR band of **High**.
- Section 3:
  - The Infrastructure Risk Rating Score is **1.43**. For Rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

- Section 1:
  - The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.
- Section 2:
  - The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.
- Section 3:
  - The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60 km/h: Oruarangi Road Between Ascot Road to 680m north of Ruaiti Road. (Section 1).
- 40 km/h: Oruarangi Road Between 680m north of Ruaiti Road to 128 m south of Waipouri Road. (Section 2).
- 60 km/h: Oruarangi Road Between 145 m south of Waipouri Road to end of Ihumatao Road. (Section 3).

Sections 1 and 3 of Oruarangi Road are self-explaining roads as the mean operating speeds (55 and 52 km/h respectively) are below the proposed safe and appropriate speeds, despite the existing 80 and 100 km/h speed limits respectively. Engineering up of both these sections of Oruarangi Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

Section 2 of Oruarangi Road requires engineering down interventions in order to lower the mean operating speeds such that it is suitable to implement the proposed safe and appropriate speed.

A proposed speed limit of 60 km/h was selected for Section 1 of Oruarangi Road due to a multitude of factors. These being the medium lane, high road-side hazards and due to adverse crash history on this section of road. Both the collective and personal risk for this section of road is classified as '**High**' due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>2</sup>

Crash history from NZTA's CAS database shows seven crashes in the last 5 years including one fatal, two serious, zero minor and four non-injury crashes.

A proposed speed limit of 40 km/h was selected for Section 2 of Oruarangi Road due to a multitude of factors. These being the medium lane, high road-side hazards, high presence of vulnerable users and due to adverse crash history on this section of road. All of these factors contribute to the section's '**High**' IRR. Both the collective and personal risk for this section of road is classified as '**High**' due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>3</sup>

Crash history from NZTA's CAS database shows five crashes in the last 5 years including zero fatal, one serious, three minor, and one non-injury crashes.

A proposed speed limit of 60 km/h was selected for Section 3 of Oruarangi Road due to a multitude of factors. These being the medium lane, and high road-side hazards.

Crash history from NZTA's CAS database shows one crash in the last 5 years including zero fatal, zero serious, zero minor and one non-injury crashes.

After considering all the above factors, the existing speed limit of 80, 50 and 100 km/h on section 1 ,2 and 3 of Oruarangi Road respectively in Mangere, are not considered to be safe and appropriate speed limits for these sections of road.

The recommended safe and appropriate speed limit for Section 1 and 3 of Oruarangi Road is 60 km/h which is higher than the Speed Management Guide recommendation (50 km/h) but is considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (55 and 52 km/h respectively).

The proposed safe and appropriate speed limit for Section 2 of Oruarangi Road is 40 km/h which is aligned with the recommended safe and appropriate speed.

Given that the existing mean operating speed of Section 2 of Oruarangi Road is 49 km/h and higher than the recommended speed limit of 40 km/h, physical interventions are required to engineer down the road environment in order to reduce travel speeds accordingly.

The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Parkhurst Road (Parakai)

Parkhurst Road, Parakai, is divided into two sections as follows:<sup>1</sup>

- Section 1: Parkhurst Road between South Head Road to 722 m south of South Head Road.
- Section 2: Parkhurst Road between 722 m south of South Head Road and 160 m northwest of Springs Road.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Parkhurst Road, Parakai, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Parkhurst Road connects to South Head Road and Green Road to the north and adjacent section of Parkhurst Road to the south. This road provides access to residential properties.	
	This section is approximately 0.72 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).	This section is approximately 0.23 km in length. It is classified as a Primary Collector Road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: zero

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	2020: zero fatal, zero serious, zero minor and three non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	fatal, zero serious, zero minor and one non-injury crashes. This resulted in zero Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Parkhurst Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided.</li> <li>• <b>Road alignment:</b> Straight.</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m).</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate.</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided.</li> <li>• <b>Road alignment:</b> Straight.</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m).</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km.</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km.</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersection per km.</li> <li>• <b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4,028 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 4,798 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.

Requirement	Comments	
	Section 1	Section 2
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit on South Head Road (from 100km/h to 80km/h) were discussed with the Local Board via meeting on 8 September 2021. At the same time it was discussed that the side road proposals were for a reduction to 60km/h or 40km/h based on the speed limit review. The changes on Parkhurst Road were not explicitly discussed in this meeting.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to		
Current speed limit	The existing speed limit is 100 km/h.	
MegaMaps Mean Operating Speed (km/h)	Parkhurst Road has a mean operating speed of 55 km/h.	Parkhurst Road has a mean operating speed of 49 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>South Head Road: 100 km/h</b> (proposed 80 km/h.).</li> <li>• <b>Green Road: 100 km/h.</b> (proposed 40 km/h).</li> </ul>	

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	0.72	0.23
Annual Daily Traffic	4,028	4,798

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Straight	1.0	Straight	1.0
Carriageway width	Medium lane, Narrow shoulder	1.45	Medium lane, Narrow shoulder	1.45
Roadside hazards	Moderate	1.43	Moderate	1.43
Adjacent land use	Rural residential	1.5	Rural residential	1.5
Intersection density (per km)	1 to <2	1.2	<1	1.0
Access density (per km)	2 to <5	1.03	>20	1.30
Traffic volume	1000 to <6000	1.40	1000 to <6000	1.40

- Section 1
  - The Infrastructure Risk Rating Score is **1.37**. For Rural areas this corresponds to an IRR band of **Medium**.
- Section 2
  - The Infrastructure Risk Rating Score is **1.37**. For Rural areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 80 km/h Parkhurst Road (between South Head Road and 722 m south of South Head Road).
- 50 km/h Parkhurst Road (between 722 m south of South Head Road and 160 m northwest of Springs Road).

Section 1 of Parkhurst Road is a self-explaining road as the mean operating speeds (55 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Parkhurst Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 80 km/h was selected for Parkhurst Road due to a multitude of factors. These being the medium lane width, narrow shoulder width and moderate road-side hazards.

Over the past five years four crashes have been recorded, resulting in zero DSIs.

Section 2 of Parkhurst Road is already operating at a safe and appropriate speed limit. Therefore, no changes are required at this 230 m small section of Parkhurst Road.

After considering all the above factors, the existing speed limit of 100 km/h on Parkhurst Road in Parakai, is not considered to be a safe and appropriate speed limit for this section of road.

The recommended safe and appropriate speed limit for section 1 of Parkhurst Road is 80 km/h which is higher than the Speed Management Guide recommendation (<80 km/h) but is considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (100 km/h).

The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Pukaki Road (Mangere)

The speed limit on:

- Pukaki Road, Mangere, between 1,050 m south of Cyclamen Road and southern end of Pukaki Road

has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>This section of Pukaki Road connects to an adjacent section of Pukaki Road to the north. This road provides access to residential properties and a marae.</p> <p>This section is approximately 0.44 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics of this section of Pukaki Road were determined using a combination of site drive-over footage, on site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow Lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist

Requirement	Comments
	<i>activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information. <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersection per km.</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 651 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modifications / engineering measures for the area are planned. Details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 13 October 2021. Responses were received and considered for investigation. The Local Board was supportive of the proposed speed limit change to 30km/h going to public consultation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Pukaki Road has a mean operating speed in the range of 20-24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Pukaki Road (to the north): 60 km/h</b></li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	<b>0</b>
DSI crashes during the period	0
Corridor Length (km)	0.44
Annual Daily Traffic	651

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**.

- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	<1	1.0
Access density (per km)	2 to <5	1.03
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is **1.36**. For Rural areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30 km/h Pukaki Road between 1,050 m south of Cyclamen Road and the southern end of Pukaki Road.*

Pukaki Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 60 km/h speed limit.

A proposed speed limit of 30km/h was selected for Pukaki Road due to a multitude of factors. These being the narrow lane and shoulder width, high road-side hazards, low mean operating speed (<30 km/h) and presence of a marae and associated housing.

After considering all the above factors, the existing speed limit of 60 km/h on Pukaki Road in Mangere, is not considered to be a safe and appropriate speed limit for this section of road.

The proposed safe and appropriate speed limit for Pukaki Road is 30 km/h, which is lower than the speed limit recommended by the Speed Management Guide (40 km/h). However, it is considered appropriate based on the function of the road, presence of the marae and the current mean operating speed based on Megamaps (20 km/h) supports this reduction.

The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Ruaiti Road (Mangere)

The speed limit on Ruaiti Road, Mangere, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Ruaiti Road connects to Oruarangi Road to the west. This road provides access to a marae and residential properties.
	This road is approximately 0.26 km in length. It is classified as an Access Road under the one network road classification (ONRC).
	This road is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics of Ruaiti Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> Moderate.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersection per km.</li> <li><b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 190 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 13 October 2021. Responses were received and considered for investigation. The local board was supportive of proposed speed limit change to 40km/h going to public consultation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Ruaiti Road has a mean operating speed of 22 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Oruarangi Road: 50 km/h</b> (proposed 40 km/h).</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.26
Annual Daily Traffic	190

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	Moderate	1.43
Adjacent land use	Rural residential	1.5
Intersection density (per km)	<1	1.0
Access density (per km)	>20	1.30
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is **1.26**. For Rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h Ruaiti Road (Full Length).*

Ruaiti Road is a self-explaining road as the mean operating speeds (22 km/h) are below or near, the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit.

A proposed speed limit of 40 km/h was selected for Ruaiti Road due to a multitude of factors. These being the presence of a marae and associated pedestrian activity, the narrow lane width and very narrow shoulder width, moderate road-side hazards and low mean operating speed (<30 km/h).

After considering all the above factors, the existing speed limit of 50 km/h on Ruaiti Road in Mangere, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

The reduced speed limits will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – South Head Road (South Head)**

The speed limit on:

- South Head Road, South Head, between Green Road and 1,504m north of Tarawera Road

has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>South Head Road connects to adjacent South Head Road to the northwest, Haranui Road to the north, Evans and Tarawera Road to the southwest and Parkhurst Road to the east. This road provides access to residential properties.</p> <p>This section is approximately 6.25 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records seventeen crashes between 2016 and 2020: zero fatal, two serious, seven minor and eight non-injury crashes. This resulted in two Deaths and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users was considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for this section of South Head Road were determined using a combination of site drive-over footage, on-site information and geomatics information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium Lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "area with

Requirement	Comments
	<i>accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information. <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km.</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2,015 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned. Details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 8 September 2021. Responses were received and considered for investigation. The Local Board was supportive of the proposed speed limit change to 80km/h being taken to public consultation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed	This section of South Head Road has a mean operating speed of 63 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Parkhurst Road: 100 km/h</b> (proposed 80 km/h)</li> <li>• <b>Evans Road: 100 km/h</b> (proposed 40 km/h)</li> <li>• <b>Tarwera Road: 100 km/h</b> (proposed 40 km/h)</li> <li>• <b>Haranui Road: 100 km/h</b> (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	9
DSI crashes during the period	2
Corridor Length (km)	6.25

Annual Daily Traffic	2,015
----------------------	-------

The Collective Risk score is **6.39** while the Personal Risk score is **8.69**. For, Rural areas this corresponds to a Collective Risk band of **Low-Medium** and a Personal Risk band of **Medium-High**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Medium lane, Narrow shoulder	1.45
Roadside hazards	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	2 to <3	1.3
Access density (per km)	10 to <20	1.1
Traffic volume	1000 to <6000	1.40

The Infrastructure Risk Rating Score is **1.63**. For Rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 80 km/h South Head Road, South Head, between Green Road and 1504m north of Tarawera Road.*

South Head Road is a self-explaining road as the mean operating speeds (63 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of South Head Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 80 km/h was selected for South Head Road due to a multitude of factors. These being the medium lane width, narrow shoulder width and high road-side hazards. All of these factors contribute to the road's 'High' IRR score. The collective and personal risk of this road are classified as '**Low-Medium**' and '**Medium-High**' respectively due to the number of Deaths and Serious Injury (DSI) crashes, making it a high-risk road.<sup>1</sup>

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Crash history from WK NZTA's database shows seventeen crashes in the last five years including zero fatal, two serious, seven minor and eight non-injury crashes.

After considering all the above factors, the existing speed limit of 100 km/h on South Head Road in South Head, is not considered to be a safe and appropriate speed limit for this section of road.

The recommended safe and appropriate speed limit for South Head Road is 80 km/h which is higher than the Speed Management Guide recommendation (<80 km/h) but is considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the 85th percentile surveyed speeds recorded on this road in 2017 (93.5 km/h).

The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Tarawera Road (South Head)**

The speed limit on Tarawera Road, South Head, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tarawera Road connects to South Head Road to the north This road provides access to residential properties.</p> <p>This road is approximately 4.18 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This road is a two-way, two-lane, unsealed undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics of Tarawera Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km.</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 31 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 8 September 2021. The proposed speed limit reduction from 100km/h to 80km/h for South Head Road was discussed as well as the speed limit on the side roads being reduced to either 60km/h or 40km/h based on the speed limit review. The Local Board was supportive of the proposed speed limit changes being taken to public consultation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	Tarawera Road has a mean operating speed of 37 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>South Head Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	4.18
Annual Daily Traffic	31

The Collective Risk score is **0.0** while the Personal Risk score is **0.0**. For Rural areas this corresponds to a Collective Risk band of **Low** and a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.0
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	Severe	2.80
Adjacent land use	Rural residential	1.5
Intersection density (per km)	2 to <3	1.3
Access density (per km)	2 to <5	1.03
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is **2.24**. For Rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40 km/h Tarawera Road (Full Length).*

Tarawera Road is a self-explaining road as the mean operating speeds (37 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Tarawera Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Tarawera Road due to a multitude of factors. These being the unsealed road surface, narrow lane and shoulder width, curved nature of the road, severe road-side hazards and low mean operating speed (<40 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Tarawera Road in South Head, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

The reduced speed limits will also reduce the potential and severity of crash risk for all road users

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Waipouri Road (Mangere)

The speed limit on Waipouri Road, Mangere, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Waipouri Road connects to Oruarangi Road to the west. This road provides access to residential properties.
	<p>This road is approximately 0.24 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This road is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for Waipouri Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided.</li> <li><b>Road alignment:</b> Straight.</li> <li><b>Carriageway width:</b> Narrow Lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m).</li> <li><b>Roadside hazards (in both directions):</b> Moderate.</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as "area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersection per km.</li> <li><b>Access density:</b> &gt;20 accesses per km.</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 280 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications at this time.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Local Board via meeting on 13 October 2021. Responses were received and considered for investigation. The local board was supportive of the proposed speed limit change to 40km/h going to public consultation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	Waipouri Road has a mean operating speed of 25 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Oruarangi Road: 50 km/h</b> (proposed 40 km/h).</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.24
Annual Daily Traffic	280

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1.0
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards	Moderate	1.43
Adjacent land use	Rural residential	1.5
Intersection density (per km)	<1	1.0
Access density (per km)	>20	1.30
Traffic volume	<1000	1.0

The Infrastructure Risk Rating Score is **1.26**. For Rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h Waipouri Road (Full Length).*

Waipouri Road is a self-explaining road as the mean operating speeds (25 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit.

A proposed speed limit of 40 km/h was selected for Waipouri Road due to a multitude of factors. These being the narrow lane and shoulder width, moderate road-side hazards, high presence of vulnerable users and low mean operating speed (<30 km/h).

After considering all the above factors, the existing speed limit of 50 km/h on Waipouri Road in Mangere, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

The reduced speed limits will also reduce the potential and severity of crash risk for all road users.
