(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waimai Avenue connects to Weymouth Road to the east and Domain Road to the west. This road provides access to residential properties and is approximately 0.23km in length.</p> <p>Waimai Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Waimai Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two minor crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Waimai Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1111 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Waimai Avenue has a mean operating speed in the range of 30-34km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Weymouth Road: 50km/h (proposed 30km/h)</li> <li>• Domain Road: 50km/h (proposed 30km/h)</li> <li>• Lane Road: 50km/h (proposed 30km/h)</li> <li>• Huber Street: 50km/h (proposed 30km/h)</li> <li>• Estuary Road: 50km/h (proposed 30km/h)</li> </ul>

#### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Waimai Avenue has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

#### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Waimai Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Waimarino Road (Weymouth)

The speed limit on Waimarino Road, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waimarino Road connects to Waimahia Avenue to the north and Taatahi Street to the north. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Waimarino Road is classified as an Access road under the one network road classification (ONRC). Waimarino Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Waimarino Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 130 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Waimarino Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Waimahia Avenue: 50km/h (proposed 30km/h)</li> <li>Taatahi Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Waimarino Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Waimarino Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Waimate Street (Otara)

The speed limit on Waimate Street, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waimate Street connects to Preston Road to the east and Oconnor Street to the north. This road provides access to residential properties and is approximately 0.54km in length.</p> <p>Waimate Street is classified as an Access road under the one network road classification (ONRC). Waimate Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Waimate Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 738 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Waimate Street has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Preston Road: 50km/h (no proposed change)</li> <li>• Oconnor Street: 50km/h (proposed 30km/h)</li> <li>• Flat Bush Road: 50km/h (proposed 30km/h)</li> <li>• Antych Place: 50km/h (proposed 30km/h)</li> <li>• Piako Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Waimate Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Waimate Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wainoni Avenue (Point Chevalier)

The speed limit on Wainoni Avenue, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wainoni Avenue connects to Shaftesbury Avenue to the west and Maranui Avenue to the east. This road provides access to residential properties and is approximately 0.20km in length.</p> <p>Wainoni Avenue is classified as an Access road under the one network road classification (ONRC). Wainoni Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wainoni Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Wainoni Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Shaftesbury Avenue: 50 km/h (proposed 30 km/h)</li> <li>Maranui Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Wainoni Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wainoni Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wainui Avenue (Point Chevalier)

The speed limit on Wainui Avenue, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wainui Avenue connects to Point Chevalier Road to the west. This road provides access to residential properties and is approximately 0.59km in length.</p> <p>Wainui Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Wainui Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wainui Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1040 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Wainui Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Point Chevalier Road: 50 km/h (proposed 30 km/h)</li> <li>Walford Street: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Wainui Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.80. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wainui Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Waipareira Avenue (Henderson)

The speed limit on Waipareira Avenue, Henderson, between 200m north of Woodford Avenue and the northern end of Waipareira Avenue, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waipareira Avenue connects to Te Pai Place to the north and Woodford Avenue to the south. This road provides access to residential properties and is approximately 0.35km in length.</p> <p>Waipareira Avenue is classified as an Arterial road under the one network road classification (ONRC). Waipareira Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Waipareira Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using MegaMaps tool. The IRR defines Commercial big box as " <i>Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2005 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>
(k) Setting of Speed Limits Rule 2017	The requirements of the Setting of Speed Limits Rule 2017 are met as shown in Table 3
(l) WK Traffic Note 37-Revision 2	The requirements of WK Traffic Note 37-Revision2 are met as shown in Table 3

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Waipareira Avenue has a mean operating speed in the range of 35-39km/h.</p> <p>According to MegaMaps, the average pick-up and drop-off operating speeds are 22.7km/h.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Te Pai Place: 50km/h (no proposed change)</li> <li>Woodford Avenue: 50km/h (no proposed change)</li> <li>Moselle Avenue: 50km/h (proposed variable 30km/h and 50km/h)</li> </ul>
Auckland Transport Vision Zero	The proposed speed limit for this section of Waipareira Avenue will align with Auckland Transport's Vision Zero approach

In addition to the factors outlined in Table 1, further relevant information was sought to meet the requirements of WK Traffic Note 37-Revision 2 and the Setting of Speed Limits Rule 2017 as summarised in Table 3 below.

Table 3: Required Information

Required Information	Data & Source
----------------------	---------------

<p>With reference to WK Traffic Note 37-Revision 2, a road controlling authority may set a 40km/h variable speed limit in a school zone under the following conditions:</p> <p>(a) <i>There is school-related pedestrian or cycle activity on the road outside the school, which exceeds approximately 50 children crossing the road or entering or leaving vehicles at the roadside, and the traffic on the road outside the school meets at least one of the following conditions:</i></p> <p>(i) <i>The mean speed of free-running vehicles is greater than 45km/h (measured when the 40km/h variable speed limit is not operating); or</i></p> <p>(ii) <i>The 85<sup>th</sup> percentile speed of free-running vehicles is greater than 50km/h (measured when the 40km/h variable speed limit is not operating); or</i></p> <p>(iii) <i>There have been pedestrian, cycle or speed-related crashes near the school in the previous five years; or</i></p> <p>(iv) <i>The school-related activity in condition 5(a) occurs on a main traffic route; or</i></p> <p>(b) <i>There is school-related pedestrians or cycle activity on the road outside the school, with children crossing the road or entering or leaving vehicles at the roadside and safe and appropriate traffic engineering measures are installed so that the mean operating speeds of free-running vehicles on the road outside the school does not exceed 40km/h when the 40km/h variable speed limit is operating</i></p>	<p>The requirements of condition “b” are met as follows:</p> <p>A 2021 Annual Survey Report for ACG Sunderland found that in total there were 63 schoolchildren walking on the road outside the school around the schools pick up and drop off hours.</p> <p>Furthermore, according to MegaMaps, the average pick-up and drop-off operating speeds are 22.7km/h.</p>
<p>With reference to the Setting of Speed Limits Rule 2017, a variable speed limit may apply when:</p> <p>(a) <i>The speed limit needs to vary in order to be safe and appropriate; and</i></p> <p>(b) <i>It is necessary to address or manage one or more of the following situations or environments</i></p>	<p>The requirements of condition “a” are met due to the observed activity on the road in front of the school around pick-up and drop-off hours, as specified above. It has been determined that since the walking activity around the school is largely concentrated around pick-up and drop-off hours, a variable speed limit would be suitable.</p> <p>The requirements of condition “b (ii)” are met due to the type of road users during the hours of operation of the proposed variable speed zone being primarily schoolchildren, which is not the</p>

<p>(i) <i>Different numbers and types of road users or different traffic movements; or</i></p> <p>(ii) <i>The effects of changing traffic volumes, including to ease congestion; or</i></p> <p>(iii) <i>For emergency or temporary traffic management; or</i></p> <p>(iv) <i>A crash risk posed by turning or crossing traffic; or</i></p> <p>(v) <i>Changing environmental conditions</i></p>	<p>case outside of the hours of operation for the proposed variable speed zone.</p>
--	---

**Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Waipareira Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.97. For urban areas this corresponds to an IRR band of **Low-Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = Variable 30km/h and 50km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Moselle Avenue, according to MegaMaps, the average pick up and drop off operating speeds, i.e. the operating speeds at times of heightened school-related activity, are less than 30km/h.

As outlined in Table 3, an assessment has been undertaken to determine if the warrant is met for a 40km/h variable speed school zone.

While the conditions required for a variable 40km/h speeds limit are met, Waka Kotahi have indicated that variable 30km/h speed limits would be appropriate if the operating speeds during the times of variable speed limit operation were less than 30km/h and they are notified of the proposal. Waka Kotahi will be notified of this proposal for a variable 30km/h speed limit prior to public consultation.

Due to the existing pick up and drop off operating speeds we have determined a variable 30km/h speed limit during school drop off and pick up times to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wairata Place (Te Atatu South)

The speed limit on Wairata Place, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wairata Place connects to Tiroroa Avenue to the north. This road provides access to residential properties and is approximately 0.22 km in length.</p> <p>Wairata Place is classified as an access road under the one network road classification (ONRC). Wairata Place is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 310 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Wairata Place has a mean operating speed in the range of &lt;30 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Lyndhurst Road: 50 km/h (proposed 30 km/h)</li> <li>Wakeling Avenue: 50 km/h (proposed 30 km/h)</li> <li>Wairata Place: 50 km/h (proposed 30 km/h)</li> <li>Taha Road: 50 km/h (proposed 30 km/h)</li> <li>Te Atatu Road: 50 km/h</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Wairata Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.17 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Wairata Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wairau Place (Pukekohe)

The speed limit on Wairau Place, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wairau Place connects to Helvetia Road to the east. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Wairau Place is classified as an Access road under the one network road classification (ONRC). Wairau Place is a two-way, Two-lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wairau Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 80 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Wairau Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Helvetia Road: 50km/h (no proposed change)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Wairau Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.60. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wairau Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Waitemata Drive (Ranui)

The speed limit on Waitemata Drive, Ranui, between Luanda Drive and the northern end of Waitemata Drive, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waitemata Drive connects to Karepo Crescent to the north and Marinich Drive to the south. This road provides access to residential properties and is approximately 0.31km in length.</p> <p>Waitemata Drive is classified as a Secondary Collector road under the one network road classification (ONRC). Waitemata Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: one minor crash, two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Waitemata Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1572 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Waitemata Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Karepo Crescent: 50km/h (proposed 30km/h)</li> <li>Marinich Drive: 50km/h (no proposed change)</li> <li>Swanson Road: 50km/h (no proposed change)</li> <li>Craiburn Street: 50km/h (no proposed change)</li> <li>Drummond Drive: 50km/h (no proposed change)</li> <li>Luanda Drive between Waitemata Drive roundabout and Swanson Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Waitemata Drive has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 1.94. For urban areas this corresponds to an IRR band of **Low Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Waitemata Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Waitoa Street (Parnell)

The speed limit on Waitoa Street, Parnell has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waitoa Street connects to Papahia Street to the north and Lichfield Road to the west. This road provides access to residential properties and is approximately 0.16km in length.</p> <p>Waitoa Street is classified as an Access road under the one network road classification (ONRC). Waitoa Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Waitoa Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Waitoa Street has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Papahia Street: 50km/h (proposed 30km/h)</li> <li>• Lichfield Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Waitoa Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Waitoa Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wakelin Road (Mangere East)

The speed limit on Wakelin Road, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wakelin Road connects to Vine Street to the north. This road provides access to residential properties and is approximately 0.20km in length.</p> <p>Wakelin Road is classified as a Primary Collector road under the one network road classification (ONRC). Wakelin Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wakelin Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3172 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Wakelin Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Vine Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Wakelin Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 50km/h as the safe and appropriate speed for Wakelin Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Wakelin Road is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wakeling Avenue (Te Atatu South)

The speed limit on Wakeling Avenue, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wakeling Avenue connects to Tiroroa Avenue to the east and Te Atatu Road to the west. This road provides access to residential properties and is approximately 0.31 km in length.</p> <p>Wakeling Avenue is classified as an access road under the one network road classification (ONRC). Wakeling Avenue is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 217 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Wakeling Avenue has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Fairlea Road: 50 km/h (proposed 30 km/h)</li> <li>• Tiroroa Avenue: 50 km/h (proposed 30 km/h)</li> <li>• Te Atatu Road: 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Wakeling Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.15 For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Wakeling Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Walford Road (Point Chevalier)

The speed limit on Walford Road, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Walford Road connects to Oliver Street to the north and Meola Road to the south. This road provides access to residential properties and is approximately 0.72km in length.</p> <p>Walford Road is classified as a Primary Collector road under the one network road classification (ONRC). Walford Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Walford Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3337 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Walford Road has a mean operating speed in the range of 35-39km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Oliver Street: 50 km/h (proposed 30 km/h)</li> <li>Dignan Street: 50 km/h (proposed 30 km/h)</li> <li>Seacombe Road: 50 km/h (proposed 30 km/h)</li> <li>Te Ra Road: 50 km/h (proposed 30 km/h)</li> <li>Newell Street: 50 km/h (proposed 30 km/h)</li> <li>Buxton Street: 50 km/h (proposed 30 km/h)</li> <li>Wainui Avenue: 50 km/h (proposed 30 km/h)</li> <li>Meola Road: 50 km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Walford Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Walford Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Walford Road is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Walker Road (Point Chevalier)

The speed limit on Walker Road, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Walker Road connects to Kenneth Small Crescent to the west and Point Chevalier Road to the east. This road provides access to residential properties and is approximately 0.77km in length.</p> <p>Walker Road is classified as a Secondary Collector road under the one network road classification (ONRC). Walker Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Walker Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2447 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Walker Road has a mean operating speed in the range of 30-34km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Point Chevalier Road: 50 km/h (no proposed change)</li> <li>• Neville Street: 50 km/h (proposed 30 km/h)</li> <li>• Muripara Avenue: 50 km/h (proposed 30 km/h)</li> <li>• Pelham Avenue: 50 km/h (proposed 30 km/h)</li> <li>• Maranui Avenue: 50 km/h (proposed 30 km/h)</li> <li>• Rama Road: 50 km/h (proposed 30 km/h)</li> <li>• Hawea Road: 50 km/h (proposed 30 km/h)</li> <li>• Maryland Street: 50 km/h (proposed 30 km/h)</li> <li>• Kenneth Small Crescent: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Walker Road has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.33. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Walker Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Walters Road (Takanini)

The speed limit on Walters Road, Takanini, between Cosgrave Road and Grove Road, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Walters Road connects to Cosgrave Road to the east and Great South Road to the west. This section of Walters road provides access to residential properties and is approximately 0.52km in length.</p> <p>Walters Road is classified as a Primary Collector road under the one network road classification (ONRC). Walters Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records twelve crashes between 2016 and 2020: one serious crash, two minor crashes, nine non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Walters Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> High and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as controlled access using MegaMaps tool. The IRR defines controlled access as "Road with roadside development and controlled access, such as an urban state highway or arterial where there are few accesses to the road e.g. as a result of a service road. Some pedestrian and cyclist activity may also be present but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8163 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Electronic variable speed limit signs are proposed for the implementation of the proposed speed limit. Pedestrian improvements to provide for children crossing the road between the school and the new subdivision to the north have also been recently implemented.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools, or 40km/h speed limits where 30km/h is not appropriate due to the existing function or use of the road.</p> <p>Key stakeholders have indicated general support for implementing reduced speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>
(k) Setting of Speed Limits Rule 2017	The requirements of the Setting of Speed Limits Rule 2017 are met as shown in Table 3
(l) WK Traffic Note 37-Revision 2	The requirements of WK Traffic Note 37-Revision2 are met as shown in Table 3

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Walters Road has a mean operating speed in the range of 50-54km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Cosgrave Road: 80km/h (no proposed change)</li> <li>Grove Road: 50km/h (no proposed change)</li> <li>Kaha Road: 50km/h (no proposed change)</li> <li>Castlepoint Avenue: 50km/h (no proposed change)</li> <li>Opoka Street: 50km/h (no proposed change)</li> </ul>

In addition to the factors outlined in Table 1, further relevant information was sought to meet the requirements of WK Traffic Note 37-Revision 2 and the Setting of Speed Limits Rule 2017 as summarised in Table 3 below.

Table 3: Required Information

Required Information	Data & Source
<p>With reference to WK Traffic Note 37-Revision 2, a road controlling authority may set a 40km/h variable speed limit in a school zone under the following conditions:</p> <p>(a) <i>There is school-related pedestrian or cycle activity on the road outside the school, which exceeds approximately 50 children crossing the road or entering or leaving vehicles at the roadside, and the traffic on the road outside the school meets at least one of the following conditions:</i></p> <p>(i) <i>The mean speed of free-running vehicles is greater than 45km/h (measured when the 40km/h variable speed limit is not operating); or</i></p> <p>(ii) <i>The 85<sup>th</sup> percentile speed of free-running vehicles is greater than 50km/h (measured when the 40km/h variable speed limit is not operating); or</i></p> <p>(iii) <i>There have been pedestrian, cycle or speed-related crashes near the school in the previous five years; or</i></p> <p>(iv) <i>The school-related activity in condition 5(a) occurs on a main traffic route; or</i></p> <p>(b) <i>There is school-related pedestrians or cycle activity on the road outside the school, with children crossing the road or entering or leaving vehicles at the roadside and safe and appropriate traffic engineering measures are installed so that the mean operating speeds of free-running vehicles on the road outside the school does not exceed 40km/h when the 40km/h variable speed limit is operating</i></p>	<p>The requirements of condition “a” are met as follows:</p> <p>Due to the recent residential development in the surrounding area which has increased pedestrian activity along and across Walters Road directly outside the school. (note that due to the school being temporarily closed as a result of COVID lockdowns, pedestrian counts have been unable to be carried out.)</p> <p>According to MegaMaps, this section of Walters Road has a mean operating speed in the range of 50-54km/h</p> <p>Furthermore, Walters Road is classified as a Primary Collector Road and is a main traffic route.</p>
<p>With reference to the Setting of Speed Limits Rule 2017, a variable speed limit may apply when:</p> <p>(a) <i>The speed limit needs to vary in order to be safe and appropriate; and</i></p>	<p>The requirements of condition “a” are met as specified above. It has been determined that since the walking activity around the school is largely concentrated around pick-up and drop-off hours, a variable speed limit would be suitable.</p> <p>The requirements of condition “b (ii)” are met due to the type of road users during the hours of</p>

<p>(b) <i>It is necessary to address or manage one or more of the following situations or environments</i></p> <p>(i) <i>Different numbers and types of road users or different traffic movements; or</i></p> <p>(ii) <i>The effects of changing traffic volumes, including to ease congestion; or</i></p> <p>(iii) <i>For emergency or temporary traffic management; or</i></p> <p>(iv) <i>A crash risk posed by turning or crossing traffic; or</i></p> <p>(v) <i>Changing environmental conditions</i></p>	<p>operation of the proposed variable speed zone being primarily schoolchildren, which is not the case outside of the hours of operation for the proposed variable speed zone.</p>
---	--

**Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Walters Road has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = variable 40km/h and 50km/h.*

As outlined in Table 3, an assessment has been undertaken to determine if the warrant is met for a 40km/h variable speed school zone.

Walters Road has been determined to meet the requirements set out in the New Zealand Transport Agency’s Traffic Note 37-Revision 2. Therefore, we have determined a variable 40km/h speed limit to be safer and more appropriate as it have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

Variable speed limits are proposed to be implemented with electronic variable signs on approaches to the school.

## Speed Limit Review – Wanstead Way (Mangere)

The speed limit on Wanstead Way, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wanstead Way connects to Canning Crescent to the north. This road provides access to residential properties and is approximately 0.82km in length.</p> <p>Wanstead Way is classified as an Access road under the one network road classification (ONRC). Wanstead Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one serious crash. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wanstead Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial Big Box/Industrial using MegaMaps tool. The IRR defines Commercial Big Box/Industrial as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 280 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Wanstead Way has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Canning Crescent: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Wanstead Way has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wanstead Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Warden Place (Mangere Bridge)

The speed limit on Warden Place, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Warden Place connects to Ambury Road to the south. This road provides access to residential properties and is approximately 0.33km in length.  Warden Place is classified as a Access road under the one network road classification (ONRC). Warden Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Warden Place were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1136 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Warden Place has a mean operating speed in the range of 30-34km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Ambury Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Warden Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.30. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Warden Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Water Street (Otahuhu)

The speed limit on Water Street, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Water Street connects to Avenue Road to the north and Harmony Avenue to the south. This road provides access to residential properties and is approximately 0.47km in length.</p> <p>Water Street is classified as a Primary Collector road under the one network road classification (ONRC). Water Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records eight crashes between 2016 and 2020: two minor crashes, six non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Water Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 998 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Water Street has a mean operating speed in the range of <30km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Avenue Road between Atkinson Avenue and the eastern end of Atkinson Avenue: 50km/h (proposed 30km/h)</li> <li>• Harmony Avenue: 50km/h (proposed 30km/h)</li> <li>• Trenwith Street between Atkinson Avenue and the eastern end of Atkinson Avenue: 50km/h (proposed 30km/h)</li> <li>• High Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Water Street has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 1.79. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Water Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Water Street is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Waterlea Avenue (Mangere Bridge)

The speed limit on Waterlea Avenue, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waterlea Avenue connects to Ambury Road to the east and Ashcroft Avenue to the west. This road provides access to residential properties and is approximately 0.89km in length.</p> <p>Waterlea Avenue is classified as a Access road under the one network road classification (ONRC). Waterlea Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Waterlea Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 561 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Waterlea Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ambury Road: 50km/h (proposed 30km/h)</li> <li>Ashcroft Avenue: 50km/h (proposed 30km/h)</li> <li>Anarahi Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Waterlea Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Waterlea Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Waters Place (Kelston)

The speed limit on Waters Place, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waters Place connects to Great North Road to the south. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Waters Place is classified as an Access road under the one network road classification (ONRC). Waters Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Waters Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 140 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Waters Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Great North Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Waters Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Waters Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Waterview Road (Stanley Point)**

The speed limit on Waterview Road, Stanley Point has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Waterview Road connects to William Bond Street to the east and Glen Road to the west. This road provides access to residential properties and is approximately 0.38km in length.</p> <p>Waterview Road is classified as a Secondary Collector road under the one network road classification (ONRC). Waterview Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Waterview Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 559 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Waterview Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• William Bond Street: 50 km/h (proposed 30 km/h)</li> <li>• Glen Road: 50 km/h (proposed 30 km/h)</li> <li>• Russell Street: 50 km/h (proposed 30 km/h)</li> <li>• Summer Street: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Waterview Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Waterview Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Watervista Place (Mangere Bridge)

The speed limit on Watervista Place, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Watervista Place connects to House Avenue to the east. This road provides access to residential properties and is approximately 0.61km in length.</p> <p>Watervista Place is classified as a Access road under the one network road classification (ONRC). Watervista Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Watervista Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 462 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Watervista Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>House Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Watervista Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Watervista Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wattle Street (Kelston)

The speed limit on Wattle Street, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wattle Street connects to Rimu Street to the north and Great North Road to the south. This road provides access to residential properties and is approximately 0.45km in length.</p> <p>Wattle Street is classified as a Secondary Collector road under the one network road classification (ONRC). Wattle Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wattle Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1298 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Wattle Street has a mean operating speed in the range of 36km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Rimu Street: 50km/h (proposed 30km/h)</li> <li>Great North Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Wattle Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.70. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wattle Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wayne Drive (Mangere)

The speed limit on Wayne Drive, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wayne Drive connects to Friesian Drive to the east and Duggan Avenue to the west. This road provides access to residential properties and is approximately 0.85km in length.</p> <p>Wayne Drive is classified as an Access road under the one network road classification (ONRC). Wayne Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wayne Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 301 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Wayne Drive has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Friesian Drive: 50km/h (proposed 30km/h)</li> <li>Duggan Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Wayne Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wayne Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Welcome Place (Henderson)

The speed limit on Welcome Place, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Welcome Place connects to Rathgar Road to the south. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Welcome Place is classified as an Access road under the one network road classification (ONRC). Welcome Place is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Welcome Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 349 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Welcome Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Rathgar Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Welcome Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Welcome Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wellington Street (Pukekohe)

The speed limit on Wellington Street, Pukekohe, between Ward Street and Kitchener Road, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wellington Street connects to Harris Street to the north and Kitchener Road to the south. This road provides access to residential properties and is approximately 0.71km in length.</p> <p>Wellington Street is classified as an Access road under the one network road classification (ONRC). Wellington Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor crash, one non-injury crash. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wellington Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2001 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Wellington Street has a mean operating speed in the range of 30-34km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Ward Street: 50km/h (no proposed change)</li> <li>• Kitchener Road: 50km/h (no proposed change)</li> <li>• Harris Road: 50km/h (no proposed change)</li> <li>• Fairfield Street: 50km/h (no proposed change)</li> <li>• Laurie Avenue: 50km/h (no proposed change)</li> <li>• Beresford Street: 50km/h (no proposed change)</li> <li>• Russell Avenue: 50km/h (no proposed change)</li> <li>• Philip Street: 50km/h (no proposed change)</li> <li>• Fair Oaks: 50km/h (no proposed change)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Wellington Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 1.81. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wellington Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – West Palms Way (Pukekohe)

The speed limit on West Palms Way, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>West Palms Way connects to Princes Street West to the south. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>West Palms Way is classified as an Access road under the one network road classification (ONRC). West Palms Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for West Palms Way were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of West Palms Way has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Princes Street West: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps West Palms Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for West Palms Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Westvale Avenue (Ranui)

The speed limit on Westvale Avenue, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Westvale Avenue connects to Kilmarnock Avenue to the north and to the south. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Westvale Avenue is classified as an Access road under the one network road classification (ONRC). Westvale Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Westvale Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 131 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Westvale Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Kilmarnock Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Westvale Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Westvale Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Westwell Road (Belmont)

The speed limit on Westwell Road, Belmont has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Westwell Road connects to Seacliffe Avenue to the east and Lake Road to the west. This road provides access to residential properties and is approximately 0.43km in length.</p> <p>Westwell Road is classified as a Secondary Collector road under the one network road classification (ONRC). Westwell Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Westwell Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1125 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Westwell Road has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Seacliffe Avenue: 50km/h (proposed 30km/h)</li> <li>Lake Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Westwell Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Westwell Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Weymouth Road (Weymouth)

The speed limit on Weymouth Road, Weymouth, between Waimahia Avenue and the southern end of Weymouth Road has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Weymouth Road connects to Roscommon Road to the north and Lawson Way to the south. This road provides access to residential properties and is approximately 1.16km in length.</p> <p>Weymouth Road is classified as a Primary Collector road under the one network road classification (ONRC). Weymouth Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records nineteen crashes between 2016 and 2020: one fatal crash, two serious crashes, one minor crash, fifteen non-injury crashes. This resulted in three Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Weymouth Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 5773 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Weymouth Road has a mean operating speed in the range of 40-44km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Roscommon Road: 60km/h (no proposed change)</li> <li>• Lawson Way: 50km/h (proposed 30km/h)</li> <li>• Beihlers Road: 50km/h (proposed 30km/h)</li> <li>• Roys Road: 50km/h (proposed 30km/h)</li> <li>• Hazards Road: 50km/h (proposed 30km/h)</li> <li>• Mcinnes Road: 50km/h (proposed 30km/h)</li> <li>• Greers Road: 50km/h (proposed 30km/h)</li> <li>• Mcleod Road: 50km/h (proposed 30km/h)</li> <li>• Estuary Road: 50km/h (proposed 30km/h)</li> <li>• Waimai Avenue: 50km/h (proposed 30km/h)</li> <li>• Gibbons Road: 50km/h (proposed 30km/h)</li> <li>• Blanes Road: 50km/h (proposed 30km/h)</li> <li>• Adel Place: 50km/h (proposed 30km/h)</li> <li>• Waimahia Avenue: 50km/h (proposed 30km/h)</li> <li>• Settlers Cove: 50km/h (proposed 30km/h)</li> <li>• Gila Place: 50km/h (proposed 30km/h)</li> <li>• Etherton Drive: 50km/h (proposed 30km/h)</li> <li>• Becker Drive: 50km/h (proposed 30km/h)</li> </ul>

	<ul style="list-style-type: none"> <li>• Kaimoana Street: 50km/h (proposed 30km/h)</li> <li>• Taitimu Drive: 50km/h (proposed 30km/h)</li> </ul>
--	--

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Weymouth Road has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 1.94. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Weymouth Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Weymouth Road is a Primary Collector Road, that is not the intended function of this section of Weymouth Road.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Weymouth Road (Weymouth)

The speed limit on Weymouth Road, Weymouth, between Roscommon Road and Waimahia Avenue, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Weymouth Road connects to Roscommon Road to the north and Lawson Way to the south. This road provides access to residential properties and is approximately 1.09km in length.</p> <p>Weymouth Road is classified as an Arterial road under the one network road classification (ONRC). Weymouth Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records twenty nine crashes between 2016 and 2020: two serious crashes, five minor crashes, twenty two non-injury crashes. This resulted in two Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Weymouth Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 9891 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Weymouth Road has a mean operating speed in the range of 40-44km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Roscommon Road: 60km/h (no proposed change)</li> <li>Lawson Way: 50km/h (proposed 30km/h)</li> <li>Beihlers Road: 50km/h (proposed 30km/h)</li> <li>Roys Road: 50km/h (proposed 30km/h)</li> <li>Hazards Road: 50km/h (proposed 30km/h)</li> <li>Mcinnes Road: 50km/h (proposed 30km/h)</li> <li>Greers Road: 50km/h (proposed 30km/h)</li> <li>Mcleod Road: 50km/h (proposed 30km/h)</li> <li>Estuary Road: 50km/h (proposed 30km/h)</li> <li>Waimai Avenue: 50km/h (proposed 30km/h)</li> <li>Gibbons Road: 50km/h (proposed 30km/h)</li> <li>Blanes Road: 50km/h (proposed 30km/h)</li> <li>Adel Place: 50km/h (proposed 30km/h)</li> <li>Waimahia Avenue: 50km/h (proposed 30km/h)</li> <li>Settlers Cove: 50km/h (proposed 30km/h)</li> <li>Gila Place: 50km/h (proposed 30km/h)</li> <li>Etherton Drive: 50km/h (proposed 30km/h)</li> <li>Becker Drive: 50km/h (proposed 30km/h)</li> </ul>

	<ul style="list-style-type: none"> <li>• Kaimoana Street: 50km/h (proposed 30km/h)</li> <li>• Taitimu Drive: 50km/h (proposed 30km/h)</li> <li>• Hanan Place: 50km/h (proposed 30km/h)</li> <li>• Hanan Place: 50km/h (proposed 30km/h)</li> <li>• Damian Way: 50km/h (proposed 30km/h)</li> <li>• Palmers Road: 50km/h (proposed 30km/h)</li> <li>• Mahia Road: 50km/h (no proposed change)</li> <li>• Alfriston Road: 50km/h (no proposed change)</li> <li>• Great South Road: 50km/h (no proposed change)</li> <li>• Beaumonts Way: 50km/h (no proposed change)</li> <li>• Selwyn Road: 50km/h (no proposed change)</li> </ul>
--	---

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Weymouth Road has the following information:

- Collective Risk band of **Medium**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 2.42. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Weymouth Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Weymouth Road is an Arterial Road, that is not the intended function for this section of Weymouth Road.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Whakapono Road (Pukekohe)**

The speed limit on Whakapono Road, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Whakapono Road connects to Raoriki Road to the west. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Whakapono Road is classified as an Access road under the one network road classification (ONRC). Whakapono Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Whakapono Road were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Whakapono Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Raoriki Road: 50 km/h (proposed 30 km/h)</li> <li>• Princes Street West: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Whakapono Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Whakapono Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wheatley Avenue (Pakuranga)

The speed limit on Wheatley Avenue, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wheatley Avenue connects to Ti Rakau Drive to the east. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Wheatley Avenue is classified as a Access road under the one network road classification (ONRC). Wheatley Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wheatley Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Wheatley Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ti Rakau Drive: 60km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Wheatley Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wheatley Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Whitley Crescent (Otago)

The speed limit on Whitley Crescent, Otago has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Whitley Crescent connects to Everitt Road to the east. This road provides access to residential properties and is approximately 0.42km in length.</p> <p>Whitley Crescent is classified as an Access road under the one network road classification (ONRC). Whitley Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Whitley Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 239 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Whitley Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Everitt Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Whitley Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Whitley Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wicklow Road (Narrow Neck)

The speed limit on Wicklow Road, Narrow Neck has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wicklow Road connects to Montgomery Avenue to the north and Old Lake Road to the south. This road provides access to residential properties and is approximately 0.38km in length.</p> <p>Wicklow Road is classified as an Access road under the one network road classification (ONRC). Wicklow Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wicklow Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 280 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Wicklow Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Montgomery Avenue: 50km/h (proposed 30km/h)</li> <li>• Old Lake Road: 50km/h (no proposed change)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Wicklow Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wicklow Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wickman Way (Mangere East)

The speed limit on Wickman Way, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wickman Way connects to Tennessee Avenue to the north and Buckland Road to the south. This road provides access to residential properties and is approximately 1.00km in length.</p> <p>Wickman Way is classified as a Primary Collector road under the one network road classification (ONRC). Wickman Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records twenty one crashes between 2016 and 2020: two serious crashes, four minor crashes, fifteen non-injury crashes. This resulted in two Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wickman Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 11354 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Wickman Way has a mean operating speed in the range of 40-44km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tennessee Avenue: 50km/h (no proposed change)</li> <li>Buckland Road: 50km/h (no proposed change)</li> <li>Garus Avenue: 50km/h (proposed 30km/h)</li> <li>Chelburn Crescent: 50km/h (proposed 30km/h)</li> <li>Tannock Place: 50km/h (proposed 30km/h)</li> <li>Yates Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Wickman Way has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Low-Medium**.
- The Infrastructure Risk Rating Score is 2.68. For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wickman Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Wickman Way is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – William Bond Street (Stanley Point)**

The speed limit on William Bond Street, Stanley Point has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>William Bond Street connects to Waterview Road to the north and Calliope Road to the south. This road provides access to residential properties and is approximately 0.34km in length.</p> <p>William Bond Street is classified as a Secondary Collector road under the one network road classification (ONRC). William Bond Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for William Bond Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 673 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of William Bond Street has a mean operating speed in the range of 30-34km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Waterview Road: 50 km/h (proposed 30 km/h)</li> <li>• Calliope Road: 50 km/h (no proposed change)</li> <li>• Rutland Road between William Bond Street and Cautley Street: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps William Bond Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for William Bond Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – William Gamble Drive (Greenhithe)

The speed limit on William Gamble Drive, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>William Gamble Drive connects to Kyle Road to the north. This road provides access to residential properties and is approximately 0.52km in length.</p> <p>William Gamble Drive is classified as a Secondary Collector road under the one network road classification (ONRC). William Gamble Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for William Gamble Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1519 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of William Gamble Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kyle Road: 50km/h (proposed 30km/h)</li> <li>George Deane Place: 50km/h (proposed 30km/h)</li> <li>Henry Partington Place: 50km/h (proposed 30km/h)</li> <li>Thomas Hamer Place: 50km/h (proposed 30km/h)</li> <li>Mary Forgham Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps William Gamble Drive has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.55. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for William Gamble Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – William Street (Mangere East)

The speed limit on William Street, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

#### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	William Street connects to Ferguson Street to the east. This road provides access to residential properties and is approximately 0.16km in length.  William Street is classified as an Access road under the one network road classification (ONRC). William Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for William Street were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 140 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of William Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Ferguson Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps William Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.79. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for William Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Williams Crescent (Otarā)

The speed limit on Williams Crescent, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Williams Crescent connects to Hills Road to the west. This road provides access to residential properties and is approximately 0.42km in length.</p> <p>Williams Crescent is classified as an Access road under the one network road classification (ONRC). Williams Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Williams Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 249 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Williams Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Hills Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Williams Crescent has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Williams Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Williamson Avenue (Belmont)

The speed limit on Williamson Avenue, Belmont has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Williamson Avenue connects to Seacliffe Avenue to the east and Bayswater Avenue to the west. This road provides access to residential properties and is approximately 0.50km in length.</p> <p>Williamson Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Williamson Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Williamson Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1831 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Williamson Avenue has a mean operating speed in the range of 30-34km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Seacliffe Avenue: 50km/h (proposed 30km/h)</li> <li>• Bayswater Avenue: 50km/h (no proposed change)</li> <li>• Lake Road: 50km/h (no proposed change)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Williamson Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.70. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Williamson Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Willis Avenue (Pukekohe)

The speed limit on Willis Avenue, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Willis Avenue connects to Kitchener Road to the south. This road provides access to residential properties and is approximately 0.19km in length.</p> <p>Willis Avenue is classified as an Access road under the one network road classification (ONRC). Willis Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Willis Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 220 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Willis Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kitchener Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Willis Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Willis Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Willowbrook (Pukekohe)

The speed limit on Willowbrook, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Willowbrook connects to Princes Street West to the north. This road provides access to residential properties and is approximately 0.16km in length.</p> <p>Willowbrook is classified as an Access road under the one network road classification (ONRC). Willowbrook is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Willowbrook were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 130 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Willowbrook has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Princes Street West: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Willowbrook has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Willowbrook, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wilson Carlile Street (Point Chevalier)

The speed limit on Wilson Carlile Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wilson Carlile Street connects to Jack Clark Way to the west and Humariri Street to the east. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Wilson Carlile Street is classified as an Access road under the one network road classification (ONRC). Wilson Carlile Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wilson Carlile Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 150 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Wilson Carlile Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Jack Clark Way: 50 km/h (proposed 30 km/h)</li> <li>Humariri Street: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Wilson Carlile Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wilson Carlile Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Windrush Close (Mangere)

The speed limit on Windrush Close, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Windrush Close connects to Cornwall Road to the west and Ansty Place to the west. This road provides access to residential properties and is approximately 0.61km in length.  Windrush Close is classified as an Access road under the one network road classification (ONRC). Windrush Close is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: two serious crashes, one non-injury crash. This resulted in two Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Windrush Close were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 670 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Windrush Close has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Cornwall Road: 50km/h (proposed 30km/h)</li> <li>• Ansty Place: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Windrush Close has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **High**.
- o The Infrastructure Risk Rating Score is 2.00. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Windrush Close, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Winscombe Street (Belmont)

The speed limit on Winscombe Street, Belmont has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Winscombe Street connects to Seacliffe Avenue to the east and Lake Road to the west. This road provides access to residential properties and is approximately 0.42km in length.</p> <p>Winscombe Street is classified as a Primary Collector road under the one network road classification (ONRC). Winscombe Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor crash, one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Winscombe Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3657 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Winscombe Street has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Seacliffe Avenue: 50km/h (proposed 30km/h)</li> <li>Lake Road: 50km/h (no proposed change)</li> <li>Baradia Street: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Winscombe Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 1.73. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Winscombe Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Winscombe Street is a Primary Collector Road, that is not its intended function

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Witla Court (Mangere Bridge)**

The speed limit on Witla Court, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Witla Court connects to Muir Avenue to the north. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Witla Court is classified as a Access road under the one network road classification (ONRC). Witla Court is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Witla Court were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Witla Court has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Muir Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Witla Court has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Witla Court, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wonderview Road (Leigh)

The speed limit on Wonderview Road, Leigh has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wonderview Road connects to Hauraki Road to the north and Lax Crescent to the west. This road provides access to residential properties and is approximately 0.31km in length.</p> <p>Wonderview Road is classified as a Secondary Collector road under the one network road classification (ONRC). Wonderview Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wonderview Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as rural towns using MegaMaps tool. The IRR defines rural towns as " <i>rural town with mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 495 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Wonderview Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Hauraki Road between Wonderview Road and north of Hauraki Road: 50km/h (proposed 30km/h)</li> <li>• Lax Crescent: 50km/h (proposed 30km/h)</li> <li>• Barrier View Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Wonderview Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Wonderview Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wood Avenue (Mangere East)

The speed limit on Wood Avenue, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wood Avenue connects to Blake Road to the south. This road provides access to residential properties and is approximately 0.88km in length.</p> <p>Wood Avenue is classified as an Access road under the one network road classification (ONRC). Wood Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wood Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1075 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Wood Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Blake Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Wood Avenue has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wood Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Woodberry Drive (Flat Bush)

The speed limit on Woodberry Drive, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Woodberry Drive connects to Baverstock Road to the north and Plantation Avenue to the south. This road provides access to residential properties and is approximately 0.24km in length.</p> <p>Woodberry Drive is classified as an Access road under the one network road classification (ONRC). Woodberry Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Woodberry Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1534 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Woodberry Drive has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Baverstock Road: 50km/h (proposed 30km/h)</li> <li>• Plantation Avenue: 50km/h (proposed 30km/h)</li> <li>• Silverwood Drive: 50km/h (proposed 30km/h)</li> <li>• Thyme Court: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Woodberry Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Woodberry Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Woodcroft Way (Pukekohe)

The speed limit on Woodcroft Way, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Woodcroft Way connects to Princes Street West to the north. This road provides access to residential properties and is approximately 0.16km in length.</p> <p>Woodcroft Way is classified as an Access road under the one network road classification (ONRC). Woodcroft Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Woodcroft Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Woodcroft Way has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Princes Street West: 50km/h (proposed 30km/h)</li> <li>Cathcart Close: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Woodcroft Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Woodcroft Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Woodford Road (Mount Eden)

The speed limit on Woodford Road, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Woodford Road connects to Valley Road to the north. This road provides access to residential properties and is approximately 0.29km in length.</p> <p>Woodford Road is classified as a Access road under the one network road classification (ONRC). Woodford Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Woodford Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 400 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Woodford Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Valley Road: 50km/h (proposed 30km/h)</li> <li>Conway Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Woodford Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.79. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Woodford Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Woodlark Close (Weymouth)

The speed limit on Woodlark Close, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Woodlark Close connects to Settlers Cove to the north. This road provides access to residential properties and is approximately 0.04km in length.</p> <p>Woodlark Close is classified as an Access road under the one network road classification (ONRC). Woodlark Close is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Woodlark Close were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1092 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Woodlark Close has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Settlers Cove: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Woodlark Close has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.60. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Woodlark Close, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wright Road (Point Chevalier)

The speed limit on Wright Road, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wright Road connects to Point Chevalier Road to the east. This road provides access to residential properties and is approximately 0.33km in length.</p> <p>Wright Road is classified as an Access road under the one network road classification (ONRC). Wright Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one serious crash. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wright Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 400 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Wright Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Point Chevalier Road: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Wright Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.58. For urban areas this corresponds to an IRR band of **Low**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wright Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wrights Spur (Mount Eden)

The speed limit on Wrights Spur, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wrights Spur connects to Brentwood Avenue to the south. This road provides access to residential properties and is approximately 0.04km in length.</p> <p>Wrights Spur is classified as a Access road under the one network road classification (ONRC). Wrights Spur is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wrights Spur were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5 to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 10+ per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 25 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Wrights Spur has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Brentwood Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Wrights Spur has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.34. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wrights Spur, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wroughton Crescent (Otara)

The speed limit on Wroughton Crescent, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wroughton Crescent connects to Ferguson Road to the north and Athelstan Place to the south. This road provides access to residential properties and is approximately 0.05km in length.</p> <p>Wroughton Crescent is classified as an Access road under the one network road classification (ONRC). Wroughton Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wroughton Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 234 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Wroughton Crescent has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Ferguson Road: 50km/h (proposed 30km/h)</li> <li>Athelstan Place: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Wroughton Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.60. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wroughton Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wynne Gray Avenue (Stonefields)

The speed limit on Wynne Gray Avenue, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wynne Gray Avenue connects to Tephra Boulevard to the south and Stonemason Avenue to the north. This road provides access to residential properties and is approximately 0.40km in length.</p> <p>Wynne Gray Avenue is classified as an Access road under the one network road classification (ONRC). Wynne Gray Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wynne Gray Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Wynne Gray Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tephra Boulevard: 50km/h (proposed 30km/h)</li> <li>Stonemason Avenue: 50km/h (proposed 30km/h)</li> <li>Tihi Street: 50km/h (proposed 30km/h)</li> <li>Emilia Nixon Lane: 50km/h (proposed 30km/h)</li> <li>Styak Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Wynne Gray Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wynne Gray Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wynyard Road (Mount Eden)

The speed limit on Wynyard Road, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wynyard Road connects to Porters Avenue to the north and View Road to the south. This road provides access to residential properties and is approximately 0.53km in length.</p> <p>Wynyard Road is classified as a Primary collector road under the one network road classification (ONRC). Wynyard Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wynyard Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3120 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Wynyard Road has a mean operating speed in the range of 35-39km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Porters Avenue: 50km/h (no proposed change)</li> <li>• Haultain Street: 50km/h (proposed 30km/h)</li> <li>• Fenton Street: 50km/h (proposed 30km/h)</li> <li>• Brentwood Avenue: 50km/h (proposed 30km/h)</li> <li>• Sylvan Avenue West: 50km/h (proposed 30km/h)</li> <li>• Edenvale Park Road: 50km/h (proposed 30km/h)</li> <li>• Edenvale Crescent: 50km/h (proposed 30km/h)</li> <li>• Punga Street: 50km/h (proposed 30km/h)</li> <li>• View Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Wynyard Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.22. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Wynyard Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Wyona Place (Otara)

The speed limit on Wyona Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Wyona Place connects to Cobham Crescent to the south. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Wyona Place is classified as an Access road under the one network road classification (ONRC). Wyona Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one serious crash. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Wyona Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 70 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Wyona Place has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Cobham Crescent: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Wyona Place has the following information:

- o Collective Risk band of **Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Wyona Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Yates Road (Mangere East)

The speed limit on Yates Road, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Yates Road connects to Wickman Way to the north and Massey Road to the south. This road provides access to residential properties and is approximately 0.87km in length.</p> <p>Yates Road is classified as a Primary Collector road under the one network road classification (ONRC). Yates Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records fourteen crashes between 2016 and 2020: two minor crashes, twelve non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Yates Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8001 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Yates Road has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Wickman Way: 50km/h (proposed 30km/h)</li> <li>Massey Road: 50km/h (no proposed change)</li> <li>Chalfont Street: 50km/h (proposed 30km/h)</li> <li>Royton Avenue: 50km/h (proposed 30km/h)</li> <li>Growers Lane: 50km/h (proposed 30km/h)</li> <li>Ferguson Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Yates Road has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Yates Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Yates Road is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Yorkton Rise (Mangere Bridge)

The speed limit on Yorkton Rise, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Yorkton Rise connects to Kiwi Esplanade to the north and Muir Avenue to the south. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Yorkton Rise is classified as a Access road under the one network road classification (ONRC). Yorkton Rise is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Yorkton Rise were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Yorkton Rise has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kiwi Esplanade: 50km/h (proposed 30km/h)</li> <li>• Muir Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Yorkton Rise has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Yorkton Rise, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Zodiac Street (Henderson)

The speed limit on Zodiac Street, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Zodiac Street connects to Universal Drive to the north and Harrington Road to the south. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Zodiac Street is classified as an Access road under the one network road classification (ONRC). Zodiac Street is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Zodiac Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 185 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Zodiac Street has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Universal Drive: 50km/h (no proposed change)</li> <li>Harrington Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Zodiac Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Zodiac Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – A Renall Road (Pollok)**

The speed limit on A Renall Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>A Renall Road connects to Lees Gully Road to the west. This road provides access to residential properties.</p> <p>This section is approximately 2.14 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of A Renall Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as <i>"rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 31 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 47 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Lees Gully Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	2.14
Annual Daily Traffic	31

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

#### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.62. For rural areas this corresponds to an IRR band of **Medium-High**.

#### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of A Renall Road.

A Renall Road is a self-explaining road as the mean operating speeds (47 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of A Renall Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for A Renall Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (47 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on A Renall Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Aldred Road (Kariotahi)**

The speed limit on Aldred Road, Kariotahi has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Aldred Road connects to Kohekohe-Karioitahi Road to the east. This road provides access to residential properties.
	This section is approximately 1.05 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Aldred Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 45 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 30 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Kohekohe-Karioitahi Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.05
Annual Daily Traffic	45

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.12. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Aldred Road.*

Aldred Road is a self-explaining road as the mean operating speeds (30 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Aldred Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Aldred Road due to a multitude of factors. These being the unsealed road surface, narrow lane and very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (30 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Aldred Road in Kariotahi, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Aldred Road is 40 km/h which is aligned with the speed limit recommended by the Speed Management Guide (<80 km/h), this is considered appropriate based on the function of the road and the mean operating speed (30 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Allan Road (Awhitu)**

The speed limit on Allan Road, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Allan Road connects to Opoia Drive to the west and Sergeant Road to the east. This road provides access to residential properties.</p> <p>This section is approximately 0.34 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Allan Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural towns using on-site information and geomaps. The IRR defines Rural towns as " <i>mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 292 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 30 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Opoia Drive:</b> 70 km/h (proposed 40 km/h)</li> <li>• <b>Sergeant Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.34
Annual Daily Traffic	292

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural towns	2.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	>20	1.30
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.09. For rural areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 40 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Allan Road.*

Allan Road is a self-explaining road as the mean operating speeds (30 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Allan Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Allan Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, winding nature of the road, moderate road-side hazards and low mean operating speed (30 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Allan Road in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

### **Speed Limit Review – Andrew-Pye Road (Manukau Heads)**

Andrew-Pye Road, Manukau Heads, is divided into two sections as follows: <sup>1</sup>

- Section 1: Andrew-Pye Road between Grahams Beach Road and 1090m south of Grahams Beach Road
- Section 2: Andrew-Pye Road between 1090m south of Grahams Beach Road and southern end of Andrew-Pye Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Andrew-Pye Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

#### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Andrew-Pye Road connects to Grahams Beach Road and Big Bay Road to the north. This road provides access to residential properties.	
	This section is approximately 1.09 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 0.28 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Andrew-Pye Road were determined using a combination of site drive-over footage, on-site information and geomaps information. <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 16 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 16 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Grahams Beach Road:</b> 80-100 km/h (proposed 60 km/h)</li> <li>• <b>Big Bay Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

- Section 1
  - The Infrastructure Risk Rating Score is 1.96. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.05. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60 km/h on Andrew-Pye Road between Grahams Beach Road and 1090m south of Grahams Beach Road
- 60 km/h on Andrew-Pye Road between 1090m south of Grahams Beach Road and southern end of Andrew-Pye Road

Andrew-Pye Road is a self-explaining road as the mean operating speeds (20 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Andrew-Pye Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section of Andrew-Pye Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (20 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>2</sup>

A proposed speed limit of 60 km/h was selected for the second section of Andrew-Pye Road due to a multitude of factors. These being the unsealed road surface, medium lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (20 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Andrew-Pye Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Awhitu Central Road (Awhitu)

The speed limit on Awhitu Central Road, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Awhitu Central Road connects to Tram Gully Road to the east and Kemp Road to the west. This road provides access to residential properties.</p> <p>This section is approximately 4.10 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Awhitu Central Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 136 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 70 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Tram Gully Road:</b> 100 km/h (proposed 60 km/h)</li> <li><b>Kemp Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	4.10
Annual Daily Traffic	136

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.96. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Awhitu Central Road.*

Awhitu Central Road is a challenging conversations road as the mean operating speeds (70 km/h) are above the proposed safe and appropriate speeds. Engineering up of Awhitu Central Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Awhitu Central Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Awhitu Central Road in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Awhitu Gully Road (Manukau Heads)

The speed limit on Awhitu Gully Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Awhitu Gully Road connects to Orua Bay Road to the north. This road provides access to residential properties.
	This section is approximately 1.42 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Awhitu Gully Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using on-site information and geomaps. The IRR defines Remote rural as " <i>only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 24 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Wattle Bay Road:</b> 100 km/h (proposed 60 km/h)</li> <li><b>Dodd Road:</b> 100km/h (proposed 40km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.42
Annual Daily Traffic	24

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Remote rural	1.00
Intersection density (per km)	<1	1.00
Access density (per km)	1 to <2	1.01
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.21. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Awhitu Gully Road.*

Awhitu Gully Road is a self-explaining road as the mean operating speeds (24 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Awhitu Gully Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Awhitu Gully Road due to a multitude of factors. These being the unsealed road surface, narrow lane and very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (24 km/h). All of these factors contribute to the road's 'High' IRR score, making it a High-risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Awhitu Gully Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Awhitu Gully Road is 40 km/h which is in line with speed limit recommended by the Speed Management Guide (<80 km/h), this is considered appropriate based on the function of the road and the mean operating speed (24 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Awhitu Road (Waiuku / Karioitahi / Pollok / Awhitu)

Awhitu Road, Waiuku / Karioitahi / Pollok / Awhitu, is divided into nine sections as follows: <sup>1</sup>

- Section 1: Awhitu Road between King Street and urban traffic area boundary (Waiuku)
- Section 2: Awhitu Road between urban traffic area boundary (Waiuku) and 225m west of Taurangaruru Road
- Section 3: Awhitu Road between 225m west of Taurangaruru Road and Kohekohe-Karioitahi Road
- Section 4: Awhitu Road between Kohekohe-Karioitahi Road and 600m west of Pollok Wharf Road
- Section 5: Awhitu Road between 600m west of Pollok Wharf Road and 150m north of Pollok Wharf Road
- Section 6: Awhitu Road between 150m north of Pollok Wharf Road and Fielding Road
- Section 7: Awhitu Road between Fielding Road and 50m east of Kemp Road
- Section 8: Awhitu Road between 50m east of Kemp Road and 210m northeast of Matakawau Road
- Section 9: Awhitu Road between 210m northeast of Matakawau Road and Tram Gully Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Awhitu Road, Waiuku / Karioitahi / Pollok / Awhitu, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1.1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Awhitu Road connects to King Street to the south and Tram Gully Road to the north. This road provides access to residential and commercial properties.		

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments								
	Section 1	Section 2	Section 3						
	<p>This section is approximately 0.375 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.</p>	<p>This section is approximately 0.465 km in length. - Section 5
  - The Infrastructure Risk Rating Score is 2.20. For rural areas this corresponds to an IRR band of **High**.
- Section 6
  - The Infrastructure Risk Rating Score is 2.12. For rural areas this corresponds to an IRR band of **High**.
- Section 7
  - The Infrastructure Risk Rating Score is 2.12. For rural areas this corresponds to an IRR band of **High**.
- Section 8
  - The Infrastructure Risk Rating Score is 1.97. For rural areas this corresponds to an IRR band of **Low-Medium**.
- Section 9
  - The Infrastructure Risk Rating Score is 1.62. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 and Table 2.2 of the Speed Management Guide is

- 50 km/h between King Street and urban traffic area boundary (Waiuku) (Section 1)
- <80km/h between urban traffic area boundary (Waiuku) and Tram Gully Road (Section 2-9)

## Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 50 km/h on Awhitu Road between King Street and urban traffic area boundary (Waiuku) (Section 1)
- 60 km/h on Awhitu Road between urban traffic area boundary (Waiuku) and 225m west of Taurangaruru Road (Section 2)
- 80 km/h on Awhitu Road between 225m west of Taurangaruru Road and Kohekohe-Karioitahi Road (Section 3)
- 80 km/h on Awhitu Road between Kohekohe-Karioitahi Road and 600m west of Pollok Wharf Road (Section 4)
- (Unchanged) 60 km/h on Awhitu Road between 600m west of Pollok Wharf Road and 150m north of Pollok Wharf Road (Section 5)
- 80 km/h on Awhitu Road between 150m north of Pollok Wharf Road and Fielding Road (Section 6)
- 80 km/h on Awhitu Road between Fielding Road and 50m east of Kemp Road (Section 7)
- (Unchanged) 60 km/h on Awhitu Road between 50m east of Kemp Road and 210m northeast of Matakawau Road (Section 8)
- 80 km/h on Awhitu Road between 210m northeast of Matakawau Road and Tram Gully Road (Section 9)

Sections 1-4 of Awhitu Road are challenging conversations roads as the mean operating speeds are higher than the proposed safe and appropriate speeds. Sections 6 and 8 of Awhitu Road are unchanged as the existing speed aligns with the safe and appropriate speeds. Sections 6,7 and 9 of Awhitu Road are self-explaining roads as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing speed limits. Engineering up of Awhitu Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for the first section of Awhitu Road due to a multitude of factors. These being the urban residential land use, medium lane width, very narrow shoulder width, straight nature of the road and high road-side hazards. All of these factors contribute to the road's 'Low-Medium' IRR score, making it a Low-Medium-risk road.

A proposed speed limit of 60 km/h was selected for the second section of Awhitu Road due to a multitude of factors. These being maintaining consistency with surrounding corridors, the medium lane width, narrow shoulder width, straight nature of the road and high road-side hazards. All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road. Due to adverse crash history on the road, the collective and personal risk of this road are classified as '**High**' and '**High**', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.<sup>2</sup>

A proposed speed limit of 80 km/h was selected for the third section of Awhitu Road due to a multitude of factors. These being the mean operating speed (87 km/hr), medium lane width, very narrow shoulder width, curved nature of the road and high road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road. Due to adverse crash history on the road, the collective and personal risk of this road are classified as '**High**' and '**High**', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.

A proposed speed limit of 80 km/h was selected for the fourth section of Awhitu Road due to a multitude of factors. These being the high mean operating speed (83 km/hr), medium lane width, very narrow shoulder width, curved nature of the road and high road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road. Due to adverse crash history on the

road, the collective and personal risk of this road are classified as '**Low-Medium**' and '**Medium-High**', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.

The existing speed limit of 60 km/h is retained for the fifth section of Awhitu Road as it aligns with the recommended safe and appropriate speed.

A proposed speed limit of 80 km/h was selected for the sixth section of Awhitu Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (78 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a High-risk road.

A proposed speed limit of 80 km/h was selected for the seventh section of Awhitu Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (82 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road. Due to adverse crash history on the road, the collective and personal risk of this road are classified as '**Medium**' and '**High**', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.

The existing speed limit of 60 km/h is retained for the eighth section of Awhitu Road as it aligns with the recommended safe and appropriate speed.

A proposed speed limit of 80 km/h was selected for the ninth section of Awhitu Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (70 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.

Crash history from NZTA's CAS database shows the following:

- Section 1: 1 crash in the last 5 years including 0 fatal, 0 serious, 1 minor, and 0 non-injury crashes.
- Section 2: 2 crashes in the last 5 years including 0 fatal, 1 serious, 1 minor, and 0 non-injury crashes.
- Section 3: 68 crashes in the last 5 years including 2 fatal, 14 serious, 15 minor, and 37 non-injury crashes.
- Section 4: 20 crashes in the last 5 years including 0 fatal, 2 serious, 6 minor, and 12 non-injury crashes.
- Section 5: No crashes in the last 5 years.
- Section 6: 4 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor, and 3 non-injury crashes.
- Section 7: 2 crashes in the last 5 years including 0 fatal, 1 serious, 0 minor, and 1 non-injury crashes.
- Section 8: 1 crash in the last 5 years including 0 fatal, 0 serious, 1 minor, and 0 non-injury crashes.
- Section 9: 6 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor, and 5 non-injury crashes.

After considering all of the above factors, the existing speed limits on parts of Awhitu Road in Waiuku, are not considered to be a safe and appropriate speed limit for this road.

The recommended safe and appropriate speed limits for Awhitu Road are:

- 50 km/h for Section 1 which is aligned with the recommended safe and appropriate speed.
- 60 km/h for Section 2 which is aligned with the recommended safe and appropriate speed.
- 80 km/h for Sections 3 and 4 which is higher than the Speed Management Guide recommendation (<80 km/h) but are considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (83-87 km/h).
- 60 km/h to be retained for Section 5 as it aligns with the recommended safe and appropriate speed.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

- 80 km/h for Sections 6 and 7 which is higher than the Speed Management Guide recommendation (<80 km/h) but are considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (78-82 km/h).
- 60 km/h to be retained for Section 8 as it aligns with the recommended safe and appropriate speed.
- 80 km/h for Section 9 which is higher than the Speed Management Guide recommendation (<80 km/h) but are considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (70 km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – B. Westhead Road (Pollok)**

The speed limit on B. Westhead Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>B. Westhead Road connects to Kohekohe-Karioitahi Road to the north. This road provides access to residential properties.</p> <p>This section is approximately 0.66 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of B. Westhead Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as <i>"rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 72 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Kohekohe-Karioitahi Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.66
Annual Daily Traffic	72

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.73. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of B. Westhead Road.*

B. Westhead Road is a self-explaining road as the mean operating speeds (24 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of B. Westhead Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for B. Westhead Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (24 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on B. Westhead Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Barthow Road (Pollok)**

The speed limit on Barthow Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Barthow Road connects to Awhitu Road to the east. This road provides access to residential properties.
	This section is approximately 0.09 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Barthow Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using on-site information and geomaps. The IRR defines Remote rural as "only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.09
Annual Daily Traffic	4

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

#### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Remote rural	1.00
Intersection density (per km)	1 to <2	1.15
Access density (per km)	1 to <2	1.01
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.52. For rural areas this corresponds to an IRR band of **Medium**.

#### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 80 km/h for the full length of Barthow Road.

Barthow Road is a self-explaining road as the mean operating speeds (20 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Barthow Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 80 km/h was selected for Barthow Road due to a multitude of factors. These being the unsealed road surface, narrow lane and very narrow shoulder width, straight nature of the road, moderate road-side hazards and low mean operating speed (20 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Barthow Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The recommended safe and appropriate speed limit for Barthow Road is 80 km/h which is higher than the Speed Management Guide recommendation (<80 km/h) but is considered appropriate when considering the very short length of Barthow Road and the proposed speed of the adjoining road (Awhitu Road 80 km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Big Bay Road (Manukau Heads)**

Big Bay Road, Manukau Heads, is divided into three sections as follows: <sup>1</sup>

- Section 1: Big Bay Road between Grahams Beach Road and Tearoe Rd
- Section 2: Big Bay Road between Tearoe Road and 550m east of MacKinnon Road
- Section 3: Big Bay Road between 550m east of MacKinnon Road and western end of Big Bay Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Big Bay Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Big Bay Road connects to Grahams Beach Road to the south. This road provides access to residential properties.		
	This section is approximately 0.44 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 1.74 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 1.40 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	road, and there is no on-street parking along this section.	road, and there is no on-street parking along this section.	road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. 	<i>particularly at certain times of the day, but with few crossing movements."</i>	<i>particularly at certain times of the day, but with few crossing movements."</i>	
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 253 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 253 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 253 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 50 km/h.	This section has a mean operating speed of 37 km/h.	This section has a mean operating speed of 26 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Grahams Beach Road:</b> 80-100 km/h (proposed 60 km/h)</li> </ul>		

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data		
	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	0	0	0
DSI crashes during the period	0	0	0
Corridor Length (km)	0.44	1.74	1.40
Annual Daily Traffic	253	253	253

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 3
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2		Section 3	
	Category	Risk Score	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Curved	1.80	Tortuous	6.00	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28	High	2.28
Adjacent land use	Rural residential	1.50	Rural residential	1.50	Rural towns	2.50

Intersection density (per km)	2 to <3	1.25	2 to <3	1.25	<1	1.00
Access density (per km)	1 to <2	1.01	2 to <5	1.03	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 1.76. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.29. For rural areas this corresponds to an IRR band of **High**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.21. For rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is:

- <80 km/h between Grahams Beach Road and 550m east of MacKinnon Road (Section 1 & 2)
- 50 km/h between 550m east of MacKinnon Road and western end of Big Bay Road (Section 3)

## Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 60 km/h on Big Bay Road between Grahams Beach Road and Tearoe Rd
- 60 km/h on Big Bay Road between Tearoe Road and 550m east of MacKinnon Road
- 40 km/h on Big Bay Road between 550m east of MacKinnon Road and western end of Big Bay Road

Big Bay Road is a self-explaining road as the mean operating speeds are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Big Bay Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section of Big Bay Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (50 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>2</sup>

A proposed speed limit of 60 km/h was selected for the second section of Big Bay Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, tortuous nature of the road, high road-side hazards and low mean operating speed (37 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.

A proposed speed limit of 40 km/h was selected for the third section of Big Bay Road due to a multitude of factors. These being the rural town land use, narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (26 km/hr). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road

After considering all of the above factors, the existing speed limit of 100 km/h on Big Bay Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h for section 1 and 2 which is aligned with the recommended safe and appropriate speed.

The proposed safe and appropriate speed limit for the third section of Big Bay Road is 40 km/h which is lower than the speed limit recommended by the Speed Management Guide (50 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (26 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Boiler Gully Road (Manukau Heads)

The speed limit on Boiler Gully Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Boiler Gully Road connects to Manukau Heads Road to the west and Orua Bay Road to the east. This road provides access to residential properties.</p> <p>This section is approximately 3.57 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Boiler Gully Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using on-site information and geomaps. The IRR defines Remote rural as "only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 81 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 52 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Manukau Heads Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Orua Bay Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	3.57
Annual Daily Traffic	81

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

#### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Remote rural	1.00
Intersection density (per km)	<1	1.00
Access density (per km)	1 to <2	1.01
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.78. For rural areas this corresponds to an IRR band of **Medium-High**.

#### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Boiler Gully Road.

Boiler Gully Road is a self-explaining road as the mean operating speeds (52 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Boiler Gully Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Boiler Gully Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (52 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Boiler Gully Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Boundary Road (Pollok)**

Boundary Road, Pollok, is divided into three sections as follows:<sup>1</sup>

- Section 1: Boundary Road between Awhitu Road and eastern end of Boundary Road
- Section 2: Boundary Road between Kohekohe-Karioitahi Road and Awhitu Road
- Section 3: Boundary Road between western end of Boundary Road and Kohekohe-Karioitahi Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Boundary Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Boundary Road connects to Awhitu Road to the east and Kohekohe-Karioitahi Road to the west. This road provides access to residential properties.		
	This section is approximately 0.86 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 3.11 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 1.49 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is an unsealed. There are no pedestrian or cyclist amenities along this road, and	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	there is no on-street parking along this section.	amenities along this road, and there is no on-street parking along this section.	amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes. - Section 1
  - The Infrastructure Risk Rating Score is 1.85. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.67. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 3
  - The Infrastructure Risk Rating Score is 1.96. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h for all sections.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation is

- 40 km/h on Boundary Road between Awhitu Road and eastern end of Boundary Road
- 60 km/h on Boundary Road between Kohekohe-Karioitahi Road and Awhitu Road
- 60 km/h on Boundary Road between western end of Boundary Road and Kohekohe-Karioitahi Road

Boundary Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Boundary Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for the first section of Boundary Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (35 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>2</sup>

A proposed speed limit of 60 km/h was selected for the second section of Boundary Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (63 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.

A proposed speed limit of 60 km/h was selected for the third section of Boundary Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (58 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Boundary Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for the first section of Boundary Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80 km/h), this is considered appropriate based on the function of the road and the mean operating speed (35 km/h) supports the reduction.

The proposed safe and appropriate speed limit is 60 km/h for sections 2 and 3 which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Brook Road (Awhitu)**

Brook Road, Awhitu, is divided into four sections as follows: <sup>1</sup>

- Section 1: Brook Road between Awhitu Road and Walters Road
- Section 2: Brook Road between Walters Road and 190m west of Featon Avenue
- Section 3: Brook Road between 190m west of Featon Avenue and 110m east of Featon Avenue
- Section 4: Brook Road between 110m east of Featon Avenue and eastern end of Brook Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Brook Road, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1.1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3

(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.		

Table 1.2: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
	Section 4
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Brook Road connects to Awhitu Road to the west. This road provides access to residential properties.

Requirement	Comments
	<b>Section 4</b>
	This section is approximately 0.26 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is an unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Brook Road were determined using a combination of site drive-over footage, on-site information and geomaps information. <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural towns using on-site information and geomaps. The IRR defines Rural towns as " <i>mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 29 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1.1 and Table 1.2, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Comment
Current speed limit	The existing speed limit(s) on Brook Road are as follows: <ul style="list-style-type: none"> <li>• 100 km/h between Awhitu Road and Walters Road (Section 1)</li> <li>• 100 km/h between Walters Road and 190m west of Featon Avenue (Section 2)</li> <li>• 40 km/h between 190m west of Featon Avenue and 110m east of Featon Avenue (Section 3)</li> <li>• 40 km/h between 110m east of Featon Avenue and eastern end of Brook Road (Section 4)</li> </ul>
MegaMaps Mean Operating Speed (km/h)	McNicol Road has a mean operating speed of: <ul style="list-style-type: none"> <li>• 59 km/h between Awhitu Road and Walters Road (Section 1)</li> <li>• 47 km/h between Walters Road and 190m west of Featon Avenue (Section 2)</li> <li>• 47 km/h between 190m west of Featon Avenue and 110m east of Featon Avenue (Section 3)</li> <li>• 20 km/h between 110m east of Featon Avenue and eastern end of Brook Road (Section 4)</li> </ul>
Speed limits on adjoining roads	The speed limits in the adjacent road network are: <ul style="list-style-type: none"> <li>• <b>Awhitu Road:</b> 100 km/h (proposed SaAS 80 km/h)</li> <li>• <b>Walters Road:</b> 100 km/h (proposed SaAS 40 km/h)</li> <li>• <b>Featon Avenue:</b> 40 km/h</li> </ul>

**Step 2: Determine the road safety metrics**

  - The Infrastructure Risk Rating Score is 1.42. For rural areas this corresponds to an IRR band of **Medium**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.66. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 3
  - The Infrastructure Risk Rating Score is 1.77. For rural areas this corresponds to an IRR band of **Low-Medium**.
- Section 4
  - The Infrastructure Risk Rating Score is 2.62. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h for section 1 and <80 km/h for section 2.

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h for sections 3 and 4.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60 km/h on Brook Road between Awhitu Road and Walters Road (Section 1)
- 40 km/h on Brook Road between Walters Road and 190m west of Featon Avenue (Section 2)
- (Unchanged) 40 km/h on Brook Road between 190m west of Featon Avenue and 110m east of Featon Avenue (Section 3)
- (Unchanged) 40 km/h on Brook Road between 110m east of Featon Avenue and eastern end of Brook Road (Section 4)

Sections 1, 3 and 4 of Brook Road are self-explaining roads as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Section 2 of Brook Road is a challenging conversations road as the mean operating speed is higher than the proposed safe and appropriate speed. Engineering up of Brook Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section of Brook Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (59 km/hr). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

A proposed speed limit of 40 km/h was selected for the second section of Brook Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (47 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>2</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on the first and second sections of Brook Road in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h for the first section which is lower than the recommended safe and appropriate speed 80km/h, because of the very narrow length width, road function, and the low operating speed (59km/h).

The proposed safe and appropriate speed limit for the second section of Brook Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80 km/h); this is considered appropriate based on the function of the road to maintain consistency with the adjacent sections of the corridor and surrounding corridors.

The existing speed limits of 40 km/h for the third and fourth sections of Brook Road are not changed as they align with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Capes Road (Pollok)

The speed limit on Capes Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Capes Road connects to Given Road and Lees Gully Road to the west. This road provides access to residential properties.
	This section is approximately 1.75 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crash. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Capes Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Given Road:</b> 100 km/h (proposed 60 km/h)</li> <li><b>Lees Gully Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.75
Annual Daily Traffic	104

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.64. For rural areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Capes Road.*

Capes Road is a self-explaining road as the mean operating speeds (20 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Capes Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Capes Road due to a multitude of factors. These being the narrow lane and narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (20 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor, and 1 non-injury crash.

After considering all of the above factors, the existing speed limit of 100 km/h on Capes Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Cemetery Road (Pollok)

The speed limit on Cemetery Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cemetery Road (Pollok) connects to Awhitu Road to the north and Given Road to the south. This road provides access to residential properties.</p> <p>This section is approximately 1.3 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 1 serious, 0 minor and 0 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crash. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Cemetery Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 110 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 61 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 60km/h</li> <li><b>Pollok Wharf Road:</b> 100 km/h (proposed 60 km/h)</li> <li><b>Given Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	1
Corridor Length (km)	1.3
Annual Daily Traffic	110

- The Collective Risk score is 0.15. For rural areas this corresponds to a Collective Risk band of **Medium-High**

- The Personal Risk score is 384.04. For rural areas this corresponds to a Personal Risk band of **High**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.02. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Cemetery Road.*

Cemetery Road is a self-explaining road as the mean operating speeds (61 km/h) are near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Cemetery Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Cemetery Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (61 km/h). All of these factors contribute to the road's 'High' IRR score, making it a High-risk road. <sup>1</sup>

Crash history from NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 1 serious, 0 minor, and 0 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Cemetery Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Clarks Beach Road (Clarks Beach)

Clarks Beach Road, Clarks Beach, is divided into five sections as follows: <sup>1</sup>

- Section 1: Clarks Beach Road between Crispe Road and 100m south of Kaitiaki Drive
- Section 2: Clarks Beach Road between 100m south of Kaitiaki Drive and urban traffic area boundary (Clarks Beach)
- Section 3: Clarks Beach Road between urban traffic area boundary (Clarks Beach) and Farley Road
- Section 4: Clarks Beach Road between Farley Road and Dell Road
- Section 5: Clarks Beach Road between Dell Road and 100m west of Titoki Way

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Clarks Beach Road, Clarks Beach has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1.1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Clarks Beach Road connects to Waiau Pa Road to the east and Torkar Road to the west. This road provides access to residential properties.		
	This section is approximately 0.67 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 1.09 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 1.12 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.	This section is a two-way, two-lane, undivided road. There are no pedestrian amenities and on-street parking along this section. There are no cyclist amenities.	This section is a two-way, two-lane, undivided road. There are no pedestrian amenities and on-street parking along this section. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 2 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 7 crashes between 2016 and 2020: 1 fatal, 0 serious, 2 minor and 4 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Clarks Beach Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as	The adjacent land use is classified as	The adjacent land use is classified as

	Urban residential using on-site information and geomaps. The IRR defines Urban residential as "dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."	Urban residential using on-site information and geomaps. The IRR defines Urban residential as "dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."	Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2282 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 2571 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 2571 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation		

Table 1.2: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 4	Section 5
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Clarks Beach Road connects to Waiau Pa Road to the east and Torkar Road to the west. This road provides access to residential properties.	
	This section is approximately 1.05 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 0.3 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian amenities and on-street parking along this section. There are no cyclist amenities.	This section is a two-way, two-lane, undivided road. There are no pedestrian amenities and on-street parking along this section. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Clarks Beach Road is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Clarks Beach Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5</li> </ul>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> </ul>

Requirement	Comments	
	Section 4	Section 5
	m) and Narrow shoulder (0.5 to 1.0 m) <ul style="list-style-type: none"> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Urban residential using on-site information and geomaps. The IRR defines Urban residential as "dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> &lt;1 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2839 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 2839 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation	

In addition to the factors outlined in Tables 1.1 and 1.2, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Comment
Current speed limit	The existing speed limit(s) on Clarks Beach Road are as follows: <ul style="list-style-type: none"> <li>• 50km/h between Crispe Road and 100m south of Kaitiaki Drive (Section 1)</li> <li>• 80km/h between 100m south of Kaitiaki Drive and urban traffic area boundary (Clarks Beach) (Section 2)</li> <li>• 80km/h between urban traffic area boundary (Clarks Beach) and Farley Road (Section 3)</li> <li>• 80km/h between Farley Road and Dell Road (Section 4)</li> <li>• 80km/h between Dell Road and 100m west of Titoki Way (Section 5)</li> </ul>
MegaMaps Mean Operating Speed (km/h)	Clarks Beach Road has a mean operating speed of: <ul style="list-style-type: none"> <li>• 48 km/h between Crispe Road and 100m south of Kaitiaki Drive (Section 1)</li> <li>• 78 km/h between 100m south of Kaitiaki Drive and urban traffic area boundary (Clarks Beach) (Section 2)</li> <li>• 78 km/h between urban traffic area boundary (Clarks Beach) and Farley Road (Section 3)</li> <li>• 83 km/h between Farley Road and Dell Road (Section 4)</li> <li>• 83 km/h between Dell Road and 100m west of Titoki Way (Section 5)</li> </ul>
Speed limits on adjoining roads	The speed limits in the adjacent road network are: <ul style="list-style-type: none"> <li>• <b>McKenzie Road:</b> 50 km/h</li> <li>• <b>Waiau Pa Road:</b> 80 km/h</li> <li>• <b>Torkar Road:</b> 50 km/h</li> </ul>

- Section 5
  - The Infrastructure Risk Rating Score is 2.03. For urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is:

- 40 km/h between Crispe Road and 100m south of Kaitiaki Drive (Section 1)
- 50 km/h between 100m south of Kaitiaki Drive and urban traffic area boundary (Clarks Beach) (Section 2)
- 50 km/h between Dell Road and 100m west of Titoki Way (Section 5)

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is:

- <80km/h between urban traffic area boundary (Clarks Beach) and Farley Road (Section 3)
- <80km/h between Farley Road and Dell Road (Section 4)

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation is

- (Unchanged) 50 km/h on Clarks Beach Road between Crispe Road and 100m south of Kaitiaki Drive (Section 1)
- 50 km/h on Clarks Beach Road between 100m south of Kaitiaki Drive and urban traffic area boundary (Clarks Beach) (Section 2)
- (Unchanged) 80 km/h on Clarks Beach Road between urban traffic area boundary (Clarks Beach) and Farley Road (Section 3)
- (Unchanged) 80 km/h on Clarks Beach Road between Farley Road and Dell Road (Section 4)
- 50 km/h on Clarks Beach Road between Dell Road and 100m west of Titoki Way (Section 5)

Clarks Beach Road is a challenging conversations road as the mean operating speeds are above the proposed safe and appropriate speeds. Engineering up of Clarks Beach Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

The existing speed of 50 km/h is unchanged for the first section of Clarks Beach Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (48 km/h). All of these factors contribute to the road's 'High' IRR score, making it a High-risk road.<sup>2</sup> It is proposed to move the current 80/50 speed limit change point to the urban traffic boundary (Clarks Beach) to better align with the future development of residential land use along this section of Clarks Beach Road.

A proposed speed limit of 50 km/h was selected for the second section of Clarks Beach Road due to a multitude of factors. These being the future residential development, medium lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and mean operating speed (78 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

Crash history from NZTA's CAS database shows 3 crashes in the last 5 years for the second section including 0 fatal, 0 serious, 1 minor, and 2 non-injury crashes.

The existing speed of 80km/h is unchanged for the third section of Clarks Beach Road due to a multitude of factors. The 80km/h was changed on 30 June 2020 by Auckland Transport. These being the medium lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and mean operating speed (78 km/h). Due to adverse crash history on the road, the collective and personal risk of this road are classified as '**Medium-High**' and '**High**', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.

Crash history from NZTA's CAS database shows 7 crashes in the last 5 years for the third section including 1 fatal, 0 serious, 2 minor, and 4 non-injury crashes.

The existing speed of 80km/h is unchanged for the fourth section of Clarks Beach Road due to a multitude of factors. These being the medium lane width, narrow shoulder width, curved nature of the road, high road-side hazards and mean operating speed (83 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.

A proposed speed limit of 50 km/h was selected for the fifth section of Clarks Beach Road due to a multitude of factors. These being the medium lane width, narrow shoulder width, curved nature of the road, high road-side hazards. All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road. It is proposed to move the current 80/50 speed limit change point further west to Dell Road to better align with the future development of residential land use along this section of Clarks Beach Road.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Crash history from NZTA's CAS database shows 1 crash in the last 5 years for the fifth section including 0 fatal, 0 serious, 0 minor, and 1 non-injury crash.

After considering all of the above factors, the existing speed limits on Clarks Beach Road in Clarks Beach is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for the first section of Clarks Beach Road is 50 km/h which is higher than the speed limit recommended by the Speed Management Guide (40 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (48 km/h) supports the existing speed limit.

The proposed safe and appropriate speed limit is 50 km/h for the second and fifth sections which is aligned with the recommended safe and appropriate speed.

The recommended safe and appropriate speed limit for the third and fourth sections of Clarks Beach Road is 80 km/h which is higher than the Speed Management Guide recommendation (<80 km/h) but are considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (78-83 km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Cochrane Road (Pollok)**

The speed limit on Cochrane Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cochrane Road connects to Awhitu Road to the east. This road provides access to residential properties.</p> <p>This section is approximately 0.61 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Cochrane Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as <i>"rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 26 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.61
Annual Daily Traffic	104

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

#### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.48. For rural areas this corresponds to an IRR band of **Medium**.

#### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Cochrane Road.

Cochrane Road is a self-explaining road as the mean operating speeds (26 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Cochrane Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Cochrane Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (26 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a medium risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Cochrane Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Cochrane Road is 60 km/h which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (26 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

### Speed Limit Review – Colbeck Road (Awhitu)

The speed limit on Colbeck Road, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

#### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Colbeck Road connects to Awhitu Road to the west. This road provides access to residential properties.</p> <p>This section is approximately 1.51 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Colbeck Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 83 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 37 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.51
Annual Daily Traffic	83

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.28. For rural areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Colbeck Road.

Colbeck Road is a self-explaining road as the mean operating speeds (37 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Colbeck Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 80 km/h was selected for Colbeck Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, straight nature of the road, moderate road-side hazards and low mean operating speed (37 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Colbeck Road in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is lower than the recommended safe and appropriate speed (80km/h) because of the very narrow road width, road function, and low operation speed (37km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Constable Road (Waiuku)**

The speed limit on Constable Road, between urban traffic area boundary (Waiuku) and Karioitahi Road, Waiuku has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Constable Road connects to King Street to the east and Karioitahi Road to the west. This road provides access to residential properties.</p> <p>This section is approximately 1.07 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian amenities or on-street parking along this section. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 0 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.</p> <p>Constable Road is identified as one of the top 10% DSI saving network sections for New Zealand.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Constable Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There

Requirement	Comments
	<i>may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 5,133 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 76 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>King Street:</b> 50 km/h</li> <li>• <b>Karioitahi Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	1.07
Annual Daily Traffic	5,133

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**

- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	2 to <3	1.25
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	1000 to <6000	1.40

The Infrastructure Risk Rating Score is 1.62. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 80 km/h for Constable Road, between urban traffic area boundary (Waiuku) and Karioitahi Road*

Constable Road is a self-explaining road as the mean operating speeds (76 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Constable Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 80 km/h was selected for Constable Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (76 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 1 minor, and 0 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Constable Road in Waiuku, is not considered to be a safe and appropriate speed limit for this road.

The recommended safe and appropriate speed limit for Constable Road is 80 km/h which is higher than the Speed Management Guide recommendation (<80km/h) but are considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (76 km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Cooper Road (Pollok)**

The speed limit on Cooper Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cooper Road connects to Awhitu Road to the west and Te Toro Road to the east. This road provides access to residential properties.</p> <p>This section is approximately 2.99 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 1 serious, 0 minor and 1 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crash. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Cooper Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as <i>"rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 55 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> <li>• <b>Te Toro Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	1
Corridor Length (km)	2.99
Annual Daily Traffic	41

- The Collective Risk score is 0.067. For rural areas this corresponds to a Collective Risk band of **Low-Medium**
- The Personal Risk score is 447.02. For rural areas this corresponds to a Personal Risk band of **High**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.05. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Cooper Road.

Cooper Road is a self-explaining road as the mean operating speeds (55 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Cooper Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Cooper Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (55 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road. Due to adverse crash history on the road, the collective and personal risk of this road are classified as 'Low-Medium' and 'High', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 1 serious, 0 minor, and 1 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Cooper Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Coronation Road (Pollok)**

The speed limit on Coronation Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Coronation Road connects to Kohekohe-Karioitahi Road to the south and Creamery Road to the north. This road provides access to residential properties.</p> <p>This section is approximately 0.87 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Coronation Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 15 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 22 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Kohekohe-Karioitahi Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Creamery Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.87
Annual Daily Traffic	15

- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.80
Adjacent land use	Rural residential	1.50
Intersection density (per km)	2 to <3	1.25
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.58. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Coronation Road.*

Coronation Road is a self-explaining road as the mean operating speeds (22 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Coronation Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Coronation Road due to a multitude of factors. These being the unsealed road surface, narrow lane and very narrow shoulder width, winding nature of the road, severe road-side hazards and low mean operating speed (22 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road. <sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Coronation Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Coronation Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80 km/h), this is considered appropriate based on the function of the road and the mean operating speed (22 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Craig Road (Pollok)

Craig Road, Pollok, is divided into two sections as follows: <sup>1</sup>

- Section 1: Craig Road between Awhitu Road and Keogh Road
- Section 2: Craig Road between Keogh Road and western end of Craig Road.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Craig Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Craig Road connects to Awhitu Road to the east. This road provides access to residential properties.	
	This section is approximately 2.04 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.26 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is an unsealed undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	and Serious Injury (DSI) crashes.	and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Craig Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 208 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 20 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 33 km/h.	No mean speed available in Megamaps.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>	

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	2.04	0.26
Annual Daily Traffic	208	20

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Unsealed	10.00
Road alignment	Curved	1.80	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural residential	1.50	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15	1 to <2	1.15
Access density (per km)	2 to <5	1.03	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 1.73. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.91. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Craig Road.*

Craig Road is a self-explaining road as the mean operating speeds (33 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Craig Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section of Craig Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (33 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>2</sup>

A proposed speed limit of 60 km/h was selected for the second section of Craig Road due to the short length of the section. These being the unsealed road surface, narrow lane width, very narrow shoulder width, straight nature of the road, high road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Craig Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h for the road which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Creamery Road (Pollok)**

Creamery Road, Pollok, is divided into two sections as follows: <sup>1</sup>

- Section 1: Creamery Road between Awhitu Rd and Keogh Road
- Section 2: Creamery Road between Keogh Road and Kelland Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Creamery Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Creamery Road connects to Awhitu Road to the east and Kelland Road to the west. This road provides access to residential properties.	
	This section is approximately 1.56 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.71 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	and Serious Injury (DSI) crashes.	and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Creamery Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 374 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 57 km/h.	This section has a mean operating speed of 51 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> <li>• <b>Kelland Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>	

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2

Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	1.56	0.71
Annual Daily Traffic	374	104

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Curved	1.80	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural residential	1.50	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15	1 to <2	1.15
Access density (per km)	5 to <10	1.06	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 1.75. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.51. For rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 60 km/h for the first section and 80 km/h for the second section.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60 km/h on Creamery Road between Awhitu Rd and Keogh Road
- 60 km/h on Creamery Road between Keogh Road and Kelland Road

Creamery Road is a self-explaining road as the mean operating speeds (57 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Creamery Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section of Creamery Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (57 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>2</sup>

A proposed speed limit of 60 km/h was selected for the second section of Creamery Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (51 km/hr). All of these factors contribute to the road's 'Medium' IRR score, making it a medium risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Creamery Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h for the first section which is aligned with the recommended safe and appropriate speed.

The proposed safe and appropriate speed limit for the second section of Creamery Road is 60 km/h which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (51 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Dickey Road (Manukau Heads)

The speed limit on Dickey Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Dickey Road connects to Manukau Heads Road to the east. This road provides access to residential properties.
	This section is approximately 0.86 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Dickey Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using on-site information and geomaps. The IRR defines Remote rural as "only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Manukau Heads Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.86
Annual Daily Traffic	8

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Tortuous	6.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Remote rural	1.00
Intersection density (per km)	1 to <2	1.15
Access density (per km)	1 to <2	1.01
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.30. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Dickey Road.*

Dickey Road is a self-explaining road as the mean operating speeds (20 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Dickey Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Dickey Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, tortuous nature of the road, moderate road-side hazards and low mean operating speed (20 km/h). All of these factors contribute to the road's 'High' IRR score, making it a High-risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Dickey Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Dickey Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80 km/h), this is considered appropriate based on the function of the road and the mean operating speed (20 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Dodd Road (Manukau Heads)

The speed limit on Dodd Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Dodd Road connects to Wattle Bay Road to the south. This road provides access to residential properties.
	This section is approximately 0.23 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Dodd Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 30 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Wattle Bay Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.23
Annual Daily Traffic	50

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.48. For rural areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Dodd Road.*

Dodd Road is a self-explaining road as the mean operating speeds (30 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Dodd Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Dodd Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road, moderate road-side hazards and low mean operating speed (30 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Dodd Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Dodd Road is 40 km/h which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (30 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Dominkovich Road (Pollok)

The speed limit on Dominkovich Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Dominkovich Road connects to Awhitu Road to the west. This road provides access to residential properties.
	This section is approximately 0.89 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Dominkovich Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 19 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 23 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.89
Annual Daily Traffic	19

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.45. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Dominkovich Road.*

Dominkovich Road is a self-explaining road as the mean operating speeds (23 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Dominkovich Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Dominkovich Road due to a multitude of factors. These being the unsealed road surface, narrow lane and very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (23 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Dominkovich Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Dominkovich Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80 km/h), this is considered appropriate based on the function of the road and the mean operating speed (23 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Douglas Road (Pollok)

The speed limit on Douglas Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Douglas Road connects to Awhitu Road to the north. This road provides access to residential properties.
	This section is approximately 1.1 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Douglas Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 72 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.1
Annual Daily Traffic	72

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.73. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Douglas Road.*

Douglas Road is a self-explaining road as the mean operating speeds (42 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Douglas Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Douglas Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (42 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Douglas Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Duncan Road (Awhitu)

The speed limit on Duncan Road, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Duncan Road connects to Matakawau Road to the north. This road provides access to residential properties.
	This section is approximately 0.12 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is a two-way, two lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Duncan Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural towns using on-site information and geomaps. The IRR defines Rural towns as " <i>mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 292 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 30 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Matakawau Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.12
Annual Daily Traffic	292

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two Lane Undivided	3.7
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural towns	2.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	>20	1.30
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.6. For rural areas this corresponds to an IRR band of **Low**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 40 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Duncan Road.*

Duncan Road is a self-explaining road as the mean operating speeds (30 km/h) are below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Duncan Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Duncan Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, straight nature of the road, moderate road-side hazards and low mean operating speed (30 km/h). All of these factors contribute to the road's 'Low' IRR score, making it a Medium-risk road.

After considering all of the above factors, the existing speed limit of 50 km/h on Duncan Road in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Fielding Road (Awhitu)

The speed limit on Fielding Road, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Fielding Road connects to Awhitu Road to the west. This road provides access to residential properties.
	This section is approximately 0.29 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Fielding Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 31 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 39 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.29
Annual Daily Traffic	31

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Tortuous	6.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.29. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 80 km/h for the full length of Fielding Road.*

Fielding Road is a self-explaining road as the mean operating speeds (39 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Fielding Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 80 km/h was selected for Fielding Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, tortuous nature of the road, high road-side hazards and low mean operating speed (39 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Fielding Road in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The recommended safe and appropriate speed limit for Fielding Road is 80 km/h which is higher than the Speed Management Guide recommendation (<80km/h) but is considered appropriate when considering the short length of the road, and the proposed speed of the adjoining road (Awhitu Road 80 km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Fisher Road (Kariotahi)

The speed limit on Fisher Road, Kariotahi has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fisher Road connects to Kohekohe-Kariotahi Road to the west and Gazelle Road to the north. This road provides access to residential properties.</p> <p>This section is approximately 1.05 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Fisher Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using on-site information and geomaps. The IRR defines Remote rural as "only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 49 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 41 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Kohekohe-Kariotahi Road:</b> 100 km/h (proposed 60 km/h)</li> <li><b>Gazelle Road:</b> 100 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.05
Annual Daily Traffic	49

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Remote rural	1.00
Intersection density (per km)	2 to <3	1.25
Access density (per km)	1 to <2	1.01
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.31. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/ h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Fisher Road.*

Fisher Road is a self-explaining road as the mean operating speeds (41 km/h) are near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Fisher Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Fisher Road due to a multitude of factors. These being the unsealed road surface, narrow lane and very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (41 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high-risk road. <sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Fisher Road in Kariotahi, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Fisher Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80km/ h), this is considered appropriate based on the function of the road and the mean operating speed (41 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Furniss Road (Pollok)

The speed limit on Furniss Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Furniss Road connects to Waipipi Wharf Road to the north. This road provides access to residential properties.
	This section is approximately 1.03 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Furniss Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 39 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Waipipi Wharf Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.03
Annual Daily Traffic	39

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Unsealed	10.00
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.18. For rural areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Furniss Road.*

Furniss Road is a self-explaining road as the mean operating speeds (42 km/h) are near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Furniss Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Furniss Road due to a multitude of factors. These being the unsealed road surface, narrow lane and very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (42 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road. <sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Furniss Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Furniss Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80km/h), this is considered appropriate based on the function of the road and the mean operating speed (42 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – G Irwin Road (Manukau Heads)

The speed limit on G Irwin Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	G Irwin Road connects to Manukau Heads Road to the east. This road provides access to residential properties.
	This section is approximately 0.73 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of G Irwin Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using on-site information and geomaps. The IRR defines Remote rural as "only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 9 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 21 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Manukau Heads Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.73
Annual Daily Traffic	9

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Remote rural	1.00
Intersection density (per km)	1 to <2	1.15
Access density (per km)	1 to <2	1.01
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.07. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of G Irwin Road.*

G Irwin Road is a self-explaining road as the mean operating speeds (21 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of G Irwin Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for G Irwin Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, winding nature of the road, moderate road-side hazards and low mean operating speed (21 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on G Irwin Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for G Irwin Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80km/h), this is considered appropriate based on the function of the road and the mean operating speed (21 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Gap Road (Manukau Heads)

The speed limit on Gap Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Gap Road connects to Wattle Bay Road to the south. This road provides access to residential properties.
	This section is approximately 0.25 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There is on-street parking along this section. There are no pedestrian amenities or cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Gap Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using on-site information and geomaps. The IRR defines Urban residential as "dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 21 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Wattle Bay Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.25
Annual Daily Traffic	50

- The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Urban residential	3.00
Intersection density (per km)	<1	1.00
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.95. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Gap Road.*

Gap Road is a self-explaining road as the mean operating speeds (21 km/h) are below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Gap Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Gap Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (21 km/h). All of these factors contribute to the road's 'Low-Medium' IRR score, making it a Low-Medium-risk road.

After considering all of the above factors, the existing speed limit of 50 km/h on Gap Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Gazelle Road (Kariotahi)

Gazelle Road, Kariotahi, is divided into two sections as follows:<sup>1</sup>

- Section 1: Gazelle Road between Kaihau Road and 300m southwest of Kaihau Road
- Section 2: Gazelle Road between 300m southwest of Kaihau Road and Fisher Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Gazelle Road, Kariotahi has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Gazelle Road connects to Kaihau Road to the north and Fisher Road to the south. This road provides access to residential properties.	
	This section is approximately 0.27 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 0.72 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is an unsealed, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	and Serious Injury (DSI) crashes.	and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Gazelle Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 25 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 25 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 27 km/h.	This section has a mean operating speed of 34 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Kaihau Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Fisher Road:</b> 100 km/h (proposed 40 km/h)</li> </ul>	

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	0.27	0.72
Annual Daily Traffic	25	25

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**

Intersection density (per km)	1 to <2	1.15	1 to <2	1.15
Access density (per km)	2 to <5	1.03	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 1.73. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.69. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation is

- 60 km/h on Gazelle Road between Kaihau Road and 300m southwest of Kaihau Road
- 40 km/h on Gazelle Road between 300m southwest of Kaihau Road and Fisher Road

Gazelle Road is a self-explaining road as the mean operating speeds (27 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Gazelle Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section of Gazelle Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (27 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>2</sup>

A proposed speed limit of 40 km/h was selected for the second section of Gazelle Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, tortuous nature of the road, high road-side hazards and low mean operating speed (34 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Gazelle Road in Kariotahi, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h for the first section which is aligned with the recommended safe and appropriate speed.

The proposed safe and appropriate speed limit for the second section of Gazelle Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80km/h);, this is considered appropriate based on the function of the road and the mean operating speed (34 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Given Road (Pollok)**

Given Road, Pollok, is divided into two sections as follows: <sup>1</sup>

- Section 1: Given Road between Awhitu Road and Cemetery Road
- Section 2: Given Road between Cemetery Road and Lees Gully Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Given Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Given Road connects to Awhitu Road to the west and Lees Gully Road to the east. This road provides access to residential properties.	
	This section is approximately 1.67 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 1.36 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	and Serious Injury (DSI) crashes.	and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Given Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 93 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 93 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 47 km/h.	This section has a mean operating speed of 47 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> <li>• <b>Lees Gully Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>	

**Step 2: Determine the road safety metrics**

- Section 2
  - The Infrastructure Risk Rating Score is 2.11. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60 km/h on Given Road between Awhitu Road and Cemetery Road
- 60 km/h on Given Road between Cemetery Road and Lees Gully Road

Given Road is a self-explaining road as the mean operating speeds (47 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Given Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section of Given Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (47 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>2</sup>

A proposed speed limit of 60 km/h was selected for the second section of Given Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, severe road-side hazards and low mean operating speed (47 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Given Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Gleeson Road (Pollok)

The speed limit on Gleeson Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Gleeson Road connects to Kohekohe-Karioitahi Road to the west and Awhitu Road to the east. This road provides access to residential properties.</p> <p>This section is approximately 3.94 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Gleeson Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 230 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 49 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Kohekohe-Karioitahi Road:</b> 100 km/h (proposed 60 km/h)</li> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	3.94
Annual Daily Traffic	230

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**

- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.69. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Gleeson Road.*

Gleeson Road is a self-explaining road as the mean operating speeds (49 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Gleeson Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Gleeson Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (49 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Gleeson Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Gordon Road (Pollok)

The speed limit on Gordon Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Gordon Road connects to Awhitu Road to the west. This road provides access to residential properties.
	This section is approximately 2.29 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Gordon Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 37 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	2.29
Annual Daily Traffic	104

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.67. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Gordon Road.*

Gordon Road is a self-explaining road as the mean operating speeds (37 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Gordon Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Gordon Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (37 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Gordon Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Grahams Beach Road (Manukau Heads)

Grahams Beach Road, Manukau Heads, is divided into three sections as follows:<sup>1</sup>

- Section 1: Grahams Beach Road between Tram Gully Road and Andrew Pye Road
- Section 2: Grahams Beach Road between Andrew Pye Road and 290m west of Greenock Drive
- Section 3: Grahams Beach Road between 290m west of Greenock Drive end the eastern end of Grahams Beach Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Grahams Beach Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Grahams Beach Road connects to Tram Gully Road to the west and Greenock Drive to the east. This road provides access to residential properties.		
	This section is approximately 3.71 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 1.03 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 0.58 km in length. The IRR defines Rural Residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and	The adjacent land use is classified as Rural towns using on-site information and geomaps. The IRR defines Rural towns as "mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present."

Requirement	Comments		
	Section 1	Section 2	Section 3
	<i>cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>	<i>cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>	
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 384 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 121 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 121 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 80 km/h.	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 61 km/h.	This section has a mean operating speed of 62 km/h.	This section has a mean operating speed of 45 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Tram Gully Road:</b> 100 km/h (proposed 60 km/h)</li> <li><b>Greenock Drive:</b> 50 km/h (proposed 40 km/h)</li> </ul>		

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data		
	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	0	0	0
DSI crashes during the period	0	0	0
Corridor Length (km)	3.71	1.03	0.58
Annual Daily Traffic	384	121	121

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 3
  - The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2		Section 3	
	Category	Risk Score	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Curved	1.80	Curved	1.80	Curved	1.80
Carriageway width	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28	High	2.28	High	2.28
Adjacent land use	Rural residential	1.50	Rural residential	1.50	Rural towns	2.50
Intersection density (per km)	1 to <2	1.15	1 to <2	1.15	1 to <2	1.15
Access density (per km)	2 to <5	1.03	2 to <5	1.03	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 1.68. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.68. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 3
  - The Infrastructure Risk Rating Score is 1.93. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h for sections 1 and 2.

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h for section 3.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 60 km/h on Grahams Beach Road between Tram Gully Road and Andrew Pye Road
- 60 km/h on Grahams Beach Road between Andrew Pye Road and 290m west of Greenock Drive
- 40 km/h on Grahams Beach Road between 290m west of Greenock Drive and the eastern end of Grahams Beach Road

Grahams Beach Road is a self-explaining road as the mean operating speeds are near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Grahams Beach Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first and second sections of Grahams Beach Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (61-62 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>2</sup>

A proposed speed limit of 40 km/h was selected for Grahams Beach Road due to a multitude of factors. These being the urban land use, medium lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (45 km/hr). All of these factors contribute to the road's 'Low-Medium' IRR score, making it a Low-Medium-risk road.

After considering all of the above factors, the existing speed limits of 100, 80 and 50 km/h on Grahams Beach Road in Manukau Heads, are not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h for the first and second sections of Grahams Beach Road which is aligned with the recommended safe and appropriate speed.

The proposed safe and appropriate speed limit is 40 km/h for the third section which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Greenfield Road (Pollok)

The speed limit on Greenfield Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Greenfield Road connects to Te Toro Road to the west. This road provides access to residential properties.
	This section is approximately 0.27 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Greenfield Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural towns using on-site information and geomaps. The IRR defines Rural towns as " <i>mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Te Toro Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.27
Annual Daily Traffic	41

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Medium lane, Narrow shoulder	1.45
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural towns	2.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	>20	1.30
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.92. For rural areas this corresponds to an IRR band of **Low-Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Greenfield Road.*

Greenfield Road is a self-explaining road as the mean operating speeds (42 km/h) are near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Greenfield Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Greenfield Road due to a multitude of factors. These being the medium lane and narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (42 km/hr). All of these factors contribute to the road's 'Low-Medium' IRR score, making it a Low-Medium-risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Greenfield Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Greenock Drive (Manukau Heads)

The speed limit on Greenock Drive, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Greenock Drive connects to Grahams Beach Road to the north. This road provides access to residential properties.
	This section is approximately 0.45 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Greenock Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 10 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 36 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Grahams Beach Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.45
Annual Daily Traffic	10

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.75. For rural areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Greenock Drive.*

Greenock Drive is a self-explaining road as the mean operating speeds (36 km/h) are below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Greenock Drive was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Greenock Drive due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (36 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 50 km/h on Greenock Drive in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Greenock Drive is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80km/h), this is considered appropriate based on the function of the road and the mean operating speed (36 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Hamilton Road (Awhitu)

Hamilton Road, Awhitu, is divided into three sections as follows: <sup>1</sup>

- Section 1: Hamilton Road between Manukau Heads Road and 2255m south of Manukau Heads Road
- Section 2: Hamilton Road between 2255m south of Manukau Heads Road and 3320m south of Manukau Heads Road
- Section 2: Hamilton Road between 3320m south of Manukau Heads Road and southern end of Hamilton Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Hamilton Road, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>

Adjacent land use	Rural residential	1.50	Rural residential	1.50	Rural residential	1.50
Intersection density (per km)	<1	1.00	<1	1.00	<1	1.00
Access density (per km)	2 to <5	1.03	5 to <10	1.06	>20	1.30
Traffic volume (vpd)	<1000	1.00	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.29. For rural areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.64. For rural areas this corresponds to an IRR band of **High**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.30. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h for all three sections.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60 km/h on Hamilton Road between Manukau Heads Road and 2255m south of Manukau Heads Road (Section 1)
- 60 km/h on Hamilton Road between 2255m south of Manukau Heads Road and 3320m south of Manukau Heads Road (Section 2)
- 60 km/h on Hamilton Road between 3320m south of Manukau Heads Road and southern end of Hamilton Road (Section 3)

Hamilton Road is a self-explaining road as the mean operating speeds (37 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Hamilton Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first and third section of Hamilton Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, tortuous nature of the road, high-severe road-side hazards and low mean operating speed (37 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>2</sup>

Although an unsealed road, a proposed speed limit of 60 km/h was also selected for the second section of Hamilton Road, due to the second section being too short for a speed change between sections 1 and 3 which have proposed speeds of 60 km/h.

After considering all of the above factors, the existing speed limit of 100 km/h on Hamilton Road in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Hamlin Road (Pollok)

The speed limit on Hamlin Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hamlin Road connects to J Renall Road to the west and Lees Gully Road to the east. This road provides access to residential properties.</p> <p>This section is approximately 1.23 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Hamlin Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 14 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 49 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>J Renall Road:</b> 100 km/h (proposed 60 km/h)</li> <li><b>Lees Gully Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.23
Annual Daily Traffic	14

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.68. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Hamlin Road.*

Hamlin Road is a self-explaining road as the mean operating speeds (49 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Hamlin Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Hamlin Road due to a multitude of factors. These being the medium lane and very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (49 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Hamlin Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Hartner Road (Manukau Heads)

Hartner Road, Manukau Heads, is divided into two sections as follows: <sup>1</sup>

- Section 1: Hartner Road between 430m east of Manukau Heads Road to eastern end of Hartner Road
- Section 2: Hartner Road between Manukau Heads Road to 430m east of Manukau Heads Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Hartner Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Hartner Road connects to Manukau Heads Road to the south. This road provides access to residential properties.	
	This section is approximately 0.71 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 0.43 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is an unsealed, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	and Serious Injury (DSI) crashes.	and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Hartner Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using on-site information and geomaps. The IRR defines Remote rural as " <i>only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry.</i> "	The adjacent land use is classified as Remote rural using on-site information and geomaps. The IRR defines Remote rural as " <i>only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 21 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 21 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 22 km/h.	This section has a mean operating speed of 22 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Manukau Heads Road:</b> 100 km/h (proposed 40 km/h)</li> </ul>	

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	0.71	0.43
Annual Daily Traffic	21	21

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Unsealed	10.00	Two-lane undivided	3.70
Road alignment	Winding	3.50	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	Moderate	1.43
Adjacent land use	Remote rural	1.00	Remote rural	1.00
Intersection density (per km)	<1	1.00	<1	1.00
Access density (per km)	1 to <2	1.01	1 to <2	1.01
Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.21. For rural areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.29. For rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h for the first section.

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h for the second section.

## Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 40 km/h on Hartner Road between 430m east of Manukau Heads Road to eastern end of Hartner Road
- 40 km/h on Hartner Road between Manukau Heads Road to 430m east of Manukau Heads Road

Hartner Road is a self-explaining road as the mean operating speeds (22 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Hartner Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for the first section of Hartner Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (22 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>2</sup>

A proposed speed limit of 40 km/h was selected for the second section of Hartner Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, moderate road-side hazards and low mean operating speed (22 km/hr). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Hartner Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for the first section of Hartner Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80km/h), this is considered appropriate based on the function of the road and the mean operating speed (22 km/h) supports the reduction.

The recommended safe and appropriate speed limit for the second section of Hartner Road is 40 km/h which is lower than the Speed Management Guide recommendation (80 km/h) but are considered appropriate when considering the nature and function of the road. A lower speed limit is likely to be credible and supported by the public due to the existing operating speeds (22 km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Harvey Road (Waiuku)

The speed limit on Harvey Road, Waiuku has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Harvey Road connects to Constable Road to the east and Park Road to the west. This road provides access to residential properties.
	This section is approximately 1.02 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Harvey Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 57 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Constable Road: 100 km/h (proposed 80 km/h)</li> <li>• Park Road: 100 km/h (proposed 60 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.02
Annual Daily Traffic	260

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

#### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural Residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.73. For rural areas this corresponds to an IRR band of **Medium-High**.

#### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Harvey Road.

Harvey Road is a self-explaining road as the mean operating speeds (57 km/h) are near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Harvey Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Harvey Road due to a multitude of factors, these being the narrow lane and very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (57 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Harvey Road in Waiuku, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Hatton Road (Awhitu)**

The speed limit on Hatton Road, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hatton Road connects to Awhitu Road to the west. This road provides access to residential properties.</p> <p>This section is approximately 3.36 km in length. It is classified as a Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Hatton Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 114 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 34 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	3.36
Annual Daily Traffic	114

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

#### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.67. For rural areas this corresponds to an IRR band of **Medium-High**.

#### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Hatton Road.*

Hatton Road is a self-explaining road as the mean operating speeds (34 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Hatton Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Hatton Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (34 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Hatton Road in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Hudson Road (Manukau Heads)**

Hudson Road, Manukau Heads, is divided into two sections as follows: <sup>1</sup>

- Section 1: Hudson Road between Big Bay Road and 160m west of Seaview Terrace
- Section 2: Hudson Road between 160m west of Seaview Terrace and Logan Drive

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Hudson Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Hudson Road connects to Big Bay Road to the west and Logan Drive to the east. This road provides access to residential properties.	
	This section is approximately 0.93 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 0.27 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	and Serious Injury (DSI) crashes.	and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Hudson Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "	The adjacent land use is classified as Urban residential using on-site information and geomaps. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 34 km/h.	This section has a mean operating speed of 34 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Big Bay Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Logan Drive:</b> 50 km/h (proposed 40 km/h)</li> </ul>	

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	0.93	0.27
Annual Daily Traffic	100	100

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Straight	1.00	Curved	1.80
Carriageway width	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural residential	1.50	Urban residential	3.00
Intersection density (per km)	<1	1.00	5 to <10	2.60
Access density (per km)	2 to <5	1.03	>20	1.30
Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 1.37. For rural areas this corresponds to an IRR band of **Medium**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.44. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h for the first section.

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h for the second section.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60 km/h on Hudson Road between Big Bay Road and 160m west of Seaview Terrace
- 40 km/h on Hudson Road between 160m west of Seaview Terrace and Logan Drive

Hudson Road is a self-explaining road as the mean operating speeds (34 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Hudson Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section of Hudson Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (34 km/hr). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

A proposed speed limit of 40 km/h was selected for the second section of Hudson Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (34 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>2</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Hudson Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for the first section of Hudson Road is 60 km/h which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (34 km/h) supports the reduction.

The proposed safe and appropriate speed limit is 40 km/h for the second section which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Hull Road (Waiuku)

The speed limit on Hull Road, Waiuku has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Hull Road connects to Towers Road to the west. This road provides access to residential properties.
	This section is approximately 0.40 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Hull Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 605 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 60 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Towers Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.40
Annual Daily Traffic	605

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.76. For rural areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 80 km/h for the full length of Hull Road.*

Hull Road is a self-explaining road as the mean operating speeds (60 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Hull Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 80 km/h was selected for Hull Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (60 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Hull Road in Waiuku, is not considered to be a safe and appropriate speed limit for this road.

The recommended safe and appropriate speed limit for Hull Road is 80 km/h which is higher than the Speed Management Guide recommendation (>80km/h) but are considered appropriate when considering proposed speeds on adjoining roads and the nature and function of the road.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – J Hull Road (Manukau Heads)

The speed limit on J Hull Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>J Hull Road connects to Manukau Heads Road to the east. This road provides access to residential properties.</p> <p>This section is approximately 0.48 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of J Hull Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using on-site information and geomaps. The IRR defines Remote rural as "only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 25 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Manukau Heads Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.48
Annual Daily Traffic	8

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Remote rural	1.00
Intersection density (per km)	2 to <3	1.25
Access density (per km)	1 to <2	1.01
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.82. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of J Hull Road.*

J Hull Road is a self-explaining road as the mean operating speeds (25 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of J Hull Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for J Hull Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, curved nature of the road, moderate road-side hazards and low mean operating speed (25 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on J Hull Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for J Hull Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80km/h), this is considered appropriate based on the function of the road and the mean operating speed (25 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – J Irwin Road (Awhitu)

The speed limit on J Irwin Road, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	J Irwin Road connects to Manukau Heads Road to the east. This road provides access to residential properties.
	This section is approximately 0.41 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of J Irwin Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using on-site information and geomaps. The IRR defines Remote rural as "only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 17 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Manukau Heads Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.41
Annual Daily Traffic	17

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Unsealed	10.00
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Remote rural	1.00
Intersection density (per km)	2 to <3	1.25
Access density (per km)	1 to <2	1.01
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.82. For rural areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of J Irwin Road.*

J Irwin Road is a self-explaining road as the mean operating speeds (20 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of J Irwin Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for J Irwin Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, curved nature of the road, moderate road-side hazards and low mean operating speed (20 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on J Irwin Road in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for J Irwin Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80km/h), this is considered appropriate based on the function of the road and the mean operating speed (20 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – J Renall Road (Pollok)

The speed limit on J Renall Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>J Renall Road connects to Awhitu Road to the west and Lees Gully Road to the east. This road provides access to residential properties.</p> <p>This section is approximately 4.87 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of J Renall Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 51 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 43 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> <li><b>Lees Gully Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	4.87
Annual Daily Traffic	51

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.73. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of J Renall Road.*

J Renall Road is a self-explaining road as the mean operating speeds (43 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of J Renall Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for J Renall Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (43 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road. <sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on J Renall Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Kaihau Road (Kariotahi)

The speed limit on Kaihau Road, Kariotahi has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kaihau Road connects to Kohekohe-Karioitahi Road to the west and Awhitu Road to the east. This road provides access to residential properties.</p> <p>This section is approximately 3.83 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 4 crashes between 2016 and 2020: 0 fatal, 0 serious, 2 minor and 2 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Kaihau Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 166 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 61 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Kohekohe-Karioitahi Road:</b> 100 km/h (proposed 60 km/h)</li> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	2
DSI crashes during the period	0
Corridor Length (km)	3.83
Annual Daily Traffic	166

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**

- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.67. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Kaihau Road.*

Kaihau Road is a self-explaining road as the mean operating speeds (61 km/h) are near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Kaihau Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Kaihau Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (61 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road. <sup>1</sup>

Crash history from NZTA's CAS database shows 4 crashes in the last 5 years including 0 fatal, 0 serious, 2 minor, and 2 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Kaihau Road in Kariotahi, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Karioitahi Road (Waiuku / Karioitahi)

Karioitahi Road, Waiuku, is divided into three sections as follows:<sup>1</sup>

- Section 1: Karioitahi Road between urban traffic area boundary (Waiuku) and Constable Road
- Section 2: Karioitahi Road between Constable Road and 1880m west of Kohekohe-Karioitahi Road
- Section 3: Karioitahi Road between 1880m west of Kohekohe-Karioitahi Road and western end of Karioitahi Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Karioitahi Road, Waiuku / Karioitahi has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Karioitahi Road connects to the urban traffic area boundary (Karioitahi Road) and Constable Road to the east. This road provides access to residential properties.		
	This section is approximately 1.13 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 5.36 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.64 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no	This section is a two-way, two-lane, undivided road. There are no	This section is a two-way, two-lane, undivided road. There are no

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 0 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 14 crashes between 2016 and 2020: 0 fatal, 0 serious, 5 minor and 9 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
	Karioitahi Road is identified as one of the top 10% DSI saving network sections for New Zealand.		
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Karioitahi Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site	The adjacent land use is classified as Rural residential using on-site	The adjacent land use is classified as Remote rural using on-site information

Requirement	Comments		
	Section 1	Section 2	Section 3
	information and geomaps. The IRR defines Rural Residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	and geomaps. The IRR defines Remote rural as "only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 450 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 1223 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 1223 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 59 km/h.	This section has a mean operating speed of 65 km/h.	This section has a mean operating speed of 49 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Urban traffic area boundary (Karioitahi Road, Waiuku):</b> 50 km/h</li> <li><b>Constable Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>		

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data		
	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	1	5	0
DSI crashes during the period	0	0	0
Corridor Length (km)	1.13	5.36	0.64
Annual Daily Traffic	450	1223	1223

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 3
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2		Section 3	
	Category	Risk Score	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Straight	1.00	Curved	1.80	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Medium lane, Very narrow shoulder	1.79	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28	High	2.28
Adjacent land use	Rural residential	1.50	Rural residential	1.50	Remote rural	1.00
Intersection density (per km)	1 to <2	1.15	1 to <2	1.15	<1	1.00
Access density (per km)	10 to <20	1.10	5 to <10	1.06	1 to <2	1.01
Traffic volume (vpd)	<1000	1.00	1000 to <6000	1.40	1000 to <6000	1.40

- Section 1
  - The Infrastructure Risk Rating Score is 1.51. For rural areas this corresponds to an IRR band of **Medium**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.84. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 3
  - The Infrastructure Risk Rating Score is 1.81. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is:

- 80 km/h between urban traffic area boundary (Waiuku) and Constable Road (Section 1)
- <80km/h between Constable Road and 1880m west of Kohekohe-Karioitahi Road (Section 2)
- <80 km/h between 1880m west of Kohekohe-Karioitahi Road and western end of Karioitahi Road (Section 3)

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 80 km/h on Karioitahi Road between urban traffic area boundary (Waiuku) and Constable Road (Section 1)
- 80 km/h on Karioitahi Road between Constable Road and 1880m west of Kohekohe-Karioitahi Road (Section 2)
- 60 km/h on Karioitahi Road between 1880m west of Kohekohe-Karioitahi Road and western end of Karioitahi Road (Section 3)

Karioitahi Road is a self-explaining road as the mean operating speeds (49-65 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Karioitahi Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 80 km/h was selected for the first section of Karioitahi Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, straight nature of the road, high road-side hazards. All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

Crash history from NZTA's CAS database shows 1 crash in the last 5 years for the first section including 0 fatal, 0 serious, 1 minor, and 0 non-injury crashes.

A proposed speed limit of 80 km/h was selected for Karioitahi Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, high road-side hazards and the long straight sections of the road. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>2</sup>

Crash history from NZTA's CAS database shows 14 crashes in the last 5 years for the second section including 0 fatal, 0 serious, 5 minor, and 9 non-injury crashes.

A proposed speed limit of 60 km/h was selected for the third section Karioitahi Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, High road-side hazards and low mean operating speed (49 km/hr). All of these factors contribute to the road's 'Medium-high' IRR score, making it a high-risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Karioitahi Road in Waiuku / Karioitahi, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for the first section is 80 km/h which is aligned with the recommended safe and appropriate speed.

The recommended safe and appropriate speed limit for the second section of Karioitahi Road is 80 km/h which is higher than the Speed Management Guide recommendation (<80km/h) but are considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (65 km/h).

The proposed safe and appropriate speed limit for the third section of Karioitahi Road is 60 km/h which aligns with the speed limit recommended by the Speed Management Guide (<80 km/h); this is considered appropriate based on the function of the road and the mean operating speed (49 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Kauri Road (Awhitu)

The speed limit on Kauri Road, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Kauri Road connects to Colbeck Road to the west. This road provides access to residential properties.
	This section is approximately 1.61 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Kauri Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 34 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Colbeck Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.61
Annual Daily Traffic	41

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.96. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Kauri Road.*

Kauri Road is a self-explaining road as the mean operating speeds (34 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Kauri Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Kauri Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (34 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Kauri Road in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Kelland Road (Pollok)

Kelland Road, Pollok, is divided into two sections as follows: <sup>1</sup>

- Section 1: Kelland Road between Creamery Road and Kohekohe-Kariotahi Road
- Section 2: Kelland Road between Kohekohe-Kariotahi Road and western end of Kelland Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Kelland Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Kelland Road connects to Creamery Road to the east. This road provides access to residential properties.	
	This section is approximately 1.36 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 0.78 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is an unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 serious, 0 minor and 1 non-injury crashes. This resulted in 0 Death	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 1 serious, 0 minor and 0 non-injury crashes. This resulted in 1 Death

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Kelland Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 26 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 26 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 45 km/h.	This section has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Creamery Road: 100 km/h (proposed 60 km/h)</li> </ul>	

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	1
DSI crashes during the period	0	1
Corridor Length (km)	1.36	0.78
Annual Daily Traffic	26	26

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.26. For rural areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 2695.00. For rural areas this corresponds to a Personal Risk band of **High**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Unsealed	10.00
Road alignment	Tortuous	6.00	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural residential	1.50	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15	1 to <2	1.15
Access density (per km)	2 to <5	1.03	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.26. For rural areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.19. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

## Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 60 km/h on Kelland Road between Creamery Road and Kohekohe-Kariotahi Road
- 40 km/h on Kelland Road between Kohekohe-Kariotahi Road and western end of Kelland Road

Kelland Road is a self-explaining road as the mean operating speeds (42-45 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Kelland Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Kelland Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, tortuous nature of the road, high road-side hazards and low mean operating speed (45 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>2</sup>

Crash history from NZTA's CAS database shows 1 crash in the last 5 years for the first section including 0 fatal, 0 serious, 0 minor, and 1 non-injury crashes.

A proposed speed limit of 40 km/h was selected for Kelland Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (42 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road. Due to adverse crash history on the road, the collective and personal risk of this road are classified as 'High' and 'High', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.

Crash history from NZTA's CAS database shows 1 crash in the last 5 years for the second section including 0 fatal, 1 serious, 0 minor, and 0 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Kelland Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h for the first section which is aligned with the recommended safe and appropriate speed.

The proposed safe and appropriate speed limit for Kelland Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80km/h), this is considered appropriate based on the function of the road and the mean operating speed (42 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Kemp Road (Awhitu)

The speed limit on Kemp Road, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kemp Road connects to Awhitu Road to the south and Awhitu Central Road to the north. This road provides access to residential properties.</p> <p>This section is approximately 4.32 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records <b>5</b> crashes between 2016 and 2020: 1 fatal, 0 serious, 0 minor and 4 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Kemp Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 208 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 55 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> <li>• <b>Awhitu Central Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	1
Corridor Length (km)	4.32
Annual Daily Traffic	208

- The Collective Risk score is 0.05. For rural areas this corresponds to a Collective Risk band of **Low-Medium**
- The Personal Risk score is 61.30. For rural areas this corresponds to a Personal Risk band of **High**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Tortuous	6.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.20. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

## Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Kemp Road.

Kemp Road is a self-explaining road as the mean operating speeds (55 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Kemp Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Kemp Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, tortuous nature of the road, high road-side hazards and low mean operating speed (55 km/h). All of these factors contribute to the road's 'High' IRR score, making it a High-risk road. Due to adverse crash history on the road, the collective and personal risk of this road are classified as '**Low-Medium**' and '**High**', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows 5 crashes in the last 5 years including 1 fatal, 0 serious, 0 minor, and 4 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Kemp Road in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Keogh Road (Pollok)

The speed limit on Keogh Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Keogh Road connects to Craig Road to the north and Creamery Road to the south. This road provides access to residential properties.</p> <p>This section is approximately 1.13 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Keogh Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 62 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 37 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Craig Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Creamery Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.13
Annual Daily Traffic	62

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.04. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Keogh Road.*

Keogh Road is a self-explaining road as the mean operating speeds (37 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Keogh Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Keogh Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (37 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Keogh Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Kohekohe-Karioitahi Road (Karioitahi / Pollok)**

Kohekohe-Karioitahi Road, Pollok, is divided into three sections as follows:<sup>1</sup>

- Section 1: Kohekohe-Karioitahi Road between Awhitu Road and Coronation Road
- Section 2: Kohekohe-Karioitahi Road between Coronation Road and Boundary Road (West)
- Section 3: Kohekohe-Karioitahi Road between Boundary Road (West) and Karioitahi Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Kohekohe-Karioitahi Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Kohekohe-Karioitahi Road connects to Awhitu Road to the north and Karioitahi Road to the south. This road provides access to residential properties.		
	This section is approximately 5.46 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 1.20 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 5.69 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no	This section is a two-way, two-lane, undivided road. There are no	This section is a two-way, two-lane, undivided road. There are no

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments

- Section 1
  - The Infrastructure Risk Rating Score is 1.97. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.01. For rural areas this corresponds to an IRR band of **High**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.02. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

## Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Kohekohe-Karioitahi Road.

Kohekohe-Karioitahi Road is a self-explaining road as the mean operating speeds (between 53 and 57 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Kohekohe-Karioitahi Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section of Kohekohe-Karioitahi Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (55 km/hr). All of these factors contribute to the road's '1.97' IRR score, making it a medium-high-risk road.

Crash history from NZTA's CAS database shows 1 crash in the last 5 years for the first section including 0 fatal, 0 serious, 0 minor, and 1 non-injury crashes.

A proposed speed limit of 60 km/h was selected for the second section Kohekohe-Karioitahi Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (57 km/hr). All of these factors contribute to the road's '2.01' IRR score, making it a high-risk road.<sup>2</sup>

Crash history from NZTA's CAS database shows 1 crash in the last 5 years for the second section including 0 fatal, 0 serious, 1 minor, and 0 non-injury crashes.

A proposed speed limit of 60 km/h was selected for the third section Kohekohe-Karioitahi Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (53 km/hr). All of these factors contribute to the road's '2.02' IRR score, making it a high-risk road. Due to adverse crash history on the road, the collective and personal risk of this road are classified as 'Medium' and 'High', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.

Crash history from NZTA's CAS database shows 4 crashes in the last 5 years for the third section including 0 fatal, 2 serious, 2 minor, and 0 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Kohekohe-Karioitahi Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Kotare Road (Pollok)

The speed limit on Kotare Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Kotare Road connects to Awhitu Road to the east. This road provides access to residential properties.
	This section is approximately 0.15 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Kotare Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) could not be determined from MegaMaps data.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	Mean operating speed could not be determined from MegaMaps data. Site visit operating speed is 30km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.15
Annual Daily Traffic	N/A

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

#### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	1 to <2	1.01
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.95. For rural areas this corresponds to an IRR band of **Medium-High**.

#### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Kotare Road.*

Kotare Road is a self-explaining road as the operating speeds (30 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Kotare Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Kotare Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, curved nature of the road, moderate road-side hazards and low operating speed (30 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Kotare Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Kotare Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80km/h); however, this is considered appropriate based on the function of the road and the operating speed (30 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Lees Gully Road (Pollok)**

The speed limit on Lees Gully Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lees Gully Road connects to Awhitu Road to the south and Given Road to the north. This road provides access to residential properties.</p> <p>This section is approximately 7 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 6 crashes between 2016 and 2020: 0 fatal, 0 serious, 5 minor and 1 non-injury crash. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Lees Gully Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as <i>"rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 384 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 60 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Te Toro Road:</b> 100 km/h (proposed 80 km/h)</li> <li>• <b>Given Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	5
DSI crashes during the period	0
Corridor Length (km)	5.21
Annual Daily Traffic	384

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.02. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Lees Gully Road.*

Lees Gully Road is a self-explaining road as the mean operating speed (60 km/h) is the same as the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Lees Gully Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Lees Gully Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (60 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 5 minor, and 1 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Lees Gully Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Lighthouse Road (Manukau Heads)

The speed limit on Lighthouse Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Lighthouse Road connects to Manukau Heads Road to the east. This road provides access to residential properties.
	This section is approximately 0.2 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Lighthouse Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using on-site information and geomaps. The IRR defines Remote rural as "only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) could not be determined from MegaMaps data.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Manukau Heads Road:</b> 100 km/h (proposed 40 km/h)</li> </ul>

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.2
Annual Daily Traffic	0

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

#### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Remote rural	1.00
Intersection density (per km)	1 to <2	1.15
Access density (per km)	1 to <2	1.01
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.98. For rural areas this corresponds to an IRR band of **Medium-High**.

#### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Lighthouse Road.

Lighthouse Road is a self-explaining road as the mean operating speeds (20 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Lighthouse Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Lighthouse Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low operating speed (20 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Lighthouse Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Lighthouse Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80km/h); however, this is considered appropriate based on the function of the road and the operating speed (20 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Logan Drive (Manukau Heads)**

The speed limit on Logan Drive, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Logan Drive connects to Hudson Road to the north. This road provides access to residential properties.
	This section is approximately 0.21 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Logan Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Low</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using on-site information and geomaps. The IRR defines Urban residential as <i>"dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 31 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Hudson Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.21
Annual Daily Traffic	100

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Low	0.40
Adjacent land use	Urban residential	3.00
Intersection density (per km)	1 to <2	1.15
Access density (per km)	>20	1.30
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.13. For rural areas this corresponds to an IRR band of **Low**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 40 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Logan Drive.*

Logan Drive is a self-explaining road as the mean operating speeds (31 km/h) are below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Logan Drive was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Logan Drive due to a multitude of factors. These being the narrow lane and very narrow shoulder width, straight nature of the road, low road-side hazards and low mean operating speed (31 km/h). All of these factors contribute to the road's 'Low' IRR score, making it a Low-risk road.

After considering all of the above factors, the existing speed limit of 50 km/h on Logan Drive in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Mackinnon Road (Manukau Heads)**

The speed limit on Mackinnon Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Mackinnon Road connects to Big Bay Road to the north. This road provides access to residential properties.
	This section is approximately 0.20 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Mackinnon Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural towns using on-site information and geomaps. The IRR defines Rural towns as " <i>mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 253 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 26 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Big Bay Road: 50 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.20
Annual Daily Traffic	253

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural towns	2.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	>20	1.30
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.59. For rural areas this corresponds to an IRR band of **Low**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 40 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of MacKinnon Road.

MacKinnon Road is a self-explaining road as the mean operating speeds (26 km/h) are below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of MacKinnon Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for MacKinnon Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, straight nature of the road, moderate road-side hazards and low mean operating speed (26 km/h). All of these factors contribute to the road's 'Low' IRR score, making it a Low-risk road.

After considering all of the above factors, the existing speed limit of 50 km/h on MacKinnon Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Manukau Heads Road (Awhitu / Manukau Heads)**

Manukau Heads Road, Awhitu / Manukau Heads, is divided into two sections as follows: <sup>1</sup>

- Section 1: Manukau Heads Road between Awhitu Central Road and 120m south of Lighthouse Road
- Section 2: Manukau Heads Road between 120m south of Lighthouse Road and the northern end of Manukau Heads Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Manukau Heads Road, Awhitu / Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Manukau Heads Road connects to Kemp Road and Awhitu Central Road to the south. This road provides access to residential properties.	
	This section is approximately 7.30 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 0.28 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 1 serious, 1 minor and 0 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 1 serious, 0 minor and 0 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Manukau Heads Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Remote rural using on-site information and geomaps. The IRR defines Remote rural as "only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> &lt;1 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 316 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 316 vehicles per day (vpd).

Requirement	Comments	
	Section 1	Section 2
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 63 km/h.	This section has a mean operating speed of 63 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Kemp Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Awhitu Central Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>	

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	2	1
DSI crashes during the period	1	1
Corridor Length (km)	7.30	0.28
Annual Daily Traffic	316	316

- Section 1
  - The Collective Risk score is 0.03. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 23.8. For rural areas this corresponds to a Personal Risk band of **High**
- Section 2
  - The Collective Risk score is 0.71. For rural areas this corresponds to a Collective Risk band of **High**

- o The Personal Risk score is 614.9. For rural areas this corresponds to a Personal Risk band of **High**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Winding	3.50	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural residential	1.50	Remote rural	1.00
Intersection density (per km)	1 to <2	1.15	2 to <3	1.25
Access density (per km)	1 to <2	1.01	<1	1.00
Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - o The Infrastructure Risk Rating Score is 2.01. For rural areas this corresponds to an IRR band of **High**.
- Section 2
  - o The Infrastructure Risk Rating Score is 1.87. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation is

- 60 km/h on Manukau Heads Road between Awhitu Central Road and 120m south of Lighthouse Road
- 40 km/h on Manukau Heads Road between 120m south of Lighthouse Road and the northern end of Manukau Heads Road

The first section of Manukau Heads Road is a self-explaining road as the mean operating speeds (63 km/h) are near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. The second section of Manukau Heads Road is a challenging conversations road as the mean operating speed (63 km/h) is higher than the proposed safe and appropriate speed. Engineering up of the two sections of Manukau Heads Road were considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section Manukau Heads Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (63 km/hr). All of these factors contribute to the road's 'High' IRR score. Due to adverse crash history on the road, the collective and personal risk of this road are classified as '**Low**' and '**High**', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.<sup>2</sup>

Crash history from NZTA's CAS database shows 2 crashes in the last 5 years for the first section including 0 fatal, 1 serious, 1 minor, and 0 non-injury crashes.

A proposed speed limit of 40 km/h was selected for the second section of Manukau Heads Road due to a multitude of factors. The proposed speed reflects an extension of the 40km/h section of Hartner Road being brought further south to include a curve in Manukau Heads Road which has poor visibility. The access road to Manukau Heads Lighthouse just north of the curve can cause queues to propagate southwards down Manukau Heads Road, which the curve obstructs. Furthermore, the section has a narrow lane width, very narrow shoulder width, winding nature of the road and high road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score. Due to adverse crash history on the road, the collective and personal risk of this road are classified as '**High**' and '**High**', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.

Crash history from NZTA's CAS database shows 1 crash in the last 5 years for the second section including 0 fatal, 1 serious, 0 minor, and 0 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Manukau Heads Road in Awhitu / Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for the first section is 60 km/h which is aligned with the recommended safe and appropriate speed.

The proposed safe and appropriate speed limit for the second section of Manukau Heads Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80km/h), this is considered appropriate based on the function of the road and the visibility around curves supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Marae O Rehia Road (Karioitahi)

The speed limit on Marae O Rehia Road, Karioitahi has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Marae O Rehia Road connects to Awhitu Road to the west. This road provides access to residential properties.
	This section is approximately 1.34 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Marae O Rehia Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 187 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 47 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.34
Annual Daily Traffic	187

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.24. For rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Marae O Rehia Road.*

Marae O Rehia Road is a self-explaining road as the mean operating speeds (47 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Marae O Rehia Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Marae O Rehia Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, straight nature of the road, moderate road-side hazards and low mean operating speed (47 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a medium risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Marae O Rehia Road in Karioitahi, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Marae O Rehia Road is 60 km/h which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (47 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Marshall Road (Manukau Heads)

The speed limit on Marshall Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Marshall Road connects to Grahams Beach Road to the south. This road provides access to residential properties.
	This section is approximately 0.49 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Marshall Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 14 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Grahams Beach Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.49
Annual Daily Traffic	14

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.17. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Marshall Road.*

Marshall Road is a self-explaining road as the mean operating speeds (20 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Marshall Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Marshall Road due to a multitude of factors. These being the unsealed road surface, narrow lane and very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (20 km/h). All of these factors contribute to the road's 'High' IRR score, making it a High-risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Marshall Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Marshall Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80 km/h), this is considered appropriate based on the function of the road and the mean operating speed (20 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Martin Road (Pollok)

The speed limit on Martin Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Martin Road connects to Given Road to the north. This road provides access to residential properties.
	This section is approximately 0.25 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Martin Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Given Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.25
Annual Daily Traffic	8

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Unsealed	10.00
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.17. For rural areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Martin Road.*

Martin Road is a self-explaining road as the mean operating speeds (42 km/h) are near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Martin Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Martin Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (42 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Martin Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Martin Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80 km/h), this is considered appropriate based on the function of the road and the mean operating speed (42 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Matakawau Road (Awhitu)

Matakawau Road, Awhitu, is divided into three sections as follows: <sup>1</sup>

- Section 1: Matakawau Road between Awhitu Road and 400m southeast of Awhitu Road
- Section 2: Matakawau Road between 400m southeast of Awhitu Road and 10m west of Poaka Road
- Section 3: Matakawau Road between 10m west of Poaka Road and eastern end of Matakawau Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Matakawau Road, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Matakawau Road connects to Awhitu Road to the west. This road provides access to residential and commercial properties.		
	This section is approximately 0.40 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 3.73 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 1.16 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist	This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	street parking along this section. There are no cyclist amenities.	amenities along this road, and there is no on-street parking along this section.	street parking along this section. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 1 non-injury crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Matakawau Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural towns using on-site information and geomaps. The IRR defines Rural towns as "mixture of residential and some	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural	The adjacent land use is classified as Rural towns using on-site information and geomaps. The IRR defines Rural towns as "mixture of residential and some

Annual Daily Traffic	292	292	292

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 3
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2		Section 3	
	Category	Risk Score	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Winding	3.50	Curved	1.80	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Medium lane, Very narrow shoulder	1.79	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28	High	2.28
Adjacent land use	Rural towns	2.50	Rural residential	1.50	Rural towns	2.50
Intersection density (per km)	1 to <2	1.15	<1	1.00	3 to <5	1.50
Access density (per km)	>20	1.30	2 to <5	1.03	>20	1.30
Traffic volume (vpd)	<1000	1.00	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.35. For rural areas this corresponds to an IRR band of **Medium**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.62. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.46. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speeds recommended by Table 2.2 of the Speed Management Guide are:

- 40 km/h between Awhitu Road and 400m southeast of Awhitu Road (Section 1)
- <80km/h between 400m southeast of Awhitu Road and 10m west of Poaka Road (Section 2)
- 40 km/h between 10m west of Poaka Road and eastern end of Matakawau Road (Section 3)

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 40 km/h on Matakawau Road between Awhitu Road and 400m southeast of Awhitu Road
- 60 km/h on Matakawau Road between 400m southeast of Awhitu Road and 10m west of Poaka Road
- 40 km/h on Matakawau Road between 10m west of Poaka Road and eastern end of Matakawau Road

Section 1 and 3 of Matakawau Road are challenging conversations roads as the mean operating speeds are higher than the proposed safe and appropriate speeds. Section 2 of Matakawau Road is a self-explaining road as the mean operating speeds are near the proposed safe and appropriate speeds, despite the existing speed limits. Engineering up of Matakawau Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for the first section of Matakawau Road due to a multitude of factors. These being the rural town land use, presence of school, narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (50 km/hr). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

A proposed speed limit of 60 km/h was selected for the second section of Matakawau Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (63 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>2</sup>

A proposed speed limit of 40 km/h was selected for the third section of Matakawau Road due to a multitude of factors. These being the rural town land use, narrow lane width, very narrow shoulder width, winding nature of the road and high road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.

After considering all of the above factors, the existing speed limit of 60 km/h on Matakawau Road in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h for the first section which is aligned with the recommended safe and appropriate speed.

The proposed safe and appropriate speed limit is 60 km/h for the second section which is aligned with the recommended safe and appropriate speed.

The proposed safe and appropriate speed limit is 40 km/h for the third section which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Mayhead Road (Karioitahi)

The speed limit on Mayhead Road, Karioitahi has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Mayhead Road connects to Awhitu Road to the west. This road provides access to residential properties.
	This section is approximately 0.55 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Mayhead Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 30 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.55
Annual Daily Traffic	104

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.48. For rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Mayhead Road.*

Mayhead Road is a self-explaining road as the mean operating speeds (30 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Mayhead Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Mayhead Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (30 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Mayhead Road in Kariotahi, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Mayhead Road is 60 km/h which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (30 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – McGowan Road (Karioitahi)

The speed limit on McGowan Road, Karioitahi has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	McGowan Road connects to Awhitu Road to the east. This road provides access to residential properties.
	This section is approximately 1.05 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of McGowan Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 93 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 27 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.05
Annual Daily Traffic	93

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.64. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of McGowan Road.*

McGowan Road is a self-explaining road as the mean operating speeds (27 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of McGowan Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for McGowan Road due to a multitude of factors. These being the narrow lane and narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (27 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on McGowan Road in Kariotahi, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – McNaughten Road (Karioitahi)

The speed limit on McNaughten Road, Karioitahi has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	McNaughten Road connects to Taurangaruru Road to the south. This road provides access to residential properties.
	This section is approximately 0.42 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of McNaughten Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 20 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Taurangaruru Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.42
Annual Daily Traffic	20

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.51. For rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of McNaughten Road.*

McNaughten Road is a self-explaining road as the mean operating speeds (42 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of McNaughten Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for McNaughten Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (42 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a medium risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on McNaughten Road in Karioitahi, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for McNaughten Road is 60 km/h which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (42 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – McPike Road (Pollok)

The speed limit on McPike Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	McPike Road connects to Pollok Wharf Road to the south. This road provides access to residential properties.
	This section is approximately 1.76 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of McPike Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 83 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 28 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Pollok Wharf Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.76
Annual Daily Traffic	83

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.69. For rural areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of McPike Road.*

McPike Road is a self-explaining road as the mean operating speeds (28 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of McPike Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for McPike Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (28 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on McPike Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Misa Road (Waiuku)

The speed limit on Misa Road, Waiuku has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Misa Road connects to Towers Road to the east. This road provides access to residential properties.
	This section is approximately 0.08 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Misa Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as <i>"rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 47 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Towers Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.08
Annual Daily Traffic	260

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.68. For rural areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 80 km/h for Misa Road within Auckland boundary, between Waiuku-Otaua Road and Towers Road (Auckland boundary).*

Misa Road is a self-explaining road as the mean operating speeds (47 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Misa Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 80 km/h was selected for Misa Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, high road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Misa Road in Waiuku, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 80 km/h which is aligned with the recommended safe and appropriate speed. This road has only a short section within Auckland boundary. The 80km/h proposed speed will minimum the impact on Waikato District Council network.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Morrison Road (Manukau Heads)

The speed limit on Morrison Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Morrison Road connects to Orua Bay Road to the west. This road provides access to residential properties.
	This section is approximately 0.62 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Morrison Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using on-site information and geomaps. The IRR defines Remote rural as "only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 20 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Orua Bay Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.62
Annual Daily Traffic	20

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.80
Adjacent land use	Remote rural	1.00
Intersection density (per km)	<1	1.00
Access density (per km)	1 to <2	1.01
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.87. For rural areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Morrison Road.*

Morrison Road is a self-explaining road as the mean operating speeds (42 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Morrison Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Morrison Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, winding nature of the road, severe road-side hazards and low mean operating speed (42 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Morrison Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Oldfield Road (Pollok)

The speed limit on Oldfield Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Oldfield Road connects to Craig Road to the north. This road provides access to residential properties.
	This section is approximately 0.14 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Oldfield Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 14 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 23 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Craig Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.14
Annual Daily Traffic	14

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.91. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Oldfield Road.*

Oldfield Road is a self-explaining road as the mean operating speeds (23 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Oldfield Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Oldfield Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (23 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Oldfield Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Opoia Drive (Awhitu)

Opoia Drive, Awhitu, is divided into two sections as follows: <sup>1</sup>

- Section 1: Opoia Drive between Matakawau Road and 25m north of Allan Road
- Section 2: Opoia Drive between 25m north of Allan Road and northern end of Opoia Drive.

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Opoia Drive, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Opoia Drive connects to Matakawau Road to the south. This road provides access to residential properties.	
	This section is approximately 0.21 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 0.38 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is an unsealed, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	and Serious Injury (DSI) crashes.	and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Opoia Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Moderate</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Low</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural towns using on-site information and geomaps. The IRR defines Rural towns as " <i>mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> "	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 292 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 292 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 30 km/h.	This section has a mean operating speed of 30 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Matakawau Raod:</b> 50 km/h (proposed 40 km/h)</li> </ul>	

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	0.21	0.38
Annual Daily Traffic	292	292

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Unsealed	10.00
Road alignment	Curved	1.80	Curved	1.80
Carriageway width	Medium lane, Very narrow shoulder	1.79	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43	Low	0.40
Adjacent land use	Rural towns	2.50	Rural residential	1.50
Intersection density (per km)	2 to <3	1.25	<1	1.00
Access density (per km)	2 to <5	1.03	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 1.74. For rural areas this corresponds to an IRR band of **Low-Medium**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.35. For rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 40 km/h for the first section.

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h for the second section.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation is

- 40 km/h on Opoia Drive between Matakawau Road and 25m north of Allan Road
- 40 km/h on Opoia Drive between 25m north of Allan Road and northern end of Opoia Drive

Opoia Drive is a self-explaining road as the mean operating speeds (30 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Opoia Drive was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for the first section of Opoia Drive due to a multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, moderate road-side hazards and low mean operating speed (30 km/hr). All of these factors contribute to the road's 'Low-Medium' IRR score, making it a Low-Medium-risk road.

A proposed speed limit of 40 km/h was selected for the second section of Opoia Drive due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, curved nature of the road, low road-side hazards and low mean operating speed (30 km/hr). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Opoia Drive in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h for the first section which is aligned with the recommended safe and appropriate speed.

The recommended safe and appropriate speed limit for the second section of Opoia Drive is 40 km/h which is in line with the Speed Management Guide recommendation (<80 km/h) but is considered appropriate when considering the nature and function of the road.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Orpheus Road (Manukau Heads)**

The speed limit on Orpheus Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Orpheus Road connects to Wattle Bay Road to the south. This road provides access to residential properties.
	This section is approximately 0.53 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Orpheus Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 21 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 22 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Wattle Bay Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.53
Annual Daily Traffic	21

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.80
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.54. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

## Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Orpheus Road.*

Orpheus Road is a self-explaining road as the mean operating speeds (22 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Orpheus Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Orpheus Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, winding nature of the road, severe road-side hazards and low mean operating speed (22 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Orpheus Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Orpheus Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80 km/h), this is considered appropriate based on the function of the road and the mean operating speed (22 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Orua Bay Road (Manukau Heads)

Orua Bay Road, Manukau Heads, is divided into two sections as follows: <sup>1</sup>

- Section 1: Orua Bay Road between Tram Gully Road and Wattle Bay Road
- Section 2: Orua Bay Road between Wattle Bay Road and northern end of Orua Bay Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Orua Bay Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Orua Bay Road connects to Grahams Beach Road and Tram Gully Road to the south. This road provides access to residential properties.	
	This section is approximately 2.70 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.27 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Orua Bay Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using on-site information and geomaps. The IRR defines Remote rural as <i>"only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."</i>	The adjacent land use is classified as Rural towns using on-site information and geomaps. The IRR defines Rural towns as <i>"mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 240 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 240 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 50 km/h.	This section has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Tram Gully Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Grahams Beach Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>	

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	2.70	0.27
Annual Daily Traffic	240	240

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Winding	3.50	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Remote rural	1.00	Rural towns	2.50
Intersection density (per km)	1 to <2	1.15	1 to <2	1.15
Access density (per km)	1 to <2	1.01	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 1.84. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.73. For rural areas this corresponds to an IRR band of **Low-Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h for the first section and 40 km/h for the second section.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60 km/h on Orua Bay Road between Tram Gully Road and Wattle Bay Road
- 40 km/h on Orua Bay Road between Wattle Bay Road and northern end of Orua Bay Road

Orua Bay Road is a self-explaining road as the mean operating speeds (50 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Orua Bay Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section of Orua Bay Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (50 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>2</sup>

Crash history from NZTA's CAS database shows 1 crash for the first sections in the last 5 years including 0 fatal, 0 serious, 0 minor, and 1 non-injury crashes.

A proposed speed limit of 40 km/h was selected for the second section of Orua Bay Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (42 km/hr). All of these factors contribute to the road's 'Low-Medium' IRR score, making it a Low-Medium-risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Orua Bay Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h for the first section which is aligned with the recommended safe and appropriate speed.

The proposed safe and appropriate speed limit is 40 km/h for the second section which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Parakau Road (Pollok)

The speed limit on Parakau Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Parakau Road connects to Awhitu Road to the east. This road provides access to residential properties.
	This section is approximately 1.62 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 1 fatal, 0 serious, 0 minor and 0 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crash. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Parakau Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 62 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 50 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	1
Corridor Length (km)	1.62
Annual Daily Traffic	62

- The Collective Risk score is 0.12. For rural areas this corresponds to a Collective Risk band of **Medium-High**
- The Personal Risk score is 546.79. For rural areas this corresponds to a Personal Risk band of **High**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.37. For rural areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Parakau Road.*

Parakau Road is a self-explaining road as the mean operating speeds (50 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Parakau Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Parakau Road due to a multitude of factors. These being the narrow lane and narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (50 km/h). All of these factors contribute to the road's 'Medium' IRR score. Due to adverse crash history on the road, the collective and personal risk of this road are classified as '**Medium-High**' and '**High**', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows 1 crash in the last 5 years including 1 fatal, 0 serious, 0 minor, and 0 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Parakau Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Park Road (Waiuku)

The speed limit on Park Road, Waiuku has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Park Road connects to Taurangaruru Road to the north and Karioitahi Road to the south. This road provides access to residential properties.</p> <p>This section is approximately 1.83 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Park Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 130 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 62 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Taurangaruru Road:</b> 100 km/h (proposed 60 km/h)</li> <li><b>Karioitahi Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.83
Annual Daily Traffic	130

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.71. For rural areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Park Road.*

Park Road is a self-explaining road as the mean operating speeds (62 km/h) are near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Park Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Park Road due to a multitude of factors. These being the medium lane and very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (62 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Park Road in Waiuku, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Poaka Road (Awhitu)

The speed limit on Poaka Road, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Poaka Road connects to Matakawau Road to the north. This road provides access to residential properties.
	This section is approximately 0.1 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Poaka Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural towns using on-site information and geomaps. The IRR defines Rural towns as " <i>mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Matakawau Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.1
Annual Daily Traffic	50

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural towns	2.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.53. For rural areas this corresponds to an IRR band of **Low**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 40 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Poaka Road.*

Poaka Road is a self-explaining road as the mean operating speeds (42 km/h) are near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Poaka Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Poaka Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, straight nature of the road, moderate road-side hazards and low mean operating speed (42 km/h). All of these factors contribute to the road's 'Low' IRR score, making it a Low-risk road.

After considering all of the above factors, the existing speed limit of 50 km/h on Poaka Road in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Pokorua Road (Pollok)

The speed limit on Pokorua Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Pokorua Road connects to Kohekohe-Karioitahi Road to the south. This road provides access to residential properties.
	This section is approximately 0.63 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Pokorua Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 11 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 32 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Kohekohe-Karioitahi Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.63
Annual Daily Traffic	11

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.97. For rural areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Pokorua Road.*

Pokorua Road is a self-explaining road as the mean operating speeds (32 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Pokorua Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Pokorua Road due to a multitude of factors. These being the narrow lane width, narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (32 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Pokorua Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Pollok Wharf Road (Pollok)

The speed limit on Pollok Wharf Road, between 75m east of Awhitu Road and eastern end of Pollok Wharf Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Pollok Wharf Road connects to Awhitu Road to the west. This road provides access to residential properties.</p> <p>This section is approximately 5.1 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Pollok Wharf Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 67 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 67 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Pollok Wharf Road</b> (between Awhitu Road and 75m east of Awhitu Road): 60km/h</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	5.22
Annual Daily Traffic	67

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.67. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is 60 km/h for Pollok Wharf Road, between 75m east of Awhitu Road and eastern end of Pollok Wharf Road .*

Pollok Wharf Road is a self-explaining road as the mean operating speeds (67 km/h) are near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Pollok Wharf Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Pollok Wharf Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road and high road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Pollok Wharf Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Ponsford Road (Pollok)

The speed limit on Ponsford Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ponsford Road connects to Awhitu Road to the west and Lees Gully Road to the east. This road provides access to residential properties.</p> <p>This section is approximately 3.33 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Ponsford Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 31 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 40 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> <li><b>Lees Gully Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	3.33
Annual Daily Traffic	31

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.96. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Ponsford Road.*

Ponsford Road is a self-explaining road as the mean operating speeds (40 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Ponsford Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Ponsford Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (40 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Ponsford Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Rewarewa Road (Waiuku)

The speed limit on Rewarewa Road, Waiuku has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Rewarewa Road connects to Taurangaruru Road to the north. This road provides access to residential properties.
	This section is approximately 0.37 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Rewarewa Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 20 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 36 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Taurangaruru Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.37
Annual Daily Traffic	20

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.49. For rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Rewarewa Road.*

Rewarewa Road is a self-explaining road as the mean operating speeds (36 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Rewarewa Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Rewarewa Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (36 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Rewarewa Road in Waiuku, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Rewarewa Road is 60 km/h which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (36 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Ridgley Road (Karioitahi)

The speed limit on Ridgley Road, Karioitahi has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Ridgley Road connects to Awhitu Road to the east. This road provides access to residential properties.
	This section is approximately 1.28 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Ridgley Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 19 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 38 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.28
Annual Daily Traffic	19

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Unsealed	10.00
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.85. For rural areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Ridgley Road.*

Ridgley Road is a self-explaining road as the mean operating speeds (38 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Ridgley Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Ridgley Road due to a multitude of factors. These being the unsealed road surface, narrow lane and very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (38 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Ridgley Road in Kariotahi, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Ridgley Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80 km/h), this is considered appropriate based on the function of the road and the mean operating speed (38 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Seaview Terrace (Manukau Heads)

The speed limit on Seaview Terrace, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Seaview Terrace connects to Hudson Road to the north. This road provides access to residential properties.
	This section is approximately 0.45 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Seaview Terrace were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using on-site information and geomaps. The IRR defines Urban residential as "dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 34 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Hudson Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.45
Annual Daily Traffic	100

- The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3.00
Intersection density (per km)	1 to <2	1.15
Access density (per km)	>20	1.30
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.22. For urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Seaview Terrace.*

Seaview Terrace is a self-explaining road as the mean operating speeds (34 km/h) are below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Seaview Terrace was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Seaview Terrace due to a multitude of factors. These being the narrow lane and very narrow shoulder width, winding nature of the road, moderate road-side hazards and low mean operating speed (34 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

After considering all of the above factors, the existing speed limit of 50 km/h on Seaview Terrace in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Sergeant Road (Awhitu)

The speed limit on Sergeant Road, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Sergeant Road connects to Matakawau Road to the east and Allan Road to the west. This road provides access to residential properties.</p> <p>This section is approximately 0.37 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Sergeant Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural towns using on-site information and geomaps. The IRR defines Rural towns as " <i>mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 292 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 30 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Matakawau Road:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Allan Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.37
Annual Daily Traffic	292

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural towns	2.50
Intersection density (per km)	3 to <5	1.50
Access density (per km)	>20	1.30
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.17. For rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 40 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Sergeant Road.*

Sergeant Road is a self-explaining road as the mean operating speeds (30 km/h) are below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Sergeant Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Sergeant Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (30 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

After considering all of the above factors, the existing speed limit of 50 km/h on Sergeant Road in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Tahuna Pa Road (Karioitahi)

The speed limit on Tahuna Pa Road, Karioitahi has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Tahuna Pa Road connects to Awhitu Road to the west. This road provides access to residential properties.
	This section is approximately 0.56 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Tahuna Pa Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 62 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.56
Annual Daily Traffic	62

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.51. For rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Tahuna Pa Road.*

Tahuna Pa Road is a self-explaining road as the mean operating speeds (20 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Tahuna Pa Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Tahuna Pa Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (20 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Tahuna Pa Road in Karioitahi, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Tahuna Pa Road is 60 km/h which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (20 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Tahurangi Road (Karioitahi)

The speed limit on Tahurangi Road, Karioitahi has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Tahurangi Road connects to Awhitu Road to the east. This road provides access to residential properties.
	This section is approximately 2.13 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Tahurangi Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 145 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 100 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	2.13
Annual Daily Traffic	145

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.42. For rural areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Tahurangi Road.*

Tahurangi Road is a challenging conversations road as the mean operating speeds (100 km/h) are above the proposed safe and appropriate speeds. Engineering up of Tahurangi Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Tahurangi Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, straight nature of the road, high road-side hazards and operating speeds of surrounding corridors. All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Tahurangi Road in Karioitahi, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Tahurangi Road is 60 km/h which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the function of the road and the proposed speeds of surrounding corridors support the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Tainui Road (Awhitu)

The speed limit on Tainui Road, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Tainui Road connects to Matakawau Road to the north. This road provides access to residential properties.
	This section is approximately 0.12 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Tainui Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two Lane Undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural towns using on-site information and geomaps. The IRR defines Rural towns as " <i>mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 292 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 30 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Matakawau Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.12
Annual Daily Traffic	292

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two Lane Undivided	3.7
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural towns	2.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	>20	1.30
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.06. For rural areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 40 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Tainui Road.*

Tainui Road is a self-explaining road as the mean operating speeds (30 km/h) are below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Tainui Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Tainui Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, High road-side hazards and low mean operating speed (30 km/h). All of these factors contribute to the road's 'Medium' IRR score.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 50 km/h on Tainui Road (Awhitu) in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Taurangaruru Road (Waiuku / Karioitahi)

The speed limit on Taurangaruru Road, Waiuku / Karioitahi has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Taurangaruru Road connects to Awhitu Road to the east and Kohekohe-Karioitahi Road to the west. This road provides access to residential properties.</p> <p>This section is approximately 4.51 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 2 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Taurangaruru Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 518 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 60 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 60 km/h (proposed 60 km/h)</li> <li><b>Kohekohe-Karioitahi Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	4.51
Annual Daily Traffic	518

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**

- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.75. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Taurangaruru Road.*

Taurangaruru Road is a self-explaining road as the mean operating speeds (60 km/h) are near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Taurangaruru Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Taurangaruru Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (60 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows 3 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor, and 2 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Taurangaruru Road in Waiuku / Karioitahi, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Te Toro Road (Pollok)

The speed limit on Te Toro Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Te Toro Road connects to Lees Gully Road to the west. This road provides access to residential properties.</p> <p>This section is approximately 3.21 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 1 serious, 0 minor and 0 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Te Toro Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 581 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 60 km/h. Site visit operating speed is 75km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> <li><b>Lees Gully Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	1
Corridor Length (km)	3.21
Annual Daily Traffic	581

- The Collective Risk score is 0.06. For rural areas this corresponds to a Collective Risk band of **Low-Medium**
- The Personal Risk score is 29.3. For rural areas this corresponds to a Personal Risk band of **High**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.43. For rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 80 km/h for the full length of Te Toro Road.*

Te Toro Road is a self-explaining road as the mean operating speed (60-75 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Te Toro Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 80 km/h was selected for Te Toro Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, straight nature of the road, high road-side hazards. All of these factors contribute to the road's 'Medium' IRR score.

Crash history from NZTA's CAS database shows 1 crash in the last 5 years for the second section including 0 fatal, 1 serious, 0 minor, and 0 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Te Toro Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 80 km/h for Te Toro Road which is higher than the Speed Management Guide recommendation (<80km/h) but are considered appropriate when considering the straight nature of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (75km/h)

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Tearoe Road (Manukau Heads)

The speed limit on Tearoe Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Tearoe Road connects to Big Bay Road to the east. This road provides access to residential properties.
	This section is approximately 0.46 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Tearoe Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 10 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Big Bay Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.46
Annual Daily Traffic	10

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.47. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Tearoe Road.*

Tearoe Road is a self-explaining road as the mean operating speeds (20 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Tearoe Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Tearoe Road due to a multitude of factors. These being the unsealed road surface, narrow lane and very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (20 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Tearoe Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Tearoe Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80km/h), this is considered appropriate based on the function of the road and the mean operating speed (20 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Tindall Road (Awhitu)

Tindall Road, Awhitu, is divided into two sections as follows: <sup>1</sup>

- Section 1: Tindall Road between Awhitu Road and 765m west of Awhitu Road
- Section 2: Tindall Road between 765m west of Awhitu Road and western end of Tindall Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Tindall Road, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Tindall Road connects to Awhitu Road to the east. This road provides access to residential properties.	
	This section is approximately 0.77 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 0.61 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is an unsealed, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	and Serious Injury (DSI) crashes.	and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Tindall Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 53 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 53 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 35 km/h.	This section has a mean operating speed of 28 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>	

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	0.77	0.61
Annual Daily Traffic	53	53

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Unsealed	10.00
Road alignment	Winding	3.50	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.80	High	2.28
Adjacent land use	Rural residential	1.50	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15	<1	1.00
Access density (per km)	1 to <2	1.01	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.10. For rural areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.12. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

## Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 60 km/h on Tindall Road between Awhitu Road and 765m west of Awhitu Road
- 60 km/h on Tindall Road between 765m west of Awhitu Road and western end of Tindall Road

Tindall Road is a self-explaining road as the mean operating speeds (35 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Tindall Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section of Tindall Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, severe road-side hazards and low mean operating speed (35 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>2</sup>

A proposed speed limit of 60 km/h was selected for the second section Tindall Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (28 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Tindall Road in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Towers Road (Waiuku)

The speed limit on Towers Road, Waiuku has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Towers Road connects to Misa Road to the west and Hull Road to the east. This road provides access to residential properties.</p> <p>This section is approximately 1.15 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Towers Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 200 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 55 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Misa Road:</b> 100 km/h (proposed 80 km/h)</li> <li>• <b>Hull Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.15
Annual Daily Traffic	200

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	3 to <5	1.50
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.85. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 80 km/h for the full length of Towers Road.

Towers Road is a self-explaining road as the mean operating speeds (55 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Towers Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 80 km/h was selected for Towers Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (55 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Towers Road in Waiuku, is not considered to be a safe and appropriate speed limit for this road.

The recommended safe and appropriate speed limit for Towers Road is 80 km/h which is higher than the Speed Management Guide recommendation (<80 km/h) because the road crossing the boundary with Waikato District Council. 80 km/h is more appropriate for the network consistence.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Tram Gully Road (Manukau Heads)**

The speed limit on Tram Gully Road, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tram Gully Road connects to Awhitu Road to the south and Grahams Beach Road to the north. This road provides access to residential properties.</p> <p>This section is approximately 2.13 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Tram Gully Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 577 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 70 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> <li>• <b>Grahams Beach Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	2.13
Annual Daily Traffic	577

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	Severe	2.80
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.00. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Tram Gully Road.

Tram Gully Road is a challenging conversations road as the mean operating speeds (70 km/h) are above the proposed safe and appropriate speeds. Engineering up of Tram Gully Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Tram Gully Road due to a multitude of factors. These being the medium lane and very narrow shoulder width, winding nature of the road, severe road-side hazards and mean operating speed (70 km/h). All of these factors contribute to the road's 'High' IRR score making it a high risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor, and 2 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Tram Gully Road in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Turner Place (Manukau Heads)**

The speed limit on Turner Place, Manukau Heads has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Turner Place connects to Wattle Bay Road to the south. This road provides access to residential properties.
	This section is approximately 0.04 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Turner Place were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 20 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Wattle Bay Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.04
Annual Daily Traffic	20

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	1 to <2	1.01
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.16. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Turner Place.

Turner Place is a self-explaining road as the mean operating speeds (20 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Turner Place was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Turner Place due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (20 km/h). All of these factors contribute to the road's 'High' IRR score, making it a High-risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Turner Place in Manukau Heads, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Waipipi Wharf Road (Pollok)**

Waipipi Wharf Road, Pollok, is divided into two sections as follows: <sup>1</sup>

- Section 1: Waipipi Wharf Road between Awhitu Road and 20m east of Furniss Road
- Section 2: Waipipi Wharf Road between 20m east of Furniss Road and eastern end of Waipipi Wharf Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Waipipi Wharf Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Waipipi Wharf Road connects to Awhitu Road to the west. This road provides access to residential properties.	
	This section is approximately 0.29 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 1.77 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	and Serious Injury (DSI) crashes.	and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Waipipi Wharf Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 197 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 197 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 43 km/h.	This section has a mean operating speed of 52 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>	

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	0.29	1.77
Annual Daily Traffic	197	197

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Curved	1.80	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural residential	1.50	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15	1 to <2	1.15
Access density (per km)	5 to <10	1.06	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 1.75. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.49. For rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h for the first section and 80 km/h for the second section.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60 km/h on Waipipi Wharf Road between Awhitu Road and 20m east of Furniss Road
- 60 km/h on Waipipi Wharf Road between 20m east of Furniss Road and eastern end of Waipipi Wharf Road

Waipipi Wharf Road is a self-explaining road as the mean operating speeds (43-52 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Waipipi Wharf Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section of Waipipi Wharf Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (43 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>2</sup>

A proposed speed limit of 60 km/h was selected for the second section of Waipipi Wharf Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (52 km/hr). All of these factors contribute to the road's 'Medium' IRR score, making it a medium risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Waipipi Wharf Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h for the first section which is aligned with the recommended safe and appropriate speed.

The proposed safe and appropriate speed limit for the second section of Waipipi Wharf Road is 60 km/h which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (52 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Walters Road (Awhitu)

The speed limit on Walters Road, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Walters Road connects to Brook Road to the south. This road provides access to residential properties.
	This section is approximately 0.42 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Walters Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 12 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Brook Road:</b> 100 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.42
Annual Daily Traffic	12

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.45. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Walters Road.*

Walters Road is a self-explaining road as the mean operating speeds (42 km/h) are near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Walters Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Walters Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (42 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Walters Road in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Walters Road is 40 km/h which is in line with the speed limit recommended by the Speed Management Guide (<80 km/h), this is considered appropriate based on the function of the road and the mean operating speed (42 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – West Coast Road (Awhitu)

West Coast Road, Awhitu, is divided into two sections as follows:<sup>1</sup>

- Section 1: West Coast Road between Awhitu Road and 2390m west of Awhitu Road
- Section 2: West Coast Road between 2390m west of Awhitu Road and western end of West Coast Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on West Coast Road, Awhitu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	West Coast Road connects to Awhitu Road to the east. This road provides access to residential properties.	
	This section is approximately 2.39 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 0.95 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	and Serious Injury (DSI) crashes.	and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of West Coast Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Remote rural using on-site information and geomaps. The IRR defines Remote rural as "only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 1 to &lt;2 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 83 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 83 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 47 km/h.	This section has a mean operating speed of 47 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Awhitu Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>	

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	2.39	0.95
Annual Daily Traffic	83	83

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Winding	3.50	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural residential	1.50	Remote rural	1.00
Intersection density (per km)	<1	1.00	<1	1.00
Access density (per km)	2 to <5	1.03	1 to <2	1.01
Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 1.96. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.78. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

## Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 60 km/h on West Coast Road between Awhitu Road and 2390m west of Awhitu Road
- 60 km/h on West Coast Road between 2390m west of Awhitu Road and western end of West Coast Road

West Coast Road is a self-explaining road as the mean operating speeds (47 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of West Coast Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for both sections of West Coast Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (47 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>2</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on West Coast Road in Awhitu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Westhead Road (Pollok)

The speed limit on Westhead Road, Pollok has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Westhead Road connects to Te Toro Road to the west. This road provides access to residential properties.</p> <p>This section is approximately 1.41 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Westhead Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 83 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Te Toro Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.41
Annual Daily Traffic	83

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

#### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.69. For rural areas this corresponds to an IRR band of **Medium-High**.

#### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Westhead Road.*

Westhead Road is a self-explaining road as the mean operating speeds (42 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Westhead Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Westhead Road due to a multitude of factors. These being the narrow lane and very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (42 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Westhead Road in Pollok, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Wharf Road (Clarks Beach)**

The speed limit on Wharf Road, Clarks Beach, between Clarks Beach Road and 400m west of Clarks Beach Road has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Wharf Road connects to Clarks Beach Road to the east. This road provides access to residential properties.
	This section is approximately 0.4 km in length. It is classified as a secondary collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Wharf Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using on-site information and geomaps. The IRR defines Urban residential as <i>"dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 554 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 52 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Wharf Road</b>, west section: 50km/h</li> <li>• <b>Clarks Beach Road</b>: 80 km/h (proposed 50 km/h)</li> </ul>

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.4
Annual Daily Traffic	554

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

#### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Urban residential	3.00
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.81. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 50 km/h for Wharf Road, between Clarks Beach Road and 400m west of Clarks Beach Road.

Wharf Road is a self-explaining road as the mean operating speeds (52 km/h) are near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit.

A proposed speed limit of 50 km/h was selected for Wharf Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, future urban development and land use change.

After considering all of the above factors, the existing speed limit of 80 km/h on Wharf Road in Clarks Beach, is not considered to be a safe and appropriate speed limit for this road.

The recommended safe and appropriate speed limit for Wharf Road is 50 km/h which is higher than the Speed Management Guide recommendation (40 km/h) but is considered appropriate when considering the consistency of the adjoining roads.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Access Road (Kumeu)**

Access Road, Kumeu, is divided into three sections as follows: <sup>1</sup>

- Section 1: Access Road between SH16 and 700m southwest of SH16
- Section 2: Access Road between 700m southwest of SH16 and 1000m southwest of SH16
- Section 3: Access Road between 1000m southwest of SH16 and Station Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Access Road, Kumeu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Access Road connects to SH16 to the east and Station Road to the west. This road provides access to residential and commercial properties.		
	This section is approximately 0.70 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 0.30 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 1.01 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	road. There is on-street parking along this section.	road. There is on-street parking along this section.	road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 0 fatal, 1 serious, 1 minor and 1 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 1 fatal, 0 serious, 1 minor and 1 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Access Road is identified as one of the top 10% DSI saving network sections for New Zealand.		
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Access Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using on-site information and	The adjacent land use is classified as Commercial big box using on-site information and	The adjacent land use is classified as Rural residential using on-site information and

Requirement	Comments		
	Section 1	Section 2	Section 3
	geomaps. The IRR defines Commercial big box as "large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."	geomaps. The IRR defines Commercial big box as "large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."	geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1651 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 1651 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 1651 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
Current speed limit	The existing speed limit is 50 km/h.	The existing speed limit is 80 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 51 km/h.	This section has a mean operating speed of 71 km/h.	This section has a mean operating speed of 71 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>State Highway 16: 60 km/h</li> <li>Station Road: 80 km/h (proposed 60 km/h)</li> </ul>		

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data		
	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	3	3	2
DSI crashes during the period	1	1	0
Corridor Length (km)	0.70	0.30	1.01
Annual Daily Traffic	1651	1651	1651

- Section 1
  - The Collective Risk score is 0.29. For rural areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 47.4. For rural areas this corresponds to a Personal Risk band of **High**
- Section 2
  - The Collective Risk score is 0.67. For rural areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 110.6. For rural areas this corresponds to a Personal Risk band of **High**
- Section 3
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2		Section 3	
	Category	Risk Score	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Curved	1.80	Straight	1.00	Straight	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.71. For urban areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.97. For urban areas this corresponds to an IRR band of **Low-Medium**.
- Section 3
  - The Infrastructure Risk Rating Score is 1.54. For rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide for the first and second section of Access Road is 40 km/h.

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide for the third section of Access Road is <80 km/h.

## Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 50 km/h on Access Road between between SH16 and 700m southwest of SH16 (Section 1)
- 50 km/h on Access Road between 700m southwest of SH16 and 1000m southwest of SH16 (Section 2)
- 80 km/h on Access Road between 1000m southwest of SH16 and Station Road (Section 3)

The first and third section of Access Road is a self-explaining road as the mean operating speeds are near or below the proposed safe and appropriate speeds, despite the existing speed limits. The second section of Access Road is a challenging conversations road as the mean operating speeds (71 km/h) are above the proposed safe and appropriate speeds. Engineering up of Access Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for the first section of Access Road due to a multitude of factors. These being the medium lane width, narrow shoulder width, curved nature of the road, severe road-side hazards and low mean operating speed (51 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>2</sup> Due to adverse crash history on the road, the collective and personal risk of this road are classified as 'High' and 'High', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.

Crash history from NZTA's CAS database shows 3 crashes in the last 5 years for the first section including 0 fatal, 1 serious, 1 minor, and 1 non-injury crashes.

A proposed speed limit of 50 km/h was selected for the second section of Access Road due to a multitude of factors. These being the future urban development, medium lane width, narrow shoulder width, straight nature of the road, and severe road-side hazards. All of these factors contribute to the road's 'Low-Medium' IRR score, making it a Low-Medium-risk road. Due to adverse crash history on the road, the collective and personal risk of this road are classified as 'High' and 'High', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.

Crash history from NZTA's CAS database shows 3 crashes in the last 5 years for the second section including 1 fatal, 0 serious, 1 minor, and 1 non-injury crashes.

A proposed speed limit of 80 km/h was selected for the third section of Access Road due to a multitude of factors. These being the medium lane width, narrow shoulder width, straight nature of the road, severe road-side hazards and mean operating speed (71 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

Crash history from NZTA's CAS database shows 2 crashes in the last 5 years for the third section including 0 fatal, 0 serious, 0 minor, and 2 non-injury crashes.

After considering all of the above factors, the existing speed limits on Access Road in Kumeu, are not considered to be a safe and appropriate speed limit for this road.

The recommended safe and appropriate speed limit for the first section of Access Road is 50 km/h which is higher than the Speed Management Guide recommendation (40 km/h) but is considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (51 km/h).

The recommended safe and appropriate speed limit for the second section of Access Road is 50 km/h which is higher than the Speed Management Guide recommendation (40 km/h) but is considered appropriate when considering the nature and function of the road. It's a short extension to the current 50km/h section.

The recommended safe and appropriate speed limit for the third section of Access Road is 80 km/h which is higher than the Speed Management Guide recommendation (<80 km/h) but is considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (71 km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Amreins Road (Taupaki)

Amreins Road, Taupaki, is divided into three sections as follows: <sup>1</sup>

- Section 1: Amreins Road between Taupaki Road and 800m south of Taupaki Road
- Section 2: Amreins Road between 800m south of Taupaki Road and 1440m north of McEntee Road
- Section 3: Amreins Road between McEntee Road and 1440m north of McEntee Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Amreins Road, Taupaki has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Amreins Road connects to Taupaki Road to the north and McEntee Road to the south. This road provides access to residential properties.		
	This section is approximately 0.80 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 1.96 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 1.44 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	amenities along this road, and there is no on-street parking along this section.	amenities along this road, and there is no on-street parking along this section.	amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Amreins Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as "rural	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural

Requirement	Comments		
	Section 1	Section 2	Section 3
	area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	area with accesses present to private dwellings and farms. Traffic volume (vpd)	1000 to <6000	1.40	1000 to <6000	1.40	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.22. For Rural areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.09. For Rural areas this corresponds to an IRR band of **High**.
- Section 3
  - The Infrastructure Risk Rating Score is 1.94. For Rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h for all three sections of Amreins Road.

## Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 60 km/h on Amreins Road between Taupaki Road and 800m south of Taupaki Road (Section 1)
- 60 km/h on Amreins Road between 800m south of Taupaki Road and 1440m north of McEntee Road (Section 2)
- 60 km/h on Amreins Road between 80m north of McEntee Road and 1440m north of McEntee Road (Section 3)

Amreins Road is a self-explaining road as the mean operating speeds (59-61 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Amreins Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Amreins Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (59-61 km/hr). All of these factors contribute to the road's 'Medium-High' and 'High' IRR scores, making it a high risk road.<sup>2</sup>

After considering all of the above factors, the existing speed limit of 80 km/h on Amreins Road in Taupaki, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h for Amreins Road which is aligned with the recommended safe and appropriate speed. The existing 50km/h section connecting with McEntee Road will be remained.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Annandale Road (Kumeu / Taupaki)

The speed limit on Annandale Road, Kumeu / Taupaki has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Annandale Road connects to Hanham Road to the north and Cuthbert Road to the south. This road provides access to residential properties.</p> <p>This section is approximately 3.33 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Annandale Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 292 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 58 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Hanham Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Cuthbert Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	3.33
Annual Daily Traffic	292

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.94. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Annandale Road.*

Annandale Road is a self-explaining road as the mean operating speeds (58 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Annandale Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Annandale Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (58 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor, and 2 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Annandale Road in Kumeu / Taupaki, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Annett Road (Huapai)

Annett Road, Huapai, is divided into two sections as follows: <sup>1</sup>

- Section 1: Annett Road between Awa Road and Fork Road
- Section 2: Annett Road between Fork and the western end of Annett Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Annett Road, Huapai has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Annett Road connects to Awa Road to the east. This road provides access to residential properties.	
	This section is approximately 1.3 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.28 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. This resulted in 0	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Annett Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 321 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 321 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 55 km/h.	This section has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Awa Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>	

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	1.3	0.28
Annual Daily Traffic	321	321

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

#### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Tortuous	6
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8	Severe	2.8
Adjacent land use	Rural residential	1.5	Rural residential	1.5
Intersection density (per km)	<1	1	<1	1
Access density (per km)	10 to <20	1.1	10 to <20	1.1
Traffic volume (vpd)	<1000	1	<1000	1

- Section 1
  - The Infrastructure Risk Rating Score is 1.79. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.31. For rural areas this corresponds to an IRR band of **High**.

#### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation is 60 km/h on Annett Road, full length.

Annett Road is a self-explaining road as the mean operating speeds are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Annett Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section of Annett Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, severe road-side hazards and low mean operating speed (55 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>2</sup>

Crash history from NZTA's CAS database shows 1 crash in the last 5 years for the first section including 0 fatal, 0 serious, 0 minor, and 1 non-injury crashes.

A proposed speed limit of 60 km/h was selected for the second section of Annett Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, tortuous nature of the road, severe road-side hazards and low mean operating speed (42 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Annett Road in Huapai, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Awa Road (Kumeu)**

The speed limit on Awa Road, Kumeu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Awa Road connects to Tawa Road to the south and Foster Road to the north. This road provides access to residential properties.</p> <p>This section is approximately 2.86 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 11 crashes between 2016 and 2020: 0 fatal, 0 serious, 7 minor and 4 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Awa Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 696 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 54 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Tawa Road: 100 km/h (proposed 60 km/h)</li> <li>• Foster Road: 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	7
DSI crashes during the period	0
Corridor Length (km)	2.86
Annual Daily Traffic	696

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	Severe	2.79
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.061
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.78. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

## Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Awa Road.*

Awa Road is a self-explaining road as the mean operating speeds (54 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Awa Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Awa Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, severe road-side hazards and low mean operating speed (54 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows 11 crashes in the last 5 years including 0 fatal, 0 serious, 7 minor, and 4 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Awa Road in Kumeu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Awanohi Road (Redvale)

The speed limit on Awanohi Road, Redvale has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Awanohi Road connects to Durey Road to the west and East Coast Road to the east. This road provides access to residential properties.</p> <p>This section is approximately 1.86 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Awanohi Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 605 vehicles per day (vpd). This level of traffic volume is lower than the traffic survey of 1070 vpd.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 68 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Durey Road 100km/h (proposed 60 km/h)</li> <li>• East Coast Road: 80 km/h</li> <li>• Wright Road: 70 km/h</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.86
Annual Daily Traffic	605

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	2 to <3	1.25
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.07. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Awanohi Road.

Awanohi Road is a challenging conversations road as the mean operating speeds (68 km/h) are above the proposed safe and appropriate speeds. Engineering up of Awanohi Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Awanohi Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and mean operating speed (68 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Awanohi Road in Redvale, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Bawden Road (Redvale, Dairy Flat)**

The speed limit on Bawden Road, Redvale, Dairy Flat has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bawden Road connects to East Coast Road to the east and Dairy Flat Highway to the south. This road provides access to residential properties.</p> <p>This section is approximately 4.32 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 0 fatal, 1 serious, 0 minor and 2 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Bawden Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 835 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 63 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• East Coast Road: 100 km/h (proposed 80 km/h)</li> <li>• Dairy Flat Highway: 80 km/h</li> <li>• Dairy Stream Road: 80 km/h (proposed 60 km/h)</li> <li>• Oregon Park: 80 km/h (proposed 60 km/h)</li> <li>• Bobs Way: 80 km/h (proposed 60 km/h)</li> <li>• Top Road (Redvale): 80 km/h (proposed 60 km/h)</li> <li>• Wilson Road (Redvale): 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	1
Corridor Length (km)	4.32
Annual Daily Traffic	835

- The Collective Risk score is 0.05. For rural areas this corresponds to a Collective Risk band of **Low-Medium**
- The Personal Risk score is 15.18. For rural areas this corresponds to a Personal Risk band of **High**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.76. For rural areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Bawden Road.*

Bawden Road is a self-explaining road as the mean operating speeds (63 km/h) are near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Bawden Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Bawden Road due to a multitude of factors. These being the, narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (63 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup>. Due to adverse crash history on the road, the collective and personal risk of this road are classified as '**Low-Medium**' and '**High**', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.

Crash history from NZTA's CAS database shows 3 crashes in the last 5 years including 0 fatal, 1 serious, 0 minor, and 2 non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on Bawden Road in Redvale, Dairy Flat, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Bobs Way (Dairy Flat)

The speed limit on Bobs Way, Dairy Flat has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Bobs Way connects to Bawden Road to the south. This road provides access to residential properties.
	This section is approximately 0.26 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Bobs Way were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 42 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Bawden Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.26
Annual Daily Traffic	104

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.56. For rural areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Bobs Way.*

Bobs Way is a self-explaining road as the mean operating speeds (42 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Bobs Way was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Bobs Way due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, moderate road-side hazards and low mean operating speed (42 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

After considering all of the above factors, the existing speed limit of 80 km/h on Bobs Way in Dairy Flat, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Bobs Way is 60 km/h which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (42 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## Speed Limit Review – Boord Crescent (Kumeu)

The speed limit on Boord Crescent, Kumeu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Boord Crescent connects to Trotting Course Drive to the north. This road provides access to residential properties.</p> <p>This section is approximately 3.14 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Boord Crescent were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 633 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 45 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Trotting Course Drive:</b> 100 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	3.14
Annual Daily Traffic	633

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.65. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Boord Crescent.*

Boord Crescent is a self-explaining road as the mean operating speeds (45 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Boord Crescent was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Boord Crescent due to a multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (45 km/h). All of these factors contribute to the road's 'medium-high' IRR score, making it a high risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor, and 2 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Boord Crescent in Kumeu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed (<80 km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Cable Road (Waimauku)

Cable Road, Waimauku, is divided into two sections as follows: <sup>1</sup>

- Section 1: Cable Road between 560m east of Valley Road and Hinau Road
- Section 2: Cable Road between Valley Road and 560m east of Valley Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Cable Road, Waimauku has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Cable Road connects to Valley Road to the west and Hinau Road to the east. This road provides access to residential properties.	
	This section is approximately 0.56 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 1.03 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	and Serious Injury (DSI) crashes.	and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Cable Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 196 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 185 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 80 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 42 km/h.	This section has a mean operating speed of 34 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Valley Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Hinau Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>	

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	0.56	1.03
Annual Daily Traffic	196	185

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Unsealed	10.00
Road alignment	Straight	1.00	Tortuous	6.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural residential	1.50	Rural residential	1.50
Intersection density (per km)	<1	1.00	1 to <2	1.15
Access density (per km)	10 to <20	1.10	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 1.45. For rural areas this corresponds to an IRR band of **Medium**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.72. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide for the first section of Cable Road is 80 km/h.

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide for the second section of Cable Road is <80 km/h.

## Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 60 km/h on Cable Road between 560m east of Valley Road and Hinau Road
- 40 km/h on Cable Road between Valley Road and 560m east of Valley Road

Cable Road is a self-explaining road as the mean operating speeds are below the proposed safe and appropriate speeds, despite the existing speed limits. Engineering up of Cable Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section of Cable Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (42 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

A proposed speed limit of 40 km/h was selected for the second section of Cable Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, tortuous nature of the road, high road-side hazards and low mean operating speed (34 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>2</sup>

After considering all of the above factors, the existing speed limits on Cable Road in Waimauku are not considered to be safe and appropriate speed limits for this road.

The proposed safe and appropriate speed limit for the first section of Cable Road is 60 km/h which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (42 km/h) supports the reduction.

The proposed safe and appropriate speed limit for the second section of Cable Road is 40 km/h which aligns with the speed limit recommended by the Speed Management Guide (<80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (34 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Coster Road (Muriwai)

The speed limit on Coster Road, Muriwai has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Coster Road connects to Oaia Road to the west. This road provides access to residential properties.
	This section is approximately 0.54 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is a two way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Coster Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 27 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Oaia Road:</b> 50 km/h</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.54
Annual Daily Traffic	100

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.48. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

## Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Coster Road.*

Coster Road is a self-explaining road as the mean operating speeds (27 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Coster Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Coster Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (27 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Coster Road in Muriwai, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Coster Road is 40 km/h which is lower than the speed limit recommended by the Speed Management Guide (<80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (27 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Cuthbert Road (Taupaki)

The speed limit on Cuthbert Road, Taupaki has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cuthbert Road connects to Annandale Road to the north and Hunter Road to the south. This road provides access to residential properties.</p> <p>This section is approximately 0.71 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Cuthbert Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 277 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 52 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Annandale Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Hunter Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.71
Annual Daily Traffic	277

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	2 to <3	1.25
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.04. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Cuthbert Road.

Cuthbert Road is a self-explaining road as the mean operating speeds (52 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Cuthbert Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Cuthbert Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (52 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Cuthbert Road in Taupaki, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed (<80 km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Dairy Stream Road (Dairy Flat)**

The speed limit on Dairy Stream Road, Dairy Flat has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Dairy Stream Road connects to Postman Road to the north and Bawden Road to the south. This road provides access to residential properties.</p> <p>This section is approximately 0.76 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 0 fatal, 1 serious, 0 minor and 2 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Dairy Stream Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 516 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 54 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Postman Road:</b> 80 km/h (proposed 80 km/h)</li> <li>• <b>Bawden Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	1
Corridor Length (km)	0.76
Annual Daily Traffic	516

- The Collective Risk score is 0.26. For rural areas this corresponds to a Collective Risk band of **High**
- The Personal Risk score is 138.99. For rural areas this corresponds to a Personal Risk band of **High**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	2 to <3	1.25
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.09. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Dairy Stream Road.

Dairy Stream Road is a self-explaining road as the mean operating speeds (54 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Dairy Stream Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Dairy Stream Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (54 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high-risk road. <sup>1</sup> Due to adverse crash history on the road, the collective and personal risk of this road are classified as 'High' and 'High', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.

Crash history from NZTA's CAS database shows 3 crashes in the last 5 years including 0 fatal, 1 serious, 0 minor, and 2 non-injury crashes.

After considering all of the above factors, the existing speed limit of 80 km/h on Dairy Stream Road in Dairy Flat, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Durey Road (Dairy Flat)**

The speed limit on Durey Road, Dairy Flat has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Durey Road connects to Dairy Flat Highway to the west and Awanohi Road to the east. This road provides access to residential properties.</p> <p>This section is approximately 1.42 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 2 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Durey Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 732 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 61 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Dairy Flat Highway:</b> 80 km/h</li> <li>• <b>Awanohi Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Oak Valley Road:</b> 80 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	2
DSI crashes during the period	0
Corridor Length (km)	1.42
Annual Daily Traffic	732

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**

- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	2 to <3	1.25
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.79. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

## Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Durey Road.*

Durey Road is a self-explaining road as the mean operating speeds (61 km/h) is near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Durey Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Durey Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (61 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows 3 crashes in the last 5 years including 0 fatal, 0 serious, 2 minor, and 1 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Durey Road in Dairy Flat, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Dysart Lane (Kumeu)

The speed limit on Dysart Lane, Kumeu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Dysart Lane connects to Pomona Road to the south. This road provides access to residential properties.
	This section is approximately 0.52 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Dysart Lane were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 150 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 30 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Pomona Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.52
Annual Daily Traffic	150

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.46. For rural areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is 80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Dysart Lane.*

Dysart Lane is a self-explaining road as the mean operating speeds (30 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Dysart Lane was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Dysart Lane due to a multitude of factors. These being the narrow lane width, narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (30 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

After considering all of the above factors, the existing speed limit of 100 km/h on Dysart Lane in Kumeu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Dysart Lane is 60 km/h which is lower than the speed limit recommended by the Speed Management Guide (80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (30 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Farrand Road (Kumeu)**

The speed limit on Farrand Road, Kumeu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Farrand Road connects to Waitakere Road to the east and a "no exit" road to the west. This road provides access to residential properties.</p> <p>This section is approximately 0.53 km in length. It is classified as an Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Farrand Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 52 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 26 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Waitakere Road:</b> 80 km/h</li> </ul>

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.53
Annual Daily Traffic	52

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

#### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	>20	1.30
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.84. For rural areas this corresponds to an IRR band of **Medium-High**.

#### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Farrand Road.

Farrand Road is a self-explaining road as the mean operating speeds (26 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Farrand Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Farrand Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (26 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 80 km/h on Farrand Road in Kumeu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Fletcher Road (Waimauku)**

Fletcher Road, Waimauku, is divided into three sections as follows: <sup>1</sup>

- Section 1: Fletcher Road between Muriwai Road and 20m east of Taha Road
- Section 2: Fletcher Road between 20m east of Taha Road and 30m west of Mahana Road
- Section 3: Fletcher Road between 30m west of Mahana Road and the western end of Fletcher Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Fletcher Road, Waimauku has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Fletcher Road connects to Muriwai Road to the east. This road provides access to residential properties.		
	This section is approximately 0.86 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.48 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.63 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is an unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this	This section is an unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	on-street parking along this section.	road, and there is no on-street parking along this section.	on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Fletcher Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private	The adjacent land use is classified as Rural residential using on-site information and geomaps. - Section 1
  - The Infrastructure Risk Rating Score is 2.72. For Rural areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.88. For Rural areas this corresponds to an IRR band of **Medium-High**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.13. For Rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h for all three sections of Fletcher Road.

## Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 40 km/h on Fletcher Road between Muriwai Road and 20m east of Taha Road (Section 1)
- 40 km/h on Fletcher Road between 20m east of Taha Road and 30m west of Mahana Road (Section 2)
- 40 km/h on Fletcher Road between 30m west of Mahana Road and the western end of Fletcher Road (Section 3)

Fletcher Road is a self-explaining road as the mean operating speeds (31-36 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Fletcher Road was considered, but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for the first section of Fletcher Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, tortuous nature of the road, high road-side hazards and low mean operating speed (36 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>2</sup>

Crash history from NZTA's CAS database shows 1 crash in the last 5 years for the first section including 0 fatal, 0 serious, 0 minor, and 1 non-injury crashes.

A proposed speed limit of 40 km/h was selected for the second section of Fletcher Road due to a multitude of factors. These being the adjoining unsealed sections, narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (31 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.

A proposed speed limit of 40 km/h was selected for the third section of Fletcher Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (31 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.

Crash history from NZTA's CAS database shows 1 crash in the last 5 years for the third section including 0 fatal, 0 serious, 0 minor, and 1 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Fletcher Road in Waimauku, is not considered to be a safe and appropriate speed limit for this road.

The recommended safe and appropriate speed limit for all three sections of Fletcher Road is 40 km/h which is higher than the Speed Management Guide recommendation (60 km/h) but are considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (36 km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Foley Quarry Road (Dairy Flat)

Foley Quarry Road, Dairy Flat, is divided into two sections as follows:<sup>1</sup>

- Section 1: Foley Quarry Road between Dairy Flat Highway and 1545m northeast of Dairy Flat Highway
- Section 2: Foley Quarry Road between 1545m northeast of Dairy Flat Highway and the northeastern end of Foley Quarry Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Foley Quarry Road, Dairy Flat has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Foley Quarry Road connects to Dairy Flat Highway to the west. This road provides access to residential properties.	
	This section is approximately 1.55 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.73 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal,	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal,

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	0 serious, 0 minor and 1 non-injury crash. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	1 serious, 0 minor and 0 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Foley Quarry Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 140 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	
(i) any planned modification to the road; and	There are no planned modifications currently.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 80 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 40 km/h.	This section has a mean operating speed of 28 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Dairy Flat Highway:</b> 80 km/h</li> </ul>	

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	1
DSI crashes during the period	0	1
Corridor Length (km)	1.55	0.73
Annual Daily Traffic	140	140

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.27. For rural areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 535.42. For rural areas this corresponds to a Personal Risk band of **High**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Unsealed	10.00
Road alignment	Tortuous	6.00	Winding	3.50
Carriageway width	Medium lane, Very narrow shoulder	1.79	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural residential	1.50	Rural residential	1.50
Intersection density (per km)	<1	1.00	<1	1.00
Access density (per km)	>20	1.30	>20	1.30
Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.25. For rural areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.50. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 60 km/h on Foley Quarry Road between Dairy Flat Highway and 1545m northeast of Dairy Flat Highway (Section 1)
- 40 km/h on Foley Quarry Road between 1545m northeast of Dairy Flat Highway and the north-eastern end of Foley Quarry Road (Section 2)

Foley Quarry Road is a self-explaining road as the mean operating speeds are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Foley Quarry Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section of Foley Quarry Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, tortuous nature of the road, high road-side hazards and low mean operating speed (40 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>2</sup>

Crash history from NZTA's CAS database shows 1 crash in the last 5 years for the first section including 0 fatal, 0 serious, 0 minor, and 1 non-injury crashes.

A proposed speed limit of 40 km/h was selected for the second section of Foley Quarry Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (28 km/h). All of these factors contribute to the road's 'High' IRR score. Due to adverse crash history on the road, the collective and personal risk of this road are classified as '**High**' and '**High**', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high risk road.

Crash history from NZTA's CAS database shows 1 crash in the last 5 years for the second section including 0 fatal, 1 serious, 0 minor, and 0 non-injury crashes.

After considering all of the above factors, the existing speed limit of 80 km/h on Foley Quarry Road in Dairy Flat, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h for the first section which is aligned with the recommended safe and appropriate speed.

The proposed safe and appropriate speed limit for the second section of Foley Quarry Road is 40 km/h which is aligned with the speed limit recommended by the Speed Management Guide (<80 km/h); this is considered appropriate based on the function of the road and the mean operating speed (28 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Fork Road (Kumeu)

The speed limit on Fork Road, Kumeu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Fork Road connects to Annett Road to the north. This road provides access to residential properties.
	This section is approximately 0.53 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is a unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Fork Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 124 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 28 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Annett Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.53
Annual Daily Traffic	124

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10
Road alignment	Tortuous	6.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.72. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Fork Road.*

Fork Road is a self-explaining road as the mean operating speeds (28 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Fork Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Fork Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, tortuous nature of the road, high road-side hazards and low mean operating speed (28 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Fork Road in Kumeu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Fork Road is 40 km/h which is lower than the speed limit recommended by the Speed Management Guide (60 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (28 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Foster Road (Kumeu)

Foster Road, Kumeu, is divided into three sections as follows:<sup>1</sup>

- Section 1: Foster Road between State Highway 16 and Awa Road
- Section 2: Foster Road between Awa Road and the western end of Kauri Crescent
- Section 3: Foster Road between the western end of Kauri Crescent and School Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Foster Road, Kumeu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Foster Road connects to State Highway 16 to the east and School Road to the west. This road provides access to residential properties.		
	This section is approximately 1.68 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 1.75 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.61 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 1147 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
Current speed limit	The existing speed limit is 80 km/h.	The existing speed limit is 80 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 60 km/h.	This section has a mean operating speed of 58 km/h.	This section has a mean operating speed of 58 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>State Highway 16:</b> 100 km/h</li> <li>• <b>Trigg Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Awa Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>School Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>		

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data		
	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	1	3	0
DSI crashes during the period	0	2	0
Corridor Length (km)	1.68	1.75	0.61
Annual Daily Traffic	1147	1147	1147

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.23. For rural areas this corresponds to a Collective Risk band of **High**
  - The Personal Risk score is 54.57. For rural areas this corresponds to a Personal Risk band of **High**
- Section 3
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2		Section 3	
	Category	Risk Score	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Curved	1.80	Curved	1.80	Tortuous	6.00
Carriageway width	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28	High	2.28	Severe	2.80
Adjacent land use	Rural residential	1.50	Rural residential	1.50	Rural residential	1.50
Intersection density (per km)	2 to <3	1.25	1 to <2	1.15	3 to <5	1.50
Access density (per km)	10 to <20	1.10	10 to <20	1.10	5 to <10	1.06
Traffic volume (vpd)	1000 to <6000	1.40	1000 to <6000	1.40	1000 to <6000	1.40

- Section 1
  - The Infrastructure Risk Rating Score is 1.89. For Rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.86. For Rural areas this corresponds to an IRR band of **Medium-High**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.57. For Rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h for all three sections of Foster Road.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 60 km/h on Foster Road between State Highway 16 and Awa Road (Section 1)
- 60 km/h on Foster Road between Awa Road and the western end of Kauri Crescent (Section 2)
- 60 km/h on Foster Road between the western end of Kauri Crescent and School Road (Section 3)

Foster Road is a self-explaining road as the mean operating speeds (58-60 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Foster Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first and second sections of Foster Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, high road-side hazards, and low mean operating speed (60 km/hr). All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>2</sup>

Due to adverse crash history on the second section of Foster Road, the collective and personal risk of this road are classified as '**High**' and '**High**' respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.

A proposed speed limit of 60 km/h was selected for the third section of Foster Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, tortuous nature of the road, severe road-side hazards, and low mean operating speed (58 km/hr). All these factors contribute to the road's 'High' IRR score, making it a high-risk road.

Crash history from NZTA's CAS database shows:

- 2 crashes in the last 5 years for the first section including 0 fatal, 0 serious, 1 minor, and 1 non-injury crashes.
- 4 crashes in the last 5 years for the second section including 0 fatal, 2 serious, 1 minor, and 1 non-injury crashes.
- 1 crash in the last 5 years for the third section including 0 fatal, 0 serious, 0 minor, and 1 non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on Foster Road in Kumeu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h for all three sections of Foster Road which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Hamilton Road (Waimauku)

The speed limit on Hamilton Road, Waimauku has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Hamilton Road connects to Muriwai Road to the east. This road provides access to residential properties.
	This section is approximately 1.32 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Hamilton Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 248 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 23 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Muriwai Road:</b> 100 km/h (proposed 80 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.32
Annual Daily Traffic	248

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Unsealed	10.00
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	>20	1.30
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.21. For rural areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Hamilton Road.*

Hamilton Road is a self-explaining road as the mean operating speeds (23 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Hamilton Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Hamilton Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, tortuous nature of the road, severe road-side hazards and low mean operating speed (20 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Hamilton Road in Waimauku, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Hamilton Road is 40 km/h which aligns with the speed limit recommended by the Speed Management Guide; this is considered appropriate based on the function of the road and the mean operating speed (23 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Hanham Road (Kumeu)

Hanham Road, Kumeu, is divided into two sections as follows: <sup>1</sup>

- Section 1: Hanham Road between Waitakere Road and 590m east of Tawa Road
- Section 2: Hanham Road between 590m east of Tawa Road and Tawa Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Hanham Road, Kumeu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Hanham Road connects to Waitakere Road to the east and Tawa Road to the west. This road provides access to residential properties.	
	This section is approximately 1.64 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 0.59 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 4 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 4 non-injury crashes. This resulted in 0	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Hanham Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 789 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 789 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 80 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 64 km/h.	This section has a mean operating speed of 62 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Waitakere Road:</b> 80 km/h (proposed 80 km/h)</li> <li>• <b>Tawa Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>	

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	1.64	0.59
Annual Daily Traffic	789	789

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Curved	1.80	Tortuous	6.00
Carriageway width	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural residential	1.50	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15	1 to <2	1.15
Access density (per km)	>20	1.30	>20	1.30
Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 1.78. For Rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.31. For Rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is 60 km/h on Hanham Road.*

Hanham Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Hanham Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section of Hanham Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, high road-side hazards, and low mean operating speed (64 km/h). All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>2</sup>

Crash history from NZTA's CAS database shows 4 crashes in the last 5 years for the first section including 0 fatal, 0 serious, 0 minor, and 4 non-injury crashes.

A proposed speed limit of 60 km/h was selected for the second section of Hanham Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, tortuous nature of the road, high road-side hazards, and low mean operating speed (62 km/h). All these factors contribute to the road's 'High' IRR score, making it a high-risk road.

After considering all the above factors, the existing speed limit of 80 km/h on Hanham Road in Kumeu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Hanham Road is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Henwood Road (Taupaki)**

The speed limit on Henwood Road, Taupaki has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Henwood Road connects to Nixon Road to the west. This road provides access to residential properties.</p> <p>This section is approximately 1.28 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Henwood Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as <i>"rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 258 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 39 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Nixon Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.28
Annual Daily Traffic	258

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

#### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.70. For rural areas this corresponds to an IRR band of **Medium-High**.

#### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Henwood Road.

Henwood Road is a self-explaining road as the mean operating speeds (39 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Henwood Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Henwood Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (39 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 80 km/h on Henwood Road in Taupaki, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Hinau Road (Waimauku)**

The speed limit on Hinau Road, Waimauku has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hinau Road connects to School Road to the north. This road provides access to residential properties.</p> <p>This section is approximately 1.57 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Hinau Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 294 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 41 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>School Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Cable Road:</b> 80 km/h (proposed 40 &amp; 60km/h [2 sections])</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.57
Annual Daily Traffic	294

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Tortuous	6.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.79
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.37. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Hinau Road.*

Hinau Road is a self-explaining road as the mean operating speeds (41 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Hinau Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Hinau Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, tortuous nature of the road, severe road-side hazards and low mean operating speed (41 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 80 km/h on Hinau Road in Waimauku, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed (<80 km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Hunter Road (Taupaki)**

Hunter Road, Taupaki, is divided into two sections as follows:<sup>1</sup>

- Section 1: Hunter Road between Waitakere Road and 610m west of Waitakere Road
- Section 2: Hunter Road between 610m west of Waitakere Road and 230m west of Cuthbert Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Hunter Road, Taupaki has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Hunter Road connects to Waitakere Road to the east and Cuthbert Road to the north. This road provides access to residential properties.	
	This section is approximately 0.61 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 1.3 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020.	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	Therefore, there are no Death and Serious Injury (DSI) crashes.	Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Hunter Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 391 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 391 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 52 km/h.	This section has a mean operating speed of 52 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Waitakere Road:</b> 80 km/h (proposed 80 km/h)</li> <li>• <b>Cuthbert Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>	

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	0.61	1.3
Annual Daily Traffic	391	391

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Winding	3.50	Winding	3.50

Access density (per km)	10 to <20	1.10	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.00. For rural areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.94. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is 60 km/h on Hunter Road*

Hunter Road is a self-explaining road as the mean operating speeds are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Hunter Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section of Hunter Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (52 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>2</sup>

A proposed speed limit of 60 km/h was selected for the second section of Hunter Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (52 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.

After considering all the above factors, the existing speed limit of 100 km/h on Hunter Road in Taupaki, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Hunter Road is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Joseph Dunstan Drive (Taupaki)

The speed limit on Joseph Dunstan Drive, Taupaki has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Joseph Dunstan Drive connects to Taupaki Road to the west. This road provides access to residential properties.
	This section is approximately 0.89 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Joseph Dunstan Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 39 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 36 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Taupaki Road:</b> 60 km/h</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.89
Annual Daily Traffic	39

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	Severe	2.79
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.79. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Joseph Dunstan Drive.*

Joseph Dunstan Drive is a self-explaining road as the mean operating speeds (36 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Joseph Dunstan Drive was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Joseph Dunstan Drive due to a multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, severe road-side hazards and low mean operating speed (36 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Joseph Dunstan Drive in Taupaki, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Kauri Crescent (Waimauku)

Kauri Crescent (East), Waimauku, is divided into two sections as follows:<sup>1</sup>

- Section 1: Kauri Crescent (East) between Foster Road and the southern end of Kauri Crescent (East).
- Section 2: Kauri Crescent (West) between Foster Road and the southern end of Kauri Crescent (West).

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Kauri Crescent, Waimauku has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Kauri Crescent (East) and Kauri Crescent (West) both connect to Foster Road to the north. These roads provide access to residential properties.	
	This section is approximately 1.43 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.58 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Kauri Crescent were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 178 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 42 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.

Requirement	Comments	
	Section 1	Section 2
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 80 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 30 km/h.	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Foster Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>	

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	1.43	0.58
Annual Daily Traffic	178	42

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Unsealed	10.00	Unsealed	10.00
Road alignment	Winding	3.50	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01

Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.50. For rural areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.47. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is 50km/h on*

- *40 km/h on Kauri Crescent (East) between Foster Road and the southern end of Kauri Crescent (East) (Section 1)*
- *40 km/h on Kauri Crescent (West) between Foster Road and the southern end of Kauri Crescent (West) (Section 2)*

Kauri Crescent (East) and Kauri Crescent (West) are self-explaining roads as the mean operating speeds are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Kauri Crescent was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Kauri Crescent (East) due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, winding nature of the road, severe road-side hazards and low mean operating speed (30 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>2</sup>

A proposed speed limit of 40 km/h was selected for Kauri Crescent (West) due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (20 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.

After considering all the above factors, the existing speed limit of 80 km/h on Kauri Crescent in Waimauku, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Kauri Crescent (East) is 40 km/h which is lower than the speed limit recommended by the Speed Management Guide (<80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (30 km/h) supports the reduction.

The proposed safe and appropriate speed limit for Kauri Crescent (West) is 40 km/h which aligns with the speed limit recommended by the Speed Management Guide (<80 km/h); this is considered appropriate based on the function of the road and the mean operating speed (20 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Mahana Road (Waimauku)

Mahana Road, Waimauku, is divided into three sections as follows:<sup>1</sup>

- Section 1: Mahana Road between Young Garden Lane and Taha Road
- Section 2: Mahana Road between 375m north of Mahana Road and Young Garden Lane
- Section 3: Mahana Road between Fletcher Road and 375m north of Mahana Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Mahana Road, Waimauku has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>

(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 113 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 113 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 113 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 37 km/h.	This section has a mean operating speed of 37 km/h.	This section has a mean operating speed of 37 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Taha Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Fletcher Road:</b> 100 km/h (proposed 40 km/h)</li> </ul>		

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data		
	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	0	0	0
DSI crashes during the period	0	0	0
Corridor Length (km)	0.91	0.5	0.37
Annual Daily Traffic	113	113	113

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 3
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2		Section 3	
	Category	Risk Score	Category	Risk Score	Category	Risk Score
Road stereotype	Unsealed	10.00	Unsealed	10.00	Two-lane undivided	3.70
Road alignment	Winding	3.50	Straight	1.00	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.80	High	2.28	High	2.28
Adjacent land use	Rural residential	1.50	Rural residential	1.50	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15	1 to <2	1.15	1 to <2	1.15
Access density (per km)	5 to <10	1.06	>20	1.30	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.56. For Rural areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.01. For Rural areas this corresponds to an IRR band of **High**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.05. For Rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 40 km/h on Mahana Road between Young Garden Lane and Taha Road (Section 1)
- 40 km/h on Mahana Road between 375m north of Mahana Road and Young Garden Lane (Section 2)
- 40 km/h on Mahana Road between Fletcher Road and 375m north of Mahana Road (Section 3)

Mahana Road is a self-explaining road as the mean operating speeds (37 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Mahana Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for the first section of Mahana Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, Winding nature of the road, Severe road-side hazards and low mean operating speed (37 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>2</sup>

Crash history from NZTA's CAS database shows 1 crash in the last 5 years for the first section including 0 fatal, 0 serious, 0 minor, and 1 non-injury crashes.

A proposed speed limit of 40 km/h was selected for the second section of Mahana Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (37 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.

A proposed speed limit of 40 km/h was selected for the third section of Mahana Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (37 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.

After considering all the above factors, the existing speed limit of 100 km/h on Mahana Road in Waimauku, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit Mahana Road is 40 km/h which is aligned with the speed limit recommended by the Speed Management Guide (<80 km/h); this is considered appropriate based on the function of the road and the mean operating speed (37 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Matatea Road (Waimauku)

The speed limit on Matatea Road, Waimauku has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Matatea Road connects to School Road to the west. This road provides access to residential properties.
	This section is approximately 0.74 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Matatea Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 114 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>School Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.74
Annual Daily Traffic	114

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Tortuous	6.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.79
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.79. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Matatea Road.*

Matatea Road is a self-explaining road as the mean operating speeds (20 km/h) are below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Matatea Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Matatea Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, tortuous nature of the road, severe road-side hazards, and low mean operating speed (20 km/h). All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 50 km/h on Matatea Road in Waimauku, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Matatea Road is 40 km/h which aligns with the speed limit recommended by the Speed Management Guide (<80 km/h); this is considered appropriate based on the function of the road and the mean operating speed (20 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Motu Road (Kumeu)

The speed limit on Motu Road, Kumeu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Motu Road connects to Trigg Road to the north and Tawa Road to the south. This road provides access to mixture of residential and commercial properties.</p> <p>This section is approximately 1.73 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 4 crashes between 2016 and 2020: 0 fatal, 0 serious, 3 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Motu Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 782 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 59 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Trigg Road:</b> 80 km/h (proposed 60 km/h)</li> <li><b>Tawa Road:</b> 80 km/h</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	3
DSI crashes during the period	0
Corridor Length (km)	1.73
Annual Daily Traffic	782

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.71. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Motu Road.*

Motu Road is a self-explaining road as the mean operating speeds (59 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Motu Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Motu Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (59 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows 4 crashes in the last 5 years including 0 fatal, 0 serious, 3 minor, and 1 non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on Motu Road in Kumeu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Muriwai Road (Waimauku / Muriwai)

Muriwai Road, Waimauku / Muriwai, is divided into two sections as follows: <sup>1</sup>

- Section 1: Muriwai Road between SH16 and 140m west of School Road
- Section 2: Muriwai Road between 140m west of School Road and Oaia Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Muriwai Road, Waimauku / Muriwai has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Muriwai Road connects to SH16 to the north and Oaia Road to the South. This road provides access to residential properties.	
	This section is approximately 1.06 km in length. It is classified as an Arterial road under the one network road classification (ONRC).	This section is approximately 6.8 km in length. It is classified as an Arterial road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are pedestrian amenities along this road, but no cyclist amenities. There is on-street parking along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 8 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 8 non-injury crashes. This resulted in 0	WK NZTA's Crash Analysis System (CAS) records 29 crashes between 2016 and 2020: 0 fatal, 1 serious, 12 minor and 16 non-injury crashes. This

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Muriwai Road is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Muriwai Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using on-site information and geomaps. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day.</i> "	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 6142 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 3679 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.

Requirement	Comments	
	Section 1	Section 2
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 50 km/h between SH1 and School Road, and 100 km/h between School Road and 140m west of School Road.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 55 km/h.	This section has a mean operating speed of 78 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>State Highway 16:</b> 70 km/h</li> <li>• <b>Oaia Road:</b> 50 km/h (proposed 50 km/h)</li> </ul>	

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	13
DSI crashes during the period	0	1
Corridor Length (km)	1.06	6.8
Annual Daily Traffic	6142	3679

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2

- The Collective Risk score is 0.03. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 2.19. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Winding	3.50	Curved	1.80
Carriageway width	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	Severe	2.80	High	2.28
Adjacent land use	Urban residential	3.00	Rural residential	1.50
Intersection density (per km)	5 to <10	2.60	<1	1.00
Access density (per km)	>20	1.30	2 to <5	1.03
Traffic volume (vpd)	6000 to <12000	2.20	6000 to <12000	2.20

- Section 1
  - The Infrastructure Risk Rating Score is 3.16. For urban areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.97. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50 km/h.

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation is

- 50 km/h on Muriwai Road between SH16 and 140m west of School Road (Section 1)
- 80 km/h on Muriwai Road between 140m west of School Road and Oaia Road (Section 2)

Muriwai Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing speed limits. Engineering up of Muriwai Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 50 km/h was selected for the first section of Muriwai Road due to a multitude of factors. These being the urban land use, medium lane width, very narrow shoulder width, winding nature of the road, severe road-side hazards and mean operating speed (55 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>2</sup>

Crash history from NZTA's CAS database shows 8 crashes in the last 5 years for the first section including 0 fatal, 0 serious, 0 minor, and 8 non-injury crashes.

A proposed speed limit of 80 km/h was selected for the second section of Muriwai Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (78 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.

Crash history from NZTA's CAS database shows 29 crashes in the last 5 years for the second section including 0 fatal, 1 serious, 12 minor, and 16 non-injury crashes.

After considering all the above factors, the existing speed limits on Muriwai Road in Waimauku / Muriwai are not considered to be a safe and appropriate speed limit for this road.

The existing speed limit of 50 km/h for the first section is unchanged which is aligned with the recommended safe and appropriate speed.

The recommended safe and appropriate speed limit for the second section of Muriwai Road is 80 km/h which is higher than the Speed Management Guide recommendation (<80 km/h) but is considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (78 km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Muriwai Valley Road (Waimauku / Muriwai)**

Muriwai Valley Road, Waimauku / Muriwai, is divided into two sections as follows: <sup>1</sup>

- Section 1: Muriwai Valley Road between Cable Road and Taiapa Road
- Section 2: Muriwai Valley Road between Taiapa Road and the southeastern end of Muriwai Valley Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Muriwai Valley Road, Waimauku / Muriwai has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Muriwai Valley Road connects to Cable Road to the east and Taiapa Road to the west. This road provides access to residential properties.	
	This section is approximately 1.79 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 2.02 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero	WK NZTA's Crash Analysis System (CAS) records zero

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Muriwai Valley Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 358 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 358 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2
Current speed limit	The existing speed limit is 100 km/h.	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 62 km/h.	This section has a mean operating speed of 31 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Cable Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Taiapa Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>	

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data	
	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	0	0
DSI crashes during the period	0	0
Corridor Length (km)	1.79	2.02
Annual Daily Traffic	358	358

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Curved	1.80	Winding	3.50
Carriageway width	Medium lane, Very narrow shoulder	1.79	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28	High	2.28
Adjacent land use	Rural residential	1.50	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15	<1	1.00
Access density (per km)	5 to <10	1.06	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 1.70. For Rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.99. For Rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation is 60 km/h for the full length of Muriwai Valley Road.*

Muriwai Valley Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Muriwai Valley Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first section of Muriwai Valley Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (62 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>2</sup>

A proposed speed limit of 60 km/h was selected for the second section of Muriwai Valley Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (31 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.

After considering all the above factors, the existing speed limit of 100 km/h on Muriwai Valley Road in Waimauku / Muriwai, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Nelson Road (Taupaki)

The speed limit on Nelson Road, Taupaki has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nelson Road connects to Nixon Road to the east and Taupaki Road to the west. This road provides access to residential properties.</p> <p>This section is approximately 1.62 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Nelson Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 979 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 66 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Nixon Road:</b> 80 km/h (proposed 60 km/h)</li> <li><b>Taupaki Road:</b> 60 km/h</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.62
Annual Daily Traffic	979

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.71. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Nelson Road.*

Nelson Road is a self-explaining road as the mean operating speeds (66 km/h) is near the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Nelson Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Nelson Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, curved nature of the road, high road-side hazards. All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor, and 2 non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on Nelson Road in Taupaki, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Nixon Road (Taupaki)

The speed limit on Nixon Road, Taupaki has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Nixon Road connects to Red Hills Road to the south and Taupaki Road to the north. This road provides access to residential properties.</p> <p>This section is approximately 2.71 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 12 crashes between 2016 and 2020: 0 fatal, 2 serious, 6 minor and 4 non-injury crashes. This resulted in 2 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Nixon Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 907 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 67 km/h.
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Taupaki Road:</b> 60 km/h</li> <li><b>Red Hills Road:</b> 80 km/h</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	8
DSI crashes during the period	2
Corridor Length (km)	2.71
Annual Daily Traffic	907

- The Collective Risk score is 0.15. For rural areas this corresponds to a Collective Risk band of **Medium-High**
- The Personal Risk score is 44.65. For rural areas this corresponds to a Personal Risk band of **High**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	1000 to <6000	1.39

The Infrastructure Risk Rating Score is 1.91. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Nixon Road.*

Nixon Road is a challenging conversations road as the mean operating speeds (67 km/h) are above the proposed safe and appropriate speeds. Engineering up of Nixon Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Nixon Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and mean operating speed (67 km/h). All these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>1</sup> Due to adverse crash history on the road, the collective and personal risk of this road are classified as '**Medium-High**' and '**High**,' respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.

Crash history from NZTA's CAS database shows 12 crashes in the last 5 years including 0 fatal, 2 serious, 6 minor, and 4 non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on Nixon Road in Taupaki, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Oak Valley Road (Dairy Flat)**

The speed limit on Oak Valley Road, Dairy Flat has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Oak Valley Road connects to Durey Road to the south. This road provides access to residential properties.
	This section is approximately 0.70 km in length. It is classified as low volume access under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Oak Valley Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using on-site information and geomaps. The IRR defines Urban residential as <i>"dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) is 350 vehicle per day determined from Mobile Road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	The mean operating speed on this section is unknown.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Durey Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.70
Annual Daily Traffic	350

- The Collective Risk score is 0.00. For urban areas this corresponds to a Collective Risk band of **Low**.
- The Personal Risk score is 0.00. For urban areas this corresponds to a Personal Risk band of **Low**.

#### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3.00
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.15. For rural areas this corresponds to an IRR band of **Medium**.

#### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Oak Valley Road.

Engineering up of Oak Valley Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Oak Valley Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, and moderate road-side hazards. All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

After considering all of the above factors, the existing speed limit of 50 km/h on Oak Valley Road in Dairy Flat, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Oregon Park (Dairy Flat)**

The speed limit on Oregon Park, Dairy Flat has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Oregon Park connects to Bawden to the south. This road provides access to residential properties.
	This section is approximately 0.34 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Oregon Park were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 62 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 24 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Bawden Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.34
Annual Daily Traffic	62

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.51. For rural areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Oregon Park.

Oregon Park is a self-explaining road as the mean operating speeds (24 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Oregon Park was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Oregon Park due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (24 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

After considering all of the above factors, the existing speed limit of 80 km/h on Oregon Park in Dairy Flat, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Oregon Park is 60 km/h which aligns with the speed limit recommended by the Speed Management Guide (<80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (24 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Pioneer Lane (Kumeu)**

The speed limit on Pioneer Lane, Kumeu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Pioneer Lane connects to Annandale Road to the east. This road provides access to residential properties.
	This section is approximately 0.59 km in length. It is classified as an Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Pioneer Lane were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 26 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Annandale Road:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.59
Annual Daily Traffic	41

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.05. For rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Pioneer Lane.

Pioneer Lane is a self-explaining road as the mean operating speeds (26 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Pioneer Lane was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Pioneer Lane due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (26 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Pioneer Lane in Kumeu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Pomona Road (Kumeu)**

The speed limit on Pomona Road, Kumeu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Pomona Road connects to Hanham Road to the south. This road provides access to residential properties.</p> <p>This section is approximately 2.24 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Pomona Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 677 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 58 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Hanham Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	2.24
Annual Daily Traffic	677

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.00. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Pomona Road.

Pomona Road is a self-explaining road as the mean operating speeds (58 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Pomona Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Pomona Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (58 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Pomona Road in Kumeu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Puke Road (Kumeu)**

The speed limit on Puke Road, Kumeu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Puke Road connects to Trigg Road to the north and Tawa Road to the south. This road provides access to residential properties.</p> <p>This section is approximately 2.25 km in length. It is classified as a Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Puke Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 164 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 37 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Trigg Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Tawa Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	2.25
Annual Daily Traffic	164

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.94. For rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Puke Road.*

Puke Road is a self-explaining road as the mean operating speeds (37 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Puke Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Puke Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (37 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor, and 1 non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on Puke Road in Kumeu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed (<80 km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Red Hills Road (Massey / Taupaki)**

Red Hills Road, Massey / Taupaki, is divided into four sections as follows:<sup>1</sup>

- Section 1: Red Hills Road between Don Buck Road and 375m west of Don Buck Road
- Section 2: Red Hills Road between 375m west of Don Buck Road and 850m east of Sunnyvale Road
- Section 3: Red Hills Road between 850m east of Sunnyvale Road and Sunnyvale Road
- Section 4: Red Hills Road between Sunnyvale Road and Nixon Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Red Hills Road, Massey / Taupaki has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1.1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments

Adjacent land use	Urban residential	3.00	Rural residential	1.50	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15	1 to <2	1.15	1 to <2	1.15
Access density (per km)	10 to <20	1.10	>20	1.30	5 to <10	1.06
Traffic volume (vpd)	6000 to <12000	2.20	6000 to <12000	2.20	6000 to <12000	2.20
Feature	Section 4					
	Category	Risk Score				
Road stereotype	Two-lane undivided	3.70				
Road alignment	Winding	3.50				
Carriageway width	Medium lane, Very narrow shoulder	1.79				
Roadside hazards (in both directions)	Severe	2.80				
Adjacent land use	Rural residential	1.50				
Intersection density (per km)	<1	1.00				
Access density (per km)	10 to <20	1.10				

Traffic volume (vpd)	6000 to <12000	2.20
----------------------	----------------	------

- Section 1
  - The Infrastructure Risk Rating Score is 2.73. For Urban areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.51. For Rural areas this corresponds to an IRR band of **High**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.42. For Rural areas this corresponds to an IRR band of **High**.
- Section 4
  - The Infrastructure Risk Rating Score is 2.37. For Rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is

- 40 km/h between Don Buck Road and 375m west of Don Buck Road (Section 1)

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is

- <80 km/h between 375m west of Don Buck Road and 850m east of Sunnyvale Road (Section 2)
- <80 km/h between 850m east of Sunnyvale Road and Sunnyvale Road (Section 3)
- <80 km/h between Sunnyvale Road and Nixon Road (Section 4)

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation is

- (Unchanged) 50 km/h on Red Hills Road between Don Buck Road and 375m west of Don Buck Road (Section 1)
- 60 km/h on Red Hills Road between 375m west of Don Buck Road and 850m east of Sunnyvale Road (Section 2)
- 60 km/h on Red Hills Road between 850m east of Sunnyvale Road and Sunnyvale Road (Section 3)
- (Unchanged) 80 km/h on Red Hills Road between Sunnyvale Road and Nixon Road (Section 4)

The first, second and fourth sections of Red Hills Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing speed limits. The third section of Red Hills Road is a challenging conversations road as the mean operating speeds are above the proposed safe and appropriate speeds. Engineering up of Red Hills Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

The existing speed limit of 50 km/h is unchanged for the first section of Red Hills Road due to a multitude of factors. These being the urban residential land use, medium lane width, very narrow shoulder width, winding nature of the road, severe road-side hazards and low mean operating speed (49 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>2</sup>

A proposed speed limit of 60 km/h was selected for the second section of Red Hills Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, winding nature of the road, severe road-side hazards. All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.

A proposed speed limit of 60 km/h was selected for the third section of Red Hills Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, winding nature of the road, severe road-side hazards. All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.

The existing speed limit of 80 km/h is unchanged for the fourth section of Red Hills Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, winding nature of the road, severe road-side hazards and mean operating speed (68 km/hr). All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.

Crash history from NZTA's CAS database shows the following crashes in the last 5 years:

- Section 1: 5 crashes including 0 fatal, 0 serious, 1 minor, and 4 non-injury crashes.
- Section 2: 12 crashes including 0 fatal, 0 serious, 7 minor, and 5 non-injury crashes.
- Section 3: 4 crashes including 0 fatal, 0 serious, 0 minor, and 4 non-injury crashes.
- Section 4: 7 crashes including 0 fatal, 0 serious, 3 minor, and 4 non-injury crashes.

After considering all of the above factors, the existing speed limits on Red Hills Road in Massey / Taupaki, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is:

- (Unchanged) 50 km/h for the first section which is aligned with the recommended safe and appropriate speed.
- 60 km/h for the second section which is aligned with the recommended safe and appropriate speed.
- 60 km/h for the third section which is aligned with the recommended safe and appropriate speed because of the future development on the road.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

- (Unchanged) 80 km/h for the fourth section which is higher than the Speed Management Guide recommendation (60 km/h) but are considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (68 km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

## **Speed Limit Review – Redvale Rise (Redvale)**

The speed limit on Redvale Rise, Redvale has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Redvale Rise connects to East Coast Road to the east. This road provides access to residential properties.</p> <p>This section is approximately 0.27 km in length. It is classified as a Access road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Redvale Rise were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 52 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 20 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>East Coast Road:</b> 80 km/h</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.27
Annual Daily Traffic	52

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.05. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Redvale Rise.

Redvale Rise is a self-explaining road as the mean operating speeds (20 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Redvale Rise was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Redvale Rise due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (20 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Redvale Rise in Redvale, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – School Road (Waimauku)**

School Road, Waimauku, is divided into three sections as follows: <sup>1</sup>

- Section 1: School Road between northern junction with Muriwai Road and Hinau Road
- Section 2: School Road between Hinau Road and 545m north of southern junction with Muriwai Road
- Section 3: School Road between 545m north of southern junction with Muriwai Road and southern junction with Muriwai Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on School Road, Waimauku has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	School Road connects to Muriwai Road to the north and south. This road provides access to residential properties.		
	This section is approximately 1.60 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 1.7 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.55 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	amenities along this road, and there is no on-street parking along this section.	amenities along this road, and there is no on-street parking along this section.	amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 0 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of School Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as "rural area with accesses	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses

Requirement	Comments		
	Section 1	Section 2	Section 3
	<i>present to private dwellings and farms. There may be the occasional industry/factory present. Annual Daily Traffic	391	383	383

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 3
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Section 1		Section 2		Section 3	
	Category	Risk Score	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Tortuous	60	Tortuous	6.00	Tortuous	6.00
Carriageway width	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28	Severe	2.80	Severe	2.80
Adjacent land use	Rural residential	1.50	Rural residential	1.50	Rural residential	1.50
Intersection density (per km)	2 to <3	1.25	1 to <2	1.15	1 to <2	1.15
Access density (per km)	5 to <10	1.06	10 to <20	1.10	2 to <5	1.03
Traffic volume (vpd)	<1000	1.00	<1000	1.00	<1000	1.00

- Section 1
  - The Infrastructure Risk Rating Score is 2.26. For Rural areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.32. For Rural areas this corresponds to an IRR band of **High**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.30. For Rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

## Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 60 km/h on School Road between northern junction with Muriwai Road and Hinau Road (Section 1)
- 60 km/h on School Road between Hinau Road and 545m north of southern junction with Muriwai Road (Section 2)
- 60 km/h on School Road between 545m north of southern junction with Muriwai Road and southern junction with Muriwai Road (Section 3)

School Road is a self-explaining road as the mean operating speeds (45-50 km/h) are below the proposed safe and appropriate speeds, despite the existing 80-100 km/h speed limit. Engineering up of School Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would outweigh any benefits.

A proposed speed limit of 60 km/h was selected for all three sections of School Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, tortuous nature of the road, high-severe road-side hazards and low mean operating speed (45-50 km/hr). All these factors contribute to the road's 'High' IRR score, making it a high-risk road.<sup>2</sup>

Crash history from NZTA's CAS database shows 1 crash in the last 5 years for the second section including 0 fatal, 0 serious, 1 minor, and 0 non-injury crashes.

WK NZTA's Crash Analysis System (CAS) records zero crash on the first and third section of School Road between 2016 and 2020.

After considering all the above factors, the existing speed limit of 80 km/h on School Road in Waimauku, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h for all sections of School Road which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Station Road (Kumeu)

The speed limit on Station Road, Kumeu, between 100m South of Nobilo Road and Tawa Road, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Station Road connects to Tawa Road to the south. This road provides access to residential properties.</p> <p>This section is approximately 0.44 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Station Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 601 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 57 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Tawa Road:</b> 80 km/h</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.44
Annual Daily Traffic	601

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Straight	1.00
Carriageway width	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.288
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.46. For rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 60 km/h for the Station Road, between 100m South of Nobilo Road and Tawa Road.

Station Road is a self-explaining road as the mean operating speeds (57 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Station Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Station Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (57 km/h). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

After considering all the above factors, the existing speed limit of 80 km/h on Station Road in Kumeu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Station Road is 60 km/h which is the speed limit recommended by the Speed Management Guide (<80 km/h); however, this is considered appropriate based on the function of the road and the mean operating speed (57 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

**Speed Limit Review – Taha Road (Waimauku)**

Taha Road, Waimauku, is divided into three sections as follows: <sup>1</sup>

- Section 1: Taha Road between Fletcher Road and 500m north of Fletcher Road
- Section 2: Taha Road between 500m north of Fletcher Road and 20m north of Mahana Road
- Section 3: Taha Road between 20m north of Mahana Road and Muriwai Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Taha Road, Waimauku has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Taha Road connects to Muriwai Road to the north and Fletcher Road to the south. This road provides access to residential and commercial properties.		
	This section is approximately 0.5 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.5 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.89 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	road, and there is no on-street parking along this section.	road, and there is no on-street parking along this section.	road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 0 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Taha Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private</i>	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private</i>	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private</i>

Requirement	Comments		
	Section 1	Section 2	Section 3

Access density (per km)	>20	1.30	10 to <20	1.10	10 to <20	1.10
Traffic volume (vpd)	1000 to <6000	1.40	1000 to <6000	1.40	1000 to <6000	1.40

- Section 1
  - The Infrastructure Risk Rating Score is 1.68. For Rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.38. For Rural areas this corresponds to an IRR band of **High**.
- Section 3
  - The Infrastructure Risk Rating Score is 1.86. For Rural areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h for all three sections.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation is

- 60 km/h on Taha Road between Fletcher Road and 500m north of Fletcher Road (Section 1)
- 60 km/h on Taha Road between 500m north of Fletcher Road and 20m north of Mahana Road (Section 2)
- 60 km/h on Taha Road between 20m north of Mahana Road and Muriwai Road (Section 3)

Taha Road is a self-explaining road as the mean operating speeds (46-59 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Taha Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for all sections of Taha Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, straight-tortuous nature of the road, high road-side hazards and low mean operating speed (46-59 km/hr). All of these factors contribute to the road's 'Medium-High' to 'High' IRR score, making it a high-risk road.<sup>2</sup>

After considering all the above factors, the existing speed limit of 100 km/h on Taha Road in Waimauku, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h for all sections of Taha Road which is aligned with the recommended safe and appropriate speed (<80 km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Taiapa Road (Muriwai)**

Taiapa Road, Muriwai, is divided into three sections as follows: <sup>1</sup>

- Section 1: Taiapa Road between Muriwai Valley Road and 1020m southwest of Muriwai Valley Road
- Section 2: Taiapa Road between 1020m southwest of Muriwai Valley Road and 45m north of Taiapa Valley Road
- Section 3: Taiapa Road between 45m north of Taiapa Valley Road and Constable Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Taiapa Road, Muriwai has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

- Section 1
  - The Infrastructure Risk Rating Score is 1.64. For Rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.75. For Rural areas this corresponds to an IRR band of **High**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.32. For Rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h for all sections of Taiapa Road.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation is

- 60 km/h on Taiapa Road between Muriwai Valley Road and 1020m southwest of Muriwai Valley Road
- 60 km/h on Taiapa Road between 1020m southwest of Muriwai Valley Road and 45m north of Taiapa Valley Road
- 60 km/h on Taiapa Road between 45m north of Taiapa Valley Road and Constable Road

Taiapa Road is a self-explaining road as the mean operating speeds (50-64 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Taiapa Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first and third sections of Taiapa Road due to a multitude of factors. These being the narrow to medium lane width, very narrow shoulder width, curved to tortuous nature of the road, high road-side hazards and low mean operating speed (52-64 km/hr). All of these factors contribute to the road's 'Medium-High' to 'High' IRR score, making it a high-risk road.<sup>2</sup>

Crash history from NZTA's CAS database shows 2 crashes in the last 5 years for the first section including 0 fatal, 0 serious, 1 minor, and 1 non-injury crashes.

A proposed speed limit of 60 km/h was selected for the second section of Taiapa Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, tortuous nature of the road, severe road-side hazards, and low mean operating speed (50 km/hr). All these factors contribute to the road's 'High' IRR score, making it a high-risk road.

After considering all the above factors, the existing speed limit of 100 km/h on Taiapa Road in Muriwai, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h for all sections of Taiapa Road which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Tawa Road (Kumeu)**

Tawa Road, Kumeu, is divided into three sections as follows: <sup>1</sup>

- Section 1: Tawa Road between Station Road and 950m southwest of Station Road
- Section 2: Tawa Road between 950m southwest of Station Road and 1460m southwest of Station Road
- Section 3: Tawa Road between 1460m southwest of Station Road and 2000m southwest of Station Road
- Section 4: between 2000m southwest of Station Road and Annandale Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Tawa Road, Kumeu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1.1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Tawa Road connects to Access Road to the north and Annadale Road and Hanham Road to the south. This road provides access to residential properties.		
	This section is approximately 0.95 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).	This section is approximately 0.51 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.54 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road.	This section is a two-way, two-lane, undivided road.	This section is a two-way, two-lane, undivided road.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 5 crashes between 2016 and 2020: 0 fatal, 2 serious, 1 minor and 2 non-injury crashes. This resulted in 2 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 1 serious, 1 minor and 0 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 0 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Tawa Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR

Requirement	Comments		
	Section 1	Section 2	Section 3
	defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 941 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 941 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 941 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.		

Table 1.2: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
	<b>Section 4</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Tawa Road connects to Access Road to the north and Annadale Road and Hanham Road to the south. This road provides access to residential properties.</p> <p>This section is approximately 1.54 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).</p> <p>This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crash. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for each section of Tawa Road were determined using a combination of site drive-over footage, on-site information and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> (3.0 to 3.5 m) and Narrow shoulder (0.5 to 1.0 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

- Section 3
  - The Infrastructure Risk Rating Score is 1.45. For Rural areas this corresponds to an IRR band of **Medium**.
- Section 4
  - The Infrastructure Risk Rating Score is 2.00. For Rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 80 km/h on Tawa Road between Station Road and 1460m southwest of Station Road (Section 1 & 2)–*unchanged*
- 60 km/h on Tawa Road between 1460m southwest of Station Road and Annandale Road (Section 3 & 4)

Tawa Road is a self-explaining road as the mean operating speeds are below the proposed safe and appropriate speeds, despite the existing speed limits. Engineering up of Tawa Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 80 km/h was selected for the first and second sections of Tawa Road due to a multitude of factors. These being the medium lane width, narrow shoulder width, straight nature of the road, severe road-side hazards and mean operating speed (66-70 km/h). All of these factors contribute to the road's 'Medium' IRR score. Due to adverse crash history on the road, the collective and personal risk of this road are classified as '**High**' and '**High**', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.<sup>2</sup>

A proposed speed limit of 60 km/h was selected for the third section of Tawa Road due to a multitude of factors. These being the medium lane width, narrow shoulder width, straight nature of the road, severe road-side hazards and mean operating speed (66 km/h). All of these factors contribute to the road's 'Medium' IRR score.

A proposed speed limit of 60 km/h was selected for the fourth section of Tawa Road due to a multitude of factors. These being the medium lane width, narrow shoulder width, winding nature of the road, severe road-side hazards and low mean operating speed (58 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high-risk road.

Crash history from NZTA's CAS database shows the following for the last 5 years:

- Section 1: 5 crashes including 0 fatal, 2 serious, 1 minor, and 2 non-injury crashes.
- Section 2: 2 crashes including 0 fatal, 1 serious, 1 minor, and 0 non-injury crashes.
- Section 3: 1 crash including 0 fatal, 0 serious, 1 minor, and 0 non-injury crashes.
- Section 4: 1 crash including 0 fatal, 0 serious, 0 minor, and 1 non-injury crashes.

After considering all the above factors, the existing speed limit on Tawa Road in Kumeu, is not considered to be a safe and appropriate speed limit for this road.

The recommended safe and appropriate speed limit for the first and second sections of Tawa Road is to keep the existing 80 km/h which is higher than the Speed Management Guide recommendation (<80 km/h) but is considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (70 km/h).

The proposed safe and appropriate speed limit is 60 km/h for the third and fourth sections of Tawa Road which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Top Road (Dairy Flat)

The speed limit on Top Road, Dairy Flat has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Top Road connects to Bawden Road to the south. This road provides access to residential properties.
	This section is approximately 1.39 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Top Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>The following were determined using a combination of site drive-over footage, on-site information and geomaps information:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 108 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 48 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Bawden Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (km)	1.39
Annual Daily Traffic	108

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Winding	3.50
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	>20	1.30
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.06. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Top Road.*

Top Road is a self-explaining road as the mean operating speeds (48 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Top Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Top Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, winding nature of the road, high road-side hazards and low mean operating speed (48 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor, and 1 non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on Top Road in Dairy Flat, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Trigg Road (Kumeu / Huapai)

Trigg Road, Kumeu / Huapai, is divided into three sections as follows:<sup>1</sup>

- Section 1: Trigg Road between Puke Road and Foster Road
- Section 2: Trigg Road between 600m south of State Highway 16 and Puke Road
- Section 3: Trigg Road between State Highway 16 and 600m south of State Highway 16

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Trigg Road, Kumeu / Huapai has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Trigg Road connects to State Highway 16 to the east and Foster Road to the west. This road provides access to residential properties.		
	This section is approximately 0.47 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 1.34 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.60 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no	This section is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this section. There

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments		
	Section 1	Section 2	Section 3
	on-street parking along this section.	on-street parking along this section.	are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 6 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 5 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Trigg Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Winding</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as "rural	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural residential as "rural	The adjacent land use is classified as Urban residential using on-site information and geomaps. The IRR defines Urban residential as

Requirement	Comments		
	Section 1	Section 2	Section 3
	area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	"dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1006 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 1006 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 1006 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.		

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
Current speed limit	The existing speed limit is 80 km/h.	The existing speed limit is 80 km/h.	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 60 km/h.	This section has a mean operating speed of 60 km/h.	This section has a mean operating speed of 46 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>State Highway 16:</b> 60 km/h</li> <li>• <b>Motu Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Puke Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Foster Road:</b> 80 km/h (proposed 60 km/h)</li> </ul>		

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data		
	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	1	0	0
DSI crashes during the period	0	0	0
Corridor Length (km)	0.47	1.34	0.60
Annual Daily Traffic	1006	1006	1006

- Section 1
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 2
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**
- Section 3
  - The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
  - The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2		Section 3	
	Category	Risk Score	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.70	Two-lane undivided	3.70	Two-lane undivided	3.70
Road alignment	Curved	1.80	Winding	3.50	Curved	1.80
Carriageway width	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79	Medium lane, Very narrow shoulder	1.79
Roadside hazards (in both directions)	High	2.28	High	2.28	Severe	2.80
Adjacent land use	Rural residential	1.50	Rural residential	1.50	Urban residential	3.00
Intersection density (per km)	3 to <5	1.50	1 to <2	1.15	3 to <5	1.50
Access density (per km)	5 to <10	1.06	10 to <20	1.10	>20	1.30
Traffic volume (vpd)	1000 to <6000	1.40	1000 to <6000	1.40	1000 to <6000	1.40

- Section 1
  - The Infrastructure Risk Rating Score is 1.96. For Rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 2.15. For Rural areas this corresponds to an IRR band of **High**.
- Section 3
  - The Infrastructure Risk Rating Score is 2.44. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h for the first and second sections of Trigg Road.

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h for the third section of Trigg Road.

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 60 km/h on Trigg Road between Puke Road and Foster Road (Section 1)
- 60 km/h on Trigg Road between 600m south of State Highway 16 and Puke Road (Section 2)
- (Unchanged) 50 km/h on Trigg Road between State Highway 16 and 600m south of State Highway 16 (Section 3)

Trigg Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing speed limits. Engineering up of Trigg Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for the first and second sections of Trigg Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, curved to winding nature of the road, high road-side hazards and low mean operating speed (60 km/hr). All of these factors contribute to the road's 'Medium-High' to 'High' IRR score, making it a high-risk road.<sup>2</sup>

Crash history from NZTA's CAS database shows 6 crashes in the last 5 years for the first section including 0 fatal, 0 serious, 1 minor, and 5 non-injury crashes.

The speed limit is unchanged (50 km/h) for the third section of Trigg Road due to a multitude of factors. These being the urban residential land use, medium lane width, very narrow shoulder width, curved nature of the road, severe road-side hazards and low mean operating speed (46 km/hr). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.

After considering all the above factors, the existing speed limits on Trigg Road in Kumeu / Huapai, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h for the first and second sections of Trigg Road which is aligned with the recommended safe and appropriate speed.

The recommended safe and appropriate speed limit for the third section of Trigg Road is 50 km/h which is higher than the Speed Management Guide recommendation (40 km/h) but are considered appropriate when considering the nature and function of the road. A lower speed limit is unlikely to be credible or supported by the public due to existing operating speeds (46 km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Trotting Course Drive (Kumeu)

The speed limit on Trotting Course Drive, Kumeu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Trotting Course Drive connects to Waitakere Road to the west. This road provides access to commercial properties.
	This section is approximately 0.31 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Trotting Course Drive were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and Very narrow shoulder (&lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 70 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 23 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Waitakere Road:</b> 80 km/h (proposed 80 km/h)</li> <li><b>Boord Crescent:</b> 100 km/h (proposed 60 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	0.31
Annual Daily Traffic	70

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	>20	1.30
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.27. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Trotting Course Drive.*

Trotting Course Drive is a self-explaining road as the mean operating speeds (23 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Trotting Course Drive was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Trotting Course Drive due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (23 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

Crash history from NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor, and 1 non-injury crashes.

After considering all of the above factors, the existing speed limit of 100 km/h on Trotting Course Drive in Kumeu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Trotting Course Drive is 40 km/h which aligns with the speed limit recommended by the Speed Management Guide, this is considered appropriate based on the function of the road and the mean operating speed (23 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Valley Road (Waimauku)

Valley Road, Waimauku, is divided into three sections as follows:<sup>1</sup>

- Section 1: Valley Road between Muriwai Valley Road and 1030m southeast of Muriwai Valley Road
- Section 2: Valley Road between 1030m southeast of Muriwai Valley Road and southeastern end of Valley Road
- Section 3: Valley Road between Muriwai Road and Muriwai Valley Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Valley Road, Waimauku has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Valley Road connects to Muriwai Road to the north. This road provides access to residential properties.		
	This section is approximately 1.03 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).	This section is approximately 0.45 km in length. It is classified as an Access road under the one network road classification (ONRC).	This section is approximately 0.5 km in length. It is classified as a Primary Collector road under the one network road classification (ONRC).
	This section is an unsealed road. There are no pedestrian or cyclist amenities along this	This section is an unsealed road. There are no pedestrian or cyclist amenities along this	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments

  - The Infrastructure Risk Rating Score is 2.08. For Rural areas this corresponds to an IRR band of **High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.83. For Rural areas this corresponds to an IRR band of **Medium-High**.
- Section 3
  - The Infrastructure Risk Rating Score is 1.56. For Rural areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h for all sections of Valley Road.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation is

- 40 km/h on Valley Road between Muriwai Valley Road and 1030m southeast of Muriwai Valley Road (Section 1)
- 40 km/h on Valley Road between 1030m southeast of Muriwai Valley Road and south-eastern end of Valley Road (Section 2)
- 60 km/h on Valley Road between Muriwai Road and Muriwai Valley Road (Section 3)

Valley Road is a self-explaining road as the mean operating speeds are below or near the proposed safe and appropriate speeds, despite the existing speed limits. Engineering up of Valley Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for the first and second section of Valley Road due to a multitude of factors. These being the unsealed road surface, medium lane width, very narrow shoulder width, Straight to Curved nature of the road, High road-side hazards and low mean operating speed (26-41 km/hr). All of these factors contribute to the road's 'Medium-High' to 'High' IRR score, making it a high-risk road.<sup>2</sup>

A proposed speed limit of 60 km/h was selected for the third section of Valley Road due to a multitude of factors. These being the medium lane width, very narrow shoulder width, straight nature of the road, high road-side hazards and low mean operating speed (53 km/hr). All of these factors contribute to the road's 'Medium' IRR score, making it a Medium-risk road.

After considering all the above factors, the existing speed limits on Valley Road in Waimauku, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for the first and second sections of Valley Road is 40 km/h which aligns with the speed limit recommended by the Speed Management Guide (<80 km/h); this is considered appropriate based on the function of the road and the mean operating speed (26-41 km/h) supports the reduction.

The proposed safe and appropriate speed limit for the third section of Valley Road is 60 km/h which aligns with the speed limit recommended by the Speed Management Guide (<80 km/h); this is considered appropriate based on the function of the road and the mean operating speed (53 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Waitakere Road (Waitakere)

Waitakere Road, Waitakere, is divided into five sections as follows:<sup>1</sup>

- Section 1: Waitakere Road between Swanson Road and 220m south of Township Road
- Section 2: Waitakere Road between 220m south of Township Road and 190m north of Bethells Road
- Section 3: Waitakere Road between 190m north of Bethells Road and Taupaki Road
- Section 4: Waitakere Road between Taupaki Road and 840m south of Hanham Road
- Section 5: Waitakere Road between 840m south of Hanham Road and Access Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

The speed limit on Waitakere Road, Waitakere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1.1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Waitakere Road connects to Access Road to the north and to Swanson Road and Scenic Drive North to the south. This road provides access to rural residential properties.		
	This section is approximately 2.54 km in length. It is classified as an Arterial road under the one network road classification (ONRC).	This section is approximately 0.56 km in length. It is classified as an Arterial road under the one network road classification (ONRC).	This section is approximately 3.05 km in length. It is classified as an Arterial road under the one network road classification (ONRC).

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There is a footpath on this section of road. There are no cycle amenities, and no on-street parking is provided along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cycle amenities, and no on-street parking is provided along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 21 crashes between 2016 and 2020: 1 fatal, 1 serious, 7 minor and 12 non-injury crashes. This resulted in 2 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 3 non-injury crashes between 2016 and 2020. Therefore, there are zero Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 13 crashes between 2016 and 2020: 1 fatal, 1 serious, 2 minor and 9 non-injury crashes. This resulted in 2 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Waitakere Road is identified as one of the top 10% DSI saving network sections for New Zealand.		
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Waitakere Road were determined using a combination of site drive-over footage, on-site information and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>

(f) adjacent land use; and	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural Residential using on-site information and geomaps. The IRR defines Rural Residential as: "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:		
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 2 to &lt;5 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 5,384 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 5,278 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.	Average daily traffic (ADT) was determined from MegaMaps as 2,976 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.		
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.		

Table 2.2: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 4	Section 5
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> Refer to the Process Summary for further information.	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Waitakere Road connects to Access Road to the north and to Swanson Road and Scenic Drive North to the south. This road provides access to rural residential properties.	
	This section is approximately 1.7 km in length. It is classified as a Arterial road under the one network road classification (ONRC).	This section is approximately 4.57 km in length. It is classified as a Arterial road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 8 crashes between 2016 and 2020: 0 fatal, 1 serious, 2 minor and 5 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.	WK NZTA's Crash Analysis System (CAS) records 9 crashes between 2016 and 2020: 0 fatal, 2 serious, 2 minor and 5 non-injury crashes. This resulted in 2 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
	Waitakere Road is identified as one of the top 10% DSI saving network sections for New Zealand.	
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Waitakere Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	

Requirement	Comments	
	Section 4	Section 5
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5 m) and Very narrow shoulder (&lt;0.5 m)</li> <li>• <b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as "rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2405 vehicles per day (vpd).	Average daily traffic (ADT) was determined from MegaMaps as 2405 vehicles per day (vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 3.1: Additional Relevant Factors

AT also had regard to	Section 1	Section 2	Section 3
Current speed limit	The existing speed limit is 80 km/h.	The existing speed limit is 70 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 66 km/h.	This section has a mean operating speed of 65 km/h.	This section has a mean operating speed of 76 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Scenic Drive North:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Swanson Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Kay Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Township Road:</b> 70 km/h (proposed 50 km/h)</li> <li>• <b>Bethells Road:</b> 70 km/h (proposed 60 km/h)</li> </ul>		

Table 4.2: Additional Relevant Factors

AT also had regard to	Section 4	Section 5
Current speed limit	The existing speed limit is 60 km/h.	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 76 km/h.	This section has a mean operating speed of 68 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Taupaki Road:</b> 60 km/h</li> <li>• <b>Cottle Road:</b> 60 km/h</li> <li>• <b>Hunter Road:</b> 100 km/h (proposed 60 km/h)</li> <li>• <b>Hanham Road:</b> 80 km/h (proposed 60 km/h)</li> <li>• <b>Access Road:</b> 50 km/h</li> </ul>	

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data		
	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	9	0	4
DSI crashes during the period	2	0	2

Traffic volume (vpd)	1000 to <6000	1.40	1000 to <6000	1.40

- Section 1
  - The Infrastructure Risk Rating Score is 1.77. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 2
  - The Infrastructure Risk Rating Score is 1.96. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 3
  - The Infrastructure Risk Rating Score is 1.77. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 4
  - The Infrastructure Risk Rating Score is 1.68. For rural areas this corresponds to an IRR band of **Medium-High**.
- Section 5
  - The Infrastructure Risk Rating Score is 1.80. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h for all sections of Waitakere Road.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is:*

- 60 km/h on Waitakere Road Name between Swanson Road and 190m north of Bethells Road (Sections 1 and 2)
- 80 km/h on Waitakere Road between 190m north of Bethells Road and Taupaki Road (Section 3)
- 60 km/h on Waitakere Road between Taupaki Road and 840m south of Hanham Road (Section 4)
- 80 km/h on Waitakere Road between 840m south of Hanham Road and Access Road (Section 5)

Waitakere Road between Swanson Road and 190m north of Bethells Road is a self-explaining road as the mean operating speeds (65 to 66 km/h) are below or near the proposed safe and appropriate speeds, despite the existing 70 km/h and 80 km/h speed limits respectively. Engineering up of Waitakere Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Waitakere Road between Swanson Road and 190m north of Bethells Road (Sections 1 and 2) due to a multitude of factors. These included the curved road alignment, high roadside hazards, and mean operating speed of 65 to 66 km/h. These factors contribute to the road's 'Medium-High' IRR score, making it a high-risk road.<sup>2</sup> Furthermore, crash history from NZTA's CAS database shows 24 crashes in the last 5 years on this section of road including 1 fatal, 1 serious, 7 minor and 15 non-injury crashes.

It is proposed to maintain the 80 km/h speed limit for the section of Waitakere Road between 190m north of Bethells Road and Taupaki Road despite this being higher than the Speed Management Guide recommendation (<80 km/h). This is considered appropriate based on the nature and function of the road, and a lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (76 km/h).

It is proposed to maintain the 60 km/h speed limit for the section of Waitakere Road between Taupaki Road and 840m south of Hanham Road which is aligned with the recommended safe and appropriate speed.

It is proposed to maintain the 80 km/h speed limit for the section of Waitakere Road between 840m south of Hanham Road and Access Road despite this being higher than the Speed Management Guide recommendation (<80 km/h). This is considered appropriate based on the nature and function of the road, and a lower speed limit is unlikely to be credible or supported by the public due to the existing operating speeds (68 km/h).

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Wilson Road (Dairy Flat)

The speed limit on Wilson Road, Dairy Flat has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Wilson Road connects to Bawden Road to the north. This road provides access to residential properties.
	This section is approximately 0.93 km in length. It is classified as a Secondary Collector road under the one network road classification (ONRC).
	This section is a two-way, two-lane, undivided road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 1 serious, 0 minor and 0 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes. This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Wilson Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information: <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 201 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 80 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 46 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Bawden Road:</b> 80 km/h (proposed 60km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	1
Corridor Length (km)	0.93
Annual Daily Traffic	201

- The Collective Risk score is 0.22. For rural areas this corresponds to a Collective Risk band of **High**
- The Personal Risk score is 293.13. For rural areas this corresponds to a Personal Risk band of **High**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.70
Road alignment	Curved	1.80
Carriageway width	Narrow lane, Very narrow shoulder	2.00
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.50
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.10
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 1.76. For rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 60 km/h for the full length of Wilson Road.*

Wilson Road is a self-explaining road as the mean operating speeds (46 km/h) are below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Wilson Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 60 km/h was selected for Wilson Road due to a multitude of factors. These being the narrow lane width, very narrow shoulder width, curved nature of the road, high road-side hazards and low mean operating speed (46 km/h). All of these factors contribute to the road's 'Medium-High' IRR score, making it a high risk road.<sup>1</sup> Due to adverse crash history on the road, the collective and personal risk of this road are classified as '**High**' and '**High**', respectively, due the number of Death and Serious Injury (DSI) crashes, making it a high-risk road.

Crash history from NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 1 serious, 0 minor, and 0 non-injury crashes.

After considering all the above factors, the existing speed limit of 80 km/h on Wilson Road in Dairy Flat, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 60 km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Worrall Road (Kumeu)

The speed limit on Worrall Road, Kumeu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Worrall Road connects to Awa Road to the north. This road provides access to residential properties.
	This section is approximately 1.22 km in length. It is classified as a Access road under the one network road classification (ONRC).
	This section is a two-way, unsealed road. There are no pedestrian or cyclist amenities along this road, and there is no on-street parking along this section.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Worrall Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0 m) and Very narrow shoulder (&lt;0.5 m)</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using on-site information and geomaps. The IRR defines Rural residential as " <i>rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> "
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 80 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area will be presented to the Local Board via email in October/November. Responses will be considered for investigation.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 100 km/h.
MegaMaps Mean Operating Speed (km/h)	This section has a mean operating speed of 29 km/h.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Awa Road:</b> 100 km/h (proposed 60km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (km)	1.22
Annual Daily Traffic	80

- The Collective Risk score is 0.00. For rural areas this corresponds to a Collective Risk band of **Low**
- The Personal Risk score is 0.00. For rural areas this corresponds to a Personal Risk band of **Low**

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10.00
Road alignment	Tortuous	6.00
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.80
Adjacent land use	Rural residential	1.50
Intersection density (per km)	<1	1.00
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	<1000	1.00

The Infrastructure Risk Rating Score is 2.73. For rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80 km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40 km/h for the full length of Worrall Road.*

Worrall Road is a self-explaining road as the mean operating speeds (29 km/h) are below the proposed safe and appropriate speeds, despite the existing 100 km/h speed limit. Engineering up of Worrall Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40 km/h was selected for Worrall Road due to a multitude of factors. These being the unsealed road surface, narrow lane width, very narrow shoulder width, tortuous nature of the road, severe road-side hazards and low mean operating speed (29 km/h). All of these factors contribute to the road's 'High' IRR score, making it a high risk road.<sup>1</sup>

After considering all of the above factors, the existing speed limit of 100 km/h on Worrall Road in Kumeu, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Worrall Road is 40 km/h which aligns with the speed limit recommended by the Speed Management Guide (<80 km/h); this is considered appropriate based on the function of the road and the mean operating speed (29 km/h) supports the reduction.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Albert Crescent (Ostend)

The speed limit on Albert Crescent, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Albert Crescent connects to Ostend Road to the north. This road provides access to residential properties and the Te Ara Hura walking network. Albert Crescent is approximately 0.5 km in length.</p> <p>Albert Crescent is classified as an Secondary Collector road under the one network road classification (ONRC). Albert Crescent is a two-way, two-lane undivided road. There are no pedestrian and/or cyclist amenities along this road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Albert Crescent were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and Very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day.</i>
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Albert Crescent is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Albert Crescent has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Ostend Road:</b> 50km/h (30km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	500
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Urban residential	3
Intersection density (per km)	2 to <3	1.25
Access density (per km)	>20	1.3
Traffic volume	520	1

The Infrastructure Risk Rating Score is 2.12. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Albert Crescent.*

Albert Crescent is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Albert Crescent was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Albert Crescent due to a multitude of factors. These being the narrow and curved nature of the road, the High roadside hazards, its Secondary Collector function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Albert Crescent in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Albert Crescent, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Alison Road (Surfdale)

Alison Road, Surfdale, is divided into the following sections and outlined as follows<sup>1</sup>:

1. Section 1: Alison Road between Mitchell Road and Donald Bruce Road
2. Section 2: Alison Road between Miami Avenue and Mitchell Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Alison Road, Surfdale have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Alison Road connects to Mitchell Road to the west and Donald Bruce Road and Causeway Road to the south. This road provides access to residential properties.	Alison Road connects to Miami Avenue to the west and Mitchell Road to the south. This road provides access to residential properties.
	This section of Alison Road is 0.31km in length. It is classified as an Arterial road under the one network road classification (ONRC). Alison Road is a two-lane undivided road.	This section of Alison Road is 0.3km in length. It is classified as an Arterial road under the one network road classification (ONRC). Alison Road is two-lane undivided road.
	This section is a two-way, two-lane, undivided road. There are pedestrian amenities including footpaths and a pedestrian refuge island and a cycle lane.	This section is a two-way, two-lane, undivided road. There are no footpaths or cycle lanes.
	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes	

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
(d) crash risk for all road users; and	for all road users and therefore the crash risk for all road users was considered. CAS records 6 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 5 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.	
(e) the characteristics of the road and roadsides; and	The following characteristics for Alison Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane and very narrow shoulder</li> </ul> <p><b>Roadside hazards (in both directions):</b> Moderate</p>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane and very narrow shoulder</li> </ul> <p><b>Roadside hazards (in both directions):</b> Moderate</p>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10</li> </ul> <p><b>Access density:</b> &gt;20</p>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10</li> </ul> <p><b>Access density:</b> &gt;20</p>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	

Requirement	Comments	
	Section 1	Section 2
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Alison Road is as follows: <ul style="list-style-type: none"> <li>50km/h Between Mitchell Road and Donald Bruce Road</li> <li>50km/h Between Miami Avenue and Mitchell Road</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Alison Road are as follows: <ul style="list-style-type: none"> <li>44.81km/h Between Mitchell Road and Donald Bruce Road</li> <li>44.81km/h Between Miami Avenue and Mitchell Road</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Mitchell Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Miami Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Bryan Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Donald Bruce Road:</b> 50 km/h (proposed 50 km/h)</li> <li><b>Jellicoe Parade:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Kennedy Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Causeway Road</b> 50km/h (proposed 50kmh)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	1	0
DSI crashes during the period	0	0
Corridor Length (m)	310	300
Annual Daily Traffic (vpd)	520	520

- Section 1
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.
- Section 2
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Curved	1.8
Carriageway width (road lane + shoulder)	Medium lane, very narrow shoulder	1.79	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	Moderate	1.43	Moderate	1.43
Adjacent land use	Urban residential	3	Urban residential	3
Intersection density (per km)	5 to <10	2.6	5 to <10	2.6
Access density (per km)	>20	1.3	>20	1.3
Traffic volume (vpd)	520	1	520	1

- Section 1: The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.
- Section 2: The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is:

- 40km/h Between Mitchell Road and Donald Bruce Road (Section 1),
- 40km/h Between Miami Avenue and Mitchell Road (Section 2)

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 50km/h on Between Mitchell Road and Donald Bruce Road (Section 1),
- 30km/h on Between Miami Avenue and Mitchell Road (Section 2).

Alison Road between Mitchell Road and Donald Bruce Road, is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. A proposed speed limit of 50km/h was selected, for Section 1 due to a multitude of factors. These being Medium lane width and Curved nature of the road, the Moderate roadside hazards, its Arterial function and its existing mean operating speed (44.81km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 6 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor and 5 non-injury crashes.

Alison Road Between Miami Avenue and Mitchell Road, is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. A proposed speed limit of 30km/h was selected, for Section 2 due to a multitude of factors. These being Medium lane width and Curved nature of the road, the Moderate roadside hazards, its Arterial function and its existing mean operating speed (44km/h). These features also contribute to the roads "Medium" IRR score. The centreline is non-continuous and there is roadside parking making the corridor different to Section 1. The collective and personal risk of this road are classified as Low and Low due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) on Alison Road in Surfdale, are not considered to be a safe and appropriate speed limit for this road.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, supports the secondary nature of this section of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Anzac Road (Waiheke Island)

Anzac Road, Waiheke Island, is divided into the following sections and outlined as follows<sup>1</sup>:

1. Section 1: Anzac Road Between Orapiu Road and Hunterville Road
2. Section 2: Anzac Road Between Orapiu Road and Nepean Avenue

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Anzac Road, Waiheke Island has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments	
	Section 1	Section 2
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>	
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.	
(c) the function and use of the road; and	Anzac Road connects to Orapiu Road to the north and Nepean Avenue to the west. This road provides access to residential properties.	
	This section is approximately 0.52km in length. This section of Anzac Road is classified as an Access road under the one network road classification (ONRC).	This section is approximately 0.8km in length. This section of Anzac Road is classified as an Access road under the one network road classification (ONRC).
	This section is a Two-lane undivided road.	This section is Unsealed.

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

Requirement	Comments	
	Section 1	Section 2
	Both sections of road provide access to residential properties. There are no footpaths and/or cycle lanes.	
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes for all road users and therefore the crash risk for all road users was considered.	
	CAS records 1 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.	CAS records zero crashes between 2016 and 2020. This resulted in 0 Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for each section of Anzac Road were determined using a combination of site drive-over footage, on-site information and geomaps information.	
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> </ul> <p><b>Roadside hazards (in both directions):</b> Severe</p>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Unsealed</li> <li>• <b>Road alignment:</b> Tortuous</li> <li>• <b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> </ul> <p><b>Roadside hazards (in both directions):</b> Severe</p>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using the drive over footage. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements".	
	The adjacent land use is classified as Rural residential using the drive over footage. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements".	The adjacent land use is classified as Rural residential using the drive over footage. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements".
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:	
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5</li> </ul> <p><b>Access density:</b> 10 to &lt;20</p>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5</li> </ul> <p><b>Access density:</b> 10 to &lt;20</p>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as	Average daily traffic (ADT) was determined from MegaMaps as

Requirement	Comments	
	Section 1	Section 2
	55 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	55 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.	
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.	

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Anzac Road are as follows: <ul style="list-style-type: none"> <li>50km/h Between Orapiu Road and Hunterville Road</li> <li>50km/h Between Orapiu Road and Nepean Avenue</li> </ul>
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Anzac Road are as follows: <ul style="list-style-type: none"> <li>21km/h Between Orapiu Road and Hunterville Road</li> <li>20km/h Between Orapiu Road and Nepean Avenue</li> </ul>
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Orapiu Road:</b> 80km/h (proposed 60km/h)</li> <li><b>Nepean Road:</b> 50km/h (proposed 40km/h)</li> <li><b>Neil Avenue:</b> 50km/h (proposed 40km/h)</li> <li><b>Hunterville Road:</b> 50km/h (proposed 40km/h)</li> <li><b>Wallingford Avenue:</b> 50km/h (proposed 40km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Section 1	Section 2
Crash Analysis Period (years)	5	5
Total injury crashes during period	1	0
DSI crashes during the period	0	0
Corridor Length (m)	520	800
Annual Daily Traffic	<1000	<1000

- Section 1
  - The Collective Risk band is 0. For Rural areas this corresponds to a Collective Risk score of **Low**.
  - Personal Risk score is 0 and a Personal Risk band is **Low**.
- Section 2
  - The Collective Risk score is **Low**. For Rural areas this corresponds to a Collective Risk band of 0.
  - Personal Risk score is **Low**. A Personal Risk band of 0.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2	
	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Unsealed	10
Road alignment	Tortuous	6	Tortuous	6
Carriageway width (road lane + shoulder)	Narrow, Very narrow	2.01	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Severe	2.8	Severe	2.8
Adjacent land use	Rural residential	1.5	Rural residential	1.5
Intersection density (per km)	3 to <5	1.5	3 to <5	1.5
Access density (per km)	10 to <20	1.1	10 to <20	1.1
Traffic volume	55vpd	1	55vpd	1

- Section 1: The Infrastructure Risk Rating Score is 2.4. For Rural areas this corresponds to an IRR band of **High**.
- Section 2: The Infrastructure Risk Rating Score is 2.9. For Rural areas this corresponds to an IRR band of **High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is:

- <80km/h Between Orapiu Road and Hunterville Road (Section 1),
- <80km/h Between Orapiu Road and Nepean Avenue (Section 2)

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation is*

- 40km/h Between Orapiu Road and Hunterville Road (Section 1),
- 40km/h Between Orapiu Road and Nepean Avenue (Section 2).

Anzac Road, Between Orapiu Road and Hunterville Road, is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected, for Section 1, due to a multitude of factors. These being the Narrow and Tortuous nature of the road, the Severe roadside hazards, its Access function and its existing mean operating speed (21.21km/h). These features also contribute to the roads "High" IRR score, making it a high-risk road<sup>2</sup>. The collective and personal risk of this road are classified as 'Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 1 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

Anzac Road Between Orapiu Road and Nepean Avenue, is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50km/h speed limit. Engineering up of this section was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 40km/h was selected, for Section 1 due to a multitude of factors. These being Narrow and Tortuous nature of the road, the Severe roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "High" IRR score, making it a high-risk road<sup>3</sup>. The collective and personal risk of this road are classified as 'Low and Low due to the number of DSI crashes.

After considering all the above factors, the existing speed limits on Anzac Road in Waiheke Island, are not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limits for both sections of Anzac Road is 40km/h which is aligned with the recommended safe and appropriate speed.

Lowering the speed limit improves the credibility of speed limit setting and assists in explaining safe travel speeds better to visiting drivers. The reduced speed limit will also reduce the potential and severity of crash risk for all road users.

---

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

<sup>3</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Awaawaroa Road (Waiheke Island)

The speed limit on Awaawaroa Road, Waiheke Island has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Awaawaroa Road connects to Man O War Bay Road to the north, Waiheke Road to the west and Orapiu Road to the east. This road provides access to rural residential properties.
	Awaawaroa Road is approximately 2.5km in length. Awaawaroa Road is classified as an Access road under the one network road classification (ONRC).
	Awaawaroa Road is Two-lane undivided. There are no footpaths, cycle lanes or on-street parking provided.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for Awaawaroa Road were determined using a combination of site drive-over footage, on-site information and geomaps information.
	<ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using the drive over footage. The IRR defines Remote rural as <i>"Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry"</i> .
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2</li> <li><b>Access density:</b> 5 to &lt;10</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 226 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Awaawaroa Road is 80km/h.
MegaMaps Mean Operating Speed (km/h)	The mean operating speed limit(s) on Awaawaroa Road is 33.49km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Waiheke Road:</b> 50km/h (proposed 60km/h)</li> <li><b>Man O War Bay Road:</b> 80km/h (proposed 40km/h)</li> <li><b>Orapiu Road:</b> 80km/h (proposed 60km/h)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	2300
Annual Daily Traffic	226

The Collective Risk band is **Low**. For Rural areas this corresponds to a Collective Risk score of 0. Personal Risk band is **Low**. A Personal Risk score of 0.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Winding	3.5
Carriageway width (road lane + shoulder)	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Remote rural	1
Intersection density (per km)	1 to <2	1.15
Access density (per km)	5 to <10	1.06
Traffic volume	226	1

The Infrastructure Risk Rating Score is 1.9. For Rural areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Awaawaroa Road*

Awaawaroa Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 80km/h speed limit. Engineering up of this road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits. A proposed speed limit of 40km/h was selected due to a multitude of factors. These being Narrow and Winding nature of the road, the Severe roadside hazards, its Access function and its existing mean operating speed (33.49km/h). These features also contribute to the roads "Medium-High" IRR score. The collective and personal risk of this road are classified as 'Low and Low respectively due to the number of DSI crashes, making it a high-risk road<sup>1</sup>.

After considering all the above factors, the existing speed limit(s) on Awaawaroa Road in Waiheke Island, are not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limits for Awaawaroa Road is 40km/h which is aligned with the recommended safe and appropriate speed.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Bay Road (Ostend)

The speed limit on Bay Road, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bay Road connects to Hill Road to the north and Wharf Road to the south. This road provides access to residential properties. Bay Road is approximately 0.78 km in length.</p> <p>Bay Road is classified as an Secondary Collector road under the one network road classification (ONRC). Bay Road is Two-lane undivided. There are no pedestrian and/or cyclist amenities along the majority of this road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bay Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and Very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day.</i>
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 789 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (789vpd).
(i) any planned modification to the road; and	Modification/engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Bay Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Bay Road has a mean operating speed in the range of 34.97 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Hill Road:</b> 50km/h (40km/h proposed)</li> <li><b>Wharf Road:</b> 50km/h (50km/h proposed)</li> <li><b>Crescent Road East:</b> 50km/h (30km/h proposed)</li> <li><b>Crescent Road West:</b> 50km/h (30km/h proposed)</li> <li><b>Giles Road:</b> 50km/h (30km/h proposed)</li> <li><b>Te Toki Road:</b> 50km/h (40km/h proposed)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	780
Annual Daily Traffic (vpd)	789

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	10 to <20	1.1
Traffic volume	789	1

The Infrastructure Risk Rating Score is 2.12. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Bay Road.*

A proposed speed limit of 30km/h was selected for Bay Road due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (34.97km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Bay Road in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bay Road, the actual operating speeds from the MegaMaps tool are 35km/h.

Engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Beach Parade (Oneroa)

The speed limit on Beach Parade, Oneroa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Beach Parade connects to Puriri Road to the east. This road provides access to residential properties and the beach. Beach Parade is approximately 0.65 km in length.</p> <p>Beach Parade is classified as an Secondary Collector road under the one network road classification (ONRC). Beach Parade is a two-lane, undivided road. No pedestrian and/or cyclist amenities along this road, however, there is a high pedestrian presence due to the beach access.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Beach Parade were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane and Very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day.</i>
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 48 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (48vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Beach Parade is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Beach Parade has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Puriri Road:</b> 50km/h (30km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	650
Annual Daily Traffic (vpd)	48

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	1 to <2	1.15
Access density (per km)	>20	1.3
Traffic volume	48	1

The Infrastructure Risk Rating Score is 1.63. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Beach Parade.*

Beach Parade is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Beach Parade was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Beach Parade due to a multitude of factors. These being the narrow and straight nature of the road, the moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (20km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Beach Parade in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Beach Parade, the actual operating speeds from the MegaMaps tool is 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Beatty Parade (Surfdale)

The speed limit on Beatty Parade, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Beatty Parade connects to Beresford Avenue / George Street to the north and Hamilton Road to the south. This road provides access to industrial and residential areas. Beatty Parade is approximately 0.5 km in length.</p> <p>Beatty Parade is classified as an Secondary Collector road under the one network road classification (ONRC). Beatty Parade is two-lane undivided. There are no footpaths, no cycle lanes, and on-street parking is partially allowed along this road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 2 minor and 1 non-injury crashes. Therefore, there are 0 Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Beatty Parade were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane and narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Beatty Parade is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Beatty Parade has a mean operating speed in the range of 36.96 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Beresford Avenue:</b> 50km/h (30km/h proposed)</li> <li><b>George Street:</b> 50km/h (30km/h proposed)</li> <li><b>Hamilton Road:</b> 50km/h (30km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

From MegaMaps and/or on-site information assessment **Beatty Parade** has the following information:

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	500
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow, Narrow	1.79
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume	520	1

The Infrastructure Risk Rating Score is 1.74. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Beatty Parade.*

A proposed speed limit of 30km/h was selected for Beatty Parade due to a multitude of factors. These being the narrow and straight nature of the road, the moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (36.96km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as 'Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 3 crashes in the last 5 years including 0 fatal, 0 serious, 2 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Beatty Parade in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Beatty Parade, the mean operating speeds from the MegaMaps tool is 37km/h.

Engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Belgium Street (Ostend)

The speed limit on Belgium Street, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Belgium Street connects to Wharf Road to the Ostend Road to the east. This road provides access to the nearby shops. Belgium Street is approximately 0.38 km in length.</p> <p>Belgium Street is classified as an Arterial road under the one network road classification (ONRC). Belgium Street is two-lane undivided. There are footpaths and on-street parking is occasionally allowed along this road. There are no cycle lanes.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 2 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Belgium Street were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using the drive over footage and the MegaMaps tool. The IRR defines Commercial big box as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 9,367 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (8,573vpd).
(i) any planned modification to the road; and	Modification/engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Belgium Street is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Belgium Street has a mean operating speed in the range of 46.19 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Wharf Road:</b> 50km/h (30km/h proposed)</li> <li><b>Ostend Road:</b> 50km/h (30km/h proposed)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	0
Corridor Length (m)	380
Annual Daily Traffic (vpd)	9,367

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Commercial big box	4
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	9367	2.2

The Infrastructure Risk Rating Score is 2.71. For Urban areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Belgium Street.*

A proposed speed limit of 30km/h was selected for Belgium Street due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Arterial function and the high number of active road users. These features also contribute to the roads "Medium-High" IRR score. The collective and personal risk of this road are classified as "Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 3 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Belgium Street in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Belgium Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bella Vista Road (Ōmiha)

The speed limit on Bella Vista Road, Ōmiha, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Bella Vista Road connects to Fairview Crescent to the north and Upland Road to the south. This road provides access to residential areas. Bella Vista Road is approximately 0.65 km in length.
	Bella Vista Road is classified as an Access road under the one network road classification (ONRC). Bella Vista Road is unsealed. There are no footpaths, cycle lanes and on-street parking along this road.
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bella Vista Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 44 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (44).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Bella Vista Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bella Vista Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Fairview Crescent:</b> 50km/h (30km/h proposed)</li> <li><b>Upland Road:</b> 50km/h (30km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	650
Annual Daily Traffic (vpd)	44

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Unsealed	10
Road alignment	Winding	3.5
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume	44	1

The Infrastructure Risk Rating Score is 3.01. For Urban areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Bella Vista Road.*

Bella Vista Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Bella Vista Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Bella Vista Road due to a multitude of factors. These being the narrow and winding nature of the road, the severe roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "High" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Bella Vista Road in Ōmiha, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Bella Vista Road, the actual operating speeds from the MegaMaps tool is 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Belle Terrace (Waiheke Island)

The speed limit on Belle Terrace, Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Belle Terrace connects to Waiheke Road to the west and east. This road provides access to residential areas. Belle Terrace is approximately 0.78 km in length.
	Belle Terrace is classified as an Access road under the one network road classification (ONRC). Belle Terrace is two-lane undivided. There are no footpaths, cycle lanes or on-street parking along this road.
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Belle Terrace were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Medium lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Belle Terrace is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Belle Terrace has a mean operating speed in the range of 31.26 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Waiheke Road:</b> 50km/h (40km/h proposed)</li> <li><b>Belle View Place:</b> 50km/h (30km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	780
Annual Daily Traffic (vpd)	260

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Winding	3.5
Carriageway width	Medium, Very narrow	1.79
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume	260	1

The Infrastructure Risk Rating Score is 2.58. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Belle Terrace.*

Belle Terrace is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Belle Terrace was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Belle Terrace due to a multitude of factors. These being the medium lane width and winding nature of the road, the severe roadside hazards, its Access function and its existing mean operating speed (31.26km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Belle Terrace in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Belle Terrace, the actual operating speeds from the MegaMaps tool are 31km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Belle View Place (Waiheke Island)

The speed limit on Belle View Place, Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Belle View Place connects to Belle Terrace to the south. This road provides access residential areas. Belle View Place is approximately 0.17 km in length.</p> <p>Belle View Place is classified as an Access road under the one network road classification (ONRC). Belle View Place is two-lane undivided. There are no footpaths, cycle lanes or on-street parking along this road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Belle View Place were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Belle View Place is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Belle View Place has a mean operating speed in the range of 31.26 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Belle Terrace:</b> 50km/h (30km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	170
Annual Daily Traffic (vpd)	260

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	10 to <20	1.1
Traffic volume	260	1

The Infrastructure Risk Rating Score is 2.17. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Belle View Place.*

Belle View Place is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Belle View Place was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Belle View Place due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (31.26km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Belle View Place in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Belle View Place, the actual operating speeds from the MegaMaps tool is 31km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Beresford Avenue (Surfdale)

The speed limit on Beresford Avenue, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Beresford Avenue connects to Beatty Parade / George Street to the northeast and Tetley Road / Marama Avenue to the south. This road provides access to residential areas. Beresford Avenue is approximately 0.71 km in length.</p> <p>Beresford Avenue is classified as an Access road under the one network road classification (ONRC). Beresford Avenue is two-lane undivided. There are no pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 0 non-injury crashes. There are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Beresford Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Beresford Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Beresford Avenue has a mean operating speed in the range of 20.46 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Beatty Parade:</b> 50 km/h (proposed 30 km/h)</li> <li><b>George Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Tetley Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Marama Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Short Street:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Fisher Street:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	710
Annual Daily Traffic (vpd)	260

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Winding	3.5
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	260	1

The Infrastructure Risk Rating Score is 2.5. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Beresford Avenue.*

Beresford Avenue is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Beresford Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Beresford Avenue due to a multitude of factors. These being the narrow and winding nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (20.46km/h). These features also contribute to the roads "Medium-High" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit of 50 km/h on Beresford Avenue in Surfdale is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Beresford Avenue, the actual operating speeds from the traffic survey are 20.46km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Blake Street (Surfdale)

The speed limit on Blake Street, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Blake Street connects to Hamilton Road to the north and The Esplanade to the south. This road provides access to the residential areas and the beach. Blake Street is approximately 0.1 km in length.</p> <p>Blake Street is classified as an Secondary Collector road under the one network road classification (ONRC). Blake Street is two-lane undivided. There are footpaths, and on-street parking is informally provided along this road. There are no cycle lanes.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Blake Street were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Blake Street is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Blake Street has a mean operating speed in the range of 28.8 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Hamilton Road</b> : 50 km/h (proposed 30 km/h)</li> <li><b>The Esplanade</b>: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	100
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Medium, very narrow	1.79
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume	520	1

The Infrastructure Risk Rating Score is 2.27. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Blake Street.*

Blake Street is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Blake Street was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Blake Street due to a multitude of factors. These being the medium lane width and straight nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (28.8km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Blake Street in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Blake Street, the actual operating speeds from the traffic survey are 29km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Brown Road Onetangi

The speed limit on Brown Road, Onetangi has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Brown Road connects to Seaview Road to the north. This road provides access to residential areas and a hostel. Brown Road is approximately 0.15 km in length.</p> <p>Brown Road is classified as an Access road under the one network road classification (ONRC). Brown Road is Unsealed. There are no footpaths, cycle lanes or on-street parking along this road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Brown Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 232 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (149 vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Brown Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Brown Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Seaview Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	150
Annual Daily Traffic (vpd)	232

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Unsealed	10
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume	232	1

The Infrastructure Risk Rating Score is 2.95. For Urban areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Brown Road.*

Brown Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Brown Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Brown Road due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as 'Low and Low respectively.

After considering all the above factors, the existing speed limit of 50 km/h on Brown Road in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed. The road is short in length. The proposed speed limit is consistent with the adjoin road.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Bryan Road (Surfdale)

The speed limit on Bryan Road, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bryan Road connects to Ocean Road to the north and Alison Road to the south. This road provides access to residential areas. Bryan Road is approximately 0.17 km in length.</p> <p>Bryan Road is classified as an Access road under the one network road classification (ONRC). Bryan Road is two-lane undivided. There are no footpaths, cycle lanes or on-street parking along this road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bryan Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 84 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey (also 84 vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Bryan Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bryan Road has a mean operating speed in the range of 22.92 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Ocean Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Alison Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Nelson Ave:</b> 50 km/h (proposed 30 km/h)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	170
Annual Daily Traffic (vpd)	84

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume	84	1

The Infrastructure Risk Rating Score is 2.52. For Urban areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Bryan Road.*

Bryan Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Bryan Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Bryan Road due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (22.92km/h). These features also contribute to the road's "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Bryan Road in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Bryan Road, the actual operating speeds from the traffic survey are 23km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Burrell Road (Oneroa/Surfdale)

The speed limit on Burrell Road, Oneroa/Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Burrell Road connects to Surfdale Road / Moana Avenue to the north. This road provides access to residential areas and the beach. Burrell Road is approximately 0.81 km in length.</p> <p>Burrell Road is classified as an Access road under the one network road classification (ONRC). Burrell Road is two-lane undivided. There are no footpaths, cycle lanes or on-street parking along this road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crash. There are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Burrell Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."</i>
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 364 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Burrell Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Burrell Road has a mean operating speed in the range of 24.18 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Surfdale Road:</b> 50 km/h (proposed 50 km/h)</li> <li><b>Moana Avenue:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Burrell Road Extension:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	810
Annual Daily Traffic (vpd)	364

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume	364	1

The Infrastructure Risk Rating Score is 2.20. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Burrell Road.*

Burrell Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Burrell Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Burrell Road due to a multitude of factors. These being the Narrow and Curved nature of the road, the High roadside hazards, its Access function and its existing mean operating speed (24.18km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crash.

After considering all the above factors, the existing speed limit of 50 km/h on Burrell Road in Oneroa/Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Burrell Road, the actual operating speeds from the Megamaps tool are 24km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Burrell Road Extension (Oneroa)

The speed limit on Burrell Road Extension, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Burrell Road Extension connects to Burrell Road to the south. This road provides access to residential areas. Burrell Road Extension is approximately 0.28 km in length.</p> <p>Burrell Road Extension is not classified under the one network road classification (ONRC). However, given the function and use of the road to residential areas only, this road could be classified as an Access Road. Burrell Road Extension is two-lane undivided. There are no footpaths, cycle lanes or on-street parking along this road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Burrell Road Extension were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	No average daily traffic (ADT) data was available.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Burrell Road Extension is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This road has no available recorded mean operating speed.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Burrell Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	280
Annual Daily Traffic (vpd)	n/a

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Straight	1
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume	n/a	1

The Infrastructure Risk Rating Score is 2.27. For Urban areas this corresponds to an IRR band of **Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Burrell Road Extension.*

Even though no mean operating speed data was available, given the function and nature of the road and the low operating speed of the adjoining road, Burrell Road Extension is likely to be a Self-Explaining road (despite the existing 50 km/h speed limit). Engineering up of Burrell Road Extension was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Burrell Road Extension due to a multitude of factors. These being the narrow and straight nature of the road, and the moderate roadside hazards. These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Burrell Road Extension in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Burrell Road Extension, no data was readily available for the mean operating speed along this road. However, given the access nature of the road and the low mean operating speed of the adjoining Burrell Road (20km/h) it is considered unlikely that mean operating speeds would exceed 30km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Cable Bay Lane (Waiheke Island)

The speed limit on Cable Bay Lane, Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Cable Bay Lane connects to Walter Frank Drive to the east. This road provides access to residential properties.
	Cable Bay Lane is approximately 0.35 km in length. Cable Bay Lane is classified as an Access road under the one network road classification (ONRC).
	Cable Bay Lane is Two-lane undivided. There are no footpaths, cycle lanes or on-street parking provided along this road.
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cable Bay Lane were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and Very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using the drive over footage and the MegaMaps tool. The IRR defines Rural residential as <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from Mobile Road as 174 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Cable Bay Lane is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Cable Bay Lane has a mean operating speed in the range of 35 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Walter Frank Drive:</b> 50km/h (proposed 40km/h)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	350
Annual Daily Traffic (vpd)	173

The Collective Risk score is 0, and a Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of Low and the Personal Risk band of Low.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural residential	1.5
Intersection density (per km)	2 to <3	1.25
Access density (per km)	10 to <20	1.1
Traffic volume	<1000	1

The Infrastructure Risk Rating Score is 1.5. For Rural areas this corresponds to an IRR band of Medium.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Cable Bay Lane.*

Cable Bay Lane is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Cable Bay Lane was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Cable Bay Lane due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its access function and its existing mean operating speed (35 km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Cable Bay Lane in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Cable Bay Lane is 40km/h which is aligned with the recommended safe and appropriate speed.

## Speed Limit Review – Calais Terrace (Ostend)

The speed limit on Calais Terrace Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Calais Terrace connects to Ostend Road to the north and Natzka Road to the west. This road provides access to residential area. Calais Terrace is approximately 0.55 km in length.
	Calais Terrace is classified as an Access road under the one network road classification (ONRC). Calais Terrace is a two-lane undivided road. There are no footpaths, cycle lanes or on-street parking provided along this road.
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Calais Terrace were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day.
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 208 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Calais Terrace is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Calais Terrace has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Ostend Road:</b> 50km/h</li> <li><b>Natzka Road:</b> 50km/h (30km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	550
Annual Daily Traffic (vpd)	208

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume	208	1

The Infrastructure Risk Rating Score is 2.00. For Urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Calais Terrace.*

Calais Terrace is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Calais Terrace was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Calais Terrace due to a multitude of factors. These being the narrow and curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Low-Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Calais Terrace in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Calais Terrace, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Church Bay Road (Oneroa/Waiheke Island)

The speed limit on Church Bay Road, Oneroa/Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Church Bay Road connects to Mako Street to the north and Walter Frank Drive to the south. This road provides access to a vineyard and residential properties. Church Bay Road is approximately 2.56 km in length.</p> <p>Church Bay Road is classified as an Access road under the one network road classification (ONRC). Church Bay Road is Two-lane undivided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 0 non-injury crashes. There are no Death and Serious Injury (DSI) crashes</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Church Bay Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided road</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Medium lane and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using the drive over footage and the MegaMaps tool. The IRR defines Rural residential as Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 683 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Church Bay Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Church Bay Road has a mean operating speed in the range of 35 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Walter Frank Drive:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Nick Johnston Drive:</b> 50 km/h (proposed 40 km/h)</li> <li><b>Mako Street:</b> 50 km/h (proposed 30/40 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	2560
Annual Daily Traffic (vpd)	683

The Collective Risk score is 0 and the Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Winding	3.5
Carriageway width	Medium lane, very narrow shoulder	1.79
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.15
Access density (per km)	>20	1.3
Traffic volume (vpd)	683	1

The Infrastructure Risk Rating Score is 2.16. For Rural areas this corresponds to an IRR band of **High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Church Bay Road.*

Church Bay Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speed, despite the existing 50 km/h speed limit. Engineering up of Church Bay Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Church Bay Road due to a multitude of factors. These being the Medium and Winding nature of the road, the Severe roadside hazards, its Access function and its existing mean operating speed (35km/h). These features also contribute to the roads "High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 0 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 0 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Church Bay Road in Oneroa/Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Church Bay Road is 40 km/h which is aligned with the speed limit recommended by the Speed Management Guide (<80km/h, this is considered appropriate based on the function of the road and the mean operating speed supports the reduction.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Coromandel Road (Oneroa)

The speed limit on Coromandel Road, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Coromandel Road connects to Great Barrier Road to the northwest and Hauraki Road to the southeast. This road provides access to residential properties. Coromandel Road is approximately 1.18 km in length.</p> <p>Coromandel Road is classified as an Secondary Collector road under the one network road classification (ONRC). Coromandel Road is two-lane undivided road. There are no footpaths, cycle lanes or on-street parking provided along this road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Coromandel Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Coromandel Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Coromandel Road has a mean operating speed in the range of 30.12 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Great Barrier Road:</b> 50km/h (30km/h proposed)</li> <li><b>Karaka Road:</b> 50km/h (30km/h proposed)</li> <li><b>Hauraki Road:</b> 50km/h (40km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	1180
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Winding	3.5
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	520	1

The Infrastructure Risk Rating Score is 2.53. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Coromandel Road.*

Coromandel Road is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Coromandel Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Coromandel Road due to a multitude of factors. These being the narrow and winding nature of the road, the Moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (30.12km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Coromandel Road in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Coromandel Road, the actual operating speeds from the MegaMaps tool are 30km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Cory Road (Oneroa/Palm Beach)

The speed limit on Cory Road, Oneroa/Palm Beach, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cory Road connects to Hauraki Road to the west and Hill Road to the east. This road provides access to residential properties and connection to the wider road network. Cory Road is approximately 0.84 km in length.</p> <p>Cory Road is classified as an Secondary Collector road under the one network road classification (ONRC). Cory Road is Two-lane undivided. The majority of Cory Road has no footpath, cycle lanes or on-street parking. However, a small section of unpaved footpath is provided at the western section of Cory Road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 1 serious, 0 minor and 1 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crash.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cory Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 685 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Cory Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Cory Road has a mean operating speed in the range of 38 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Hauraki Road:</b> 50km/h (40km/h proposed)</li> <li><b>Junction Road:</b> 50km/h (40km/h proposed)</li> <li><b>Hill Road:</b> 50km/h (40km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	1
DSI crashes during the period	1
Corridor Length (m)	840
Annual Daily Traffic (vpd)	685

The Collective Risk score is 0.24 and the Personal Risk score is 95.2. For Urban areas this corresponds to a Collective Risk band of **High**, and a Personal Risk band of **High**.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Tortuous	6
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	2 to <3	1.25
Access density (per km)	>20	1.3
Traffic volume (vpd)	685	1

The Infrastructure Risk Rating Score is 2.73. For Urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Cory Road.*

Cory Road is a Self-Explaining road as the mean operating speed is already near the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Cory Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Cory Road due to a multitude of factors. These being the narrow and tortuous nature of the road, the Severe roadside hazards, its Secondary Collector function and its existing mean operating speed (38km/h). These features also contribute to the roads "Medium-High" IRR score and due to adverse crash history on the road. The collective and personal risk of this road are classified as High and High respectively due to the number of DSI crashes, making it a high-risk road<sup>1</sup>.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 1 serious, 0 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Cory Road in Oneroa/Palm Beach, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit is 40 km/h which is aligned with the recommended safe and appropriate speed.

---

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Cowes Bay Road (Waiheke Island)

The speed limit on Cowes Bay Road, Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Cowes Bay Road connects to Man O War Bay Road to the north and Orapiu Road to the south. This road provides access to residential properties, beach accesses and vineyard.
	Cowes Bay Road is approximately 6.3 km in length. Cowes Bay Road is classified as an Access road under the one network road classification (ONRC).
	Cowes Bay Road is a two-way, unsealed road. There are no footpaths, cycle lanes or on-street parking provided along this road.
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cowes Bay Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Narrow lane and Very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Remote rural using the drive over footage and the MegaMaps tool. The IRR defines Remote rural as <i>Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry.</i>
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 intersections per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from traffic surveys as 82 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Cowes Bay Road is 80km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Cowes Bay Road has a mean operating speed in the range of 34.75 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Man O War Bay Road:</b> 80km/h (proposed 40km/h)</li> <li><b>Orapiu Road:</b> 80km/h (proposed 60km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	6300
Annual Daily Traffic (vpd)	82

The Collective Risk score is 0 and the Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low** and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10
Road alignment	Tortuous	6
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Remote rural	1
Intersection density (per km)	<1	1
Access density (per km)	5 to <10	1.06
Traffic volume (vpd)	82	1

The Infrastructure Risk Rating Score is 2.5. For Rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Cowes Bay Road.*

Cowes Bay Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 80 km/h speed limit. Engineering up of Cowes Bay Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Cowes Bay Road due to a multitude of factors. These being the narrow and tortuous nature of the road, the Severe roadside hazards, its Access function and its existing mean operating speed (34.75km/h). These features also contribute to the roads " " IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 80 km/h on Cowes Bay Road in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Cowes Bay Road is 40km/h which is aligned with the recommended safe and appropriate speed.

## Speed Limit Review – Crescent Road East (Ostend)

The speed limit on Crescent Road East, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Crescent Road East connects to Wharf Road to the south and Crescent Road East Ext to the north. This road provides access to residential properties. Crescent Road East is approximately 0.75 km in length.</p> <p>Crescent Road East is classified as an Access road under the one network road classification (ONRC). Crescent Road East is a two-lane undivided road. There are no footpaths, cycle lanes or on-street parking provided along this road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Crescent Road East were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and traffic survey.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Crescent Road East is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Crescent Road East has a mean operating speed in the range of 34.81 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Crescent Road West:</b> 50km/h (30km/h proposed)</li> <li><b>View Road:</b> 50km/h (30km/h proposed)</li> <li><b>Potai Road:</b> 50km/h (30km/h proposed)</li> <li><b>Homai Road:</b> 50km/h (30km/h proposed)</li> <li><b>Wharf Road:</b> 50km/h (50km/h proposed)</li> <li><b>Te Toki Road:</b> 50km/h (40km/h proposed)</li> <li><b>Wharf Road:</b> 50km/h (50km/h proposed)</li> <li><b>Potai Road:</b> 50km/h (30km/h proposed)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	750
Annual Daily Traffic (vpd)	156

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume (vpd)	156	1

The Infrastructure Risk Rating Score is 2.29. For Urban areas this corresponds to an IRR band of **Medium**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Crescent Road East.*

A proposed speed limit of 30km/h was selected for Crescent Road East due to a multitude of factors. These being the narrow and curved nature of the road, the Severe roadside hazards, its Access function and its existing mean operating speed (34.81km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Crescent Road East in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Crescent Road East, the actual operating speeds from the MegaMaps tool are 35km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Crescent Road West (Ostend)

The speed limit on Crescent Road West, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Crescent Road West connects to Bay Road to the south and Crescent Road East to the north. This road provides access to residential properties. Crescent Road West is approximately 0.79 km in length.</p> <p>Crescent Road West is classified as an Access road under the one network road classification (ONRC). Crescent Road West is a two-lane undivided road. There are no footpaths, cycle lanes or on-street parking provided along this road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Crescent Road West were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day.
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Crescent Road West is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Crescent Road West has a mean operating speed in the range of 34.81 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Bay Road:</b> 50km/h (30km/h proposed)</li> <li><b>Crescent Road East:</b> 50km/h (30km/h proposed)</li> <li><b>View Road:</b> 50km/h (30km/h proposed)</li> </ul>

**Step 2: Determine the road safety metrics**

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	790
Annual Daily Traffic (vpd)	156

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

**Step 3: Calculate the IRR score**

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Winding	3.5
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3
Intersection density (per km)	2 to <3	1.25
Access density (per km)	>20	1.3
Traffic volume (vpd)	156	1

The Infrastructure Risk Rating Score is 2.50. For Urban areas this corresponds to an IRR band of **Medium-High**.

**Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Crescent Road West.*

A proposed speed limit of 30km/h was selected for Crescent Road West due to a multitude of factors. These being the narrow and winding nature of the road, the Severe roadside hazards, its Access function and its existing mean operating speed (34.81km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes,.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Crescent Road West, the actual operating speeds from the MegaMaps tool are 35km/h.

Engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Delamore Drive (Oneroa)

The speed limit on Delamore Drive, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Delamore Drive connects to Tiri Road to the east. This road provides access to residential properties and small rural businesses (such as horse riding).
	Delamore Drive is approximately 1.32 km in length. Delamore Drive is classified as an Access road under the one network road classification (ONRC).
	Delamore Drive is two-way, two-lane, undivided road. There are no footpaths, cycle lanes or on-street parking provided along on this road.
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Delamore Drive were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow and Very narrow</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using the drive over footage and the MegaMaps tool. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 intersections per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Delamore Drive is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Delamore Drive has a mean operating speed in the range of 32.9 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Tiri Road:</b> 50km/h (30km/h proposed)</li> <li><b>Alan Murray Lane:</b> 50km/h (40km/h proposed)</li> </ul>

### **Step 2: Determine the road safety metrics**

<b>Required Information for safety metrics calculations</b>	<b>Data</b>
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	1320
Annual Daily Traffic (vpd)	104

The Collective Risk score is **Low** and the Personal Risk score is **Low**. For Rural areas this corresponds to a Collective Risk band of 0, and a Personal Risk band of 0.

### **Step 3: Calculate the IRR score**

<b>Feature</b>	<b>Category</b>	<b>Risk Score</b>
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Rural residential	1.5
Intersection density (per km)	1 to <2	1.15
Access density (per km)	10 to <20	1.1
Traffic volume (vpd)	104	1

The Infrastructure Risk Rating Score is 1.7. For Rural areas this corresponds to an IRR band of **Medium-High**.

### **Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

### **Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Delamore Drive.*

Delamore Drive is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Delamore Drive was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Delamore Drive due to a multitude of factors. These being the narrow and curved nature of the road, the high roadside hazards, its access function and its existing mean operating speed (32.9km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Delamore Drive in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit for Delamore Drive is 40 km/h which is aligned with the speed limit recommended by the Speed Management Guide (<80km/h); this is considered appropriate based on the function of the road and the mean operating speed supports the reduction.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Dickson Road (Surfdale)

The speed limit on Dickson Road, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Dickson Road connects Wilma Road to the east. This road provides access to residential properties. Dickson Road is approximately 0.13 km in length.</p> <p>Dickson Road is classified as an Access road under the one network road classification (ONRC). Dickson Road is an unsealed road. There are no footpaths, cycle lanes or on-street parking provided along this road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Dickson Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Minor</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>"Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Dickson Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Dickson Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Wilma Road:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	130
Annual Daily Traffic (vpd)	50

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10
Road alignment	Straight	1
Carriageway width	Narrow lane, Very narrow shoulder	2.01
Roadside hazards (in both directions)	Minor	0.67
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	50	1

The Infrastructure Risk Rating Score is 2.08. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 5: Conclusion

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Dickson Road.*

Dickson Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Dickson Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Dickson Road due to a multitude of factors. These being the Narrow and Straight nature of the road, the Minor roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as 'Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Dickson Road in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Dickson Road, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Donald Bruce Road (Surfdale)

Donald Bruce Road, Surfdale, is divided into the following section and outlined as follows<sup>1</sup>:

1. Section 1: Donald Bruce Road between 55m south of Causeway Road and 28m north of Esslin Road
2. Section 2: Donald Bruce Road between Causeway Road and Kennedy Road
3. Section 3: Donald Bruce Road between Kennedy Road and southern end of Donald Bruce Road

These sections were chosen to create homogenous road sections that have consistent features (adjacent land use, access density, nature of the road, etc). Therefore, people can understand the reason for a speed limit change when they move between sections.

All sections of Donald Bruce Road, Surfdale have been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments		
	Section 1	Section 2	Section 3
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>		
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.		
(c) the function and use of the road; and	Donald Bruce Road – Section 1, starts from 55m south of Causeway Road to the north of and ends 28m north of Esslin Road to the south. This road provides access to residential properties and a school.	Donald Bruce Road – Section 2, connects Causeway Road / Alison Road to the North and Kennedy Point Road to the south. This road provides access to residential properties	Donald Bruce Road – Section 3, connects to Kennedy Point Road to the north and Kennedy Point Ferry Terminal to the south. This road provides access to the Ferry Terminal and residential properties.
	This section of Donald Bruce Road is 0.45km in length. It is classified as an Arterial road under the one network road classification (ONRC). Donald Bruce Road is a two-lane undivided road.	This section of Donald Bruce Road is 1.52km in length. It is classified as an Arterial road under the one network road classification (ONRC). Donald Bruce Road is a two-lane undivided road.	This section of Donald Bruce Road is 0.33km in length. It is classified as an Arterial road under the one network road classification (ONRC). Donald Bruce Road is a two-lane undivided road..
	This section is a two-way, two-lane, undivided road. There are pedestrian amenities including a pedestrian refuge island and a cycle lane.	This section is a two-way, two-lane, undivided road. There are pedestrian amenities including a pedestrian refuge island and a cycle lane.	This section is a two-way, two-lane, undivided road. There are pedestrian amenities including a pedestrian refuge island and a cycle lane.
	WK NZTA's Crash Analysis System (CAS) was used to determine the crash history between 2016 and 2020. CAS includes crashes for all road users and therefore the crash risk for all road users was considered		

(d) crash risk for all road users; and	CAS records 1 crashes between 2016 and 2020: 0 fatal, 1 serious, 0 minor and 0 non-injury crashes. This resulted in 1 Death and Serious Injury (DSI) crashes.	CAS records 5 crashes between 2016 and 2020: 0 fatal, 0 serious, 3 minor and 2 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.	CAS records 5 crashes between 2016 and 2020: 0 fatal, 0 serious, 3 minor and 2 non-injury crashes. This resulted in 0 Death and Serious Injury (DSI) crashes.
(e) the characteristics of the road and roadsides; and	The following characteristics for Donald Bruce Road were determined using a combination of site drive-over footage and geomaps information.		
	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane and very narrow shoulder</li> </ul> <p><b>Roadside hazards (in both directions):</b> Severe</p>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane and very narrow shoulder</li> </ul> <p><b>Roadside hazards (in both directions):</b> Severe</p>	<ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two-lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane and very narrow shoulder</li> </ul> <p><b>Roadside hazards (in both directions):</b> Severe</p>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".	The adjacent land use is classified as Urban residential using the drive over footage. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	The following were determined using a combination of site drive-over footage, on-site information and geomaps information		
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10</li> </ul> <p><b>Access density:</b> &gt;20</p>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10</li> </ul> <p><b>Access density:</b> &gt;20</p>	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10</li> </ul> <p><b>Access density:</b> &gt;20</p>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2615 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 2615 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.	Average daily traffic (ADT) was determined from MegaMaps as 2615 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/engineering measures for the area are planned, details of the measures for this road are still under investigation.		

<sup>1</sup> It is noted that the ONRC and MegaMaps sections differ from the proposed road sections. This is because AT has chosen to align the proposed speed limit changes with sections of similar road alignment (i.e tortuous vs curved) as specified within the IRR.

(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”.</p> <p>Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.</p>
---	--

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	<p>The existing speed limit(s) on Donald Bruce Road are as follows:</p> <ul style="list-style-type: none"> <li>A variable 40km/h Between 55m south of Causeway Road and 28m north of Esslin Road. Operates at the start and end of the school day.</li> <li>50km/h Between Causeway Road and Kennedy Road</li> <li>50km/h Between Kennedy Road and southern end of Donald Bruce Road</li> </ul>
MegaMaps Mean Operating Speed (km/h)	<p>The mean operating speed limit(s) on Donald Bruce Road are as follows:</p> <ul style="list-style-type: none"> <li>42.66km/h Between 55m south of Causeway Road and 28m north of Esslin Road</li> <li>42.66km/h Between Causeway Road and Kennedy Road</li> <li>42.66km/h Between Kennedy Road and southern end of Donald Bruce Road</li> </ul>
Existing Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li><b>Causeway Road:</b> 50 km/h (proposed 50 km/h)</li> <li><b>Alison Road:</b> 50 km/h (proposed 50 km/h)</li> <li><b>Hooks Lane:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Esslin Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Section 1	Section 2	Section 3
Crash Analysis Period (years)	5	5	5
Total injury crashes during period	1	0	0
DSI crashes during the period	1	0	0
Corridor Length (m)	950	1850	1850
Annual Daily Traffic (vpd)	2615	2615	2615

- Section 1
  - The Collective Risk score is 0.21. For Urban areas this corresponds to a Collective Risk band of **High**.
  - Personal Risk score is 22.06. A Personal Risk band of **High**.
- Section 2
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.

- Section 3
  - The Collective Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**.
  - Personal Risk score is 0. A Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Section 1		Section 2		Section 3	
	Category	Risk Score	Category	Risk Score	Category	Risk Score
Road stereotype	Two-lane undivided	3.7	Two-lane undivided	3.7	Two-lane undivided	3.7
Road alignment	Curved	1.8	Curved	1.8	Curved	1.8
Carriageway width (road lane + shoulder)	Medium, Very narrow	1.79	Medium, Very narrow	1.79	Medium, Very narrow	1.79
Roadside hazards (in both directions)	Severe	2.8	Severe	2.8	Severe	2.8
Adjacent land use	Urban residential	3	Urban residential	3	Urban residential	3
Intersection density (per km)	5 to <10	2.6	5 to <10	2.6	5 to <10	2.6
Access density (per km)	>20	1.3	>20	1.3	>20	1.3
Traffic volume	2615	1.4	2615	1.4	2615	1.4

- Section 1: The Infrastructure Risk Rating Score is 2.68. For Urban areas this corresponds to an IRR band of **Medium-High**.
- Section 2: The Infrastructure Risk Rating Score is 2.68. For Urban areas this corresponds to an IRR band of **Medium-High**.
- Section 3: The Infrastructure Risk Rating Score is 2.68. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is:

- 50km/h Between 55m south of Causeway Road and 28m north of Esslin Road (Section 1),
- 50km/h Between Causeway Road and Kennedy Road (Section 2),
- 50km/h Between Kennedy Road and southern end of Donald Bruce Road (Section 3)

### Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation is

- 30km/h on Between 55m south of Causeway Road and 28m north of Esslin Road (Section 1),
- 50km/h on Between Causeway Road and Kennedy Road (Section 2),
- 30km/h on Between Kennedy Road and southern end of Donald Bruce Road (Section 3).

For Donald Bruce Road – Section 1, a proposed variable speed limit of 30km/h was selected, for Section 1 due to a multitude of factors, not least the presence of two schools with frontage to the road in this section. Additional factors included the curved nature of the road, the Severe roadside hazards, its Arterial function and high pedestrian and cyclist demand during school pickup and drop-off peak periods. These features also contribute to the roads “Medium-

High" IRR score. The collective and personal risk of this road are classified as High and High respectively due to the number of DSI crashes, making it a high-risk road<sup>2</sup>.

Crash history from WK NZTA's CAS database shows 1 crashes in the last 5 years including 0 fatal, 1 serious, 0 minor and 0 non-injury crashes.

Waka Kotahi have indicated that variable 30km/h speed limits would be appropriate if the operating speeds during the times of variable speed limit operation were less than 30km/h and they are notified of the proposal. Waka Kotahi will be notified of this proposal for a variable 30km/h speed limit prior to public consultation.

Due to the lock down in 2021, traffic survey will be undertaken to monitor the traffic speed during peak periods once the school opens. It will be engineered down if monitoring finds that the operating speed at those times is high.

Donald Bruce Road – Section 2, is a self-explaining road. A proposed speed limit of 50km/h was selected, for Section 2 due to a multitude of factors. These being Medium and Curved nature of the road, the Severe roadside hazards, its Arterial function and its existing mean operating speed (42.66km/h). These features also contribute to the roads "Medium-High" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes, making it a high-risk road<sup>3</sup>.

Crash history from WK NZTA's CAS database shows 5 crashes in the last 5 years including 0 fatal, 0 serious, 3 minor and 2 non-injury crashes.

Donald Bruce Road – Section 3. A proposed speed limit of 30km/h was selected, for Section 3 due to a multitude of factors. These being Medium and Curved nature of the road, the Severe roadside hazards, its Arterial function and its existing mean operating speed (42.66km/h). These features also contribute to the roads "Medium-High" IRR score. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes, making it a high-risk road<sup>4</sup>.

Crash history from WK NZTA's CAS database shows 5 crashes in the last 5 years including 0 fatal, 0 serious, 3 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit(s) on Donald Bruce Road in Surfdale, are not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Donald Bruce Road – Section 2, is 50 km/h which is aligned with the recommended safe and appropriate speed.

While the speed management guide suggests 50 km/h as the safe and appropriate speed for Donald Bruce Road – Sections 1 & 3, the actual operating speeds from the MegaMaps are 42.66km/h.

Engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>2</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

<sup>3</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

<sup>4</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – Eden Terrace Onetangi

The speed limit on Eden Terrace Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Eden Terrace connects to Onetangi Road to the northwest and Trig Hill Road to the southwest. This road provides access to residential properties. Eden Terrace is approximately 0.67 km in length. There are no footpaths or cycle lanes provided.</p> <p>Eden Terrace is classified as an Secondary Collector road under the one network road classification (ONRC). Eden Terrace is a two-lane undivided road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Eden Terrace were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 624 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Eden Terrace is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Eden Terrace has a mean operating speed in the range of 28 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Onetangi Road:</b> 50km/h (50km/h proposed)</li> <li>• <b>Marine View Road:</b> 50km/h (30km/h proposed)</li> <li>• <b>Victoria Road South:</b> 50km/h (30km/h proposed)</li> <li>• <b>Hobson Terrace:</b> 50km/h (30km/h proposed)</li> <li>• <b>Trig Hill Road:</b> 50km/h (30km/h proposed)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	670
Annual Daily Traffic (vpd)	624

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume	624	1

The Infrastructure Risk Rating Score is 2.24. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Eden Terrace.

Eden Terrace is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Eden Terrace was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Eden Terrace due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (28.36km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Eden Terrace in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Eden Terrace, the actual operating speeds from the MegaMaps tool are 28 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Empire Avenue (Oneroa)**

The speed limit on Empire Avenue, Oneroa, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Empire Avenue connects to Great Barrier Road to the north. This road provides access residential properties. Empire Avenue is approximately 0.2 km in length.</p> <p>Empire Avenue is classified as an Access road under the one network road classification (ONRC). Empire Avenue is a two-way, unsealed road. No pedestrian footpaths or cycle lanes are provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Empire Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and Very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li>Access density: &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 25 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Empire Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Empire Avenue has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Great Barrier Road: 50km/h (30km/h proposed)</li> </ul>

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	200
Annual Daily Traffic (vpd)	25

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

#### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume	25	1

The Infrastructure Risk Rating Score is 2.43. For Urban areas this corresponds to an IRR band of **Medium-High**.

#### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Empire Avenue.

Empire Avenue is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Empire Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Empire Avenue due to a multitude of factors. These being the narrow and curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Empire Avenue in Oneroa, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Empire Avenue, the actual operating speeds from the MegaMaps tool 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Erua Road (Ostend)**

The speed limit on Erua Road, Ostend, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Erua Road connects to Sea View Road to the north and Ostend Road to the south. This road provides access commercial, residential and light industrial properties. Erua Road is approximately 0.92 km in length.</p> <p>Erua Road is classified as an Secondary Collector road under the one network road classification (ONRC). Erua Road is a two-lane undivided road. There are no footpaths or cycle lanes along this road. Perpendicular parking is provided along Erua Road, with some vehicles also parking parallel along the berms.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 2 non-injury crashes. There are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Erua Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box using the drive over footage and the MegaMaps tool. The IRR defines Commercial big box as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present."

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Requirement	Comments
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Erua Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Erua Road has a mean operating speed in the range of 29.6 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Sea View Road:</b> 50 km/h (proposed 40 km/h)</li> <li>• <b>Ostend Road:</b> 50 km/h</li> <li>• <b>Tahi Road:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Poto Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	920
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Commercial big box	4
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume	520	1

The Infrastructure Risk Rating Score is 2.12. For Urban areas this corresponds to an IRR band of **Medium**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Erua Road.*

Erua Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Erua Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Erua Road due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (29.6km/h). These features also contribute to the roads "Medium" IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

Crash history from WK NZTA's CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 0 minor and 2 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Erua Road in Ostend, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Erua Road, the actual operating speeds from the MegaMaps tool is 29.6 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Esslin Road (Surfdale)**

The speed limit on Esslin Road, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Esslin Road connects to Donald Bruce Road to the south-east. This road provides access to residential properties. Esslin Road is approximately 0.2 km in length.</p> <p>Esslin Road is classified as an Secondary Collector road under the one network road classification (ONRC). Esslin Road is a two-lane undivided road. There is a footpath provided on the north-eastern side of the road. There are no on-street parking or cycle lanes provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Esslin Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &gt;10 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Esslin Road is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Esslin Road has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Donald Bruce Road:</b> 50km/h</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	200
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume	520	1

The Infrastructure Risk Rating Score is 2.52. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Esslin Road.

Esslin Road is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Esslin Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Esslin Road due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Secondary Collector function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Esslin Road in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Esslin Road, the actual operating speeds from the MegaMaps tool are 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Fairview Crescent (Ōmiha)**

The speed limit on Fairview Crescent, Ōmiha, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fairview Crescent connects to Upland Road / Watson Road to the south/east and Glen Brook Road / Okoka Road to the south/west. This road provides access to residential areas. Fairview Crescent is approximately 1.72 km in length.</p> <p>Fairview Crescent is classified as an Access road under the one network road classification (ONRC). Fairview Crescent is a two-lane undivided road. There are no pedestrian footpaths or on-street parking along this road. There are no cycle lanes provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crash between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fairview Crescent were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Severe</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> </ul>

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Access density:</b> &gt; 20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 146 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Fairview Crescent is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Fairview Crescent has a mean operating speed in the range of 20 km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Okoka Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Glen Brook Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Bella Vista Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Watson Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Upland Road:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	1,072
Annual Daily Traffic (vpd)	146

The Collective Risk score is 0 and the Personal Risk score is 0. For urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-way undivided	3.7
Road alignment	Winding	3.5
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Severe	2.8
Adjacent land use	Urban residential	3.0
Intersection density (per km)	2 to <3	1.3
Access density (per km)	>20	1.3
Traffic volume (vpd)	146	1.0

The Infrastructure Risk Rating Score is 2.40. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

## Step 5: Conclusion

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Fairview Crescent.

Fairview Crescent is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Fairview Crescent was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Fairview Crescent due to a multitude of factors. These being the Narrow and Curved nature of the road, the Severe roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

After considering all the above factors, the existing speed limit of 50 km/h on Fairview Crescent in Ōmiha, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Fairview Crescent, the actual operating speeds from the MegaMaps tool are 20km/h .

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

## Speed Limit Review – First Avenue (Onetangi)

The speed limit on First Avenue, Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>First Avenue intersects with Le Roy Road, from the west, approximately midway along its alignment. This road provides access to residential properties. First Avenue is approximately 0.07 km in length.</p> <p>First Avenue is classified as an Access road under the one network road classification (ONRC). First Avenue is two-lane undivided road. There are no pedestrian footpaths and on-street parking along this road. There are no cycle lanes provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for First Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."
(g) the number of intersections and property accessways; and	<p>A combination of site drive over footage and geomaps information revealed:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &gt;10 intersections per km</li> <li><b>Access density:</b> &gt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on First Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of First Avenue has a mean operating speed in the range of 20 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Le Roy Road:</b> 50km/h (30km/h proposed)</li> </ul>

#### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	70
Annual Daily Traffic (vpd)	104

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

#### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3
Intersection density (per km)	>10	5
Access density (per km)	>20	1.3
Traffic volume	104	1

The Infrastructure Risk Rating Score is 2.52. For Urban areas this corresponds to an IRR band of **Medium-High**.

#### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of First Avenue.*

First Avenue is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of First Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for First Avenue due to a multitude of factors. These being the narrow and curved nature of the road, the moderate roadside hazards, its Access function and its existing mean operating speed (20km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high risk road.<sup>1</sup> The collective and personal risk of this road are classified as Low and Low respectively due the number of Death and Serious Injury (DSI) crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on First Avenue in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for First Avenue, the actual operating speeds from the MegaMaps is 20km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Fisher Road Waiheke Island**

The speed limit on Fisher Road Waiheke Island, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fisher Road connects to Waiheke Road to the east. This road provides access residential properties.</p> <p>Fisher Road is approximately 0.17 km in length. Fisher Road is classified as an "No information available" road under the one network road classification (ONRC).</p> <p>Fisher Road is a two-way, unsealed road. There are no pedestrian footpaths or cycle lanes provided along this road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 0 crashes between 2016 and 2020. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fisher Road were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using the drive over footage and the MegaMaps tool. The IRR defines Rural residential as "Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements."

Requirement	Comments
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	No average daily traffic (ADT) was available for this road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Fisher Road is 80km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Fisher Road has no data available for the mean operating speed.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Waiheke Road:</b> 50km/h (proposed 60km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	170
Annual Daily Traffic (vpd)	n/a

The Collective Risk score is 0, and a Personal Risk score is 0. For Rural areas this corresponds to a Collective Risk band of **Low** and the Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Unsealed	10
Road alignment	Curved	1.8
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Rural residential	1.5
Intersection density (per km)	5 to <10	2.6
Access density (per km)	10 to <20	1.1
Traffic volume	n/a	1

The Infrastructure Risk Rating Score is 2.3. For Rural areas this corresponds to an IRR band of **High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.2 of the Speed Management Guide is <80km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 40km/h for the full length of Fisher Road.*

Even though no mean operating speed data was available, given the function and nature of the road (particularly that it is unsealed), Fisher Road is likely to be a Self-Explaining road (despite the existing 80 km/h speed limit). Engineering up of Fisher Road was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 40km/h was selected for Fisher Road due to a multitude of factors. These being the narrow and curved nature of the road and the moderate roadside hazards. These features also contribute to the roads “High” IRR score. The collective and personal risk of this road are classified as Low and Low respectively.

After considering all the above factors, the existing speed limit(s) of 80 km/h on Fisher Road in Waiheke Island, is not considered to be a safe and appropriate speed limit for this road.

The proposed safe and appropriate speed limit(s) for Fisher Road is 40km/h which is aligned with the recommended safe and appropriate speed.

**Speed Limit Review – Fisher Street (Surfdale)**

The speed limit on Fisher Street, Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fisher Street connects to Park Road to the west and Beresford Avenue to the east. This road provides access to residential areas. Fisher Street is approximately 0.31 km in length.</p> <p>Fisher Street is classified as an Access road under the one network road classification (ONRC). Fisher Street is a two-lane undivided road. There are no pedestrian footpaths or on-street parking along this road. There are no cycle lanes provided.</p>
(d) crash risk for all road users; and	<p>WK NZTA’s Crash Analysis System (CAS) records 1 crash between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 1 non-injury crashes. Therefore, there are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fisher Street were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulder</li> <li><b>Roadside hazards (in both directions):</b> Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>“Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day”</i> .
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> &gt; 20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Fisher Street is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Fisher Street has a mean operating speed in the range of 20.46 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li><b>Park Road:</b> 50 km/h (proposed 30 km/h)</li> <li><b>Beresford Avenue:</b> 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	310
Annual Daily Traffic (vpd)	260

The Collective Risk score is 0 and the Personal Risk score is 0. For urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-way undivided	3.7
Road alignment	Winding	3.5
Carriageway width	Narrow lane, very narrow shoulder	2.01
Roadside hazards (in both directions)	Moderate	1.43
Adjacent land use	Urban residential	3.0
Intersection density (per km)	5 to <10	2.6
Access density (per km)	>20	1.3
Traffic volume (vpd)	260	1.0

The Infrastructure Risk Rating Score is 2.40. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Fisher Street.*

Fisher Street is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Fisher Street was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Fisher Street due to a multitude of factors. These being the Narrow and Curved nature of the road, the Moderate roadside hazards, its Access function and its existing mean operating speed (20.46km/h). These features also contribute to the roads "Medium-High" IRR score, making it a high-risk road<sup>1</sup>. The collective and personal risk of this road are classified as Low and Low respectively due to the number of DSI crashes.

Crash history from WK NZTA's CAS database shows 1 crash in the last 5 years including 0 fatal, 0 serious, 0 minor and 1 non-injury crash.

After considering all the above factors, the existing speed limit of 50 km/h on Fisher Street in Surfdale, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Fisher Street, the actual operating speeds from the MegaMaps tool are 20km/h .

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Fourth Avenue (Onetangi)**

The speed limit on Fourth Avenue, Onetangi, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fourth Avenue connects to The Strand to the north and Onetangi Road / Waiheke Road to the south. This road provides access to the local shops. Fourth Avenue is approximately 0.25 km in length.</p> <p>Fourth Avenue is classified as an Secondary Collector road under the one network road classification (ONRC). Fourth Avenue is a two-lane undivided road. There are pedestrian footpaths and perpendicular on-street parking provided along this road. There are no cycle lanes provided. Two bus stops are provided along this road.</p>
(d) crash risk for all road users; and	<p>WK NZTA's Crash Analysis System (CAS) records 2 crashes between 2016 and 2020: 0 fatal, 0 serious, 1 minor and 1 non-injury crashes. There are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fourth Avenue were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as "Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day."

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

Requirement	Comments
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1,029 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road and the traffic survey (1,029vpd).
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Fourth Avenue is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Fourth Avenue has a mean operating speed in the range of 30 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>The Strand:</b> 50 km/h (proposed 30 km/h)</li> <li>• <b>Onetangi Road:</b> 50 km/h (proposed 50 km/h)</li> <li>• <b>Waiheke Road:</b> 50 km/h (proposed 40 km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	250
Annual Daily Traffic (vpd)	1,029

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Curved	1.8
Carriageway width	Medium, Very narrow	1.79
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Urban residential	3
Intersection density (per km)	5 to <10	2.6
Access density (per km)	10 to <20	1.1
Traffic volume	1029	1.4

The Infrastructure Risk Rating Score is 2.51. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

*Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Fourth Avenue.*

Fourth Avenue is a Self-Explaining road as the mean operating speed is already below the proposed safe and appropriate speeds, despite the existing 50 km/h speed limit. Engineering up of Fourth Avenue was considered but dismissed due to the substantial and costly upgrades that would be required. The cost to do this would substantially outweigh any benefits.

A proposed speed limit of 30km/h was selected for Fourth Avenue due to a multitude of factors. These being the medium lane width and curved nature of the road, the high roadside hazards, its Secondary Collector function and its existing mean operating speed (30km/h). These features also contribute to the road’s “Medium-High” IRR score, making it a high-risk road<sup>1</sup>.

Crash history from WK NZTA’s CAS database shows 2 crashes in the last 5 years including 0 fatal, 0 serious, 1 minor and 1 non-injury crashes.

After considering all the above factors, the existing speed limit(s) of 50 km/h on Fourth Avenue in Onetangi, is not considered to be a safe and appropriate speed limit for this road.

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Fourth Avenue, the actual operating speeds from the MegaMaps tool are 30 km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

<sup>1</sup> A road is high risk if either the Personal Risk, Collective Risk, or Infrastructure Risk Rating is Medium-High or High

**Speed Limit Review – Frank Street (Oneroa/Surfdale)**

The speed limit on Frank Street, Oneroa/Surfdale, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached.

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Frank Street connects to Pacific Parade to the and Queens Drive to the northeast. This road provides access to residential areas. Frank Street is approximately 0.84 km in length.</p> <p>Frank Street is classified as an Secondary Collector road under the one network road classification (ONRC). Frank Street is a two-lane undivided road. There are no pedestrian footpaths and on-street parking along this road. There are no cycle lanes.</p>
(d) crash risk for all road users; and	<p>WK NZTA’s Crash Analysis System (CAS) records 3 crashes between 2016 and 2020: 0 fatal, 0 serious, 0 minor and 3 non-injury crashes. There are no Death and Serious Injury (DSI) crashes.</p> <p>This data includes crashes for all road users and therefore crash risk for all road users were considered.</p>
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Frank Street were determined using a combination of site drive-over footage and geomaps information.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Narrow lanes and very narrow shoulders</li> <li><b>Roadside hazards (in both directions):</b> High</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using the drive over footage and the MegaMaps tool. The IRR defines Urban residential as <i>“Urban residential area dominated by housing with frequent driveways and on-street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity is also likely to be present, particularly at certain times of the day.”</i>
(g) the number of intersections and property accessways; and	A combination of site drive over footage and geomaps information revealed:

Requirement	Comments
	<ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li>• <b>Access density:</b> &gt;20 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	There are no planned modifications currently.
(j) the views of interested persons and groups.	Potential changes to the speed limit in this area were presented to the Waiheke Local Board via meetings on 11th August 2021. Responses were received and considered for investigation. The local board was generally supportive of the speed limit changes.

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit on Frank Street is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Frank Street has a mean operating speed in the range of 22.75 km/h.
Existing Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• <b>Pacific Parade:</b> 50 km/h (proposed 40 km/h)</li> <li>• <b>Queens Drive:</b> 50 km/h (proposed 40 km/h)</li> <li>• <b>Hekeura Road:</b> 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics

Required Information for safety metrics calculations	Data
Crash Analysis Period (years)	5
Total injury crashes during period	0
DSI crashes during the period	0
Corridor Length (m)	840
Annual Daily Traffic (vpd)	520

The Collective Risk score is 0 and the Personal Risk score is 0. For Urban areas this corresponds to a Collective Risk band of **Low**, and a Personal Risk band of **Low**.

### Step 3: Calculate the IRR score

Feature	Category	Risk Score
Road stereotype	Two-lane undivided	3.7
Road alignment	Winding	3.5
Carriageway width	Narrow, Very narrow	2.01
Roadside hazards (in both directions)	High	2.28
Adjacent land use	Urban residential	3
Intersection density (per km)	3 to <5	1.5
Access density (per km)	>20	1.3
Traffic volume	520	1

The Infrastructure Risk Rating Score is 2.49. For Urban areas this corresponds to an IRR band of **Medium-High**.

### Step 4: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 5: Conclusion**

Proposed safe and appropriate speed limit recommendation = 30km/h for the full length of Frank Street.
