Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bodmin Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Bolina Crescent (Pakuranga)**

The speed limit on Bolina Crescent, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bolina Crescent connects to Tiraumea Drive to the south. This road provides access to residential properties and is approximately 0.09 km in length.</p> <p>Bolina Crescent is classified as an access road under the one network road classification (ONRC). Bolina Crescent is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 90 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bolina Crescent has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Tiraumea Drive: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Bolina Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.69 For urban areas this corresponds to an IRR band of **Medium High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Bolina Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bolton Place (Otara)

The speed limit on Bolton Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bolton Place connects to Grant Avenue to the east. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Bolton Place is classified as an Access road under the one network road classification (ONRC). Bolton Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bolton Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 447 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Bolton Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Grant Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Bolton Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.20. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bolton Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bonaparte Drive (Pukekohe)

The speed limit on Bonaparte Drive, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bonaparte Drive connects to Wellington Street to the east. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Bonaparte Drive is classified as an Access road under the one network road classification (ONRC). Bonaparte Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bonaparte Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2001 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bonaparte Drive has a mean operating speed in the range of 30-34km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Wellington Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Bonaparte Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 1.81. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bonaparte Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bond Street (Otarā)

The speed limit on Bond Street, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bond Street connects to Ferguson Road to the east and Cobham Crescent to the west. This road provides access to residential properties and is approximately 0.21km in length.</p> <p>Bond Street is classified as a Secondary Collector road under the one network road classification (ONRC). Bond Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bond Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2719 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Bond Street has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ferguson Road: 50km/h (proposed 30km/h)</li> <li>Cobham Crescent: 50km/h (proposed 30km/h)</li> <li>Tindall Crescent: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Bond Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.58. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bond Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Booker Place (Weymouth)

The speed limit on Booker Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Booker Place connects to Gibbons Road to the north. This road provides access to residential properties and is approximately 0.17km in length.</p> <p>Booker Place is classified as an Access road under the one network road classification (ONRC). Booker Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Booker Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 3 to &lt;5 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 478 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Booker Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Gibbons Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Booker Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Booker Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Boscawen Street (Point Chevalier)

The speed limit on Boscawen Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Boscawen Street connects to Point Chevalier Road to the west and Bangor Street to the east. This road provides access to residential properties and is approximately 0.18km in length.</p> <p>Boscawen Street is classified as an Access road under the one network road classification (ONRC). Boscawen Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Boscawen Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 312 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Boscawen Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Point Chevalier Road: 50 km/h (proposed 30 km/h)</li> <li>Bangor Street: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Boscawen Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Boscawen Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bourne Street (Mount Eden)

The speed limit on Bourne Street, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bourne Street connects to Lovelock Avenue to the north. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Bourne Street is classified as a Access road under the one network road classification (ONRC). Bourne Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bourne Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bourne Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Lovelock Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Bourne Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bourne Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bowen Street (Manurewa East)

The speed limit on Bowen Street, Manurewa East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bowen Street connects to McDougall Street to the north. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Bowen Street is classified as an Access road under the one network road classification (ONRC). Bowen Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bowen Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 343 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bowen Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• McDougall Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Bowen Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bowen Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bowmore Close (Flat Bush)

The speed limit on Bowmore Close, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bowmore Close connects to Cyril French Drive to the south and Pennygale Close to the south. This road provides access to residential properties and is approximately 0.05km in length.</p> <p>Bowmore Close is classified as an Access road under the one network road classification (ONRC). Bowmore Close is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bowmore Close were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 228 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Bowmore Close has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Cyril French Drive: 50km/h (proposed 30km/h)</li> <li>Pennygale Close: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Bowmore Close has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bowmore Close, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Boyd Avenue (Mangere Bridge)

The speed limit on Boyd Avenue, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Boyd Avenue connects to Kiwi Esplanade to the east and Wallace Road to the west. This road provides access to residential properties and is approximately 0.39km in length.</p> <p>Boyd Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Boyd Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Boyd Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2080 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Boyd Avenue has a mean operating speed in the range of 35-39km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kiwi Esplanade: 50km/h (proposed 30km/h)</li> <li>• Wallace Road: 50km/h (proposed 30km/h)</li> <li>• Sullivan Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Boyd Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.22. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Boyd Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Brains Road (Kelston)

The speed limit on Brains Road, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Brains Road connects to Cobham Crescent to the north and Archibald Road to the east. This road provides access to residential properties and is approximately 0.36km in length.</p> <p>Brains Road is classified as a Primary Collector road under the one network road classification (ONRC). Brains Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Brains Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3814 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Brains Road has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Cobham Crescent: 50km/h (proposed 30km/h)</li> <li>Archibald Road: 50km/h (proposed 30km/h)</li> <li>Martin Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Brains Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Brains Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Brains Road is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Brava Place (Clendon Park)

The speed limit on Brava Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Brava Place connects to Finlayson Avenue to the south. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Brava Place is classified as an Access road under the one network road classification (ONRC). Brava Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Brava Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 110 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Brava Place has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Finlayson Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Brava Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Brava Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Brentwood Avenue (Mount Eden)

The speed limit on Brentwood Avenue, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Brentwood Avenue connects to Dominion Road to the west and Wynyard Road to the east. This road provides access to residential properties and is approximately 0.42km in length.</p> <p>Brentwood Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Brentwood Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Brentwood Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 539 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Brentwood Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Horopito Street: 50km/h (proposed 30km/h)</li> <li>Wrights Spur: 50km/h (proposed 30km/h)</li> <li>Wynyard Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Brentwood Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Brentwood Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Brian Slater Way (Stonefields)

The speed limit on Brian Slater Way, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Brian Slater Way connects to Searle Street to the north and Stonemason Avenue to the south. This road provides access to residential properties and is approximately 0.28km in length.</p> <p>Brian Slater Way is classified as a Secondary Collector road under the one network road classification (ONRC). Brian Slater Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Brian Slater Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1352 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Brian Slater Way has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Searle Street: 50km/h (proposed 30km/h)</li> <li>Garin Way: 50km/h (proposed 30km/h)</li> <li>Stonemason Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Brian Slater Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.84. For urban areas this corresponds to an IRR band of **High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Brian Slater Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bridgefield Crescent (Flat Bush)

The speed limit on Bridgefield Crescent, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bridgefield Crescent connects to Coachman Drive to the north and Oakville Avenue to the west. This road provides access to residential properties and is approximately 0.24km in length.</p> <p>Bridgefield Crescent is classified as an Access road under the one network road classification (ONRC). Bridgefield Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bridgefield Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 572 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bridgefield Crescent has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Coachman Drive: 50km/h (proposed 30km/h)</li> <li>• Oakville Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Bridgefield Crescent has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bridgefield Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bridgewater Road (Parnell)

The speed limit on Bridgewater Road, Parnell has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bridgewater Road connects to Saint Stephens Avenue to the east and Judges Bay Road to the west. This road provides access to residential properties and is approximately 0.25km in length.</p> <p>Bridgewater Road is classified as an Access road under the one network road classification (ONRC). Bridgewater Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bridgewater Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Bridgewater Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Saint Stephens Avenue between Gladstone Road and the northern end of Saint Stephens Avenue: 50km/h (proposed 30km/h)</li> <li>Judges Bay Road: 50km/h (proposed 30km/h)</li> <li>Rota Place: 50km/h (proposed 30km/h)</li> <li>Crescent Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Bridgewater Road has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **High**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bridgewater Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Briody Terrace (Stonefields)

The speed limit on Briody Terrace, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Briody Terrace connects to Stonemason Avenue to the north and Tihi Street to the south. This road provides access to residential properties and is approximately 0.25km in length.</p> <p>Briody Terrace is classified as an Access road under the one network road classification (ONRC). Briody Terrace is a two-way, Two lane undivided road. There are partial pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Briody Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and Very Narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 10+ per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Briody Terrace has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Tihi Street: 50km/h (proposed 30km/h)</li> <li>• Styak Street: 50km/h (proposed 30km/h)</li> <li>• Stonemason Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Briody Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Briody Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bronwylian Drive (Flat Bush)

The speed limit on Bronwylian Drive, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bronwylian Drive connects to Cyril French Drive to the east and Baverstock Road to the south. This road provides access to residential properties and is approximately 0.81km in length.</p> <p>Bronwylian Drive is classified as an Access road under the one network road classification (ONRC). Bronwylian Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bronwylian Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 747 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Bronwylian Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Cyril French Drive: 50km/h (proposed 30km/h)</li> <li>Baverstock Road: 50km/h (proposed 30km/h)</li> <li>Tornish Drive: 50km/h (proposed 30km/h)</li> <li>Middlefield Drive: 50km/h (proposed 30km/h)</li> <li>Ainwick Road: 50km/h (proposed 30km/h)</li> <li>Fernloche Place: 50km/h (proposed 30km/h)</li> <li>Finty Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Bronwylian Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bronwylian Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Brook Haven Rise (Clendon Park)

The speed limit on Brook Haven Rise, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Brook Haven Rise connects to Pitt Avenue to the north. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Brook Haven Rise is classified as an Access road under the one network road classification (ONRC). Brook Haven Rise is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Brook Haven Rise were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 3 to &lt;5 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 440 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Brook Haven Rise has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Pitt Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Brook Haven Rise has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **High**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Brook Haven Rise, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Browning Street (Manurewa East)

The speed limit on Browning Street, Manurewa East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Browning Street connects to Ellen Street to the north and Mcannalley Street to the south. This road provides access to residential properties and is approximately 0.20km in length.</p> <p>Browning Street is classified as a Secondary Collector road under the one network road classification (ONRC). Browning Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Browning Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 998 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Browning Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ellen Street: 50km/h (proposed 30km/h)</li> <li>Mcannalley Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Browning Street has the following information:

- o Collective Risk band of **Low Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.18. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Browning Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bulwer Street (Devonport)

The speed limit on Bulwer Street, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bulwer Street connects to Abbotsford Terrace to the south. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Bulwer Street is classified as an Access road under the one network road classification (ONRC). Bulwer Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bulwer Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 132 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bulwer Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Abbotsford Terrace: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Bulwer Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bulwer Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bundena Place (Clendon Park)

The speed limit on Bundena Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bundena Place connects to Finlayson Avenue to the west. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Bundena Place is classified as an Access road under the one network road classification (ONRC). Bundena Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bundena Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 180 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Bundena Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Finlayson Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Bundena Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bundena Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bungalow Avenue (Point Chevalier)

The speed limit on Bungalow Avenue, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bungalow Avenue connects to Johnstone Street to the north and Oliver Street to the south. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Bungalow Avenue is classified as an Access road under the one network road classification (ONRC). Bungalow Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bungalow Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 312 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Bungalow Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Johnstone Street: 50 km/h (proposed 30 km/h)</li> <li>• Oliver Street: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Bungalow Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bungalow Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Burden Lane (Stonefields)

The speed limit on Burden Lane, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Burden Lane connects to Barbarich Drive to the west and Searle Street to the east. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Burden Lane is classified as an Access road under the one network road classification (ONRC). Burden Lane is a two-way, Two lane undivided road. There are partial pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Burden Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 172 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Burden Lane has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Barbarich Drive: 50km/h (proposed 30km/h)</li> <li>Searle Street: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Burden Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Burden Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Burundi Avenue (Clendon Park)

The speed limit on Burundi Avenue, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Burundi Avenue connects to Roscommon Road to the east and Rukumoana Place to the west. This road provides access to residential properties and is approximately 0.78km in length.</p> <p>Burundi Avenue is classified as a Primary Collector road under the one network road classification (ONRC). Burundi Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records nine crashes between 2016 and 2020: one serious crash, five minor crashes, three non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Burundi Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4014 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Burundi Avenue has a mean operating speed in the range of 35-39km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Roscommon Road: 60km/h (no proposed change)</li> <li>• Rukumoana Place: 50km/h (proposed 30km/h)</li> <li>• Balwin Place: 50km/h (proposed 30km/h)</li> <li>• Templeton Place: 50km/h (proposed 30km/h)</li> <li>• Maplesden Drive: 50km/h (proposed 30km/h)</li> <li>• Finlayson Avenue: 50km/h (proposed 30km/h)</li> <li>• Frobisher Way: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Burundi Avenue has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Burundi Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Burundi Avenue is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Bushpark Place (Flat Bush)

The speed limit on Bushpark Place, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Bushpark Place connects to Kestev Drive to the west. This road provides access to residential properties and is approximately 0.05km in length.</p> <p>Bushpark Place is classified as an Access road under the one network road classification (ONRC). Bushpark Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Bushpark Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 124 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Bushpark Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kestev Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Bushpark Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.20. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Bushpark Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Buxton Street (Point Chevalier)

The speed limit on Buxton Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Buxton Street connects to Walford Road to the east and Point Chevalier Road to the west. This road provides access to residential properties and is approximately 0.29km in length.</p> <p>Buxton Street is classified as a Secondary Collector road under the one network road classification (ONRC). Buxton Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Buxton Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Buxton Street has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Walford Street: 50 km/h (proposed 30 km/h)</li> <li>• Point Chevalier Road: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Buxton Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Buxton Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Civil Place has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Capstick Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Civil Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Civil Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Claresholm Place (Mangere Bridge)

The speed limit on Claresholm Place, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Claresholm Place connects to Kiwi Esplanade to the north. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Claresholm Place is classified as an Access road under the one network road classification (ONRC). Claresholm Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Claresholm Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 180 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Claresholm Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kiwi Esplanade: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Claresholm Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Claresholm Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Clarkson Crescent (Otarā)

The speed limit on Clarkson Crescent, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Clarkson Crescent connects to Johnstones Road to the north. This road provides access to residential properties and is approximately 0.34km in length.</p> <p>Clarkson Crescent is classified as an Access road under the one network road classification (ONRC). Clarkson Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Clarkson Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 166 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Clarkson Crescent has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Tate Place: 50km/h (proposed 30km/h)</li> <li>• Johnstones Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Clarkson Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Clarkson Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Clayton Avenue (Otara)

The speed limit on Clayton Avenue, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Clayton Avenue connects to Bairds Road to the east and Everitt Road to the south. This road provides access to residential properties and is approximately 1.02km in length.</p> <p>Clayton Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Clayton Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: seven minor crashes, three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Clayton Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2256 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Clayton Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Bairds Road: 50km/h (proposed 30km/h)</li> <li>Everitt Road: 50km/h (proposed 30km/h)</li> <li>Terry Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Clayton Avenue has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 2.43. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Clayton Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Cleek Road (Mangere East)

The speed limit on Cleek Road, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cleek Road connects to Vine Street to the north and Tennessee Avenue to the south. This road provides access to residential properties and is approximately 0.22km in length.</p> <p>Cleek Road is classified as an Access road under the one network road classification (ONRC). Cleek Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cleek Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 426 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Cleek Road has a mean operating speed in the range of <30km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Vine Street: 50km/h (proposed 30km/h)</li> <li>• Tennessee Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Cleek Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Cleek Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Clement Street (Otahuhu)

The speed limit on Clement Street, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Clement Street connects to Ronaki Road to the west. This road provides access to residential properties and is approximately 0.82km in length.</p> <p>Clement Street is classified as an Access road under the one network road classification (ONRC). Clement Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Clement Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 228 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Clement Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ronaki Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Clement Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Clement Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Clipper Place (Shelly Park)**

The speed limit on Clipper Place, Shelly Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Clipper Place connects to John Gill Road to the west. This road provides access to residential properties and is approximately 0.21 km in length.</p> <p>Clipper Place is classified as an access road under the one network road classification (ONRC). Clipper Place is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 561 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Clipper Place has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>John Gill Road: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Clipper Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.41 For urban areas this corresponds to an IRR band of **Medium High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Clipper Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Cloud Way (Karaka)

The speed limit on Cloud Way, Karaka has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cloud Way connects to Ockhams Street to the west. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Cloud Way is classified as an Access road under the one network road classification (ONRC). Cloud Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cloud Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Cloud Way has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ockhams Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Cloud Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.04. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Cloud Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Clyro Place (Mangere East)

The speed limit on Clyro Place, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Clyro Place connects to Chelburn Crescent to the west. This road provides access to residential properties and is approximately 0.90km in length.</p> <p>Clyro Place is classified as an Access road under the one network road classification (ONRC). Clyro Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Clyro Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 830 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Clyro Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Chelburn Crescent: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Clyro Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Clyro Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Coachman Drive (Flat Bush)

The speed limit on Coachman Drive, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Coachman Drive connects to Baverstock Road to the south and Amon Avenue to the west. This road provides access to residential properties and is approximately 0.69km in length.</p> <p>Coachman Drive is classified as an Access road under the one network road classification (ONRC). Coachman Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Coachman Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 572 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Coachman Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Baverstock Road: 50km/h (proposed 30km/h)</li> <li>Amon Avenue: 50km/h (proposed 30km/h)</li> <li>Citron Court: 50km/h (proposed 30km/h)</li> <li>Bridgefield Crescent: 50km/h (proposed 30km/h)</li> <li>Tsar Court: 50km/h (proposed 30km/h)</li> <li>Oakville Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Coachman Drive has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Coachman Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Cobham Crescent (Kelston)

The speed limit on Cobham Crescent, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cobham Crescent connects to Brains Road to the south and Ingleby Place to the east. This road provides access to residential properties and is approximately 1.02km in length.</p> <p>Cobham Crescent is classified as a Primary Collector road under the one network road classification (ONRC). Cobham Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cobham Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Winding</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 796 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Cobham Crescent has a mean operating speed in the range of 30-34km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Brains Road: 50km/h (proposed 30km/h)</li> <li>• Ingleby Place: 50km/h (proposed 30km/h)</li> <li>• Kiernan Place: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Cobham Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.38. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Cobham Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Cobham Crescent is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Cobham Crescent (Otara)

The speed limit on Cobham Crescent, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cobham Crescent connects to Bairds Road to the west and Tindall Crescent to the east. This road provides access to residential properties and is approximately 1.00km in length.</p> <p>Cobham Crescent is classified as a Secondary Collector road under the one network road classification (ONRC). Cobham Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records eight crashes between 2016 and 2020: two serious crashes, six non-injury crashes. This resulted in two Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cobham Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2818 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Cobham Crescent has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Bairds Road: 50km/h (proposed 30km/h)</li> <li>Tindall Crescent: 50km/h (proposed 30km/h)</li> <li>Crown Crescent: 50km/h (proposed 30km/h)</li> <li>Bond Street: 50km/h (proposed 30km/h)</li> <li>Vilma Place: 50km/h (proposed 30km/h)</li> <li>Nola Crescent: 50km/h (proposed 30km/h)</li> <li>Wyona Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Cobham Crescent has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.30. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Cobham Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Coles Avenue (Mount Eden)

The speed limit on Coles Avenue, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Coles Avenue connects to Valley Road to the south. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Coles Avenue is classified as a Access road under the one network road classification (ONRC). Coles Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Coles Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Coles Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Valley Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Coles Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Coles Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Coniston Avenue (Te Atatu South)**

The speed limit on Coniston Avenue, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Coniston Avenue connects to Te Atatu Road to the west. This road provides access to residential properties and is approximately 0.40 km in length.</p> <p>Coniston Avenue is classified as a secondary collector road under the one network road classification (ONRC). Coniston Avenue is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 530 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Coniston Avenue has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Te Atatu Road: 50 km/h</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Coniston Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 1.83 For urban areas this corresponds to an IRR band of **Low Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Coniston Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Connaught Street (Blockhouse Bay)

The speed limit on Connaught Street, Blockhouse Bay, between Connell Street and Armagh Road, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Connaught Street connects to Godley Road to the west and Armagh Road to the east. This road provides access to residential properties and is approximately 0.35km in length.</p> <p>Connaught Street is classified as a Secondary Collector road under the one network road classification (ONRC). Connaught Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor crash, one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Connaught Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1975 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Connaught Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Armagh Road: 50km/h (proposed 30km/h)</li> <li>Mitchell Street: 50km/h (proposed 30km/h)</li> <li>Connell Street: 50km/h (proposed 30km/h)</li> <li>Portage Road: 50km/h (no proposed change)</li> <li>Godley Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Connaught Street has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 1.70. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Connaught Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Connell Street (Blockhouse Bay)

The speed limit on Connell Street, Blockhouse Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Connell Street connects to Kinross Street to the north and Taunton Terrace to the south. This road provides access to residential properties and is approximately 0.76km in length.</p> <p>Connell Street is classified as an Access road under the one network road classification (ONRC). Connell Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Connell Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Connell Street has a mean operating speed in the range of 35-39km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kinross Street: 50km/h (no proposed change)</li> <li>• Taunton Terrace: 50km/h (proposed 30km/h)</li> <li>• Armagh Road: 50km/h (proposed 30km/h)</li> <li>• Connaught Street: 50km/h (proposed 30km/h)</li> <li>• Barton Street: 50km/h (proposed 30km/h)</li> <li>• Mitchell Street: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Connell Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Connell Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Conway Road (Mount Eden)

The speed limit on Conway Road, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Conway Road connects to Woodford Road to the east. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Conway Road is classified as a Access road under the one network road classification (ONRC). Conway Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Conway Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 400 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Conway Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Woodford Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Conway Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.79. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Conway Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Cooper Crescent (Otara)

The speed limit on Cooper Crescent, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cooper Crescent connects to Everitt Road to the east. This road provides access to residential properties and is approximately 0.53km in length.</p> <p>Cooper Crescent is classified as an Access road under the one network road classification (ONRC). Cooper Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: one serious crash, two non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cooper Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 416 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Cooper Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Everitt Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Cooper Crescent has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Cooper Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Cooper Street (Pukekohe)

The speed limit on Cooper Street, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cooper Street connects to Ward Street to the north and Queen Street to the east. This road provides access to residential properties and is approximately 0.50km in length.</p> <p>Cooper Street is classified as an Access road under the one network road classification (ONRC). Cooper Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cooper Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Wide shoulder (1.0m to &lt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 540 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Cooper Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Ward Street: 50km/h (no proposed change)</li> <li>• Queen Street: 50km/h (no proposed change)</li> <li>• Ashby Place: 50km/h (proposed 30km/h)</li> <li>• Girdhar Place: 50km/h (proposed 30km/h)</li> <li>• Revell Court: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Cooper Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Cooper Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Copley Street (Kelston)

The speed limit on Copley Street, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Copley Street connects to Kelwyn Road to the south. This road provides access to residential properties and is approximately 0.31km in length.</p> <p>Copley Street is classified as an Access road under the one network road classification (ONRC). Copley Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor crash, one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Copley Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Copley Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kelwyn Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Copley Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.66. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Copley Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Cornwall Road (Mangere)**

The speed limit on Cornwall Road, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cornwall Road connects to Windrush Road to the east and Thomas Road to the west. This road provides access to residential properties and is approximately 0.16km in length.</p> <p>Cornwall Road is classified as a Secondary Collector road under the one network road classification (ONRC). Cornwall Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cornwall Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1758 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Cornwall Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Windrush Road: 50km/h (proposed 30km/h)</li> <li>• Thomas Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Cornwall Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.33. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Cornwall Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Cornwall Street (Te Atatu South)

The speed limit on Cornwall Street, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cornwall Street connects to Roberts Road to the north. This road provides access to residential properties and is approximately 0.19 km in length.</p> <p>Cornwall Street is classified as an access road under the one network road classification (ONRC). Cornwall Street is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 126 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Cornwall Street has a mean operating speed in the range of &lt;30 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Roberts Road: 50 km/h (proposed 30 km/h)</li> <li>Devon Street: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Cornwall Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**
- The Infrastructure Risk Rating Score is 2.15 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Cornwall Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Corran Place (Ranui)

The speed limit on Corran Place, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Corran Place connects to Dunbarton Drive to the north and Kilmarnock Avenue to the south. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Corran Place is classified as an Access road under the one network road classification (ONRC). Corran Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Corran Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 131 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Corran Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Dunbarton Drive: 50km/h (proposed 30km/h)</li> <li>• Kilmarnock Avenue: 50km/h (proposed 30km/h)</li> <li>• Drummond Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Corran Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Corran Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Cosmo Place (Otara)

The speed limit on Cosmo Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cosmo Place connects to Carey Place to the south. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Cosmo Place is classified as an Access road under the one network road classification (ONRC). Cosmo Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cosmo Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 130 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Cosmo Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Carey Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Cosmo Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Cosmo Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Cotterell Street (Leigh)

The speed limit on Cotterell Street, Leigh has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cotterell Street connects to Hill Street to the north and Barrier View Road to the south. This road provides access to residential properties and is approximately 0.29km in length.</p> <p>Cotterell Street is classified as an Access road under the one network road classification (ONRC). Cotterell Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cotterell Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as rural towns using MegaMaps tool. The IRR defines rural towns as " <i>rural town with mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 332 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Cotterell Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Hill Street: 50km/h (proposed 30km/h)</li> <li>• Barrier View Road: 50km/h (proposed 30km/h)</li> <li>• Penguin Street: 50km/h (proposed 30km/h)</li> <li>• Totara Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Cotterell Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Cotterell Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Cottrell Place (Clendon Park)

The speed limit on Cottrell Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cottrell Place connects to Finlayson Avenue to the north. This road provides access to residential properties and is approximately 0.20km in length.</p> <p>Cottrell Place is classified as an Access road under the one network road classification (ONRC). Cottrell Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cottrell Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 240 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Cottrell Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Finlayson Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Cottrell Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Cottrell Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Cowper Street (Devonport)

The speed limit on Cowper Street, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cowper Street connects to Abbotsford Terrace to the north and Ewen Alison Avenue to the south. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Cowper Street is classified as an Access road under the one network road classification (ONRC). Cowper Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cowper Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 121 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Cowper Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Abbotsford Terrace: 50 km/h (proposed 30 km/h)</li> <li>• Ewen Alison Avenue: 50 km/h (proposed 30 km/h)</li> <li>• Mozeley Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Cowper Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.18. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Cowper Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Cracroft Street (Otahuhu)

The speed limit on Cracroft Street, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cracroft Street connects to Tamaki Avenue to the east and Great South Road to the west. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Cracroft Street is classified as an Access road under the one network road classification (ONRC). Cracroft Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cracroft Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 280 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Cracroft Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tamaki Avenue: 50km/h (proposed 30km/h)</li> <li>Great southRoad: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Cracroft Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.18. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Cracroft Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Craiburn Street (Ranui)

The speed limit on Craiburn Street, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Craiburn Street connects to Waitemata Drive to the east and Glenarden Way to the west. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Craiburn Street is classified as an Access road under the one network road classification (ONRC). Craiburn Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Craiburn Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 10+ per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 131 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Craiburn Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Waitemata Drive: 50km/h (no proposed change)</li> <li>• Glenarden Way: 50km/h (proposed 30km/h)</li> <li>• Hibernian Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Craiburn Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Craiburn Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Crayford Street West (Avondale)

The speed limit on Crayford Street West, Avondale has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Crayford Street West connects to Layard Street to the east and Great North Road to the west. This road provides access to residential properties and is approximately 0.16km in length.</p> <p>Crayford Street West is classified as a Secondary Collector road under the one network road classification (ONRC). Crayford Street West is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: four non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Crayford Street West were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1248 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Crayford Street West has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Layard Street: 50km/h (proposed 30km/h)</li> <li>Great North Road: 50km/h (no proposed change)</li> <li>Geddes Terrace: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Crayford Street West has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.33. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Crayford Street West, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Crescent Road (Parnell)

The speed limit on Crescent Road, Parnell has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Crescent Road connects to Bridgewater Road to the east and Glanville Terrace to the west. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Crescent Road is classified as an Access road under the one network road classification (ONRC). Crescent Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Crescent Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 338 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Crescent Road has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Bridgewater Road: 50km/h (proposed 30km/h)</li> <li>• Glanville Terrace: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Crescent Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Crescent Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Crewe Close (Albany)

The speed limit on Crewe Close, Albany has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Crewe Close connects to Roanoke Way to the west. This road provides access to residential properties and is approximately 0.50km in length.</p> <p>Crewe Close is classified as an Access road under the one network road classification (ONRC). Crewe Close is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Crewe Close were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow lane (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Crewe Close has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Roanoke Way: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Crewe Close has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Crewe Close, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Crimson Park (Oteha)

The speed limit on Crimson Park, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Crimson Park connects to Fernhill Way to the east. This road provides access to residential properties and is approximately 1.93km in length.</p> <p>Crimson Park is classified as an Access road under the one network road classification (ONRC). Crimson Park is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Crimson Park were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Crimson Park has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Fernhill Way: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Crimson Park has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Crimson Park, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Crispian Place (Weymouth)

The speed limit on Crispian Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Crispian Place connects to Gibbons Road to the south. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Crispian Place is classified as an Access road under the one network road classification (ONRC). Crispian Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Crispian Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 110 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Crispian Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Gibbons Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Crispian Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Crispian Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Crown Crescent (Otara)

The speed limit on Crown Crescent, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Crown Crescent connects to Cobham Crescent to the east. This road provides access to residential properties and is approximately 0.35km in length.</p> <p>Crown Crescent is classified as an Access road under the one network road classification (ONRC). Crown Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Crown Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 228 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Crown Crescent has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Cobham Crescent: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Crown Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Crown Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Cumberland Street (Leigh)

The speed limit on Cumberland Street, Leigh has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cumberland Street connects to Kowhai Terrace to the east and Pakiri Road to the west. This road provides access to residential properties and is approximately 0.54km in length.</p> <p>Cumberland Street is classified as an Access road under the one network road classification (ONRC). Cumberland Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cumberland Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as rural towns using MegaMaps tool. The IRR defines rural towns as “ <i>rural town with mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> ”.
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 411 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Cumberland Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kowhai Terrace: 50km/h (proposed 30km/h)</li> <li>Pakiri Road between Seatoun Avenue and 240 metres west of Seatoun Avenue: 50km/h (proposed 30km/h)</li> <li>Seatoun Avenue: 50km/h (proposed 30km/h)</li> <li>Puriri Avenue: 50km/h (proposed 30km/h)</li> <li>Hauraki Road between Wonderview Road and north of Hauraki Road: 50km/h (proposed 30km/h)</li> <li>Hill Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Cumberland Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.19. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Cumberland Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Cuthill Close (Albany)

The speed limit on Cuthill Close, Albany has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cuthill Close connects to Mahoney Drive to the east. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Cuthill Close is classified as a Secondary Collector road under the one network road classification (ONRC). Cuthill Close is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cuthill Close were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and Very Narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 10+ per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Cuthill Close has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Mahoney Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Cuthill Close has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Cuthill Close, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Cutter Place (Greenhithe)

The speed limit on Cutter Place, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cutter Place connects to Admirals Court Drive to the west. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Cutter Place is classified as an Access road under the one network road classification (ONRC). Cutter Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cutter Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 297 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Cutter Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Admirals Court Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Cutter Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Cutter Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Cyclades Place (Shelly Park)**

The speed limit on Cyclades Place, Shelly Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cyclades Place connects to John Gill Road to the west. This road provides access to residential properties and is approximately 0.18 km in length.</p> <p>Cyclades Place is classified as an access road under the one network road classification (ONRC). Cyclades Place is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 170 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Cyclades Place has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>John Gill Road: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Cyclades Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.15 For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Cyclades Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Cyril French Drive (Flat Bush)

The speed limit on Cyril French Drive, Flat Bush, between Baverton Road and Bronwylian Drive, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Cyril French Drive connects to Chapel Road to the west and Elwyn Close to the south. This road provides access to residential properties and is approximately 0.76km in length.</p> <p>Cyril French Drive is classified as a Access road under the one network road classification (ONRC). Cyril French Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Cyril French Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 228 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Cyril French Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Chapel Road: 60km/h (no proposed change)</li> <li>Elwyn Close: 50km/h (proposed 30km/h)</li> <li>Camith Close: 50km/h (no proposed change)</li> <li>Duntrune Road: 50km/h (no proposed change)</li> <li>Banshire Close: 50km/h (no proposed change)</li> <li>Dalcross Drive: 50km/h (no proposed change)</li> <li>Earlshall Drive: 50km/h (proposed 30km/h)</li> <li>Middlefield Drive: 50km/h (proposed 30km/h)</li> <li>Maybole Drive: 50km/h (no proposed change)</li> <li>Baverton Drive: 50km/h (no proposed change)</li> <li>Bronwylian Drive: 50km/h (proposed 30km/h)</li> <li>Ainwick Road: 50km/h (proposed 30km/h)</li> <li>Dunoon Close: 50km/h (proposed 30km/h)</li> <li>Bowmore Close: 50km/h (proposed 30km/h)</li> <li>Karson Place: 50km/h (proposed 30km/h)</li> <li>Tornish Drive: 50km/h (proposed 30km/h)</li> <li>Stornaway Drive: 50km/h (proposed 30km/h)</li> <li>Pennygale Close: 50km/h (proposed 30km/h)</li> </ul>

	<ul style="list-style-type: none"> <li>Oswald Close: 50km/h (proposed 30km/h)</li> </ul>
--	--

**Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Cyril French Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Cyril French Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Dairy Road (Otarā)

The speed limit on Dairy Road, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Dairy Road connects to Hamill Road to the north. This road provides access to residential properties and is approximately 0.22km in length.</p> <p>Dairy Road is classified as an Access road under the one network road classification (ONRC). Dairy Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Dairy Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 655 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Dairy Road has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Hamill Road: 50km/h (proposed 30km/h)</li> <li>• Blampied Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Dairy Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Dairy Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Dalry Place (Mangere Bridge)

The speed limit on Dalry Place, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Dalry Place connects to Muir Avenue to the north. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Dalry Place is classified as an Access road under the one network road classification (ONRC). Dalry Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Dalry Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 190 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Dalry Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Muir Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Dalry Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Dalry Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Damian Way (Weymouth)

The speed limit on Damian Way, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Damian Way connects to Mahia Road to the east and Weymouth Road to the west. This road provides access to residential properties and is approximately 0.20km in length.</p> <p>Damian Way is classified as a Secondary Collector road under the one network road classification (ONRC). Damian Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Damian Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2641 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Damian Way has a mean operating speed in the range of 30-34km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Mahia Road: 50km/h (no proposed change)</li> <li>• Weymouth Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Damian Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.58. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Damian Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Daphne Street (Kelston)

The speed limit on Daphne Street, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Daphne Street connects to Kelkirk Street to the east and Hurley Place to the west. This road provides access to residential properties and is approximately 0.87km in length.</p> <p>Daphne Street is classified as an Access road under the one network road classification (ONRC). Daphne Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Daphne Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 268 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Daphne Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kelkirk Street: 50km/h (proposed 30km/h)</li> <li>Hurley Place: 50km/h (proposed 30km/h)</li> <li>Hurley Place: 50km/h (proposed 30km/h)</li> <li>Barbary Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Daphne Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Daphne Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – De Blodge Place (Clendon Park)

The speed limit on De Blodge Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

#### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>De Blodge Place connects to Maplesden Drive to the east. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>De Blodge Place is classified as an Access road under the one network road classification (ONRC). De Blodge Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for De Blodge Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 170 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of De Bløge Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Maplesden Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps De Bløge Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for De Bløge Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Deborah Place (Mangere)

The speed limit on Deborah Place, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Deborah Place connects to Tranent Road to the east. This road provides access to residential properties and is approximately 0.31km in length.</p> <p>Deborah Place is classified as an Access road under the one network road classification (ONRC). Deborah Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Deborah Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 170 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Deborah Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tranent Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Deborah Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Deborah Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Desford Place (Mangere)

The speed limit on Desford Place, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Desford Place connects to Staverton Crescent to the east. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Desford Place is classified as an Access road under the one network road classification (ONRC). Desford Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Desford Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 811 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Desford Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Staverton Crescent: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Desford Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Desford Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Devon Street (Te Atatu South)

The speed limit on Devon Street, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Devon Street connects to Cornwall Street to the west. This road provides access to residential properties and is approximately 0.09 km in length.</p> <p>Devon Street is classified as an access road under the one network road classification (ONRC). Devon Street is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 126 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Devon Street has a mean operating speed in the range of &lt;30 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Cornwall Street: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Devon Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**
- The Infrastructure Risk Rating Score is 2.15 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Devon Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Dignan Street (Point Chevalier)

The speed limit on Dignan Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Dignan Street connects to Point Chevalier Road to the west. This road provides access to residential properties and is approximately 0.59km in length.</p> <p>Dignan Street is classified as a Secondary Collector road under the one network road classification (ONRC). Dignan Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Dignan Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 728 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Dignan Street has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Point Chevalier Road: 50 km/h (proposed 30 km/h)</li> <li>• Walford Street: 50 km/h (proposed 30 km/h)</li> <li>• Lister Street: 50 km/h (proposed 30 km/h)</li> <li>• Lynch Street: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Dignan Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Dignan Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Dione Place (Flat Bush)

The speed limit on Dione Place, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Dione Place connects to Heidi Crescent to the east. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Dione Place is classified as an Access road under the one network road classification (ONRC). Dione Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Dione Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1534 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Dione Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Heidi Crescent: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Dione Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Dione Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Dolphin Street (Pakuranga)**

The speed limit on Dolphin Street, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Dolphin Street connects to Tiraumea Drive to the north. This road provides access to residential properties and is approximately 0.10 km in length.</p> <p>Dolphin Street is classified as an access road under the one network road classification (ONRC). Dolphin Street is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 200 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Dolphin Street has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Tiraumea Drive: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Dolphin Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.44 For urban areas this corresponds to an IRR band of **Medium High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Dolphin Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Domain Road (Weymouth)

The speed limit on Domain Road, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Domain Road connects to Gibbons Road to the north and McLeod Road to the south. This road provides access to residential properties and is approximately 0.44km in length.</p> <p>Domain Road is classified as an Access road under the one network road classification (ONRC). Domain Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one serious crash, one non-injury crash. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Domain Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 478 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Domain Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Gibbons Road: 50km/h (proposed 30km/h)</li> <li>McLeod Road: 50km/h (proposed 30km/h)</li> <li>Waimai Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Domain Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Domain Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Don Place (Otarā)

The speed limit on Don Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Don Place connects to Vickerman Street to the west. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Don Place is classified as an Access road under the one network road classification (ONRC). Don Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Don Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 176 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Don Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Vickerman Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Don Place has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Don Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Doone Place (Massey)

The speed limit on Doone Place, Massey has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Doone Place connects to Triangle Road to the north. This road provides access to residential properties and is approximately 0.21km in length.</p> <p>Doone Place is classified as an Access road under the one network road classification (ONRC). Doone Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Doone Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 320 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Doone Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Triangle Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Doone Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Doone Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Doughty Place (Otara)

The speed limit on Doughty Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Doughty Place connects to Hamill Road to the north. This road provides access to residential properties and is approximately 0.15km in length.  Doughty Place is classified as an Access road under the one network road classification (ONRC). Doughty Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Doughty Place were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 170 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Doughty Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Hamill Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Doughty Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.20. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Doughty Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Dovey Place (Massey)

The speed limit on Dovey Place, Massey has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Dovey Place connects to Waimumu Road to the south. This road provides access to residential properties and is approximately 0.18km in length.</p> <p>Dovey Place is classified as an Access road under the one network road classification (ONRC). Dovey Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Dovey Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 249 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Dovey Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Waimumu Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Dovey Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Dovey Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Driver Road (Mangere East)

The speed limit on Driver Road, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Driver Road connects to Vine Street to the north and Tennessee Avenue to the south. This road provides access to residential properties and is approximately 0.22km in length.</p> <p>Driver Road is classified as an Access road under the one network road classification (ONRC). Driver Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Driver Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 470 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Driver Road has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Vine Street: 50km/h (proposed 30km/h)</li> <li>• Tennessee Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Driver Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Driver Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Drummond Drive (Ranui)

The speed limit on Drummond Drive, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Drummond Drive connects to Waitemata Drive to the east and Corran Place to the west. This road provides access to residential properties and is approximately 0.16km in length.</p> <p>Drummond Drive is classified as an Access road under the one network road classification (ONRC). Drummond Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Drummond Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 131 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Drummond Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Waitemata Drive: 50km/h (no proposed change)</li> <li>Corran Place: 50km/h (proposed 30km/h)</li> <li>Hibernian Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Drummond Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Drummond Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Duggan Avenue (Mangere)

The speed limit on Duggan Avenue, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Duggan Avenue connects to Friesian Drive to the north and Massey Road to the south. This road provides access to residential properties and is approximately 0.85km in length.</p> <p>Duggan Avenue is classified as an Access road under the one network road classification (ONRC). Duggan Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Duggan Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 301 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Duggan Avenue has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Friesian Drive: 50km/h (proposed 30km/h)</li> <li>• Massey Road: 50km/h (no proposed change)</li> <li>• Leeson Place: 50km/h (proposed 30km/h)</li> <li>• Wayne Drive: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Duggan Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Duggan Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Duke Avenue (Pukekohe)

The speed limit on Duke Avenue, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Duke Avenue connects to Princes Street West to the south. This road provides access to residential properties and is approximately 0.17km in length.</p> <p>Duke Avenue is classified as an Access road under the one network road classification (ONRC). Duke Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Duke Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 160 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Duke Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Princes Street West: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Duke Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Duke Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Dunbarton Drive (Ranui)

The speed limit on Dunbarton Drive, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

#### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Dunbarton Drive connects to Hibernian Drive to the east and Armada Drive to the west. This road provides access to residential properties and is approximately 0.17km in length.  Dunbarton Drive is classified as an Access road under the one network road classification (ONRC). Dunbarton Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Dunbarton Drive were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 10+ per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 131 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Dunbarton Drive has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Hibernian Drive: 50km/h (proposed 30km/h)</li> <li>• Armada Drive: 50km/h (proposed 30km/h)</li> <li>• Corran Place: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Dunbarton Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Dunbarton Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Dungarvon Place (Clendon Park)

The speed limit on Dungarvon Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Dungarvon Place connects to Maplesden Drive to the east. This road provides access to residential properties and is approximately 0.21km in length.</p> <p>Dungarvon Place is classified as an Access road under the one network road classification (ONRC). Dungarvon Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Dungarvon Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 240 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Dungarvon Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Maplesden Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Dungarvon Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Dungarvon Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Dunoon Close (Flat Bush)

The speed limit on Dunoon Close, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Dunoon Close connects to Cyril French Drive to the west. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Dunoon Close is classified as an Access road under the one network road classification (ONRC). Dunoon Close is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Dunoon Close were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 747 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Dunoon Close has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Cyril French Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Dunoon Close has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Dunoon Close, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Durrant Place (Kelston)

The speed limit on Durrant Place, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Durrant Place connects to Queen Mary Avenue to the west. This road provides access to residential properties and is approximately 0.55km in length.</p> <p>Durrant Place is classified as an Access road under the one network road classification (ONRC). Durrant Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Durrant Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 300 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Durrant Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Queen Mary Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Durrant Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.92. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Durrant Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Eaves Bush Parade (Orewa)

The speed limit on Eaves Bush Parade, Orewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Eaves Bush Parade connects to Kensington Drive to the east and Panorama Heights to the west. This road provides access to residential properties and is approximately 0.23km in length.</p> <p>Eaves Bush Parade is classified as a Secondary Collector road under the one network road classification (ONRC). Eaves Bush Parade is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Eaves Bush Parade were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Eaves Bush Parade has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kensington Drive: 50km/h (proposed 30km/h)</li> <li>• Panorama Heights: 50km/h (proposed 30km/h)</li> <li>• Parkside Drive: 50km/h (proposed 30km/h)</li> <li>• Hibiscus Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Eaves Bush Parade has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Eaves Bush Parade, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ebanjane Way (Weymouth)

The speed limit on Ebanjane Way, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ebanjane Way connects to Nicholas Gibbons Drive to the north. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Ebanjane Way is classified as an Access road under the one network road classification (ONRC). Ebanjane Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ebanjane Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 440 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ebanjane Way has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Nicholas Gibbons Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ebanjane Way has the following information:

- Collective Risk band of **Medium-High**, and a Personal Risk band of **High**.
- The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ebanjane Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ebenezer Way (Weymouth)

The speed limit on Ebenezer Way, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ebenezer Way connects to Palmers Road to the north. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Ebenezer Way is classified as an Access road under the one network road classification (ONRC). Ebenezer Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ebenezer Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 120 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ebenezer Way has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Palmers Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Ebenezer Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ebenezer Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Edenvale Crescent (Mount Eden)

The speed limit on Edenvale Crescent, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Edenvale Crescent connects to Wynyard Road to the west. This road provides access to residential properties and is approximately 0.54km in length.</p> <p>Edenvale Crescent is classified as a Secondary Collector road under the one network road classification (ONRC). Edenvale Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Edenvale Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5 to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 825 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Edenvale Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Wynyard Road: 50km/h (proposed 30km/h)</li> <li>Kelly Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Edenvale Crescent has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Edenvale Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Edenvale Park Road (Mount Eden)

The speed limit on Edenvale Park Road, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Edenvale Park Road connects to Wynyard Road to the east. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Edenvale Park Road is classified as a Secondary Collector road under the one network road classification (ONRC). Edenvale Park Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Edenvale Park Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5 to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 825 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Edenvale Park Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Wynyard Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Edenvale Park Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Edenvale Park Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Edgewater Drive (Pakuranga)

The speed limit on Edgewater Drive, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Edgewater Drive connects to Ti Rakau Drive to the east. This road provides access to residential properties and is approximately 1.59km in length.</p> <p>Edgewater Drive is classified as a Secondary Collector road under the one network road classification (ONRC). Edgewater Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records seven crashes between 2016 and 2020: one serious and six non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Edgewater Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5 to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1346 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Edgewater Drive has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Snell Place: 50km/h (proposed 30km/h)</li> <li>Mangos Place: 50km/h (proposed 30km/h)</li> <li>Riverina Avenue: 50km/h (proposed 30km/h)</li> <li>Raewyn Place: 50km/h (proposed 30km/h)</li> <li>Susanne Place: 50km/h (proposed 30km/h)</li> <li>Ti Rakau Drive: 60km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Edgewater Drive has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low-Medium**.
- The Infrastructure Risk Rating Score is 2.51. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Edgewater Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Edith Street (Point Chevalier)

The speed limit on Edith Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Edith Street connects to Harbour View Road to the west and Point Chevalier Road to the east. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Edith Street is classified as an Access road under the one network road classification (ONRC). Edith Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Edith Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Edith Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Point Chevalier Road: 50 km/h (proposed 30 km/h)</li> <li>Harbour View Road: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Edith Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.55. For urban areas this corresponds to an IRR band of **Low**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Edith Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Edwards Avenue (Henderson)

The speed limit on Edwards Avenue, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Edwards Avenue connects to Fairdene Avenue to the east and Rathgar Road to the west. This road provides access to residential properties and is approximately 0.40km in length.</p> <p>Edwards Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Edwards Avenue is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records five crashes between 2016 and 2020: one serious crash, four non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Edwards Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1635 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Edwards Avenue has a mean operating speed in the range of 35-39km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Fairdene Avenue: 50km/h (proposed 30km/h)</li> <li>• Rathgar Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Edwards Avenue has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.30. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Edwards Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Edwin Freeman Place (Ranui)

The speed limit on Edwin Freeman Place, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Edwin Freeman Place connects to Armada Drive to the east. This road provides access to residential properties and is approximately 0.23km in length.</p> <p>Edwin Freeman Place is classified as an Access road under the one network road classification (ONRC). Edwin Freeman Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Edwin Freeman Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 280 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Edwin Freeman Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Armada Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Edwin Freeman Place has the following information:

- Collective Risk band of **Low Medium**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Edwin Freeman Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Eileen Lane (Otara)

The speed limit on Eileen Lane, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

#### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Eileen Lane connects to Johnstones Road to the south. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Eileen Lane is classified as an Access road under the one network road classification (ONRC). Eileen Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Eileen Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 10+ per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 110 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Eileen Lane has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Johnstones Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Eileen Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Eileen Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Elisa Lane (Ranui)

The speed limit on Elisa Lane, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Elisa Lane connects to Childers Road to the west. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Elisa Lane is classified as an Access road under the one network road classification (ONRC). Elisa Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Elisa Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 267 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Elisa Lane has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Childers Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Elisa Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Elisa Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Elizabeth Street (Orewa)

The speed limit on Elizabeth Street, Orewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Elizabeth Street connects to Puriri Avenue to the north and West Hoe Road to the south. This road provides access to residential properties and is approximately 0.40km in length.</p> <p>Elizabeth Street is classified as a Secondary Collector road under the one network road classification (ONRC). Elizabeth Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Elizabeth Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 505 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Elizabeth Street has a mean operating speed in the range of 35-39km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Puriri Avenue: 50km/h (proposed 30km/h)</li> <li>• West Hoe Road: 50km/h (no proposed change)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Elizabeth Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Elizabeth Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ellen Street (Manurewa East)

The speed limit on Ellen Street, Manurewa East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ellen Street connects to Scotts Road to the east and Mcannalley Street to the south. This road provides access to residential properties and is approximately 0.35km in length.</p> <p>Ellen Street is classified as an Access road under the one network road classification (ONRC). Ellen Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor crash, one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ellen Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ellen Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Scotts Road: 50km/h (proposed 30km/h)</li> <li>Mcannalley Street: 50km/h (proposed 30km/h)</li> <li>Browning Street: 50km/h (proposed 30km/h)</li> <li>Short Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ellen Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.18. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ellen Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Eloise Place (Clendon Park)**

The speed limit on Eloise Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Eloise Place connects to Belville Drive to the east. This road provides access to residential properties and is approximately 0.81km in length.</p> <p>Eloise Place is classified as an Access road under the one network road classification (ONRC). Eloise Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Eloise Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1127 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Eloise Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Bellville Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Eloise Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.31. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Eloise Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Elsa Lane (Otara)

The speed limit on Elsa Lane, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Elsa Lane connects to Vickerman Street to the east. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Elsa Lane is classified as an Access road under the one network road classification (ONRC). Elsa Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Elsa Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 176 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Elsa Lane has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Vickerman Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Elsa Lane has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Elsa Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Elvira Place (Ranui)

The speed limit on Elvira Place, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Elvira Place connects to Ulrich Drive to the south. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Elvira Place is classified as an Access road under the one network road classification (ONRC). Elvira Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Elvira Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 3 to &lt;5 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 370 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Elvira Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Urlich Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Elvira Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Elvira Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Elwyn Close (Flat Bush)

The speed limit on Elwyn Close, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Elwyn Close connects to Cyril French Drive to the north. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Elwyn Close is classified as an Access road under the one network road classification (ONRC). Elwyn Close is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Elwyn Close were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 228 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Elwyn Close has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Cyril French Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Elwyn Close has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Elwyn Close, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Emilia Nixon Lane (Stonefields)

The speed limit on Emilia Nixon Lane, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Emilia Nixon Lane connects to Barbarich Drive to the west and Wynne Gray Avenue to the east. This road provides access to residential properties and is approximately 0.30km in length.</p> <p>Emilia Nixon Lane is classified as an Access road under the one network road classification (ONRC). Emilia Nixon Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Emilia Nixon Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Emilia Nixon Lane has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Barbarich Drive: 50km/h (proposed 30km/h)</li> <li>• Searle Street: 50km/h (proposed 30km/h)</li> <li>• Wynne Gray Avenue: 50km/h (proposed 30km/h)</li> <li>• Baber Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Emilia Nixon Lane has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Emilia Nixon Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Emsworth Court (Pukekohe)

The speed limit on Emsworth Court, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Emsworth Court connects to Wellington Street to the east. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Emsworth Court is classified as an Access road under the one network road classification (ONRC). Emsworth Court is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Emsworth Court were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2001 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Emsworth Court has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Wellington Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Emsworth Court has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 1.81. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Emsworth Court, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Endeavour Street (Blockhouse Bay)

The speed limit on Endeavour Street, Blockhouse Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Endeavour Street connects to Kinross Street to the north. This road provides access to residential properties and is approximately 0.68km in length.</p> <p>Endeavour Street is classified as a Secondary Collector road under the one network road classification (ONRC). Endeavour Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor crash, one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Endeavour Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 802 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Endeavour Street has a mean operating speed in the range of 35-39km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kinross Street: 50km/h (no proposed change)</li> <li>• Gilfillan Street: 50km/h (proposed 30km/h)</li> <li>• Armagh Road: 50km/h (proposed 30km/h)</li> <li>• Barton Street East: 50km/h (proposed 30km/h)</li> <li>• Wade Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Endeavour Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Endeavour Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Erica Road (Flat Bush)

The speed limit on Erica Road, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Erica Road connects to Baverstock Road to the north and Stancombe Road to the south. This road provides access to residential properties and is approximately 0.29km in length.</p> <p>Erica Road is classified as an Access road under the one network road classification (ONRC). Erica Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Erica Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 124 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Erica Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Baverstock Road: 50km/h (proposed 30km/h)</li> <li>Stancombe Road: 60km/h (no proposed change)</li> <li>Magnolia Place: 50km/h (proposed 30km/h)</li> <li>Maypark Crescent: 50km/h (proposed 30km/h)</li> <li>Kestev Drive: 50km/h (proposed 30km/h)</li> <li>Agapanthus Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Erica Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.20. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Erica Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Esplanade Road (Mount Eden)

The speed limit on Esplanade Road, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Esplanade Road connects to Mount Eden Road to the north and Lovelock Avenue to the south. This road provides access to residential properties and is approximately 0.74km in length.</p> <p>Esplanade Road is classified as a Secondary Collector road under the one network road classification (ONRC). Esplanade Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: one minor and five non-injury crashes. This resulted in one Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Esplanade Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 830 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Esplanade Road has a mean operating speed in the range of 30-34km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Mount Eden Road: 50km/h (no proposed change)</li> <li>• Puka Street: 50km/h (proposed 30km/h)</li> <li>• View Road: 50km/h (proposed 30km/h)</li> <li>• Bellevue Road: 50km/h (proposed 30km/h)</li> <li>• Lovelock Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Esplanade Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

#### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Esplanade Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Estuary Road (Weymouth)

The speed limit on Estuary Road, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Estuary Road connects to Evans Road to the south and Waimai Avenue to the west. This road provides access to residential properties and is approximately 0.46km in length.</p> <p>Estuary Road is classified as an Access road under the one network road classification (ONRC). Estuary Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Estuary Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 353 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Estuary Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Evans Road: 50km/h (proposed 30km/h)</li> <li>• Waimai Avenue: 50km/h (proposed 30km/h)</li> <li>• Weymouth Road: 50km/h (proposed 30km/h)</li> <li>• Mail Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Estuary Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Estuary Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Etherton Drive (Weymouth)

The speed limit on Etherton Drive, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Etherton Drive connects to Finlayson Avenue to the north and Weymouth Road to the east. This road provides access to residential properties and is approximately 0.94km in length.</p> <p>Etherton Drive is classified as a Secondary Collector road under the one network road classification (ONRC). Etherton Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records five crashes between 2016 and 2020: two minor crashes, three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Etherton Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1611 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Etherton Drive has a mean operating speed in the range of 40-44km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Finlayson Avenue: 50km/h (proposed 30km/h)</li> <li>Weymouth Road: 50km/h (proposed 30km/h)</li> <li>Silver Creek Road: 50km/h (proposed 30km/h)</li> <li>Sparrow Place: 50km/h (proposed 30km/h)</li> <li>Reyland Close: 50km/h (proposed 30km/h)</li> <li>Harobed Place: 50km/h (proposed 30km/h)</li> <li>Janese Place: 50km/h (proposed 30km/h)</li> <li>Nicholas Gibbons Drive: 50km/h (proposed 30km/h)</li> <li>Palmers Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Etherton Drive has the following information:

- Collective Risk band of **Medium-High**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 2.48. For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Etherton Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ettrick Place (Mangere East)

The speed limit on Ettrick Place, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ettrick Place connects to Chelburn Crescent to the east. This road provides access to residential properties and is approximately 0.90km in length.</p> <p>Ettrick Place is classified as an Access road under the one network road classification (ONRC). Ettrick Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ettrick Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 830 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ettrick Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Chelburn Crescent: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Ettrick Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ettrick Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Evans Road (Weymouth)

The speed limit on Evans Road, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Evans Road connects to Blanes Road to the north and Greers Road to the south. This road provides access to residential properties and is approximately 0.45km in length.</p> <p>Evans Road is classified as an Access road under the one network road classification (ONRC). Evans Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Evans Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 353 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Evans Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Blanes Road: 50km/h (proposed 30km/h)</li> <li>Greers Road: 50km/h (proposed 30km/h)</li> <li>Estuary Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Evans Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Evans Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Evergreen Rise (Kelston)

The speed limit on Evergreen Rise, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Evergreen Rise connects to Lynwood Road to the east. This road provides access to residential properties and is approximately 0.08km in length.  Evergreen Rise is classified as an Access road under the one network road classification (ONRC). Evergreen Rise is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Evergreen Rise were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 10+ per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 113 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Evergreen Rise has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Lynwood Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Evergreen Rise has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Evergreen Rise, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Everitt Road (Otara)

The speed limit on Everitt Road, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Everitt Road connects to Clayton Avenue to the north and Bairds Road to the east. This road provides access to residential properties and is approximately 0.67km in length.</p> <p>Everitt Road is classified as a Secondary Collector road under the one network road classification (ONRC). Everitt Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: one serious crash, three non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Everitt Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1467 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Everitt Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Clayton Avenue: 50km/h (proposed 30km/h)</li> <li>Bairds Road: 50km/h (proposed 30km/h)</li> <li>Whitley Crescent: 50km/h (proposed 30km/h)</li> <li>Cooper Crescent: 50km/h (proposed 30km/h)</li> <li>Ross Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Everitt Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.58. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Everitt Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ewen Alison Avenue (Devonport)

The speed limit on Ewen Alison Avenue, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ewen Alison Avenue connects to Victoria Road to the east and Patuone Avenue to the west. This road provides access to residential properties and is approximately 0.40km in length.</p> <p>Ewen Alison Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Ewen Alison Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ewen Alison Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 691 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ewen Alison Avenue has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Victoria Road between Albert Road and northern end of Victoria Road: 50 km/h (proposed 30 km/h)</li> <li>• Patuone Avenue: 50 km/h (proposed 30 km/h)</li> <li>• Cowper Street: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Ewen Alison Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ewen Alison Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ewington Avenue (Mount Eden)

The speed limit on Ewington Avenue, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ewington Avenue connects to Dominion Road to the west and Kenyon Avenue to the north. This road provides access to residential properties and is approximately 0.21km in length.</p> <p>Ewington Avenue is classified as a Access road under the one network road classification (ONRC). Ewington Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ewington Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5 to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box/industrial using MegaMaps tool. The IRR defines Commercial big box/industrial as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1248 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ewington Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Dominion Road: 50km/h (no proposed change)</li> <li>Kenyon Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ewington Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ewington Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Exotic Place (Massey)

The speed limit on Exotic Place, Massey has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Exotic Place connects to Triangle Road to the north. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Exotic Place is classified as an Access road under the one network road classification (ONRC). Exotic Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Exotic Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Exotic Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Triangle Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Exotic Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Exotic Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Factory Road (Pukekohe)

The speed limit on Factory Road, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Factory Road connects to Belmont Road to the north and Victoria Street West to the south. This road provides access to residential properties and is approximately 0.30km in length.</p> <p>Factory Road is classified as a Secondary Collector road under the one network road classification (ONRC). Factory Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Factory Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> High and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as Rural residential using MegaMaps tool. The IRR defines Rural residential as " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 2 to &lt;5 accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 228 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Factory Road has a mean operating speed in the range of 40-44km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Belmont Road: 50km/h (proposed 30km/h)</li> <li>Victoria Street West: 50km/h (no proposed change)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Factory Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.95. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 60km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 60km/h as the safe and appropriate speed for Factory Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Fairburn Road (Otahuhu)

The speed limit on Fairburn Road, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fairburn Road connects to Church Street to the east and Great South Road to the west. This road provides access to residential properties and is approximately 0.49km in length.</p> <p>Fairburn Road is classified as a Secondary Collector road under the one network road classification (ONRC). Fairburn Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fairburn Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2147 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Fairburn Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Church Street between Princes Street and Ngaio Street: 50km/h (proposed 30km/h)</li> <li>Great south Road: 50km/h (no proposed change)</li> <li>Tamaki Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Fairburn Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.94. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Fairburn Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Fairdene Avenue (Henderson)

The speed limit on Fairdene Avenue, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fairdene Avenue connects to Lincoln Road to the east and Pinedale Place to the south. This road provides access to residential properties and is approximately 0.59km in length.</p> <p>Fairdene Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Fairdene Avenue is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fairdene Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2512 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Fairdene Avenue has a mean operating speed in the range of 35-39km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Lincoln Road: 50km/h (no proposed change)</li> <li>• Pinedale Place: 50km/h (proposed 30km/h)</li> <li>• Edwards Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Fairdene Avenue has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.30. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Fairdene Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Fairlea Road (Te Atatu South)

The speed limit on Fairlea Road, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fairlea Road connects to Wakeling Avenue to the north. This road provides access to residential properties and is approximately 0.13 km in length.</p> <p>Fairlea Road is classified as an access road under the one network road classification (ONRC). Fairlea Road is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 217 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Fairlea Road has a mean operating speed in the range of &lt;30 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Wakeling Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Fairlea Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**
- The Infrastructure Risk Rating Score is 2.15 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Fairlea Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Farmer Street (Mangere East)

The speed limit on Farmer Street, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Farmer Street connects to Vine Street to the north and Tennessee Avenue to the south. This road provides access to residential properties and is approximately 0.38km in length.</p> <p>Farmer Street is classified as a Primary Collector road under the one network road classification (ONRC). Farmer Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Farmer Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3603 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Farmer Street has a mean operating speed in the range of 30-34km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Vine Street: 50km/h (proposed 30km/h)</li> <li>• Tennessee Avenue: 50km/h (proposed 30km/h)</li> <li>• Trembath Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Farmer Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Farmer Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Farmer Street is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Farnol Street (Hillsborough)

The speed limit on Farnol Street, Hillsborough has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Farnol Street connects to Belfast Street to the north. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Farnol Street is classified as an Access road under the one network road classification (ONRC). Farnol Street is a two-way, Two lane undivided. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 150 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Farnol Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Belfast Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Farnol Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.20. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Farnol Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Fayette Place (Te Atatu South)

The speed limit on Fayette Place, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fayette Place connects to Fowey Avenue to the east. This road provides access to residential properties and is approximately 0.06 km in length.</p> <p>Fayette Place is classified as an access road under the one network road classification (ONRC). Fayette Place is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 203 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Fayette Place has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Fowey Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Fayette Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.15 For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Fayette Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Feltwell Place (Mangere Bridge)

The speed limit on Feltwell Place, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Feltwell Place connects to Ashcroft Avenue to the east. This road provides access to residential properties and is approximately 0.89km in length.</p> <p>Feltwell Place is classified as an Access road under the one network road classification (ONRC). Feltwell Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Feltwell Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 561 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Feltwell Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ashcroft Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Feltwell Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Feltwell Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Fenton Street (Mount Eden)

The speed limit on Fenton Street, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fenton Street connects to Wynyard Road to the west. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Fenton Street is classified as a Access road under the one network road classification (ONRC). Fenton Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fenton Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5 to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box/industrial using MegaMaps tool. The IRR defines Commercial big box/industrial as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Fenton Street has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Wynyard Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Fenton Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.35. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Fenton Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ferguson Road (Otara)

The speed limit on Ferguson Road, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ferguson Road connects to East Tamaki Road to the north and Preston Road to the east. This road provides access to residential properties and is approximately 1.01km in length.</p> <p>Ferguson Road is classified as a Primary Collector road under the one network road classification (ONRC). Ferguson Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: three minor crashes, three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ferguson Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 5347 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ferguson Road has a mean operating speed in the range of 30-34km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• East Tamaki Road: 60km/h (no proposed change)</li> <li>• Preston Road: 50km/h (no proposed change)</li> <li>• Wroughton Crescent: 50km/h (proposed 30km/h)</li> <li>• Ivon Road: 50km/h (proposed 30km/h)</li> <li>• Hannah Road: 50km/h (proposed 30km/h)</li> <li>• Capstick Road: 50km/h (proposed 30km/h)</li> <li>• Bond Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Ferguson Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low-Medium**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Ferguson Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Ferguson Road is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ferguson Street (Manurewa East)

The speed limit on Ferguson Street, Manurewa East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ferguson Street connects to Myers Road to the north and Greenmeadows Avenue to the east. This road provides access to residential properties and is approximately 0.68km in length.</p> <p>Ferguson Street is classified as a Secondary Collector road under the one network road classification (ONRC). Ferguson Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: two minor crashes, two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ferguson Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1096 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ferguson Street has a mean operating speed in the range of 40-44km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Myers Road: 50km/h (proposed 30km/h)</li> <li>Greenmeadows Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ferguson Street has the following information:

- Collective Risk band of **Low Medium**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 1.81. For urban areas this corresponds to an IRR band of **Low Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ferguson Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ferguson Street (Mangere East)

The speed limit on Ferguson Street, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ferguson Street connects to Yates Road to the west and Massey Road to the east. This road provides access to residential properties and is approximately 0.91km in length.</p> <p>Ferguson Street is classified as a Secondary Collector road under the one network road classification (ONRC). Ferguson Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records nine crashes between 2016 and 2020: one serious crash, one minor crash, seven non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ferguson Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1081 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ferguson Street has a mean operating speed in the range of 30-34km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Yates Road: 50km/h (proposed 30km/h)</li> <li>• Massey Road: 50km/h (no proposed change)</li> <li>• Chadwick Crescent: 50km/h (proposed 30km/h)</li> <li>• Carnac Place: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Ferguson Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.30. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ferguson Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Fernbank Lane (Greenhithe)

The speed limit on Fernbank Lane, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fernbank Lane connects to George Deane Place to the south. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Fernbank Lane is classified as a Secondary Collector road under the one network road classification (ONRC). Fernbank Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fernbank Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Fernbank Lane has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>George Deane Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Fernbank Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.10. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Fernbank Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ferndale Avenue (Leigh)

The speed limit on Ferndale Avenue, Leigh has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ferndale Avenue connects to Harbour View Road to the east and Puriri Avenue to the south. This road provides access to residential properties and is approximately 0.19km in length.</p> <p>Ferndale Avenue is classified as an Access road under the one network road classification (ONRC). Ferndale Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ferndale Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as rural towns using MegaMaps tool. The IRR defines rural towns as " <i>rural town with mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 411 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ferndale Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Harbour View Road: 50km/h (proposed 30km/h)</li> <li>• Puriri Avenue: 50km/h (proposed 30km/h)</li> <li>• Hauraki Road between Wonderview Road and north of Hauraki Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Ferndale Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.19. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ferndale Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Fernhill Way (Oteha)

The speed limit on Fernhill Way, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fernhill Way connects to Fields Parade to the north and Hooten Place to the south. This road provides access to residential properties and is approximately 1.93km in length.</p> <p>Fernhill Way is classified as an Access road under the one network road classification (ONRC). Fernhill Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records five crashes between 2016 and 2020: five non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fernhill Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Fernhill Way has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Fields Parade: 50km/h (proposed 30km/h)</li> <li>Hooten Place: 50km/h (proposed 30km/h)</li> <li>Medallion Drive: 50km/h (proposed 30km/h)</li> <li>Sonoma Crescent: 50km/h (proposed 30km/h)</li> <li>Sohlue Place: 50km/h (proposed 30km/h)</li> <li>Ponderosa Drive: 50km/h (proposed 30km/h)</li> <li>Crimson Park: 50km/h (proposed 30km/h)</li> <li>Pannill Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Fernhill Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Fernhill Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Fernloche Place (Flat Bush)

The speed limit on Fernloche Place, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fernloche Place connects to Bronwylian Drive to the north. This road provides access to residential properties and is approximately 0.18km in length.</p> <p>Fernloche Place is classified as an Access road under the one network road classification (ONRC). Fernloche Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fernloche Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 747 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Fernloche Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Bronwylan Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Fernloche Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Fernloche Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Fields Parade (Oteha)

The speed limit on Fields Parade, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fields Parade connects to Oteha Valley Road to the north and Fernhill Way to the south. This road provides access to residential properties and is approximately 0.79km in length.</p> <p>Fields Parade is classified as a Primary Collector road under the one network road classification (ONRC). Fields Parade is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: one minor crash, two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fields Parade were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1994 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Fields Parade has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Oteha Valley Road: 50km/h (no proposed change)</li> <li>Fernhill Way: 50km/h (proposed 30km/h)</li> <li>Nimstedt Avenue: 50km/h (proposed 30km/h)</li> <li>Gleanor Avenue: 50km/h (proposed 30km/h)</li> <li>John Jennings Drive: 50km/h (proposed 30km/h)</li> <li>Sunnydale Place: 50km/h (proposed 30km/h)</li> <li>Horizon View Road: 50km/h (proposed 30km/h)</li> <li>Vicente Place: 50km/h (proposed 30km/h)</li> <li>Candlestick Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Fields Parade has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Fields Parade, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Filgate Street (Hillsborough)

The speed limit on Filgate Street, Hillsborough has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Filgate Street connects to Hoskins Avenue to the east. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Filgate Street is classified as an Access road under the one network road classification (ONRC). Filgate Street is a two-way, Two lane undivided. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Filgate Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Hoskins Avenue: 50km/h (proposed 30km/h)</li> <li>Bagley Street: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Filgate Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Filgate Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Finlayson Avenue (Clendon Park)

The speed limit on Finlayson Avenue, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Finlayson Avenue connects to Roscommon Road to the east and Palmers Road to the south. This road provides access to residential properties and is approximately 1.38km in length.</p> <p>Finlayson Avenue is classified as a Primary Collector road under the one network road classification (ONRC). Finlayson Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records thirty eight crashes between 2016 and 2020: six serious crashes, five minor crashes, twenty seven non-injury crashes. This resulted in six Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Finlayson Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4046 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Finlayson Avenue has a mean operating speed in the range of 45-50km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Roscommon Road: 60km/h (no proposed change)</li> <li>Palmers Road: 50km/h (proposed 30km/h)</li> <li>Cottrell Place: 50km/h (proposed 30km/h)</li> <li>Hanford Place: 50km/h (proposed 30km/h)</li> <li>Stoll Place: 50km/h (proposed 30km/h)</li> <li>Brava Place: 50km/h (proposed 30km/h)</li> <li>Brava Place: 50km/h (proposed 30km/h)</li> <li>Kopu Place: 50km/h (proposed 30km/h)</li> <li>Kopara Place: 50km/h (proposed 30km/h)</li> <li>Matua Place: 50km/h (proposed 30km/h)</li> <li>Ngatira Place: 50km/h (proposed 30km/h)</li> <li>Bundena Place: 50km/h (proposed 30km/h)</li> <li>Pureora Place: 50km/h (proposed 30km/h)</li> <li>Burundi Avenue: 50km/h (proposed 30km/h)</li> <li>Maplesden Drive: 50km/h (proposed 30km/h)</li> <li>Bellville Drive: 50km/h (proposed 30km/h)</li> <li>Wai Iti Place: 50km/h (proposed 30km/h)</li> <li>Moncrieff Avenue: 50km/h (proposed 30km/h)</li> </ul>

**Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Finlayson Avenue has the following information:

- o Collective Risk band of **Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 2.30. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Finlayson Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Finlayson Avenue is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Fintry Place (Flat Bush)**

The speed limit on Fintry Place, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fintry Place connects to Bronwylian Drive to the north. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Fintry Place is classified as an Access road under the one network road classification (ONRC). Fintry Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fintry Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 747 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Fintry Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Bronwylan Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Fintry Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Fintry Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Fisher Crescent (Otara)

The speed limit on Fisher Crescent, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fisher Crescent connects to Preston Road to the east. This road provides access to residential properties and is approximately 0.74km in length.</p> <p>Fisher Crescent is classified as an Access road under the one network road classification (ONRC). Fisher Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fisher Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 390 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Fisher Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Preston Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Fisher Crescent has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.80. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Fisher Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Flat Bush Road (Otara)

The speed limit on Flat Bush Road, Otara, between Preston Road and the western end of Flat Bush Road, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

#### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>Infrastructure Risk Rating Manual 2016 (IRR)</li><li>WK NZTA MegaMaps tool</li><li>Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Flat Bush Road connects to Dawson Road to the east and Waimate Street to the west. This road provides access to residential properties and is approximately 0.37km in length.</p> <p>Flat Bush Road is classified as a Primary Collector road under the one network road classification (ONRC). Flat Bush Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Flat Bush Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li><b>Road stereotype:</b> Two lane undivided</li><li><b>Road alignment:</b> Straight</li><li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li><li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1974 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Flat Bush Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Dawson Road: 50km/h (no proposed change)</li> <li>• Waimate Street: 50km/h (proposed 30km/h)</li> <li>• Vickerman Street: 50km/h (proposed 30km/h)</li> <li>• Oconnor Street: 50km/h (proposed 30km/h)</li> <li>• Piako Street: 50km/h (proposed 30km/h)</li> <li>• Preston Road: 50km/h (no proposed change)</li> <li>• Emerson Road: 50km/h (no proposed change)</li> <li>• Awatere Street: 50km/h (no proposed change)</li> <li>• Rapson Road: 50km/h (no proposed change)</li> <li>• Ravenna Way: 50km/h (no proposed change)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Flat Bush Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Flat Bush Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Flat Bush Road is a Primary Collector Road, that is not the intended function of this section of Flat Bush Road.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Flax Place (Stonefields)

The speed limit on Flax Place, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Flax Place connects to Vialou Lane to the west. This road provides access to residential properties and is approximately 0.04km in length.</p> <p>Flax Place is classified as an Access road under the one network road classification (ONRC). Flax Place is a two-way, Two lane undivided road. There are partial pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Flax Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 208 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Flax Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Vialou Lane: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Flax Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Flax Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Fleming Street (Manurewa East)

The speed limit on Fleming Street, Manurewa East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fleming Street connects to Alfriston Road to the north and Mcannalley Street to the south. This road provides access to residential properties and is approximately 0.34km in length.</p> <p>Fleming Street is classified as a Secondary Collector road under the one network road classification (ONRC). Fleming Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fleming Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1937 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Fleming Street has a mean operating speed in the range of 35-39km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Alfriston Road: 50km/h (no proposed change)</li> <li>McCannalley Street: 50km/h (proposed 30km/h)</li> <li>Hyde Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Fleming Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Fleming Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Fleming Street (Mangere East)

The speed limit on Fleming Street, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fleming Street connects to Tennessee Avenue to the south. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Fleming Street is classified as a Secondary Collector road under the one network road classification (ONRC). Fleming Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fleming Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1716 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Fleming Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tennessee Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Fleming Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.35. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Fleming Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Flint Way (Stonefields)

The speed limit on Flint Way, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Flint Way connects to Ngahue Drive to the west and Magma Crescent to the east. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Flint Way is classified as an Access road under the one network road classification (ONRC). Flint Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Flint Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 200 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Flint Way has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Ngahue Drive: 50km/h (no proposed change)</li> <li>• Magma Crescent: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Flint Way has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Flint Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Foote Street (Hillsborough)

The speed limit on Foote Street, Hillsborough has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Foote Street connects to Hoskins Avenue to the east. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Foote Street is classified as an Access road under the one network road classification (ONRC). Foote Street is a two-way, Two lane undivided. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Foote Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Hoskins Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Foote Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 50km/h as the safe and appropriate speed for Foote Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Footwide Place (Weymouth)

The speed limit on Footwide Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Footwide Place connects to Settlers Cove to the north and Newbegin Place to the north. This road provides access to residential properties and is approximately 0.05km in length.</p> <p>Footwide Place is classified as an Access road under the one network road classification (ONRC). Footwide Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Footwide Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1092 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Footwide Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Settlers Cove: 50km/h (proposed 30km/h)</li> <li>• Newbegin Place: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Footwide Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.60. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Footwide Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Forbury Place (Mangere)

The speed limit on Forbury Place, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Forbury Place connects to Mascot Avenue to the east. This road provides access to residential properties and is approximately 0.24km in length.</p> <p>Forbury Place is classified as an Access road under the one network road classification (ONRC). Forbury Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor crash, one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Forbury Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 280 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Forbury Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Mascot Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Forbury Place has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Forbury Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Forest Glen (Orewa)

The speed limit on Forest Glen, Orewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Forest Glen connects to Annalise Place to the north and Puriri Avenue to the south. This road provides access to residential properties and is approximately 0.34km in length.  Forest Glen is classified as a Secondary Collector road under the one network road classification (ONRC). Forest Glen is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Forest Glen were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 485 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Forest Glen has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Annalise Place: 50km/h (proposed 30km/h)</li> <li>Puriri Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Forest Glen has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Forest Glen, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Formby Avenue (Point Chevalier)

The speed limit on Formby Avenue, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Formby Avenue connects to Pelham Avenue to the west and Point Chevalier Road. This road provides access to residential properties and is approximately 0.37km in length.</p> <p>Formby Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Formby Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Formby Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Formby Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Point Chevalier Road: 50 km/h (no proposed change)</li> <li>Pelham Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Formby Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Formby Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Fort Lincoln Loop (Karaka)

The speed limit on Fort Lincoln Loop, Karaka has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fort Lincoln Loop connects to Hayfield Way to the north. This road provides access to residential properties and is approximately 0.37km in length.</p> <p>Fort Lincoln Loop is classified as an Access road under the one network road classification (ONRC). Fort Lincoln Loop is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fort Lincoln Loop were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> &lt;1 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Fort Lincoln Loop has a mean operating speed in the range of 40-44km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Hayfield Way: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Fort Lincoln Loop has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.04. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Fort Lincoln Loop, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Four Oaks Place (Pukekohe)

The speed limit on Four Oaks Place, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Four Oaks Place connects to Kauri Road to the north. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Four Oaks Place is classified as an Access road under the one network road classification (ONRC). Four Oaks Place is a two-way, Two-lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Four Oaks Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Four Oaks Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kauri Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Four Oaks Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Four Oaks Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Fowey Avenue (Te Atatu South)**

The speed limit on Fowey Avenue, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fowey Avenue connects to McLeod Road to the north. This road provides access to residential properties and is approximately 0.14 km in length.</p> <p>Fowey Avenue is classified as an access road under the one network road classification (ONRC). Fowey Avenue is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 203 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Fowey Avenue has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• McLeod Road: 50 km/h (proposed 30 km/h)</li> <li>• Fayette Place: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Fowey Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.15 For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Fowey Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Frank Evans Place (Henderson)

The speed limit on Frank Evans Place, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Frank Evans Place connects to Swanson Road to the west. This road provides access to residential properties and is approximately 0.33km in length.</p> <p>Frank Evans Place is classified as a Secondary Collector road under the one network road classification (ONRC). Frank Evans Place is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Frank Evans Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 437 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Frank Evans Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Swanson Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Frank Evans Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Frank Evans Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Fraser Road (Narrow Neck)

The speed limit on Fraser Road, Narrow Neck has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fraser Road connects to Old Lake Road to the south. This road provides access to residential properties and is approximately 0.29km in length.</p> <p>Fraser Road is classified as an Access road under the one network road classification (ONRC). Fraser Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fraser Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 127 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Fraser Road has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Old Lake Road: 50km/h (no proposed change)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Fraser Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.92. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Fraser Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Frederick Street (Hillsborough)

The speed limit on Frederick Street, Hillsborough has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Frederick Street connects to Queenstown Road to the north and Hoskins Avenue to the south. This road provides access to residential properties and is approximately 1.19km in length.</p> <p>Frederick Street is classified as a Primary collector road under the one network road classification (ONRC). Frederick Street is a two-way, Two lane undivided. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records four crashes between 2016 and 2020: two minor and two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Winding</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5 to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2040 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Frederick Street has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Queenstown Road: 50km/h (no proposed change)</li> <li>Seacliffe Road: 50km/h (no proposed change)</li> <li>Carlton Street: 50km/h (proposed 30km/h)</li> <li>Lilac Grove: 50km/h (proposed 30km/h)</li> <li>Pallister Drive: 50km/h (proposed 30km/h)</li> <li>Belfast Street: 50km/h (proposed 30km/h)</li> <li>Goodall Street: 50km/h (proposed 30km/h)</li> <li>Bluff Terrace: 50km/h (proposed 30km/h)</li> <li>Hoskins Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Frederick Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.75. For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Frederick Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Frederick Street is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Friesian Drive (Mangere)

The speed limit on Friesian Drive, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Friesian Drive connects to Massey Road to the east and Mascot Avenue to the west. This road provides access to residential properties and is approximately 0.93km in length.</p> <p>Friesian Drive is classified as a Primary Collector road under the one network road classification (ONRC). Friesian Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: six non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Friesian Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 7190 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Friesian Drive has a mean operating speed in the range of 34-39km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Massey Road: 50km/h (no proposed change)</li> <li>• Mascot Avenue: 50km/h (proposed 30km/h)</li> <li>• Ashgrove Road: 50km/h (proposed 30km/h)</li> <li>• Nevis Place: 50km/h (proposed 30km/h)</li> <li>• Duggan Avenue: 50km/h (proposed 30km/h)</li> <li>• Wayne Drive: 50km/h (proposed 30km/h)</li> <li>• Imrie Avenue: 50km/h (proposed 30km/h)</li> <li>• Nicola Place: 50km/h (proposed 30km/h)</li> <li>• Paine Place: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Friesian Drive has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.24. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Friesian Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Friesian Drive is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Fulton Crescent (Otara)

The speed limit on Fulton Crescent, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fulton Crescent connects to East Tamaki Road to the north. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Fulton Crescent is classified as an Access road under the one network road classification (ONRC). Fulton Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fulton Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 170 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Fulton Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>East Tamaki Road: 60km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Fulton Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Fulton Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Fynes Avenue (Stonefields)

The speed limit on Fynes Avenue, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Fynes Avenue connects to Stonemason Avenue to the north and Tihī Street to the south. This road provides access to residential properties and is approximately 0.26km in length.</p> <p>Fynes Avenue is classified as an Access road under the one network road classification (ONRC). Fynes Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Fynes Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Fynes Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Tihi Street: 50km/h (proposed 30km/h)</li> <li>• Stonemason Avenue: 50km/h (proposed 30km/h)</li> <li>• Papango Street: 50km/h (proposed 30km/h)</li> <li>• Galway Bay Terrace: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Fynes Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Fynes Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Gallaher Street (Manurewa East)

The speed limit on Gallaher Street, Manurewa East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Gallaher Street connects to Mcannalley Street to the south. This road provides access to residential properties and is approximately 0.05km in length.</p> <p>Gallaher Street is classified as an Access road under the one network road classification (ONRC). Gallaher Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Gallaher Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 60 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Gallaher Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Mcannalley Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Gallaher Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.18. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Gallaher Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Galway Bay Terrace (Stonefields)

The speed limit on Galway Bay Terrace, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Galway Bay Terrace connects to Fynes Avenue to the west and Ganley Terrace to the east. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Galway Bay Terrace is classified as an Access road under the one network road classification (ONRC). Galway Bay Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Galway Bay Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Galway Bay Terrace has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Fynes Avenue: 50km/h (proposed 30km/h)</li> <li>Ganley Terrace: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Galway Bay Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Galway Bay Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ganley Terrace (Stonefields)

The speed limit on Ganley Terrace, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ganley Terrace connects to Papango Street to the south and Purchas Hill Drive to the north. This road provides access to residential properties and is approximately 0.26km in length.</p> <p>Ganley Terrace is classified as an Access road under the one network road classification (ONRC). Ganley Terrace is a two-way, Two lane undivided road. There are partial pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ganley Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ganley Terrace has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Papango Street: 50km/h (proposed 30km/h)</li> <li>Galway Bay Terrace: 50km/h (proposed 30km/h)</li> <li>Stonemason Avenue: 50km/h (proposed 30km/h)</li> <li>Purchas Hill Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ganley Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ganley Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Garin Way (Stonefields)

The speed limit on Garin Way, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Garin Way connects to Brian Slater Way to the north and Tihi Street to the south. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Garin Way is classified as an Access road under the one network road classification (ONRC). Garin Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Garin Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Garin Way has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Tihi Street: 50km/h (proposed 30km/h)</li> <li>• Styak Street: 50km/h (proposed 30km/h)</li> <li>• Stonemason Avenue: 50km/h (proposed 30km/h)</li> <li>• Singleton Avenue: 50km/h (proposed 30km/h)</li> <li>• Brian Slater Way: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Garin Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Garin Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Garrett Place (Otaru)

The speed limit on Garrett Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Garrett Place connects to Tindall Crescent to the north. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Garrett Place is classified as an Access road under the one network road classification (ONRC). Garrett Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Garrett Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 769 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Garrett Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tindall Crescent: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Garrett Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Garrett Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Geddes Terrace (Avondale)

The speed limit on Geddes Terrace, Avondale has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Geddes Terrace connects to Crayford Street West to the north and St Jude Street to the south. This road provides access to residential properties and is approximately 0.22km in length.</p> <p>Geddes Terrace is classified as an Access road under the one network road classification (ONRC). Geddes Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: one minor crash, two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Geddes Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 676 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Geddes Terrace has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Crayford St West: 50km/h (proposed 30km/h)</li> <li>• St Jude Street: 50km/h (no proposed change)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Geddes Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Geddes Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – George Arthur Place (Pukekohe)

The speed limit on George Arthur Place, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>George Arthur Place connects to Helvetia Road to the east. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>George Arthur Place is classified as an Access road under the one network road classification (ONRC). George Arthur Place is a two-way, Two-lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for George Arthur Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two-lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 80 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of George Arthur Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Helvetia Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps George Arthur Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for George Arthur Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – George Deane Place (Greenhithe)

The speed limit on George Deane Place, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>George Deane Place connects to William Gamble Drive to the west. This road provides access to residential properties and is approximately 0.29km in length.</p> <p>George Deane Place is classified as a Secondary Collector road under the one network road classification (ONRC). George Deane Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for George Deane Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of George Deane Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• William Gamble Drive: 50km/h (proposed 30km/h)</li> <li>• Fernbank Lane: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps George Deane Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for George Deane Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Gibbons Road (Weymouth)

The speed limit on Gibbons Road, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Gibbons Road connects to Blanes Road to the east and Domain Road to the west. This road provides access to residential properties and is approximately 0.23km in length.</p> <p>Gibbons Road is classified as a Secondary Collector road under the one network road classification (ONRC). Gibbons Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor crash, one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Gibbons Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1207 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Gibbons Road has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Blanes Road: 50km/h (proposed 30km/h)</li> <li>Domain Road: 50km/h (proposed 30km/h)</li> <li>Honey Place: 50km/h (proposed 30km/h)</li> <li>Crispian Place: 50km/h (proposed 30km/h)</li> <li>Huber Street: 50km/h (proposed 30km/h)</li> <li>Booker Place: 50km/h (proposed 30km/h)</li> <li>Weymouth Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Gibbons Road has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.33. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Gibbons Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Gila Place (Weymouth)

The speed limit on Gila Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Gila Place connects to Weymouth Road to the west. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Gila Place is classified as an Access road under the one network road classification (ONRC). Gila Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Gila Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 140 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Gila Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Weymouth Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Gila Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Gila Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Gilfillan Street (Blockhouse Bay)

The speed limit on Gilfillan Street, Blockhouse Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Gilfillan Street connects to Armagh Road to the west and Blockhouse Bay Road to the east. This road provides access to residential properties and is approximately 0.34km in length.</p> <p>Gilfillan Street is classified as a Primary Collector road under the one network road classification (ONRC). Gilfillan Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Gilfillan Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3867 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Gilfillan Street has a mean operating speed in the range of 35-39km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Blockhouse Bay Road: 50km/h (proposed 30km/h)</li> <li>Armagh Road: 50km/h (proposed 30km/h)</li> <li>Endeavour Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Gilfillan Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Gilfillan Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Gilfillan Street is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Gill Crescent (Blockhouse Bay)

The speed limit on Gill Crescent, Blockhouse Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Gill Crescent connects to Blockhouse Bay Road to the west. This road provides access to residential properties and is approximately 0.30km in length.</p> <p>Gill Crescent is classified as an Access road under the one network road classification (ONRC). Gill Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Gill Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 3 to &lt;5 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 150 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Gill Crescent has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Blockhouse Bay Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Gill Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Gill Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Gingernut Place (Karaka)

The speed limit on Gingernut Place, Karaka has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Gingernut Place connects to Ockhams Street to the east and Songline Road to the east. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Gingernut Place is classified as an Access road under the one network road classification (ONRC). Gingernut Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Gingernut Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Gingernut Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ockhams Street: 50km/h (proposed 30km/h)</li> <li>Songline Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Gingernut Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.04. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Gingernut Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Girdhar Place (Pukekohe)

The speed limit on Girdhar Place, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Girdhar Place connects to Cooper Street to the east. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Girdhar Place is classified as an Access road under the one network road classification (ONRC). Girdhar Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Girdhar Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 540 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Girdhar Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Cooper Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Girdhar Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Girdhar Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Glanville Terrace (Parnell)

The speed limit on Glanville Terrace, Parnell has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Glanville Terrace connects to Crescent Road to the north and Takutai Street to the south. This road provides access to residential properties and is approximately 0.56km in length.</p> <p>Glanville Terrace is classified as an Access road under the one network road classification (ONRC). Glanville Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Glanville Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 312 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Glanville Terrace has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Crescent Road: 50km/h (proposed 30km/h)</li> <li>Takutai Street: 50km/h (proposed 30km/h)</li> <li>Lichfield Road: 50km/h (proposed 30km/h)</li> <li>Awatea Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Glanville Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Glanville Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Gleanor Avenue (Oteha)

The speed limit on Gleanor Avenue, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Gleanor Avenue connects to Nimstedt Avenue to the north and Fields Parade to the west. This road provides access to residential properties and is approximately 0.29km in length.</p> <p>Gleanor Avenue is classified as an Access road under the one network road classification (ONRC). Gleanor Avenue is a two-way, Two lane undivided road. There is pedestrian amenities on one side of the road and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Gleanor Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Gleanor Avenue has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Nimstedt Avenue: 50km/h (proposed 30km/h)</li> <li>• Fields Parade: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Gleanor Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.69. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Gleanor Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Glen Norman Avenue (Henderson)

The speed limit on Glen Norman Avenue, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Glen Norman Avenue connects to Rathgar Road to the east and Normandy Place to the north. This road provides access to residential properties and is approximately 0.29km in length.</p> <p>Glen Norman Avenue is classified as a Primary Collector road under the one network road classification (ONRC). Glen Norman Avenue is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Glen Norman Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2920 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Glen Norman Avenue has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Rathgar Road: 50km/h (proposed 30km/h)</li> <li>Normandy Place: 50km/h (proposed 30km/h)</li> <li>Hughdene Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Glen Norman Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Glen Norman Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Glen Norman Avenue is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Glen Road (Stanley Point)**

The speed limit on Glen Road, Stanley Point has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Glen Road connects to Waterview Road to the north and Calliope Road to the south. This road provides access to residential properties and is approximately 0.30km in length.</p> <p>Glen Road is classified as an Access road under the one network road classification (ONRC). Glen Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Glen Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 280 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Glen Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Waterview Road: 50 km/h (proposed 30 km/h)</li> <li>• Calliope Road: 50 km/h (no proposed change)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Glen Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Glen Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Glenarden Way (Ranui)

The speed limit on Glenarden Way, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Glenarden Way connects to Kilmarnock Avenue to the north and to the south. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Glenarden Way is classified as an Access road under the one network road classification (ONRC). Glenarden Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Glenarden Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 131 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Glenarden Way has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kilmarnock Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Glenarden Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Glenarden Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Glenbrook Waiuku Road (Glenbrook)

The speed limit on Glenbrook Waiuku Road, Glenbrook, between 1010 metres north east of Mission Bush Road and 100 metres south west of Brookside Road, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Glenbrook Waiuku Road connects to Glenbrook Road to the north and Collingwood Road to the south. This road provides access to residential properties and is approximately 1.70km in length.</p> <p>Glenbrook Waiuku Road is classified as an Arterial road under the one network road classification (ONRC). Glenbrook Waiuku Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Glenbrook Waiuku Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> High and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>Rural area with accesses present to private dwellings and farms. There may be the occasional industry/factory present. Some pedestrian and cyclist activity may also be present, particularly at certain times of the day, but with few crossing movements.</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8413 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Variable speed limit signs consistent with the requirements of Traffic Note 37, will be implemented for the proposed variable school zone.
(j) the views of interested persons and groups.	Central government policy is to implement speed limits of 60km/h or less adjacent to rural schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"
(k) Setting of Speed Limits Rule 2017	The requirements of the Setting of Speed Limits Rule 2017 are met as shown in Table 3
(l) WK Traffic Note 37-Revision 2	The requirements of WK Traffic Note 37-Revision2 are met as shown in Table 3

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 60km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Glenbrook Waiuku Road has a mean operating speed in the range of 75-79km/h. (note that this speed data dates back to before the implementation of a permanent speed limit reduction from 70km/h to 60km/h so operating speeds are expected to have reduced.)  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Brookside Road: 80km/h (no proposed change)</li> <li>• Glenbrook Road: 80km/h (no proposed change)</li> <li>• Mission Bush Road: 80km/h (no proposed change)</li> </ul>

In addition to the factors outlined in Table 1, further relevant information was sought to meet the requirements of WK Traffic Note 37-Revision 2 and the Setting of Speed Limits Rule 2017 as summarised in Table 3 below.

Table 3: Required Information

Required Information	Data & Source
<p>With reference to WK Traffic Note 37-Revision 2, a road controlling authority may set a 40km/h variable speed limit in a school zone under the following conditions:</p> <p>(a) <i>There is school-related pedestrian or cycle activity on the road outside the school, which exceeds approximately 50 children crossing the road or entering or leaving vehicles at the roadside, and the traffic on the road outside the school meets at least one of the following conditions:</i></p> <p>(i) <i>The mean speed of free-running vehicles is greater than 45km/h (measured when the 40km/h variable speed limit is not operating); or</i></p> <p>(ii) <i>The 85<sup>th</sup> percentile speed of free-running vehicles is greater than 50km/h (measured when the 40km/h variable speed limit is not operating); or</i></p> <p>(iii) <i>There have been pedestrian, cycle or speed-related crashes near the school in the previous five years; or</i></p> <p>(iv) <i>The school-related activity in condition 5(a) occurs on a main traffic route; or</i></p> <p>(b) <i>There is school-related pedestrians or cycle activity on the road outside the school, with children crossing the road or entering or leaving vehicles at the roadside and safe and appropriate traffic engineering measures are installed so that the mean operating speeds of free-running vehicles on the road outside the school does not exceed 40km/h when the 40km/h variable speed limit is operating</i></p>	<p>The requirements of condition "a" are met as follows:</p> <p>Due to growth in the school roll associated with recent development in the Glenbrook Beach area we consider that this criteria is likely to be already met and student numbers will have increased further by the time the decision on the proposed bylaw amendment is made. (Note actual counts have been unable to be completed due to Covid lockdowns temporarily closing the school.)</p> <p>According to MegaMaps, this section of Glenbrook Waiuku Road has a mean operating speed in the range of 75-79km/h. As noted in the table above recent changes to the permanent speed limit since this data was collected can be expected to have resulted in some reduction, however mean operating speeds will still be well above 45km/h.</p> <p>Furthermore, Glenbrook Waiuku Road is classified as an Arterial Road and is a main traffic route.</p>
<p>With reference to the Setting of Speed Limits Rule 2017, a variable speed limit may apply when:</p> <p>(a) <i>The speed limit needs to vary in order to be safe and appropriate; and</i></p>	<p>The requirements of condition "a" are met as specified above. It has been determined that since the walking activity around the school is largely concentrated around pick-up and drop-off hours, a variable speed limit would be suitable.</p> <p>The requirements of condition "b (ii)" are met due to the type of road users during the hours of</p>

<p>(b) <i>It is necessary to address or manage one or more of the following situations or environments</i></p> <p>(i) <i>Different numbers and types of road users or different traffic movements; or</i></p> <p>(ii) <i>The effects of changing traffic volumes, including to ease congestion; or</i></p> <p>(iii) <i>For emergency or temporary traffic management; or</i></p> <p>(iv) <i>A crash risk posed by turning or crossing traffic; or</i></p> <p>(v) <i>Changing environmental conditions</i></p>	<p>operation of the proposed variable speed zone being primarily schoolchildren, which is not the case outside of the hours of operation for the proposed variable speed zone.</p>
---	--

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Glenbrook Waiuku Road has the following information:

- o Collective Risk band of **Medium-High**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 1.70. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 80km/h.

### **Step 4: Conclusion**

Existing speed limit: 60km/h

*Proposed safe and appropriate speed limit recommendation = variable 40km/h and 60km/h.*

As outlined in Table 3, an assessment has been undertaken to determine if the warrant is met for a 40km/h variable speed school zone.

Glenbrook Waiuku Road has been determined to meet the requirements set out in the New Zealand Transport Agency's Traffic Note 37-Revision 2. Therefore, we have determined a variable 40km/h speed limit to be safer and more appropriate as it have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

Variable speed limits are proposed to be implemented with electronic variable signs on approaches to the school.

## **Speed Limit Review – Glennis Place (Clendon Park)**

The speed limit on Glennis Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Glennis Place connects to Frobisher Way to the west. This road provides access to residential properties and is approximately 0.04km in length.</p> <p>Glennis Place is classified as an Access road under the one network road classification (ONRC). Glennis Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Glennis Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1079 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Glennis Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Frobisher Way: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Glennis Place has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 2.30. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Glennis Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Glynnbrooke Street (Te Atatu South)

The speed limit on Glynnbrooke Street, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Glynnbrooke Street connects to Roberts Road to the north and McLeod Road to the south. This road provides access to residential properties and is approximately 0.42 km in length.</p> <p>Glynnbrooke Street is classified as an access road under the one network road classification (ONRC). Glynnbrooke Street is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: 1 minor and 1 non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 773 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Glynnbrooke Street has a mean operating speed in the range of 30-34 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Roberts Road: 50 km/h (proposed 30 km/h)</li> <li>McLeod Road: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Glynnbrooke Street has the following information:

- Collective Risk band of **Low Medium**, and a Personal Risk band of **Medium**
- The Infrastructure Risk Rating Score is 1.82 For urban areas this corresponds to an IRR band of **Low Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Glynnbrooke Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Goodall Street (Hillsborough)

The speed limit on Goodall Street, Hillsborough has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Goodall Street connects to Frederick Street to to the south. This road provides access to residential properties and is approximately 0.79km in length.</p> <p>Goodall Street is classified as a Secondary Collector road under the one network road classification (ONRC). Goodall Street is a two-way, Two lane undivided. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1433 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Goodall Street has a mean operating speed in the range of 30-34km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Frederick Street: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Goodall Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.98. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Goodall Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Grant Avenue (Otaru)

The speed limit on Grant Avenue, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Grant Avenue connects to Hills Road to the east. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Grant Avenue is classified as an Access road under the one network road classification (ONRC). Grant Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Grant Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 447 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Grant Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Hills Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Grant Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.20. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Grant Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Graysons Lane (Mount Eden)

The speed limit on Graysons Lane, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Graysons Lane connects to Edenvale Crescent to the west. This road provides access to residential properties and is approximately 0.06km in length.  Graysons Lane is classified as a Access road under the one network road classification (ONRC). Graysons Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Graysons Lane were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5 to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 10+ per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 52 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Graysons Lane has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Edenvale Crescent: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Graysons Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.34. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Graysons Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Greenbough Lane (Greenhithe)

The speed limit on Greenbough Lane, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Greenbough Lane connects to Kyle Road to the west and Kyle Road to the south. This road provides access to residential properties and is approximately 0.38km in length.</p> <p>Greenbough Lane is classified as a Secondary Collector road under the one network road classification (ONRC). Greenbough Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Greenbough Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Greenbough Lane has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kyle Road: 50km/h (proposed 30km/h)</li> <li>• Ashurst Lane: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Greenbough Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Greenbough Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Greenbrooke Drive (Flat Bush)

The speed limit on Greenbrooke Drive, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Greenbrooke Drive connects to Silverwood Drive to the north and Plantation Avenue to the south. This road provides access to residential properties and is approximately 0.17km in length.</p> <p>Greenbrooke Drive is classified as an Access road under the one network road classification (ONRC). Greenbrooke Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Greenbrooke Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1534 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Greenbrooke Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Silverwood Drive: 50km/h (proposed 30km/h)</li> <li>Plantation Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Greenbrooke Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Greenbrooke Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Greenmeadows Avenue (Manurewa East)

The speed limit on Greenmeadows Avenue, Manurewa East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Greenmeadows Avenue connects to Myers Road to the north and Ferguson Street to the south. This road provides access to residential properties and is approximately 0.71km in length.</p> <p>Greenmeadows Avenue is classified as an Access road under the one network road classification (ONRC). Greenmeadows Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Greenmeadows Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 748 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Greenmeadows Avenue has a mean operating speed in the range of 30-34km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Myers Road: 50km/h (proposed 30km/h)</li> <li>• Ferguson Street: 50km/h (proposed 30km/h)</li> <li>• Sterling Avenue: 50km/h (proposed 30km/h)</li> <li>• Sexton Place: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Greenmeadows Avenue has the following information:

- o Collective Risk band of **Low Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 1.66. For urban areas this corresponds to an IRR band of **Low Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Greenmeadows Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Greers Road (Weymouth)

The speed limit on Greers Road, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Greers Road connects to Evans Road to the north and McLeod Road to the west. This road provides access to residential properties and is approximately 0.32km in length.</p> <p>Greers Road is classified as an Access road under the one network road classification (ONRC). Greers Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Greers Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 353 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Greers Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Evans Road: 50km/h (proposed 30km/h)</li> <li>McLeod Road: 50km/h (proposed 30km/h)</li> <li>Weymouth Road: 50km/h (proposed 30km/h)</li> <li>Mail Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Greers Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Greers Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Greig Place (Pukekohe)

The speed limit on Greig Place, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Greig Place connects to Victoria Street West to the south. This road provides access to residential properties and is approximately 0.22km in length.</p> <p>Greig Place is classified as an Access road under the one network road classification (ONRC). Greig Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Greig Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 160 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Greig Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Victoria Street West: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Greig Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Greig Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Growers Lane (Mangere East)

The speed limit on Growers Lane, Mangere East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Growers Lane connects to Yates Road to the north. This road provides access to residential properties and is approximately 0.26km in length.</p> <p>Growers Lane is classified as an Access road under the one network road classification (ONRC). Growers Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Growers Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 280 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Growers Lane has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Yates Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Growers Lane has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Growers Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Grundy Place (Otara)

The speed limit on Grundy Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	Grundy Place connects to Hills Road to the west. This road provides access to residential properties and is approximately 0.09km in length.  Grundy Place is classified as an Access road under the one network road classification (ONRC). Grundy Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	The following characteristics for Grundy Place were determined using MegaMaps tool. <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 10+ per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Grundy Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Hills Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Grundy Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Grundy Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Guard Crescent (Stonefields)

The speed limit on Guard Crescent, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Guard Crescent connects to Tihi Street to the east. This road provides access to residential properties and is approximately 0.25km in length.</p> <p>Guard Crescent is classified as an Access road under the one network road classification (ONRC). Guard Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Guard Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 200 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Guard Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tihi Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Guard Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.69. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Guard Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Gubb Place (Otara)

The speed limit on Gubb Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Gubb Place connects to Hills Road to the west. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Gubb Place is classified as an Access road under the one network road classification (ONRC). Gubb Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Gubb Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 120 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Gubb Place has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Hills Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Gubb Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Gubb Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Guthrey Place (Otaru)

The speed limit on Guthrey Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Guthrey Place connects to Bairds Road to the south. This road provides access to residential properties and is approximately 0.16km in length.</p> <p>Guthrey Place is classified as an Access road under the one network road classification (ONRC). Guthrey Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Guthrey Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 190 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Guthrey Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Bairds Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Guthrey Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Guthrey Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Guyon Street (Stonefields)

The speed limit on Guyon Street, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Guyon Street connects to Tihi Street to the south and Stonemason Avenue to the north. This road provides access to residential properties and is approximately 0.26km in length.</p> <p>Guyon Street is classified as an Access road under the one network road classification (ONRC). Guyon Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Guyon Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Guyon Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Tihi Street: 50km/h (proposed 30km/h)</li> <li>• Stonemason Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Guyon Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Guyon Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Halloran Place (Massey)

The speed limit on Halloran Place, Massey has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Halloran Place connects to Waimumu Road to the east. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Halloran Place is classified as an Access road under the one network road classification (ONRC). Halloran Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Halloran Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 116 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Halloran Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Waimumu Road: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Halloran Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Halloran Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hamana Street (Narrow Neck)

The speed limit on Hamana Street, Narrow Neck has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hamana Street connects to Seacliffe Avenue to the north and Old Lake Road to the south. This road provides access to residential properties and is approximately 0.31km in length.</p> <p>Hamana Street is classified as a Secondary Collector road under the one network road classification (ONRC). Hamana Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hamana Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3863 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hamana Street has a mean operating speed in the range of 35-39km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Seacliffe Avenue: 50km/h (proposed 30km/h)</li> <li>• Old Lake Road: 50km/h (no proposed change)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Hamana Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.81. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hamana Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hamblyn Place (Ranui)

The speed limit on Hamblyn Place, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hamblyn Place connects to Luanda Drive to the north. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Hamblyn Place is classified as an Access road under the one network road classification (ONRC). Hamblyn Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hamblyn Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 128 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Hamblyn Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Luanda Drive between waitemata Drive roundabout and Swanson Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Hamblyn Place has the following information:

- Collective Risk band of **Medium**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hamblyn Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hamill Road (Otarā)

The speed limit on Hamill Road, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hamill Road connects to Johnstones Road to the north and Hills Road to the south. This road provides access to residential properties and is approximately 0.82km in length.</p> <p>Hamill Road is classified as a Secondary Collector road under the one network road classification (ONRC). Hamill Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: one minor and two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hamill Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5 to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 808 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hamill Road has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Johnstones Road: 50km/h (proposed 30km/h)</li> <li>• Blampied Road: 50km/h (proposed 30km/h)</li> <li>• Dairy Road: 50km/h (proposed 30km/h)</li> <li>• Doughty Place: 50km/h (proposed 30km/h)</li> <li>• Hills Road: 50km/h (proposed 30km/h)</li> </ul>

#### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Hamill Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

#### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hamill Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hanan Place (Weymouth)

The speed limit on Hanan Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hanan Place connects to Weymouth Road to the west. This road provides access to residential properties and is approximately 0.25km in length.</p> <p>Hanan Place is classified as an Access road under the one network road classification (ONRC). Hanan Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hanan Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 70 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Hanan Place has a mean operating speed in the range of 40-44km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Weymouth Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Hanan Place has the following information:

- Collective Risk band of **Medium**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.03. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 50km/h as the safe and appropriate speed for Hanan Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hanford Place (Clendon Park)

The speed limit on Hanford Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hanford Place connects to Finlayson Avenue to the south. This road provides access to residential properties and is approximately 0.31km in length.</p> <p>Hanford Place is classified as an Access road under the one network road classification (ONRC). Hanford Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hanford Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 301 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hanford Place has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Finlayson Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Hanford Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hanford Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hannah Road (Otara)

The speed limit on Hannah Road, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hannah Road connects to Ferguson Road to the north and Kudu Road to the south. This road provides access to residential properties and is approximately 0.39km in length.</p> <p>Hannah Road is classified as a Secondary Collector road under the one network road classification (ONRC). Hannah Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hannah Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1206 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Hannah Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ferguson Road: 50km/h (proposed 30km/h)</li> <li>Kudu Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Hannah Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.30. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hannah Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Harbour View Road (Point Chevalier)

The speed limit on Harbour View Road, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Harbour View Road connects to Joan Street to the north and Raymond Street to the south. This road provides access to residential properties and is approximately 0.67km in length.</p> <p>Harbour View Road is classified as an Access road under the one network road classification (ONRC). Harbour View Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Harbour View Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Harbour View Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Joan Street: 50 km/h (proposed 30 km/h)</li> <li>Raymond Street: 50 km/h (proposed 30 km/h)</li> <li>Edith Street: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Harbour View Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.55. For urban areas this corresponds to an IRR band of **Low**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Harbour View Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Harbour View Road (Leigh)

The speed limit on Harbour View Road, Leigh has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Harbour View Road connects to Ferndale Avenue to the west and Hill Street to the south. This road provides access to residential properties and is approximately 0.42km in length.</p> <p>Harbour View Road is classified as an Access road under the one network road classification (ONRC). Harbour View Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Harbour View Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as rural towns using MegaMaps tool. The IRR defines rural towns as “ <i>rural town with mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> ”.
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 332 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Harbour View Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ferndale Avenue: 50km/h (proposed 30km/h)</li> <li>Hill Street: 50km/h (proposed 30km/h)</li> <li>Hauraki Road between Wonderview Road and north of Hauraki Road: 50km/h (proposed 30km/h)</li> <li>Kowhai Terrace: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Harbour View Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Harbour View Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Harkin Close (Albany)

The speed limit on Harkin Close, Albany has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Harkin Close connects to Roanoke Way to the east. This road provides access to residential properties and is approximately 0.50km in length.</p> <p>Harkin Close is classified as a Access road under the one network road classification (ONRC). Harkin Close is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Harkin Close were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 3 to &lt;5 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Harkin Close has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Roanoke Way: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Harkin Close has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.08. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Harkin Close, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Harmony Avenue (Otahuhu)

The speed limit on Harmony Avenue, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Harmony Avenue connects to Water Street to the north and Melody Lane to the west. This road provides access to residential properties and is approximately 0.31km in length.</p> <p>Harmony Avenue is classified as an Access road under the one network road classification (ONRC). Harmony Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Harmony Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “ <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 369 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Harmony Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Water Street: 50km/h (proposed 30km/h)</li> <li>Melody Lane: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Harmony Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Harmony Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Harobed Place (Weymouth)**

The speed limit on Harobed Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Harobed Place connects to Etherton Drive to the east. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Harobed Place is classified as an Access road under the one network road classification (ONRC). Harobed Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Harobed Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 110 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Harobed Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Etherton Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Harobed Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Harobed Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Harrington Road (Henderson)

The speed limit on Harrington Road, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Harrington Road connects to Rathgar Road to the east and Mawney Road to the south. This road provides access to residential properties and is approximately 0.84km in length.</p> <p>Harrington Road is classified as a Secondary Collector road under the one network road classification (ONRC). Harrington Road is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: two minor crashes, one non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Harrington Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1599 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Harrington Road has a mean operating speed in the range of 35-39km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Rathgar Road: 50km/h (proposed 30km/h)</li> <li>Mawney Road: 50km/h (proposed 30km/h)</li> <li>Ascot Avenue: 50km/h (proposed 30km/h)</li> <li>Harry Ward Place: 50km/h (proposed 30km/h)</li> <li>Zodiac Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Harrington Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.84. For urban areas this corresponds to an IRR band of **High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Harrington Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Harrison Avenue (Belmont)

The speed limit on Harrison Avenue, Belmont has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Harrison Avenue connects to Westwell Road to the north. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Harrison Avenue is classified as an Access road under the one network road classification (ONRC). Harrison Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Harrison Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 127 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Harrison Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Westwell Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Harrison Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Harrison Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Harry Ward Place (Henderson)

The speed limit on Harry Ward Place, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Harry Ward Place connects to Harrington Road to the south. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Harry Ward Place is classified as an Access road under the one network road classification (ONRC). Harry Ward Place is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Harry Ward Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 113 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Harry Ward Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Harrington Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Harry Ward Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Harry Ward Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Harwell Place (Mangere)

The speed limit on Harwell Place, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Harwell Place connects to Killington Crescent to the north. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Harwell Place is classified as an Access road under the one network road classification (ONRC). Harwell Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Harwell Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 811 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Harwell Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Killington Crescent: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Harwell Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Harwell Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hastings Parade (Devonport)

The speed limit on Hastings Parade, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hastings Parade connects to Victoria Road to the east and Shoal Bay Road to the west. This road provides access to residential properties and is approximately 0.37km in length.</p> <p>Hastings Parade is classified as an Access road under the one network road classification (ONRC). Hastings Parade is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hastings Parade were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 560 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Hastings Parade has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Victoria Road between Albert Road and northern end of Victoria Road: 50 km/h (proposed 30 km/h)</li> <li>Shoal Bay Road: 50 km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Hastings Parade has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hastings Parade, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hatherley Place (Clendon Park)

The speed limit on Hatherley Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hatherley Place connects to Kennington Drive to the west. This road provides access to residential properties and is approximately 0.43km in length.</p> <p>Hatherley Place is classified as an Access road under the one network road classification (ONRC). Hatherley Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hatherley Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 499 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hatherley Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kennington Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Hatherley Place has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hatherley Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Haultain Street (Mount Eden)

The speed limit on Haultain Street, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Haultain Street connects to Wynyard Road to the east. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Haultain Street is classified as a Access road under the one network road classification (ONRC). Haultain Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Haultain Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box/industrial using MegaMaps tool. The IRR defines Commercial big box/industrial as "Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Haultain Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Wynyard Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Haultain Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.19. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Haultain Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hauraki Road (Leigh)

The speed limit on Hauraki Road, Leigh, between Wonderview Road and north of Hauraki Road has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hauraki Road connects to Ferndale Avenue to the north and Leigh Road to the south. This road provides access to residential properties and is approximately 1.17km in length.</p> <p>Hauraki Road is classified as a Primary Collector road under the one network road classification (ONRC). Hauraki Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hauraki Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as rural towns using MegaMaps tool. The IRR defines rural towns as "rural town with mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1599 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Hauraki Road has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ferndale Avenue: 50km/h (proposed 30km/h)</li> <li>Leigh Road: 50km/h (no proposed change)</li> <li>Wonderview Road: 50km/h (proposed 30km/h)</li> <li>Totara Road: 50km/h (proposed 30km/h)</li> <li>Cumberland Street: 50km/h (proposed 30km/h)</li> <li>Harbour View Road: 50km/h (proposed 30km/h)</li> <li>Seatoun Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Hauraki Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.43. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hauraki Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Hauraki Road is a Primary Collector Road, that is not the intended function of this section of Hauraki Road

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Hawea Road (Point Chevalier)**

The speed limit on Hawea Road, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hawea Road connects to Walker Road to the north and Smale Street to the south. This road provides access to residential properties and is approximately 0.27km in length.</p> <p>Hawea Road is classified as an Access road under the one network road classification (ONRC). Hawea Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hawea Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 312 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hawea Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Walker Road: 50 km/h (proposed 30 km/h)</li> <li>Smale Street: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Hawea Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hawea Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hayfield Way (Karaka)

The speed limit on Hayfield Way, Karaka has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hayfield Way connects to Oakland Road to the north and Fort Lincoln Loop to the south. This road provides access to residential properties and is approximately 0.89km in length.</p> <p>Hayfield Way is classified as a Secondary Collector road under the one network road classification (ONRC). Hayfield Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hayfield Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"Only occasional accesses and intersections are present. Surrounding land is rural with few houses and almost no industry."</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1591 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Hayfield Way has a mean operating speed in the range of 35-39km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Oakland Road: 50km/h (no proposed change)</li> <li>Fort Lincoln Loop: 50km/h (proposed 30km/h)</li> <li>Tumu Road: 50km/h (proposed 30km/h)</li> <li>Melody Belle Street: 50km/h (proposed 30km/h)</li> <li>Vespa Road: 50km/h (proposed 30km/h)</li> <li>Toporoa Street: 50km/h (proposed 30km/h)</li> <li>Songline Road: 50km/h (proposed 30km/h)</li> <li>Ockhams Street: 50km/h (proposed 30km/h)</li> <li>Te Ipukai Drive: 50km/h (proposed 30km/h)</li> <li>Patakatuna Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Hayfield Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.79. For urban areas this corresponds to an IRR band of **Low-Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Hayfield Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hazards Road (Weymouth)

The speed limit on Hazards Road, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hazards Road connects to Weymouth Road to the west and McInnes Road to the west. This road provides access to residential properties and is approximately 0.24km in length.</p> <p>Hazards Road is classified as an Access road under the one network road classification (ONRC). Hazards Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hazards Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 410 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hazards Road has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Weymouth Road: 50km/h (proposed 30km/h)</li> <li>• McInnes Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Hazards Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.66. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hazards Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Heidi Crescent (Flat Bush)

The speed limit on Heidi Crescent, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Heidi Crescent connects to Kensway Drive to the west and Plantation Avenue to the south. This road provides access to residential properties and is approximately 0.24km in length.</p> <p>Heidi Crescent is classified as an Access road under the one network road classification (ONRC). Heidi Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Heidi Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1534 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Heidi Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kensway Drive: 50km/h (proposed 30km/h)</li> <li>Plantation Avenue: 50km/h (proposed 30km/h)</li> <li>Dione Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Heidi Crescent has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Heidi Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hemi Street (Narrow Neck)

The speed limit on Hemi Street, Narrow Neck has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hemi Street connects to Old Lake Road to the south. This road provides access to residential properties and is approximately 0.28km in length.</p> <p>Hemi Street is classified as an Access road under the one network road classification (ONRC). Hemi Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hemi Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 270 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hemi Street has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Old Lake Road: 50km/h (no proposed change)</li> </ul>

#### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Hemi Street has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 1.66. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hemi Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hemopo Street (Pukekohe)

The speed limit on Hemopo Street, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hemopo Street connects to Adams Road South to the west and Te Manaki Street to the east. This road provides access to residential properties and is approximately 0.17km in length.</p> <p>Hemopo Street is classified as an Access road under the one network road classification (ONRC). Hemopo Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hemopo Street were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Hemopo Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Adams Road South: 100 km/h (proposed 30 km/h)</li> <li>Te Manaki Street: 50 km/h (proposed 30 km/h)</li> <li>Koropupu Street: 50 km/h (proposed 30 km/h)</li> <li>Raki Street: 50 km/h (proposed 30 km/h)</li> <li>Kapia Street: 50 km/h (proposed 30 km/h)</li> <li>Taikaranga Street: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Hemopo Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hemopo Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hendry Avenue (Hillsborough)

The speed limit on Hendry Avenue, Hillsborough has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hendry Avenue connects to Queenstown Road to the east and Kelsey Crescent to the west. This road provides access to residential properties and is approximately 0.90km in length.</p> <p>Hendry Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Hendry Avenue is a two-way, Two lane undivided. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Winding</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5 to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 3 to &lt;5 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 943 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hendry Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Queenstown Road: 50km/h (no proposed change)</li> <li>• Stephen Lysnar Place: 50km/h (proposed 30km/h)</li> <li>• Kelsey Crescent: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Hendry Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.37. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hendry Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Henry Curd Terrace (Pukekohe)

The speed limit on Henry Curd Terrace, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Henry Curd Terrace connects to Queen Street to the east. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Henry Curd Terrace is classified as an Access road under the one network road classification (ONRC). Henry Curd Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Henry Curd Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Henry Curd Terrace has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Queen Street: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Henry Curd Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.69. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Henry Curd Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Henry Partington Place (Greenhithe)

The speed limit on Henry Partington Place, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Henry Partington Place connects to William Gamble Drive to the west. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Henry Partington Place is classified as a Secondary Collector road under the one network road classification (ONRC). Henry Partington Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Henry Partington Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Henry Partington Place has a mean operating speed in the range of <30km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• William Gamble Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Henry Partington Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Henry Partington Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Herald Place (Otara)

The speed limit on Herald Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Herald Place connects to Sandbrook Avenue to the west. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Herald Place is classified as an Access road under the one network road classification (ONRC). Herald Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Herald Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Herald Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Sandbrook Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Herald Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Herald Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Heyford Close (Mangere)

The speed limit on Heyford Close, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Heyford Close connects to Mascot Avenue to the west. This road provides access to residential properties and is approximately 0.64km in length.</p> <p>Heyford Close is classified as a Secondary Collector road under the one network road classification (ONRC). Heyford Close is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: two minor crashes, one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Heyford Close were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 1 to &lt;2 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1216 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Heyford Close has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Mascot Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Heyford Close has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 2.11. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Heyford Close, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hibernian Drive (Ranui)

The speed limit on Hibernian Drive, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hibernian Drive connects to Dunbarton Drive to the north and Craiburn Street to the south. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Hibernian Drive is classified as an Access road under the one network road classification (ONRC). Hibernian Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hibernian Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 131 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Hibernian Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Dunbarton Drive: 50km/h (proposed 30km/h)</li> <li>Craiburn Street: 50km/h (proposed 30km/h)</li> <li>Drummond Drive: 50km/h (proposed 30km/h)</li> <li>Kilmarnock Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Hibernian Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hibernian Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hibiscus Drive (Orewa)

The speed limit on Hibiscus Drive, Orewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hibiscus Drive connects to Eaves Bush Parade to the north and Puriri Boulevard to the south. This road provides access to residential properties and is approximately 0.27km in length.</p> <p>Hibiscus Drive is classified as an Access road under the one network road classification (ONRC). Hibiscus Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hibiscus Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 52 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hibiscus Drive has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Eaves Bush Parade: 50km/h (proposed 30km/h)</li> <li>Puriri Boulevard: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Hibiscus Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hibiscus Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – High Street (Devonport)

The speed limit on High Street, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>High Street connects to Hastings Parade to the north and Calliope Road to the south. This road provides access to residential properties and is approximately 0.18km in length.</p> <p>High Street is classified as an Access road under the one network road classification (ONRC). High Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for High Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 560 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of High Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Hastings Parade: 50 km/h (proposed 30 km/h)</li> <li>Calliope Road: 50 km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps High Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for High Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – High Street (Otahuhu)

The speed limit on High Street, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>High Street connects to Water Street to the east and Atkinson Avenue to the west. This road provides access to residential properties and is approximately 0.51km in length.</p> <p>High Street is classified as a Secondary Collector road under the one network road classification (ONRC). High Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: one serious crash, two non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for High Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 5057 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of High Street has a mean operating speed in the range of <30km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Water Street: 50km/h (proposed 30km/h)</li> <li>• Atkinson Avenue: 50km/h (no proposed change)</li> <li>• Great south Road: 50km/h (no proposed change)</li> <li>• Jack Browne Place: 50km/h (proposed 30km/h)</li> <li>• Hutton Street between Princes Street and Fairburn Road: 50km/h (proposed 30km/h)</li> <li>• Church Street between Princes Street and Ngaio Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps High Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.94. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for High Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Highlight Parade (Te Atatu South)

The speed limit on Highlight Parade, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Highlight Parade connects to Jaemont Avenue to the south. This road provides access to residential properties and is approximately 0.15 km in length.</p> <p>Highlight Parade is classified as an access road under the one network road classification (ONRC). Highlight Parade is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 208 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Highlight Parade has a mean operating speed in the range of &lt;30 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Jaemont Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Highlight Parade has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.46 For urban areas this corresponds to an IRR band of **Medium High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Highlight Parade, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hill Street (Leigh)

The speed limit on Hill Street, Leigh has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hill Street connects to Harbour View Road to the north and Cotterell Street to the south. This road provides access to residential properties and is approximately 0.20km in length.</p> <p>Hill Street is classified as an Access road under the one network road classification (ONRC). Hill Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hill Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as rural towns using MegaMaps tool. The IRR defines rural towns as " <i>rural town with mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 332 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hill Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Harbour View Road: 50km/h (proposed 30km/h)</li> <li>• Cotterell Street: 50km/h (proposed 30km/h)</li> <li>• Totara Road: 50km/h (proposed 30km/h)</li> <li>• Cumberland Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Hill Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hill Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hillman Place (Ranui)

The speed limit on Hillman Place, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hillman Place connects to Karepo Crescent to the north. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Hillman Place is classified as an Access road under the one network road classification (ONRC). Hillman Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hillman Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 413 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Hillman Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Karepo Crescent: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Hillman Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hillman Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hills Road (Otara)

The speed limit on Hills Road, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hills Road connects to Johnstones Road to the north and East Tamaki Road to the south. This road provides access to residential properties and is approximately 0.98km in length.</p> <p>Hills Road is classified as an Access road under the one network road classification (ONRC). Hills Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records eleven crashes between 2016 and 2020. Two minor and nine non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hills Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5 to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4747 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hills Road has a mean operating speed in the range of 35-39km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Berrett Place: 50km/h (proposed 30km/h)</li> <li>• Grant Avenue: 50km/h (proposed 30km/h)</li> <li>• Williams Crescent: 50km/h (proposed 30km/h)</li> <li>• Velvet Crescent: 50km/h (proposed 30km/h)</li> <li>• Gubb Place: 50km/h (proposed 30km/h)</li> <li>• Hamill Road: 50km/h (proposed 30km/h)</li> <li>• Carey Place: 50km/h (proposed 30km/h)</li> <li>• Grundy Place: 50km/h (proposed 30km/h)</li> <li>• East Tamaki Road: 60km/h (no proposed change)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Hills Road has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hills Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hinekohu Street (Kelston)

The speed limit on Hinekohu Street, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hinekohu Street connects to Miro Street to the north and Rewa Street to the west. This road provides access to residential properties and is approximately 0.28km in length.</p> <p>Hinekohu Street is classified as a Secondary Collector road under the one network road classification (ONRC). Hinekohu Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hinekohu Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 165 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Hinekohu Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Miro Street: 50km/h (proposed 30km/h)</li> <li>Rewa Street: 50km/h (proposed 30km/h)</li> <li>Rimu Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Hinekohu Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.18. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hinekohu Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hinton Place (Weymouth)

The speed limit on Hinton Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hinton Place connects to Becker Drive to the west. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Hinton Place is classified as an Access road under the one network road classification (ONRC). Hinton Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hinton Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hinton Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Becker Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Hinton Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hinton Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hitori Street (Weymouth)

The speed limit on Hitori Street, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hitori Street connects to Ipukarea Street to the north and Kaimoana Street to the south. This road provides access to residential properties and is approximately 0.19km in length.</p> <p>Hitori Street is classified as an Access road under the one network road classification (ONRC). Hitori Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hitori Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Hitori Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ipukarea Street: 50km/h (proposed 30km/h)</li> <li>Kaimoana Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Hitori Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hitori Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hochstetter Place (Stonefields)

The speed limit on Hochstetter Place, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hochstetter Place connects to Korere Terrace to the north. This road provides access to residential properties and is approximately 0.42km in length.</p> <p>Hochstetter Place is classified as an Access road under the one network road classification (ONRC). Hochstetter Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hochstetter Place were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 312 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hochstetter Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Korere Terrace: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Hochstetter Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hochstetter Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hoiho Road (Pukekohe)

The speed limit on Hoiho Road, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hoiho Road connects to Jutland Road to the west and Piripono Crescent to the east. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Hoiho Road is classified as an Access road under the one network road classification (ONRC). Hoiho Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hoiho Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 30 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Hoiho Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Jutland Road: 50km/h (proposed 30km/h)</li> <li>Piripono Crescent: 50km/h (proposed 30km/h)</li> <li>Pinto Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Hoiho Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hoiho Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hokioi Street (Karaka)

The speed limit on Hokioi Street, Karaka has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hokioi Street connects to Karera Road to the north. This road provides access to residential properties and is approximately 0.03km in length.</p> <p>Hokioi Street is classified as an Access road under the one network road classification (ONRC). Hokioi Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hokioi Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hokioi Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Karera Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Hokioi Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.04. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hokioi Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Honey Place (Weymouth)

The speed limit on Honey Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Honey Place connects to Gibbons Road to the north. This road provides access to residential properties and is approximately 0.14km in length.</p> <p>Honey Place is classified as an Access road under the one network road classification (ONRC). Honey Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Honey Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 170 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Honey Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Gibbons Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Honey Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Honey Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hooten Place (Oteha)

The speed limit on Hooten Place, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hooten Place connects to Fernhill Way to the north and Pocock Lane to the south. This road provides access to residential properties and is approximately 0.17km in length.</p> <p>Hooten Place is classified as an Access road under the one network road classification (ONRC). Hooten Place is a two-way, Two lane undivided road. There are pedestrian amenities and partial on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hooten Place were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hooten Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Fernhill Way: 50km/h (proposed 30km/h)</li> <li>Pocock Lane: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Hooten Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hooten Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Horizon View Road (Oteha)

The speed limit on Horizon View Road, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Horizon View Road connects to Fields Parade to the west. This road provides access to residential properties and is approximately 0.18km in length.</p> <p>Horizon View Road is classified as a Primary Collector road under the one network road classification (ONRC). Horizon View Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Horizon View Road were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Horizon View Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Fields Parade: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Horizon View Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Horizon View Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Horoeaka Avenue (Mount Eden)

The speed limit on Horoeaka Avenue, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Horoeaka Avenue connects to View Road to the north and Valley Road to the south. This road provides access to residential properties and is approximately 0.44km in length.</p> <p>Horoeaka Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Horoeaka Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Horoeaka Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2429 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Horoeoka Avenue has a mean operating speed in the range of 30-34km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• View Road: 50km/h (proposed 30km/h)</li> <li>• Bellevue Road: 50km/h (proposed 30km/h)</li> <li>• Valley Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Horoeoka Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.22. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Horoeoka Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Horopito Street (Mount Eden)

The speed limit on Horopito Street, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Horopito Street connects to Dominion Road to the west. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Horopito Street is classified as a Access road under the one network road classification (ONRC). Horopito Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Horopito Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 312 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Horopito Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Dominion Road: 50km/h (no proposed change)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Horopito Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.79. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Horopito Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hoskins Avenue (Hillsborough)

The speed limit on Hoskins Avenue, Hillsborough has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hoskins Avenue connects to Foote Street to the east. This road provides access to residential properties and is approximately 0.62km in length.</p> <p>Hoskins Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Hoskins Avenue is a two-way, Two lane undivided. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 524 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hoskins Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Foote Street: 50km/h (proposed 30km/h)</li> <li>• Frederick Street: 50km/h (proposed 30km/h)</li> <li>• Bagley Street: 50km/h (proposed 30km/h)</li> <li>• Filgate Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Hoskins Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hoskins Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – House Avenue (Mangere Bridge)

The speed limit on House Avenue, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>House Avenue connects to Kiwi Esplanade to the north and Muir Avenue to the south. This road provides access to residential properties and is approximately 0.61km in length.</p> <p>House Avenue is classified as an Access road under the one network road classification (ONRC). House Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for House Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 462 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of House Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kiwi Esplanade: 50km/h (proposed 30km/h)</li> <li>Muir Avenue: 50km/h (proposed 30km/h)</li> <li>Watervista Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps House Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for House Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Huamanu Street (Pukekohe)

The speed limit on Huamanu Street, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Huamanu Street connects to Adams Road South to the west and Te Manaki Street to the east. This road provides access to residential properties and is approximately 0.34km in length.</p> <p>Huamanu Street is classified as an Access road under the one network road classification (ONRC). Huamanu Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Huamanu Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Huamanu Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Adams Road South: 100km/h (proposed 30km/h)</li> <li>• Te Manaki Street: 50km/h (proposed 30km/h)</li> <li>• Raki Street: 50km/h (proposed 30km/h)</li> <li>• Marire Place: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Huamanu Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Huamanu Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Huber Street (Weymouth)

The speed limit on Huber Street, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Huber Street connects to Gibbons Road to the north and Waimai Avenue to the south. This road provides access to residential properties and is approximately 0.22km in length.</p> <p>Huber Street is classified as an Access road under the one network road classification (ONRC). Huber Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Huber Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 291 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Huber Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Gibbons Road: 50km/h (proposed 30km/h)</li> <li>Waimai Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Huber Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Huber Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hughdene Place (Henderson)

The speed limit on Hughdene Place, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hughdene Place connects to Glen Norman Avenue to the north. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Hughdene Place is classified as a Access road under the one network road classification (ONRC). Hughdene Place is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hughdene Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hughdene Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Glen Norman Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Hughdene Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hughdene Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Humariri Street (Point Chevalier)

The speed limit on Humariri Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Humariri Street connects to Point Chevalier Road to the east and Wilson Carlile Street to the west. This road provides access to residential properties and is approximately 0.28km in length.</p> <p>Humariri Street is classified as an Access road under the one network road classification (ONRC). Humariri Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Humariri Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 312 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Humariri Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Point Chevalier Road: 50 km/h (proposed 30 km/h)</li> <li>Wilson Carlile Street: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Humariri Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Humariri Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Humphreys Place (Mangere)

The speed limit on Humphreys Place, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Humphreys Place connects to Ashgrove Road to the west. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Humphreys Place is classified as an Access road under the one network road classification (ONRC). Humphreys Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Humphreys Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 140 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Humphreys Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ashgrove Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Humphreys Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Humphreys Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Huntington Park Drive (Greenhithe)

The speed limit on Huntington Park Drive, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Huntington Park Drive connects to Kyle Road to the west. This road provides access to residential properties and is approximately 0.45km in length.</p> <p>Huntington Park Drive is classified as a Secondary Collector road under the one network road classification (ONRC). Huntington Park Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Huntington Park Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Huntington Park Drive has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kyle Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Huntington Park Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.00. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Huntington Park Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hurley Place (Kelston)

The speed limit on Hurley Place, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hurley Place connects to Daphne Street to the west and Laura Street to the south. This road provides access to residential properties and is approximately 0.87km in length.</p> <p>Hurley Place is classified as an Access road under the one network road classification (ONRC). Hurley Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hurley Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 268 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Hurley Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Daphne Street: 50km/h (proposed 30km/h)</li> <li>Laura Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Hurley Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hurley Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hutton Street (Otahuhu)

The speed limit on Hutton Street, Otahuhu, between Princes Street and Fairburn Road, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hutton Street connects to Princes Street to the north and Fairburn Road to the south. This road provides access to residential properties and is approximately 1.09km in length.</p> <p>Hutton Street is classified as a Secondary Collector road under the one network road classification (ONRC). Hutton Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: six non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hutton Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1081 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Hutton Street has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Princes Street: 50km/h (no proposed change)</li> <li>• Fairburn Road: 50km/h (proposed 30km/h)</li> <li>• Avenue Road between Atkinson Avenue and the eastern end of Atkinson Avenue: 50km/h (proposed 30km/h)</li> <li>• High Street: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Hutton Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.70. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hutton Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Hyde Street (Manurewa East)

The speed limit on Hyde Street, Manurewa East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Hyde Street connects to Fleming Street to the west. This road provides access to residential properties and is approximately 0.21km in length.</p> <p>Hyde Street is classified as an Access road under the one network road classification (ONRC). Hyde Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Hyde Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 400 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Hyde Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Fleming Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Hyde Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Hyde Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ilford Crescent (Mangere)

The speed limit on Ilford Crescent, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ilford Crescent connects to Kenton Lane to the north and Ashgrove Road to the west. This road provides access to residential properties and is approximately 0.53km in length.</p> <p>Ilford Crescent is classified as an Access road under the one network road classification (ONRC). Ilford Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ilford Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 228 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ilford Crescent has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kenton Lane: 50km/h (proposed 30km/h)</li> <li>• Ashgrove Road: 50km/h (proposed 30km/h)</li> <li>• Kelburn Lane: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Ilford Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ilford Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Imrie Avenue (Mangere)

The speed limit on Imrie Avenue, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Imrie Avenue connects to Massey Road to the east and Friesian Drive to the west. This road provides access to residential properties and is approximately 0.65km in length.</p> <p>Imrie Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Imrie Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Imrie Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2012 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Imrie Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Massey Road: 50km/h (no proposed change)</li> <li>Friesian Drive: 50km/h (proposed 30km/h)</li> <li>Tranent Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Imrie Avenue has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Imrie Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ingleby Place (Kelston)

The speed limit on Ingleby Place, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ingleby Place connects to Cobham Crescent to the west. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Ingleby Place is classified as an Access road under the one network road classification (ONRC). Ingleby Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ingleby Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 10+ per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 130 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ingleby Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Cobham Crescent: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Ingleby Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.18. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ingleby Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ingram Crescent (Otara)

The speed limit on Ingram Crescent, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ingram Crescent connects to Bairds Road to the south. This road provides access to residential properties and is approximately 0.32km in length.</p> <p>Ingram Crescent is classified as an Access road under the one network road classification (ONRC). Ingram Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ingram Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 187 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ingram Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Bairds Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ingram Crescent has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ingram Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ipukarea Street (Weymouth)

The speed limit on Ipukarea Street, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ipukarea Street connects to Leaver Place to the north and Kaimoana Street to the south. This road provides access to residential properties and is approximately 0.39km in length.</p> <p>Ipukarea Street is classified as an Access road under the one network road classification (ONRC). Ipukarea Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ipukarea Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Ipukarea Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Leaver Place: 50km/h (proposed 30km/h)</li> <li>• Kaimoana Street: 50km/h (proposed 30km/h)</li> <li>• Kuurae Crescent: 50km/h (proposed 30km/h)</li> <li>• Apa Street: 50km/h (proposed 30km/h)</li> <li>• Hitori Street: 50km/h (proposed 30km/h)</li> <li>• Taiaapure Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Ipukarea Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ipukarea Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Ivon Road (Otara)

The speed limit on Ivon Road, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Ivon Road connects to Capstick Road to the north and Ferguson Road to the south. This road provides access to residential properties and is approximately 0.29km in length.</p> <p>Ivon Road is classified as an Access road under the one network road classification (ONRC). Ivon Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Ivon Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 197 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Ivon Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Capstick Road: 50km/h (proposed 30km/h)</li> <li>Ferguson Road: 50km/h (proposed 30km/h)</li> <li>Sandra Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Ivon Road has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Ivon Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Jacaranda Court (Pukekohe)

The speed limit on Jacaranda Court, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Jacaranda Court connects to Wellington Street to the east. This road provides access to residential properties and is approximately 0.16km in length.</p> <p>Jacaranda Court is classified as an Access road under the one network road classification (ONRC). Jacaranda Court is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Jacaranda Court were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Wide shoulder (1.0m to &lt;2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> &lt;1 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2001 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Jacaranda Court has a mean operating speed in the range of 30-34km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Wellington Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Jacaranda Court has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 1.81. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Jacaranda Court, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Jack Browne Place (Otahuhu)

The speed limit on Jack Browne Place, Otahuhu has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Jack Browne Place connects to High Street to the north. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Jack Browne Place is classified as an Access road under the one network road classification (ONRC). Jack Browne Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Jack Browne Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 110 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Jack Browne Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>High Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Jack Browne Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.34. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Jack Browne Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Jack Clark Way (Point Chevalier)

The speed limit on Jack Clark Way, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Jack Clark Way connects to St Francis Crescent to the south and Wilson Carlile Street to the north. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Jack Clark Way is classified as an Access road under the one network road classification (ONRC). Jack Clark Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Jack Clark Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 150 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Jack Clark Way has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• St Francis Crescent: 50 km/h (proposed 30 km/h)</li> <li>• Wilson Carlile Street: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Jack Clark Way has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Jack Clark Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Jaemont Avenue (Te Atatu South)

The speed limit on Jaemont Avenue, Te Atatu South has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Jaemont Avenue connects to Te Atatu Road to the west. This road provides access to residential properties and is approximately 0.80 km in length.</p> <p>Jaemont Avenue is classified as a secondary collector road under the one network road classification (ONRC). Jaemont Avenue is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records five crashes between 2016 and 2020: one serious injury, two minor injury, and two non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 698 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Jaemont Avenue has a mean operating speed in the range of 30-34 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Te Atatu Road: 50 km/h</li> <li>Sunrise Lane: 50 km/h (proposed 30 km/h)</li> <li>Highlight Parade: 50 km/h (proposed 30 km/h)</li> <li>Merchant Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Jaemont Avenue has the following information:

- Collective Risk band of **Low Medium**, and a Personal Risk band of **Medium-High**
- The Infrastructure Risk Rating Score is 2.46 For urban areas this corresponds to an IRR band of **Medium High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Jaemont Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – Jan Place (Pakuranga)**

The speed limit on Jan Place, Pakuranga has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Jan Place connects to Tiraumea Drive to the north and Aurea Avenue to the south. This road provides access to residential properties and is approximately 0.10 km in length.</p> <p>Jan Place is classified as a secondary collector road under the one network road classification (ONRC). Jan Place is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 10+ intersections per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1591 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Jan Place has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Tiraumea Drive: 50 km/h (proposed 30 km/h)</li> <li>• Aurea Avenue: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Jan Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.58 For urban areas this corresponds to an IRR band of **Medium High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Jan Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Janese Place (Weymouth)

The speed limit on Janese Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Janese Place connects to Etherton Drive to the west. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Janese Place is classified as an Access road under the one network road classification (ONRC). Janese Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Janese Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 120 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Janese Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Etherton Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Janese Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Janese Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Janway Avenue (Flat Bush)

The speed limit on Janway Avenue, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Janway Avenue connects to Kensway Drive to the east and Kestev Drive to the south. This road provides access to residential properties and is approximately 0.22km in length.</p> <p>Janway Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Janway Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Janway Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1258 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Janway Avenue has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kensway Drive: 50km/h (proposed 30km/h)</li> <li>• Kestev Drive: 50km/h (proposed 30km/h)</li> <li>• Lorenzo Way: 50km/h (proposed 30km/h)</li> <li>• Bezar Place: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Janway Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Janway Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Jenkins Place (Manurewa East)

The speed limit on Jenkins Place, Manurewa East has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Jenkins Place connects to Sterling Avenue to the west. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Jenkins Place is classified as an Access road under the one network road classification (ONRC). Jenkins Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Jenkins Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 748 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Jenkins Place has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Sterling Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Jenkins Place has the following information:

- o Collective Risk band of **Low Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 1.66. For urban areas this corresponds to an IRR band of **Low Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Jenkins Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Jim Titchener Parade (Devonport)

The speed limit on Jim Titchener Parade, Devonport has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Jim Titchener Parade connects to Mozeley Avenue to the east and Ewen Alison Avenue to the south. This road provides access to residential properties and is approximately 0.40km in length.</p> <p>Jim Titchener Parade is classified as a Secondary Collector road under the one network road classification (ONRC). Jim Titchener Parade is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Jim Titchener Parade were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as commercial big box/Industrial using MegaMaps tool. The IRR defines commercial big box/Industrial as " <i>large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be present.</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1206 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Jim Titchener Parade has a mean operating speed in the range of 35-39km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Mozeley Avenue: 50km/h (proposed 30km/h)</li> <li>• Ewen Alison Avenue: 50km/h (proposed 30km/h)</li> <li>• Patuone Avenue: 50km/h (proposed 30km/h)</li> <li>• Patuone Place: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Jim Titchener Parade has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.02. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Jim Titchener Parade, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Joan Street (Point Chevalier)

The speed limit on Joan Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Joan Street connects to Harbour View Road to the west and Point Chevalier Road to the east. This road provides access to residential properties and is approximately 0.89km in length.</p> <p>Joan Street is classified as an Access road under the one network road classification (ONRC). Joan Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Joan Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Joan Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Point Chevalier Road: 50 km/h (proposed 30 km/h)</li> <li>Harbour View Road: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Joan Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.55. For urban areas this corresponds to an IRR band of **Low**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Joan Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## **Speed Limit Review – John Gill Road (Cockle Bay)**

The speed limit on John Gill Road, Cockle Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### **Step 1: Determine the base information**

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

<b>Requirement</b>	<b>Comments</b>
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>John Gill Road connects to Churchill Road to the north and Sandspit Road to the south. This road provides access to residential properties and is approximately 0.91 km in length.</p> <p>John Gill Road is classified as a secondary collector road under the one network road classification (ONRC). John Gill Road is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one serious and one minor injury crash. This resulted in one Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ intersections per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 508 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of John Gill Road has a mean operating speed in the range of 30-34 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Sandspit Road: 50 km/h</li> <li>• Churchill Road: 50 km/h</li> <li>• Trident Place: 50 km/h (proposed 30 km/h)</li> <li>• Cyclades Place: 50 km/h (proposed 30 km/h)</li> <li>• Sunnyview Avenue: 50 km/h (proposed 30 km/h)</li> <li>• Aries Place: 50 km/h (proposed 30 km/h)</li> <li>• Clipper Place: 50 km/h (proposed 30 km/h)</li> <li>• Advene Road: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps John Gill Road has the following information:

- o Collective Risk band of **Low Medium**, and a Personal Risk band of **Medium High**
- o The Infrastructure Risk Rating Score is 2.44 For urban areas this corresponds to an IRR band of **Medium High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for John Gill Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – John Jennings Drive (Oteha)

The speed limit on John Jennings Drive, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>John Jennings Drive connects to Fields Parade to the east and Canyon Drive to the south. This road provides access to residential properties and is approximately 0.26km in length.</p> <p>John Jennings Drive is classified as an Access road under the one network road classification (ONRC). John Jennings Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for John Jennings Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 104 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of John Jennings Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Fields Parade: 50km/h (proposed 30km/h)</li> <li>Canyon Drive: 50km/h (proposed 30km/h)</li> <li>Andersons Road: 50km/h (proposed 30km/h)</li> <li>Ravine Lane: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps John Jennings Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for John Jennings Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Johnstone Street (Point Chevalier)

The speed limit on Johnstone Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Johnstone Street connects to Point Chevalier Road to the west. This road provides access to residential properties and is approximately 0.24km in length.</p> <p>Johnstone Street is classified as an Access road under the one network road classification (ONRC). Johnstone Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Johnstone Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 312 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Johnstone Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Point Chevalier Road: 50 km/h (proposed 30 km/h)</li> <li>• Bungalow Avenue: 50 km/h (proposed 30 km/h)</li> <li>• Bangor Street: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Johnstone Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Johnstone Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Johnstones Road (Otago)

The speed limit on Johnstones Road, Otago has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Johnstones Road connects to Springs Road to the east. This road provides access to residential properties and is approximately 0.81km in length.</p> <p>Johnstones Road is classified as a Secondary Collector road under the one network road classification (ONRC). Johnstones Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records seven crashes between 2016 and 2020: two minor and five non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Johnstones Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5 to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1915 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Johnstones Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tyrone Street: 50km/h (proposed 30km/h)</li> <li>Hills Road: 50km/h (proposed 30km/h)</li> <li>Hamill Road: 50km/h (proposed 30km/h)</li> <li>Pearl Baker Drive: 50km/h (proposed 30km/h)</li> <li>Clarkson Crescent: 50km/h (proposed 30km/h)</li> <li>Lester Lane: 50km/h (proposed 30km/h)</li> <li>Largo Lane: 50km/h (proposed 30km/h)</li> <li>Eileen Lane: 50km/h (proposed 30km/h)</li> <li>Springs Road: 60km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Johnstones Road has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 2.49. For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Johnstones Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Jolson Road (Mt Wellington)

The speed limit on Jolson Road, Mt Wellington has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Jolson Road connects to Panama Road to the west and Tuapapa Way to the south. This road provides access to residential properties and is approximately 0.61km in length.</p> <p>Jolson Road is classified as a Secondary Collector road under the one network road classification (ONRC). Jolson Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: one minor crash, two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Jolson Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1352 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Jolson Road has a mean operating speed in the range of 30-34km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Panama Road: 50km/h (proposed 30km/h)</li> <li>• Tuapapa Way: 50km/h (proposed 30km/h)</li> <li>• Runa Place: 50km/h (proposed 30km/h)</li> <li>• Bernard Street: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Jolson Road has the following information:

- o Collective Risk band of **Medium-High**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 2.55. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Jolson Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Jordan Road (Mangere)

The speed limit on Jordan Road, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Jordan Road connects to Thomas Road to the east and Kirkbride Road to the south. This road provides access to residential properties and is approximately 0.35km in length.</p> <p>Jordan Road is classified as a Primary Collector road under the one network road classification (ONRC). Jordan Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Jordan Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 3754 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Jordan Road has a mean operating speed in the range of 33km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Thomas Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Jordan Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Jordan Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Jordan Road is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Joshua Place (Weymouth)

The speed limit on Joshua Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Joshua Place connects to Becker Drive to the north. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Joshua Place is classified as an Access road under the one network road classification (ONRC). Joshua Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Joshua Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Joshua Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Becker Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Joshua Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Joshua Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Judge Street (Parnell)

The speed limit on Judge Street, Parnell has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Judge Street connects to Saint Stephens Avenue to the east. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Judge Street is classified as an Access road under the one network road classification (ONRC). Judge Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Judge Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 200 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Judge Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Saint Stephens Avenue between Gladstone Road and the northern end of Saint Stephens Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Judge Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Judge Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Judges Bay Road (Parnell)

The speed limit on Judges Bay Road, Parnell has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Judges Bay Road connects to Gladstone Road to the east and Bridgewater Road to the west. This road provides access to residential properties and is approximately 0.31km in length.</p> <p>Judges Bay Road is classified as an Access road under the one network road classification (ONRC). Judges Bay Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor crash, one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Judges Bay Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Judges Bay Road has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Gladstone Road: 50km/h (no proposed change)</li> <li>• Bridgewater Road: 50km/h (proposed 30km/h)</li> <li>• Taurarua Terrace: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Judges Bay Road has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **High**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Judges Bay Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Judith Anne Drive (Pukekohe)

The speed limit on Judith Anne Drive, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Judith Anne Drive connects to Green Lane to the west. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Judith Anne Drive is classified as an Access road under the one network road classification (ONRC). Judith Anne Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Judith Anne Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 4 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Judith Anne Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Green Lane: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Judith Anne Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Judith Anne Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Judkins Crescent (Cockle Bay)

The speed limit on Judkins Crescent, Cockle Bay has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Judkins Crescent connects to Advene Road to the south. This road provides access to residential properties and is approximately 0.48 km in length.</p> <p>Judkins Crescent is classified as an access road under the one network road classification (ONRC). Judkins Crescent is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 291 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Judkins Crescent has a mean operating speed in the range of <30 km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Advene Road: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Judkins Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.17 For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30 km/h*

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Judkins Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Jukes Place (Otara)

The speed limit on Jukes Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Jukes Place connects to Bairds Road to the east. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Jukes Place is classified as an Access road under the one network road classification (ONRC). Jukes Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Jukes Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 110 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Jukes Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Bairds Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Jukes Place has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Jukes Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Justamere Place (Weymouth)

The speed limit on Justamere Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Justamere Place connects to Waimahia Avenue to the south. This road provides access to residential properties and is approximately 0.18km in length.</p> <p>Justamere Place is classified as an Access road under the one network road classification (ONRC). Justamere Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Justamere Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 210 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Justamere Place has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Waimahia Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Justamere Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Justamere Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Jutland Road (Pukekohe)

The speed limit on Jutland Road, Pukekohe, between Victoria Street West and the northern end of Jutland Road, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Jutland Road connects to Belmont Road to the south. This road provides access to residential properties and is approximately 0.91km in length.</p> <p>Jutland Road is classified as an Access road under the one network road classification (ONRC). Jutland Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Jutland Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Jutland Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Belmont Road: 50km/h (proposed 30km/h)</li> <li>Taikaranga Street: 50km/h (proposed 30km/h)</li> <li>Princes Street West: 50km/h (proposed 30km/h)</li> <li>Tawhiti Road: 50km/h (proposed 30km/h)</li> <li>Raoriki Road: 50km/h (proposed 30km/h)</li> <li>Piripono Crescent: 50km/h (proposed 30km/h)</li> <li>Hoiho Road: 50km/h (proposed 30km/h)</li> <li>Victoria Street West: 50km/h (no proposed change)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Jutland Road has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Jutland Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kaakahoa Road (Karaka)

The speed limit on Kaakahoa Road, Karaka has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kaakahoa Road connects to Pataka Close to the south. This road provides access to residential properties and is approximately 0.04km in length.</p> <p>Kaakahoa Road is classified as an Access road under the one network road classification (ONRC). Kaakahoa Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kaakahoa Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kaakahoa Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Pataka Close: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kaakahoa Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.04. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kaakahoa Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kaimoana Street (Weymouth)

The speed limit on Kaimoana Street, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kaimoana Street connects to Ipukarea Street to the north and Waimahia Avenue to the south. This road provides access to residential properties and is approximately 0.81km in length.</p> <p>Kaimoana Street is classified as an Access road under the one network road classification (ONRC). Kaimoana Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kaimoana Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kaimoana Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ipukarea Street: 50km/h (proposed 30km/h)</li> <li>Waimahia Avenue: 50km/h (proposed 30km/h)</li> <li>Hitori Street: 50km/h (proposed 30km/h)</li> <li>Kuparu Street: 50km/h (proposed 30km/h)</li> <li>Tonuitanga Street: 50km/h (proposed 30km/h)</li> <li>Becker Drive: 50km/h (proposed 30km/h)</li> <li>Taiaapure Street: 50km/h (proposed 30km/h)</li> <li>Tutuwhatu Crescent: 50km/h (proposed 30km/h)</li> <li>Weymouth Road: 50km/h (proposed 30km/h)</li> <li>Taitimu Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kaimoana Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kaimoana Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kalmia Street (Eilerslie)

The speed limit on Kalmia Street, Eilerslie has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kalmia Street connects to Main Highway to the north and Great South Road to the south. This road provides access to residential properties and is approximately 0.48km in length.</p> <p>Kalmia Street is classified as a Primary collector road under the one network road classification (ONRC). Kalmia Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: two minor and four non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kalmia Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and Very wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Commercial big box/industrial using MegaMaps tool. The IRR defines Urban Residential as " <i>Large (big box) shops and/or industry/factories with intermittent large accessways and intersections leading to large car parking areas. Regular intersections and smaller accesses are also likely to be present. Some pedestrian and cyclist activity may be</i> "

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 5 to &lt;10 accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 6745 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kalmia Street has a mean operating speed in the range of 35-39km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Sultan Street: 50km/h (proposed 30km/h)</li> <li>• Stanway Place: 50km/h (proposed 30km/h)</li> <li>• Main Highway: 50km/h (no proposed change)</li> <li>• Great South Road: 50km/h (no proposed change)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kalmia Street has the following information:

- o Collective Risk band of **Medium**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kalmia Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kamahi Street (Mount Eden)

The speed limit on Kamahi Street, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kamahi Street connects to Leamington Road to the west. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Kamahi Street is classified as a Access road under the one network road classification (ONRC). Kamahi Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kamahi Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5 to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 150 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kamahi Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Leamington Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kamahi Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.34. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kamahi Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kapia Street (Pukekohe)

The speed limit on Kapia Street, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kapia Street connects to Tawhiti Road to the north and Hempopo Street to the south. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Kapia Street is classified as an Access road under the one network road classification (ONRC). Kapia Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kapia Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kapia Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Tawhiti Road: 50km/h (proposed 30km/h)</li> <li>Hempopo Street: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kapia Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kapia Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Karaka Street (Kelston)

The speed limit on Karaka Street, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Karaka Street connects to Rimu Street to the north. This road provides access to residential properties and is approximately 0.26km in length.</p> <p>Karaka Street is classified as an Access road under the one network road classification (ONRC). Karaka Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Karaka Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 350 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Karaka Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Rimu Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Karaka Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.66. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Karaka Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kare Ariki Place (Pukekohe)

The speed limit on Kare Ariki Place, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kare Ariki Place connects to Te Manaki Street to the west and Matikao Place to the east. This road provides access to residential properties and is approximately 0.24km in length.</p> <p>Kare Ariki Place is classified as an Access road under the one network road classification (ONRC). Kare Ariki Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kare Ariki Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kare Ariki Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Te Manaki Street: 50km/h (proposed 30km/h)</li> <li>• Matikao Place: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kare Ariki Place has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kare Ariki Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Karepo Crescent (Ranui)

The speed limit on Karepo Crescent, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Karepo Crescent connects to Glen Road to the east and Waitemata Drive to the west. This road provides access to residential properties and is approximately 0.38km in length.</p> <p>Karepo Crescent is classified as an Access road under the one network road classification (ONRC). Karepo Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Karepo Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 413 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Karepo Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Glen Road: 50km/h (proposed 30km/h)</li> <li>Waitemata Drive between Luanda Drive and the northern end of Waitemata Drive: 50km/h (proposed 30km/h)</li> <li>Hillman Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Karepo Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Karepo Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Karera Road (Karaka)**

The speed limit on Karera Road, Karaka has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Karera Road connects to Oakland Road to the north and Mataitai Way to the south. This road provides access to residential properties and is approximately 0.54km in length.</p> <p>Karera Road is classified as an Access road under the one network road classification (ONRC). Karera Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Karera Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Karera Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Oakland Road: 50km/h (no proposed change)</li> <li>• Mataitai Way: 50km/h (proposed 30km/h)</li> <li>• Hokioi Street: 50km/h (proposed 30km/h)</li> <li>• Pataka Close: 50km/h (proposed 30km/h)</li> <li>• Peketua Street: 50km/h (proposed 30km/h)</li> <li>• Tuarongo Road: 50km/h (proposed 30km/h)</li> <li>• Patakatuna Drive: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Karera Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.04. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Karera Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Karson Place (Flat Bush)

The speed limit on Karson Place, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Karson Place connects to Cyril French Drive to the south and Oswald Close to the south. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Karson Place is classified as an Access road under the one network road classification (ONRC). Karson Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Karson Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 228 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Karson Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Cyril French Drive: 50km/h (proposed 30km/h)</li> <li>Oswald Close: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Karson Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Karson Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Katoa Street (Point Chevalier)

The speed limit on Katoa Street, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Katoa Street connects to Huamariri Street to the north and Target Street to the south. This road provides access to residential properties and is approximately 0.09km in length.</p> <p>Katoa Street is classified as an Access road under the one network road classification (ONRC). Katoa Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Katoa Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 312 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Katoa Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Humariri Street: 50 km/h (proposed 30 km/h)</li> <li>• Target Street: 50 km/h (proposed 30 km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Katoa Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Katoa Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kauriki Terrace (Stonefields)

The speed limit on Kauriki Terrace, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kauriki Terrace connects to Stonefields Avenue to the north and Tihi Street to the east. This road provides access to residential properties and is approximately 0.44km in length.</p> <p>Kauriki Terrace is classified as an Access road under the one network road classification (ONRC). Kauriki Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kauriki Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kauriki Terrace has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Tihi Street: 50km/h (proposed 30km/h)</li> <li>Stonefields Avenue: 50km/h (proposed 30km/h)</li> <li>Aruhe Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kauriki Terrace has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kauriki Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kauru Way (Karakaka)

The speed limit on Kauru Way, Karaka has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kauru Way connects to Patakatuna Drive to the north and Te Ipukai Drive to the south. This road provides access to residential properties and is approximately 0.17km in length.</p> <p>Kauru Way is classified as an Access road under the one network road classification (ONRC). Kauru Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kauru Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kauru Way has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Patakatuna Drive: 50km/h (proposed 30km/h)</li> <li>• Te Ipukai Drive: 50km/h (proposed 30km/h)</li> <li>• Umuti Lane: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kauru Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.04. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kauru Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kawaka Street (Mount Eden)

The speed limit on Kawaka Street, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kawaka Street connects to View Road to the south. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Kawaka Street is classified as a Access road under the one network road classification (ONRC). Kawaka Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kawaka Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kawaka Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>View Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kawaka Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kawaka Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kealy Road (Mt Wellington)

The speed limit on Kealy Road, Mt Wellington has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kealy Road connects to Bernard Street to the east and Panama Road to the west. This road provides access to residential properties and is approximately 0.23km in length.</p> <p>Kealy Road is classified as an Access road under the one network road classification (ONRC). Kealy Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kealy Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 208 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kealy Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Bernard Street: 50km/h (proposed 30km/h)</li> <li>Panama Road: 50km/h (proposed 30km/h)</li> <li>Ataahua Lane: 50km/h (proposed 30km/h)</li> <li>Rerehua Lane: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kealy Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.69. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kealy Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Keegan Drive (Massey)

The speed limit on Keegan Drive, Massey has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Keegan Drive connects to Triangle Road to the north and Waimumu Road to the south. This road provides access to residential properties and is approximately 0.71km in length.</p> <p>Keegan Drive is classified as a Secondary Collector road under the one network road classification (ONRC). Keegan Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Keegan Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1268 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Keegan Drive has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Triangle Road: 50km/h (no proposed change)</li> <li>• Waimumu Road: 50km/h (no proposed change)</li> <li>• Lilburn Crescent: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Keegan Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.31. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Keegan Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kelburn Lane (Mangere)

The speed limit on Kelburn Lane, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kelburn Lane connects to Ilford Crescent to the south. This road provides access to residential properties and is approximately 0.53km in length.</p> <p>Kelburn Lane is classified as an Access road under the one network road classification (ONRC). Kelburn Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kelburn Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 228 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kelburn Lane has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ilford Crescent: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kelburn Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kelburn Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kelkirk Street (Kelston)

The speed limit on Kelkirk Street, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kelkirk Street connects to Daphne Street to the east and Barbary Avenue to the south. This road provides access to residential properties and is approximately 0.24km in length.</p> <p>Kelkirk Street is classified as an Access road under the one network road classification (ONRC). Kelkirk St is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kelkirk Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 350 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kelkirk Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Daphne Street: 50km/h (proposed 30km/h)</li> <li>Barbary Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kelkirk Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kelkirk Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kelly Street (Mount Eden)

The speed limit on Kelly Street, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kelly Street connects to Mount Eden Road to the east. This road provides access to residential properties and is approximately 0.26km in length.</p> <p>Kelly Street is classified as a Access road under the one network road classification (ONRC). Kelly Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kelly Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 300 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kelly Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Mount Eden Road: 50km/h (no proposed change)</li> <li>Edenvale Crescent: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kelly Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.22. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kelly Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kelman Road (Kelston)

The speed limit on Kelman Road, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kelman Road connects to Archibald Road to the east and Standage Lane to the south. This road provides access to residential properties and is approximately 0.87km in length.</p> <p>Kelman Road is classified as an Access road under the one network road classification (ONRC). Kelman Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records seven crashes between 2016 and 2020: one serious crash, one minor crash, five non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kelman Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 268 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kelman Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Laura Street: 50km/h (proposed 30km/h)</li> <li>Standage Lane: 50km/h (proposed 30km/h)</li> <li>Barbary Avenue: 50km/h (proposed 30km/h)</li> <li>Manatu Lane: 50km/h (proposed 30km/h)</li> <li>Laura Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kelman Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kelman Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kelsey Crescent (Hillsborough)

The speed limit on Kelsey Crescent, Hillsborough has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kelsey Crescent connects to Hillsborough Road to the west and Hendry Avenue to the north. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Kelsey Crescent is classified as a Access road under the one network road classification (ONRC). Kelsey Crescent is a two-way, Two lane undivided. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 156 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kelsey Crescent has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Hillsborough Road: 50km/h (no proposed change)</li> <li>Hendry Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kelsey Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kelsey Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kelston Street (Kelston)

The speed limit on Kelston Street, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kelston Street connects to Nikau Street to the south. This road provides access to residential properties and is approximately 0.17km in length.</p> <p>Kelston Street is classified as an Access road under the one network road classification (ONRC). Kelston Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kelston Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kelston Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Nikau Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kelston Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kelston Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kelwyn Road (Kelston)

The speed limit on Kelwyn Road, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kelwyn Road connects to Beaubank Road to the north and Lynwood Road to the east. This road provides access to residential properties and is approximately 0.27km in length.</p> <p>Kelwyn Road is classified as a Primary Collector road under the one network road classification (ONRC). Kelwyn Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records five crashes between 2016 and 2020: one serious crash, four non-injury crashes. This resulted in one Death and Serious Injury (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kelwyn Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 8074 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kelwyn Road has a mean operating speed in the range of 35-39km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Beaubank Road: 50km/h (proposed 30km/h)</li> <li>Lynwood Road: 50km/h (proposed 30km/h)</li> <li>Alston Avenue: 50km/h (proposed 30km/h)</li> <li>Archlynn Road: 50km/h (proposed 30km/h)</li> <li>Copley Street: 50km/h (proposed 30km/h)</li> <li>Rimu Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kelwyn Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.26. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Kelwyn Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Kelwyn Road is a Primary Collector Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kemble Close (Mangere)

The speed limit on Kemble Close, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kemble Close connects to Mascot Avenue to the east. This road provides access to residential properties and is approximately 0.49km in length.</p> <p>Kemble Close is classified as a Secondary Collector road under the one network road classification (ONRC). Kemble Close is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kemble Close were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 572 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kemble Close has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Mascot Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kemble Close has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.00. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kemble Close, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kenneth Small Crescent (Point Chevalier)

The speed limit on Kenneth Small Crescent, Point Chevalier has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kenneth Small Crescent connects to Walker Road to the east. This road provides access to residential properties and is approximately 0.23km in length.</p> <p>Kenneth Small Crescent is classified as an Access road under the one network road classification (ONRC). Kenneth Small Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kenneth Small Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 80 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kenneth Small Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Walker Road: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kenneth Small Crescent has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kenneth Small Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kennington Drive (Clendon Park)

The speed limit on Kennington Drive, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kennington Drive connects to Maplesden Drive to the north and Palmers Road to the south. This road provides access to residential properties and is approximately 0.43km in length.</p> <p>Kennington Drive is classified as an Access road under the one network road classification (ONRC). Kennington Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor crash, one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kennington Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 499 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kennington Drive has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Maplesden Drive: 50km/h (proposed 30km/h)</li> <li>• Palmers Road: 50km/h (proposed 30km/h)</li> <li>• Hatherley Place: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kennington Drive has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kennington Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kensington Drive (Orewa)

The speed limit on Kensington Drive, Orewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kensington Drive connects to Eaves Bush Parade to the west and Parkside Drive to the west. This road provides access to residential properties and is approximately 0.21km in length.</p> <p>Kensington Drive is classified as a Secondary Collector road under the one network road classification (ONRC). Kensington Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kensington Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 52 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kensington Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Eaves Bush Parade: 50km/h (proposed 30km/h)</li> <li>Parkside Drive: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kensington Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.22. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kensington Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kensway Drive (Flat Bush)

The speed limit on Kensway Drive, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kensway Drive connects to Baverstock Road to the north and Stancombe Road to the south. This road provides access to residential properties and is approximately 0.30km in length.</p> <p>Kensway Drive is classified as an Access road under the one network road classification (ONRC). Kensway Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kensway Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1534 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kensway Drive has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Baverstock Road: 50km/h (proposed 30km/h)</li> <li>• Stancombe Road: 60km/h (no proposed change)</li> <li>• Janway Avenue: 50km/h (proposed 30km/h)</li> <li>• Heidi Crescent: 50km/h (proposed 30km/h)</li> <li>• Kestev Drive: 50km/h (proposed 30km/h)</li> <li>• Plantation Avenue: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kensway Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kensway Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kenton Lane (Mangere)

The speed limit on Kenton Lane, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kenton Lane connects to Ilford Crescent to the south. This road provides access to residential properties and is approximately 0.53km in length.</p> <p>Kenton Lane is classified as an Access road under the one network road classification (ONRC). Kenton Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kenton Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 228 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kenton Lane has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ilford Crescent: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kenton Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kenton Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kenyon Avenue (Mount Eden)

The speed limit on Kenyon Avenue, Mount Eden has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kenyon Avenue connects to Valley Road to the north and Ewington Avenue to the west. This road provides access to residential properties and is approximately 0.24km in length.</p> <p>Kenyon Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Kenyon Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kenyon Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt;2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1248 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kenyon Avenue has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Ewington Avenue: 50km/h (proposed 30km/h)</li> <li>• Valley Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kenyon Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.70. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kenyon Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kessel-Way Court (Ranui)

The speed limit on Kessel-Way Court, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kessel-Way Court connects to Crailburn Street to the north and Swanson Road to the south. This road provides access to residential properties and is approximately 0.18km in length.</p> <p>Kessel-Way Court is classified as an Access road under the one network road classification (ONRC). Kessel-Way Court is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kessel-Way Court were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kessel-Way Court has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Craiburn Street: 50km/h (proposed 30km/h)</li> <li>• Swanson Road: 50km/h (no proposed change)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kessel-Way Court has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kessel-Way Court, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kestev Drive (Flat Bush)

The speed limit on Kestev Drive, Flat Bush has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kestev Drive connects to Kensway Drive to the east and Stancombe Road to the south. This road provides access to residential properties and is approximately 0.54km in length.</p> <p>Kestev Drive is classified as an Access road under the one network road classification (ONRC). Kestev Drive is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kestev Drive were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 1534 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kestev Drive has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kensway Drive: 50km/h (proposed 30km/h)</li> <li>Stancombe Road: 60km/h (no proposed change)</li> <li>Bushpark Place: 50km/h (proposed 30km/h)</li> <li>Erica Road: 50km/h (proposed 30km/h)</li> <li>Agapanthus Place: 50km/h (proposed 30km/h)</li> <li>Janway Avenue: 50km/h (proposed 30km/h)</li> <li>Lorenzo Way: 50km/h (proposed 30km/h)</li> <li>Reno Way: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kestev Drive has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.21. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kestev Drive, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kiernan Place (Kelston)

The speed limit on Kiernan Place, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kiernan Place connects to Cobham Crescent to the east. This road provides access to residential properties and is approximately 0.20km in length.</p> <p>Kiernan Place is classified as an Access road under the one network road classification (ONRC). Kiernan Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kiernan Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 320 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kiernan Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Cobham Crescent: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kiernan Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kiernan Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Killington Crescent (Mangere)

The speed limit on Killington Crescent, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Killington Crescent connects to Orly Avenue to the south and Staverton Crescent to the south. This road provides access to residential properties and is approximately 0.64km in length.</p> <p>Killington Crescent is classified as an Access road under the one network road classification (ONRC). Killington Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Killington Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 811 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Killington Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Orly Avenue: 50km/h (proposed 30km/h)</li> <li>Staverton Crescent: 50km/h (proposed 30km/h)</li> <li>Upwood Place: 50km/h (proposed 30km/h)</li> <li>Harwell Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Killington Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Killington Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kilmarnock Avenue (Ranui)

The speed limit on Kilmarnock Avenue, Ranui has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kilmarnock Avenue connects to Hibernian Drive to the east and Armada Drive to the west. This road provides access to residential properties and is approximately 0.17km in length.</p> <p>Kilmarnock Avenue is classified as an Access road under the one network road classification (ONRC). Kilmarnock Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kilmarnock Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 10+ per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 131 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kilmarnock Avenue has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Hibernian Drive: 50km/h (proposed 30km/h)</li> <li>• Armada Drive: 50km/h (proposed 30km/h)</li> <li>• Corran Place: 50km/h (proposed 30km/h)</li> <li>• Westvale Avenue: 50km/h (proposed 30km/h)</li> <li>• Glenarden Way: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kilmarnock Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kilmarnock Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kingdale Road (Henderson)

The speed limit on Kingdale Road, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kingdale Road connects to Pomaria Road to the south. This road provides access to residential properties and is approximately 0.62km in length.</p> <p>Kingdale Road is classified as a Secondary Collector road under the one network road classification (ONRC). Kingdale Road is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kingdale Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 1 to &lt;2 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 447 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kingdale Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Pomaria Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kingdale Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kingdale Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kinleith Way (Albany)

The speed limit on Kinleith Way, Albany has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kinleith Way connects to Bass Road to the east. This road provides access to residential properties and is approximately 0.32km in length.</p> <p>Kinleith Way is classified as an Access road under the one network road classification (ONRC). Kinleith Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kinleith Way were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow lane (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 3 to &lt;5 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kinleith Way has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Bass Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kinleith Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kinleith Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kiwi Esplanade (Mangere Bridge)

The speed limit on Kiwi Esplanade, Mangere Bridge, between Boyd Avenue and the western end of Kiwi Esplanade, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kiwi Esplanade connects to Waterfront Road to the east and Andes Avenue to the west. This road provides access to residential properties and is approximately 2.49km in length.</p> <p>Kiwi Esplanade is classified as a Secondary Collector road under the one network road classification (ONRC). Kiwi Esplanade is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records five crashes between 2016 and 2020: three minor crashes, two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kiwi Esplanade were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Tortuous</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very wide shoulder (&gt; 2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 805 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kiwi Esplanade has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Waterfront Road: 50km/h (no proposed change)</li> <li>Andes Avenue: 50km/h (no proposed change)</li> <li>Coronation Road: 50km/h (no proposed change)</li> <li>Woodward Avenue: 50km/h (no proposed change)</li> <li>Scott Avenue: 50km/h (no proposed change)</li> <li>Boyd Avenue: 50km/h (proposed 30km/h)</li> <li>House Avenue: 50km/h (proposed 30km/h)</li> <li>Seaforth Avenue: 50km/h (proposed 30km/h)</li> <li>Chipping Dale: 50km/h (proposed 30km/h)</li> <li>Yorkton Rise: 50km/h (proposed 30km/h)</li> <li>Banbury Place: 50km/h (proposed 30km/h)</li> <li>Charesholm Place: 50km/h (proposed 30km/h)</li> <li>Sealand Place: 50km/h (proposed 30km/h)</li> </ul>

**Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kiwi Esplanade has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **High**.
- o The Infrastructure Risk Rating Score is 2.33. For urban areas this corresponds to an IRR band of **Medium**.

**Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

**Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kiwi Esplanade, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

**Speed Limit Review – Kiwi Road (Stanley Point)**

The speed limit on Kiwi Road, Stanley Point has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

**Step 1: Determine the base information**

*Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))*

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kiwi Road connects to Patuone Place to the north and Calliope Road to the south. This road provides access to residential properties and is approximately 0.36km in length.</p> <p>Kiwi Road is classified as a Secondary Collector road under the one network road classification (ONRC). Kiwi Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kiwi Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Straight</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 473 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kiwi Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Patuone Place: 50km/h (proposed 30km/h)</li> <li>• Calliope Road: 50km/h (no proposed change)</li> <li>• Rutland Road: 50km/h (proposed 30km/h)</li> <li>• Roslyn Terrace: 50km/h (proposed 30km/h)</li> <li>• Shoal Bay Road: 50km/h (proposed 30km/h)</li> <li>• Ewen Alison Avenue: 50km/h (proposed 30km/h)</li> <li>• Jim Titchener Parade: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kiwi Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kiwi Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kohekohe Street (Kelston)

The speed limit on Kohekohe Street, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kohekohe Street connects to Lynwood Road to the west and Maunder Place to the east. This road provides access to residential properties and is approximately 0.48km in length.</p> <p>Kohekohe Street is classified as an Access road under the one network road classification (ONRC). Kohekohe Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: one minor crash, two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kohekohe Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 367 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kohekohe Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Lynwood Road: 50km/h (proposed 30km/h)</li> <li>Maunder Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kohekohe Street has the following information:

- Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- The Infrastructure Risk Rating Score is 1.91. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kohekohe Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kohi Kai Place (Weymouth)

The speed limit on Kohi Kai Place, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kohi Kai Place connects to Becker Drive to the north. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Kohi Kai Place is classified as an Access road under the one network road classification (ONRC). Kohi Kai Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kohi Kai Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kohi Kai Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Becker Drive: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kohi Kai Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kohi Kai Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kona Crescent (Henderson)

The speed limit on Kona Crescent, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kona Crescent connects to Stephen Avenue to the east. This road provides access to residential properties and is approximately 0.40km in length.</p> <p>Kona Crescent is classified as an Access road under the one network road classification (ONRC). Kona Crescent is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kona Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 222 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kona Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Stephen Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kona Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.22. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kona Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kopara Place (Clendon Park)

The speed limit on Kopara Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kopara Place connects to Finlayson Avenue to the east. This road provides access to residential properties and is approximately 0.32km in length.</p> <p>Kopara Place is classified as an Access road under the one network road classification (ONRC). Kopara Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records two crashes between 2016 and 2020: one minor crash, one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kopara Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 3 to &lt;5 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 380 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kopara Place has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Finlayson Avenue: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kopara Place has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kopara Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kopu Place (Clendon Park)

The speed limit on Kopu Place, Clendon Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kopu Place connects to Finlayson Avenue to the south. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Kopu Place is classified as an Access road under the one network road classification (ONRC). Kopu Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kopu Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 130 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kopu Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Finlayson Avenue: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kopu Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kopu Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Korere Terrace (Stonefields)

The speed limit on Korere Terrace, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Korere Terrace connects to Papango to the east and Kauriki Terrace to the north. This road provides access to residential properties and is approximately 0.42km in length.</p> <p>Korere Terrace is classified as an Access road under the one network road classification (ONRC). Korere Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Korere Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 312 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Korere Terrace has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Kauriki Terrace: 50km/h (proposed 30km/h)</li> <li>• Tihi Street: 50km/h (proposed 30km/h)</li> <li>• Papango Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Korere Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Korere Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Koromiko Street (Kelston)

The speed limit on Koromiko Street, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Koromiko Street connects to Nikau Street to the north and Miro Street to the south. This road provides access to residential properties and is approximately 0.26km in length.</p> <p>Koromiko Street is classified as a Secondary Collector road under the one network road classification (ONRC). Koromiko Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Koromiko Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 615 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Koromiko Street has a mean operating speed in the range of 31km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Nikau Street: 50km/h (proposed 30km/h)</li> <li>Miro Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Koromiko Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Koromiko Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Koropupu Street (Pukekohe)

The speed limit on Koropupu Street, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Koropupu Street connects to Tawhiti Road to the north and Te Manaki Street to the east. This road provides access to residential properties and is approximately 0.36km in length.</p> <p>Koropupu Street is classified as an Access road under the one network road classification (ONRC). Koropupu Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Koropupu Street were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5) and narrow shoulder (0.5m to &lt;1.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Koropupu Street has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Tawhiti Road: 50 km/h (proposed 30 km/h)</li> <li>• Te Manaki Street: 50 km/h (proposed 30 km/h)</li> <li>• Hemptopo Street: 50 km/h (proposed 30 km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Koropupu Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Koropupu Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kowhai Avenue (Mangere Bridge)

The speed limit on Kowhai Avenue, Mangere Bridge has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kowhai Avenue connects to Wallace Road to the west. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Kowhai Avenue is classified as an Access road under the one network road classification (ONRC). Kowhai Avenue is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kowhai Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 120 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kowhai Avenue has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Wallace Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kowhai Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.32. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kowhai Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kowhai Terrace (Leigh)

The speed limit on Kowhai Terrace, Leigh has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kowhai Terrace connects to Cumberland Street to the north. This road provides access to residential properties and is approximately 0.10km in length.</p> <p>Kowhai Terrace is classified as an Access road under the one network road classification (ONRC). Kowhai Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kowhai Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as rural towns using MegaMaps tool. The IRR defines rural towns as " <i>rural town with mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present.</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 332 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kowhai Terrace has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Cumberland Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kowhai Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kowhai Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kowhai Terrace (Leigh)

The speed limit on Kowhai Terrace, Leigh has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kowhai Terrace connects to Harbour View Road to the south. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Kowhai Terrace is classified as an Access road under the one network road classification (ONRC). Kowhai Terrace is a two-way, Unsealed road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kowhai Terrace were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Unsealed</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as rural towns using MegaMaps tool. The IRR defines rural towns as "rural town with mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present."
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 24 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kowhai Terrace has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Harbour View Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kowhai Terrace has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.77. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kowhai Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kuaka Place (Kelston)

The speed limit on Kuaka Place, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kuaka Place connects to Nikau Street to the west. This road provides access to residential properties and is approximately 0.19km in length.</p> <p>Kuaka Place is classified as an Access road under the one network road classification (ONRC). Kuaka Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one minor crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kuaka Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 258 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kuaka Place has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Nikau Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kuaka Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kuaka Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kudu Road (Otarā)

The speed limit on Kudu Road, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kudu Road connects to Preston Road to the east and Hannah Road to the west. This road provides access to residential properties and is approximately 0.39km in length.</p> <p>Kudu Road is classified as an Access road under the one network road classification (ONRC). Kudu Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: one minor crash, two non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kudu Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 925 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kudu Road has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Preston Road: 50km/h (no proposed change)</li> <li>Hannah Road: 50km/h (proposed 30km/h)</li> <li>Birch Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kudu Road has the following information:

- Collective Risk band of **Medium**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kudu Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kunzea Place (Greenhithe)

The speed limit on Kunzea Place, Greenhithe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kunzea Place connects to Miromiro Street to the west. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Kunzea Place is classified as a Secondary Collector road under the one network road classification (ONRC). Kunzea Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kunzea Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Straight</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and wide shoulder (1.0m to &lt;2.0m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"><li>• <b>Intersection density:</b> 5 to &lt;10 per km</li><li>• <b>Access density:</b> 20+ accesses per km</li></ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kunzea Place has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Miromiro Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kunzea Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 1.90. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kunzea Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kuparu Street (Weymouth)

The speed limit on Kuparu Street, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kuparu Street connects to Kaimoana Street to the east and Tonuitanga Street to the west. This road provides access to residential properties and is approximately 0.12km in length.</p> <p>Kuparu Street is classified as an Access road under the one network road classification (ONRC). Kuparu Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kuparu Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as “dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”.

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for “reduced speed limits near schools, kindergartens and community facilities”</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kuparu Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Kaimoana Street: 50km/h (proposed 30km/h)</li> <li>Tonuitanga Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kuparu Street has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kuparu Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kurt Lane (Otarā)

The speed limit on Kurt Lane, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kurt Lane connects to Oconnor Street to the west. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Kurt Lane is classified as an Access road under the one network road classification (ONRC). Kurt Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kurt Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 130 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kurt Lane has a mean operating speed in the range of <30km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Oconnor Street: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Kurt Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kurt Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kuurae Crescent (Weymouth)

The speed limit on Kuurae Crescent, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kuurae Crescent connects to Ipukarea Street to the east and Apa Street to the east. This road provides access to residential properties and is approximately 0.29km in length.</p> <p>Kuurae Crescent is classified as an Access road under the one network road classification (ONRC). Kuurae Crescent is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kuurae Crescent were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 250 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kuurae Crescent has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Ipukarea Street: 50km/h (proposed 30km/h)</li> <li>Apa Street: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kuurae Crescent has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kuurae Crescent, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kyle Road (Greenhithe)

The speed limit on Kyle Road, Greenhithe, between Wicklam Lane and the southern end of Kyle Road, has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kyle Road connects to Orwell Road to the south and Schnapper Rock Road to the north. This road provides access to residential properties and is approximately 2.46km in length.</p> <p>Kyle Road is classified as an Access road under the one network road classification (ONRC). Kyle Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records six crashes between 2016 and 2020: two minor crashes, four non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kyle Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban Residential using MegaMaps tool. The IRR defines urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 2090 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Kyle Road has a mean operating speed in the range of 40-44km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Schnapper Rock Road: 50km/h (no proposed change)</li> <li>• Albertine Place: 50km/h (no proposed change)</li> <li>• Wicklam Lane: 50km/h (no proposed change)</li> <li>• William Gamble Drive: 50km/h (proposed 30km/h)</li> <li>• Miromiro Street: 50km/h (proposed 30km/h)</li> <li>• Pitoitoi Avenue: 50km/h (proposed 30km/h)</li> <li>• Huntington Park Drive: 50km/h (proposed 30km/h)</li> <li>• Lemon Grove Lane: 50km/h (proposed 30km/h)</li> <li>• Northbrook Close: 50km/h (proposed 30km/h)</li> <li>• Admirals Court Drive: 50km/h (proposed 30km/h)</li> <li>• Greenbough Lane: 50km/h (proposed 30km/h)</li> <li>• Maryann Place: 50km/h (proposed 30km/h)</li> <li>• Orwell Place: 50km/h (proposed 30km/h)</li> <li>• Mural Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kyle Road has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Medium-High**.
- The Infrastructure Risk Rating Score is 2.58. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kyle Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Kyle Street (Leigh)

The speed limit on Kyle Street, Leigh has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Kyle Street connects to Barrier View Road to the north. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Kyle Street is classified as an Access road under the one network road classification (ONRC). Kyle Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Kyle Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as rural towns using MegaMaps tool. The IRR defines rural towns as "rural town with mixture of residential and some shops. Some intersections and accesses are present. Some pedestrian and cyclist activity may also be present."
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 10 to &lt;20 accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 332 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Kyle Street has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Barrier View Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Kyle Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.05. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Kyle Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lagonda Rise (Oteha)

The speed limit on Lagonda Rise, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>• Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>• WK NZTA MegaMaps tool</li> <li>• Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lagonda Rise connects to Medallion Drive to the east and Masons Road to the west. This road provides access to residential properties and is approximately 0.37km in length.</p> <p>Lagonda Rise is classified as an Access road under the one network road classification (ONRC). Lagonda Rise is a two-way, Two lane undivided road. There are pedestrian amenities and partial on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lagonda Rise were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li>• <b>Road stereotype:</b> Two lane undivided</li> <li>• <b>Road alignment:</b> Curved</li> <li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 2 to &lt;3 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 32 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Lagonda Rise has a mean operating speed in the range of <30km/h.
	Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Medallion Drive: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Lagonda Rise has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.09. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lagonda Rise, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lancia Way (Oteha)

The speed limit on Lancia Way, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lancia Way connects to Lagonda Rise to the south. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Lancia Way is classified as an Access road under the one network road classification (ONRC). Lancia Way is a two-way, Two lane undivided road. There are no pedestrian amenities, on-street parking and cyclist amenities along this road.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lancia Way were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 20 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Lancia Way has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Lagonda Rise: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Lancia Way has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.46. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lancia Way, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Landmark Terrace (Orewa)

The speed limit on Landmark Terrace, Orewa has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Landmark Terrace connects to Panorama Heights to the north and Puriri Boulevard to the east. This road provides access to residential properties and is approximately 0.45km in length.</p> <p>Landmark Terrace is classified as an Access road under the one network road classification (ONRC). Landmark Terrace is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Landmark Terrace were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 10+ per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 50 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Landmark Terrace has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Panorama Heights: 50km/h (proposed 30km/h)</li> <li>• Puriri Boulevard: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Landmark Terrace has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Landmark Terrace, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Landon Place (Pukekohe)

The speed limit on Landon Place, Pukekohe has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Landon Place connects to Puriri Road to the west. This road provides access to residential properties and is approximately 0.13km in length.</p> <p>Landon Place is classified as an Access road under the one network road classification (ONRC). Landon Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Landon Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5) and Narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 41 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Landon Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Puriri Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Landon Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.06. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Landon Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lane Road (Weymouth)

The speed limit on Lane Road, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lane Road connects to Waimai Avenue to the north and McInnes Road to the south. This road provides access to residential properties and is approximately 0.34km in length.</p> <p>Lane Road is classified as an Access road under the one network road classification (ONRC). Lane Road is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lane Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 478 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Lane Road has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Waimai Avenue: 50km/h (proposed 30km/h)</li> <li>• McInnes Road: 50km/h (proposed 30km/h)</li> <li>• McLeod Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Lane Road has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium-High**.
- o The Infrastructure Risk Rating Score is 1.82. For urban areas this corresponds to an IRR band of **Low-Medium**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lane Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lapilli Lane (Stonefields)

The speed limit on Lapilli Lane, Stonefields has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lapilli Lane connects to Charles Heaphy Lane to the north. This road provides access to residential properties and is approximately 0.07km in length.</p> <p>Lapilli Lane is classified as an Access road under the one network road classification (ONRC). Lapilli Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020: This Resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lapilli Lane were estimated using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and Very Narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban residential using MegaMaps tool. The IRR defines Urban residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i> .
(g) the number of intersections and property accessways; and	<p>Estimated from MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was estimated from MegaMaps as 260 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Lapilli Lane has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Charles Heaphy Lane: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Lapilli Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.44. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lapilli Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Largo Lane (Otara)

The speed limit on Largo Lane, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Largo Lane connects to Johnstones Road to the south. This road provides access to residential properties and is approximately 0.08km in length.</p> <p>Largo Lane is classified as an Access road under the one network road classification (ONRC). Largo Lane is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Largo Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>“dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day”</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 100 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools.  Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.  A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Largo Lane has a mean operating speed in the range of <30km/h.  Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>Johnstones Road: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Largo Lane has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Largo Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Larissa Avenue (Henderson)

The speed limit on Larissa Avenue, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Larissa Avenue connects to Rathgar Road to the east and Larnoch Road to the south. This road provides access to residential properties and is approximately 0.32km in length.</p> <p>Larissa Avenue is classified as a Secondary Collector road under the one network road classification (ONRC). Larissa Avenue is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Larissa Avenue were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 5 to &lt;10 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 438 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Larissa Avenue has a mean operating speed in the range of 30-34km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Rathgar Road: 50km/h (proposed 30km/h)</li> <li>Larnoch Road: 50km/h (proposed 30km/h)</li> <li>Mildmay Road: 50km/h (proposed 30km/h)</li> <li>Vanden Place: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Larissa Avenue has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Larissa Avenue, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Larnoch Road (Henderson)

The speed limit on Larnoch Road, Henderson has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Larnoch Road connects to Rathgar Road to the east and Swanson Road to the west. This road provides access to residential properties and is approximately 0.65km in length.</p> <p>Larnoch Road is classified as an Arterial road under the one network road classification (ONRC). Larnoch Road is a two-way, two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records nine crashes between 2016 and 2020: three minor crashes, six non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Larnoch Road were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and narrow shoulder (0.5m to &lt;1.0m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 6411 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Larnoch Road has a mean operating speed in the range of 35-39km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Rathgar Road: 50km/h (proposed 30km/h)</li> <li>• Swanson Road: 50km/h (no proposed change)</li> <li>• Powell Place: 50km/h (proposed 30km/h)</li> <li>• Alan Ave: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Larnoch Road has the following information:

- o Collective Risk band of **Low-Medium**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.40. For urban areas this corresponds to an IRR band of **Medium-High**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 50km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 50km/h as the safe and appropriate speed for Larnoch Road, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h. Furthermore, while MegaMaps suggests that Larnoch Road is an Arterial Road, that is not its intended function.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lastel Place (Shelly Park)

The speed limit on Lastel Place, Shelly Park has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>New Zealand Transport Agency (NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lastel Place connects to Sandspit Road to the west. This road provides access to residential properties and is approximately 0.34 km in length.</p> <p>Lastel Place is classified as an access road under the one network road classification (ONRC). Lastel Place is a two-way, two-lane, undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Road Name were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as Urban Residential using MegaMaps tool. The IRR defines Urban Residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> "
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 2 to &lt;3 intersections per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 390 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road is still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50 km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Lastel Place has a mean operating speed in the range of &lt;30 km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Sandspit Road: 50 km/h (proposed 30 km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Lastel Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**
- o The Infrastructure Risk Rating Score is 2.09 For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40 km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30 km/h

While the speed management guide suggests 40 km/h as the safe and appropriate speed for Lastel Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Laura Street (Kelston)

The speed limit on Laura Street, Kelston has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Laura Street connects to Hurley Place to the north and Kelman Road to the south. This road provides access to residential properties and is approximately 0.87km in length.</p> <p>Laura Street is classified as an Access road under the one network road classification (ONRC). Laura Street is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records three crashes between 2016 and 2020: three non-injury crashes. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Laura Street were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 268 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Laura Street has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Hurley Place: 50km/h (proposed 30km/h)</li> <li>• Kelman Road: 50km/h (proposed 30km/h)</li> </ul>

#### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Laura Street has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Medium**.
- o The Infrastructure Risk Rating Score is 2.15. For urban areas this corresponds to an IRR band of **Medium**.

#### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Laura Street, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lavender Garden Lane (Oteha)

The speed limit on Lavender Garden Lane, Oteha has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lavender Garden Lane connects to Masons Road to the east. This road provides access to residential properties and is approximately 0.06km in length.</p> <p>Lavender Garden Lane is classified as a Secondary Collector road under the one network road classification (ONRC). Lavender Garden Lane is a two-way, Two lane undivided road. There are partial pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lavender Garden Lane were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Curved</li> <li><b>Carriageway width:</b> Narrow lane (&lt;3.0m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as "dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day".

Requirement	Comments
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 10+ per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 520 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Lavender Garden Lane has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Masons Road: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Lavender Garden Lane has the following information:

- Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- The Infrastructure Risk Rating Score is 2.74. For urban areas this corresponds to an IRR band of **Medium-High**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

#### Step 4: Conclusion

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lavender Garden Lane, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lawford Place (Mangere)

The speed limit on Lawford Place, Mangere has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"><li>• Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li><li>• Infrastructure Risk Rating Manual 2016 (IRR)</li><li>• WK NZTA MegaMaps tool</li><li>• Auckland Transport Vision Zero</li></ul> Refer to the Process Summary for further information.
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lawford Place connects to Staverton Crescent to the south. This road provides access to residential properties and is approximately 0.15km in length.</p> <p>Lawford Place is classified as an Access road under the one network road classification (ONRC). Lawford Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records one crash between 2016 and 2020: one non-injury crash. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lawford Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"><li>• <b>Road stereotype:</b> Two lane undivided</li><li>• <b>Road alignment:</b> Curved</li><li>• <b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li><li>• <b>Roadside hazards (in both directions):</b> Severe and Moderate</li></ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines urban residential as " <i>dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day</i> ".

Requirement	Comments
(g) the number of intersections and property accessways; and	From MegaMaps tool: <ul style="list-style-type: none"> <li>• <b>Intersection density:</b> 5 to &lt;10 per km</li> <li>• <b>Access density:</b> 20+ accesses per km</li> </ul>
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 811 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	Central government policy is to implement 30km/h speed limits adjacent to urban schools. Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools. A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	This section of Lawford Place has a mean operating speed in the range of <30km/h. Speed calming measures will be installed area wide to achieve a low operating speed.
Speed limits on adjoining roads	The existing speed limits on adjoining roads are: <ul style="list-style-type: none"> <li>• Staverton Crescent: 50km/h (proposed 30km/h)</li> </ul>

### **Step 2: Determine the road safety metrics and IRR score**

From MegaMaps Lawford Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.41. For urban areas this corresponds to an IRR band of **Medium-High**.

### **Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables**

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### **Step 4: Conclusion**

Existing speed limit: 50km/h

*Proposed safe and appropriate speed limit recommendation = 30km/h.*

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lawford Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lawrence Place (Otara)

The speed limit on Lawrence Place, Otara has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lawrence Place connects to Velvet Crescent to the north. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Lawrence Place is classified as an Access road under the one network road classification (ONRC). Lawrence Place is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
(d) crash risk for all road users; and	WK NZTA's Crash Analysis System (CAS) records zero crashes between 2016 and 2020. This resulted in zero Death and Serious Injuries (DSI). This data includes crashes for all road users and therefore crash risk for all road users were considered.
(e) the characteristics of the road and roadsides; and	<p>The following characteristics for Lawrence Place were determined using MegaMaps tool.</p> <ul style="list-style-type: none"> <li><b>Road stereotype:</b> Two lane undivided</li> <li><b>Road alignment:</b> Straight</li> <li><b>Carriageway width:</b> Medium lane (3.0 to 3.5m) and very narrow shoulder (0m to &lt;0.5m)</li> <li><b>Roadside hazards (in both directions):</b> Severe and Moderate</li> </ul>
(f) adjacent land use; and	The adjacent land use is classified as urban residential using MegaMaps tool. The IRR defines Urban Residential as <i>"dominated by housing with frequent driveways and on street parking. Regular intersections and accesses are present. Pedestrian and cyclist activity are also likely to be present, particularly at certain times of the day"</i>
(g) the number of intersections and property accessways; and	<p>From MegaMaps tool:</p> <ul style="list-style-type: none"> <li><b>Intersection density:</b> 3 to &lt;5 per km</li> <li><b>Access density:</b> 20+ accesses per km</li> </ul>

Requirement	Comments
(h) traffic volume; and	Average daily traffic (ADT) was determined from MegaMaps as 572 vehicles per day (vpd). This level of traffic volume is consistent with the nature of the road.
(i) any planned modification to the road; and	Modification/Engineering measures for the area are planned, details of the measures for this road are still under investigation.
(j) the views of interested persons and groups.	<p>Central government policy is to implement 30km/h speed limits adjacent to urban schools.</p> <p>Key stakeholders have indicated general support for implementing 30km/h speed limits around urban schools.</p> <p>A recent survey of Auckland residents shows 78% support for "reduced speed limits near schools, kindergartens and community facilities"</p>

In addition to the factors outlined in Table 1, further relevant information was sought as summarised in Table 2 below.

Table 2: Additional Relevant Factors

AT also had regard to	
Current speed limit	The existing speed limit is 50km/h.
MegaMaps Mean Operating Speed (km/h)	<p>This section of Lawrence Place has a mean operating speed in the range of &lt;30km/h.</p> <p>Speed calming measures will be installed area wide to achieve a low operating speed.</p>
Speed limits on adjoining roads	<p>The existing speed limits on adjoining roads are:</p> <ul style="list-style-type: none"> <li>Velvet Crescent: 50km/h (proposed 30km/h)</li> </ul>

### Step 2: Determine the road safety metrics and IRR score

From MegaMaps Lawrence Place has the following information:

- o Collective Risk band of **Low**, and a Personal Risk band of **Low**.
- o The Infrastructure Risk Rating Score is 2.17. For urban areas this corresponds to an IRR band of **Medium**.

### Step 3: Identify the recommended safe and appropriate speed using the speed management guide tables

The safe and appropriate speed recommended by Table 2.1 of the Speed Management Guide is 40km/h.

### Step 4: Conclusion

Existing speed limit: 50km/h

Proposed safe and appropriate speed limit recommendation = 30km/h.

While the speed management guide suggests 40km/h as the safe and appropriate speed for Lawrence Place, engineering measures are proposed to be implemented with the intention of achieving an operating speed of less than 33km/h.

Therefore, we have determined 30km/h to be safer and more appropriate as it will be consistent with the expected operating speed of the road, and will have better strategic alignment with national and regional goals including Vision Zero safety outcomes and supporting mode shift to active transport modes for local trips.

## Speed Limit Review – Lawson Way (Weymouth)

The speed limit on Lawson Way, Weymouth has been reviewed in accordance with the Land Transport Rule: Setting of Speed Limits 2017 (Setting of Speed Limits Rule). The review process is outlined in the Process Summary document attached

### Step 1: Determine the base information

Table 1: Setting of Speed Limits Rule Summary of Relevant Requirements (4.2(2))

Requirement	Comments
(a) the information about speed management developed and maintained by the Agency; and:	<ul style="list-style-type: none"> <li>Waka Kotahi New Zealand Transport Agency (WK NZTA) Speed Management Guide 2016</li> <li>Infrastructure Risk Rating Manual 2016 (IRR)</li> <li>WK NZTA MegaMaps tool</li> <li>Auckland Transport Vision Zero</li> </ul> <p>Refer to the Process Summary for further information.</p>
(b) any relevant guidance on speed management provided by the Agency; and	The WK NZTA Speed Management Guide was used for the review and consideration of the speed limit.
(c) the function and use of the road; and	<p>Lawson Way connects to Weymouth Road to the west. This road provides access to residential properties and is approximately 0.11km in length.</p> <p>Lawson Way is classified as an Access road under the one network road classification (ONRC). Lawson Way is a two-way, Two lane undivided road. There are pedestrian amenities and on-street parking along this road. There are no cyclist amenities.</p>
