Mount Albert rail overbridge note:

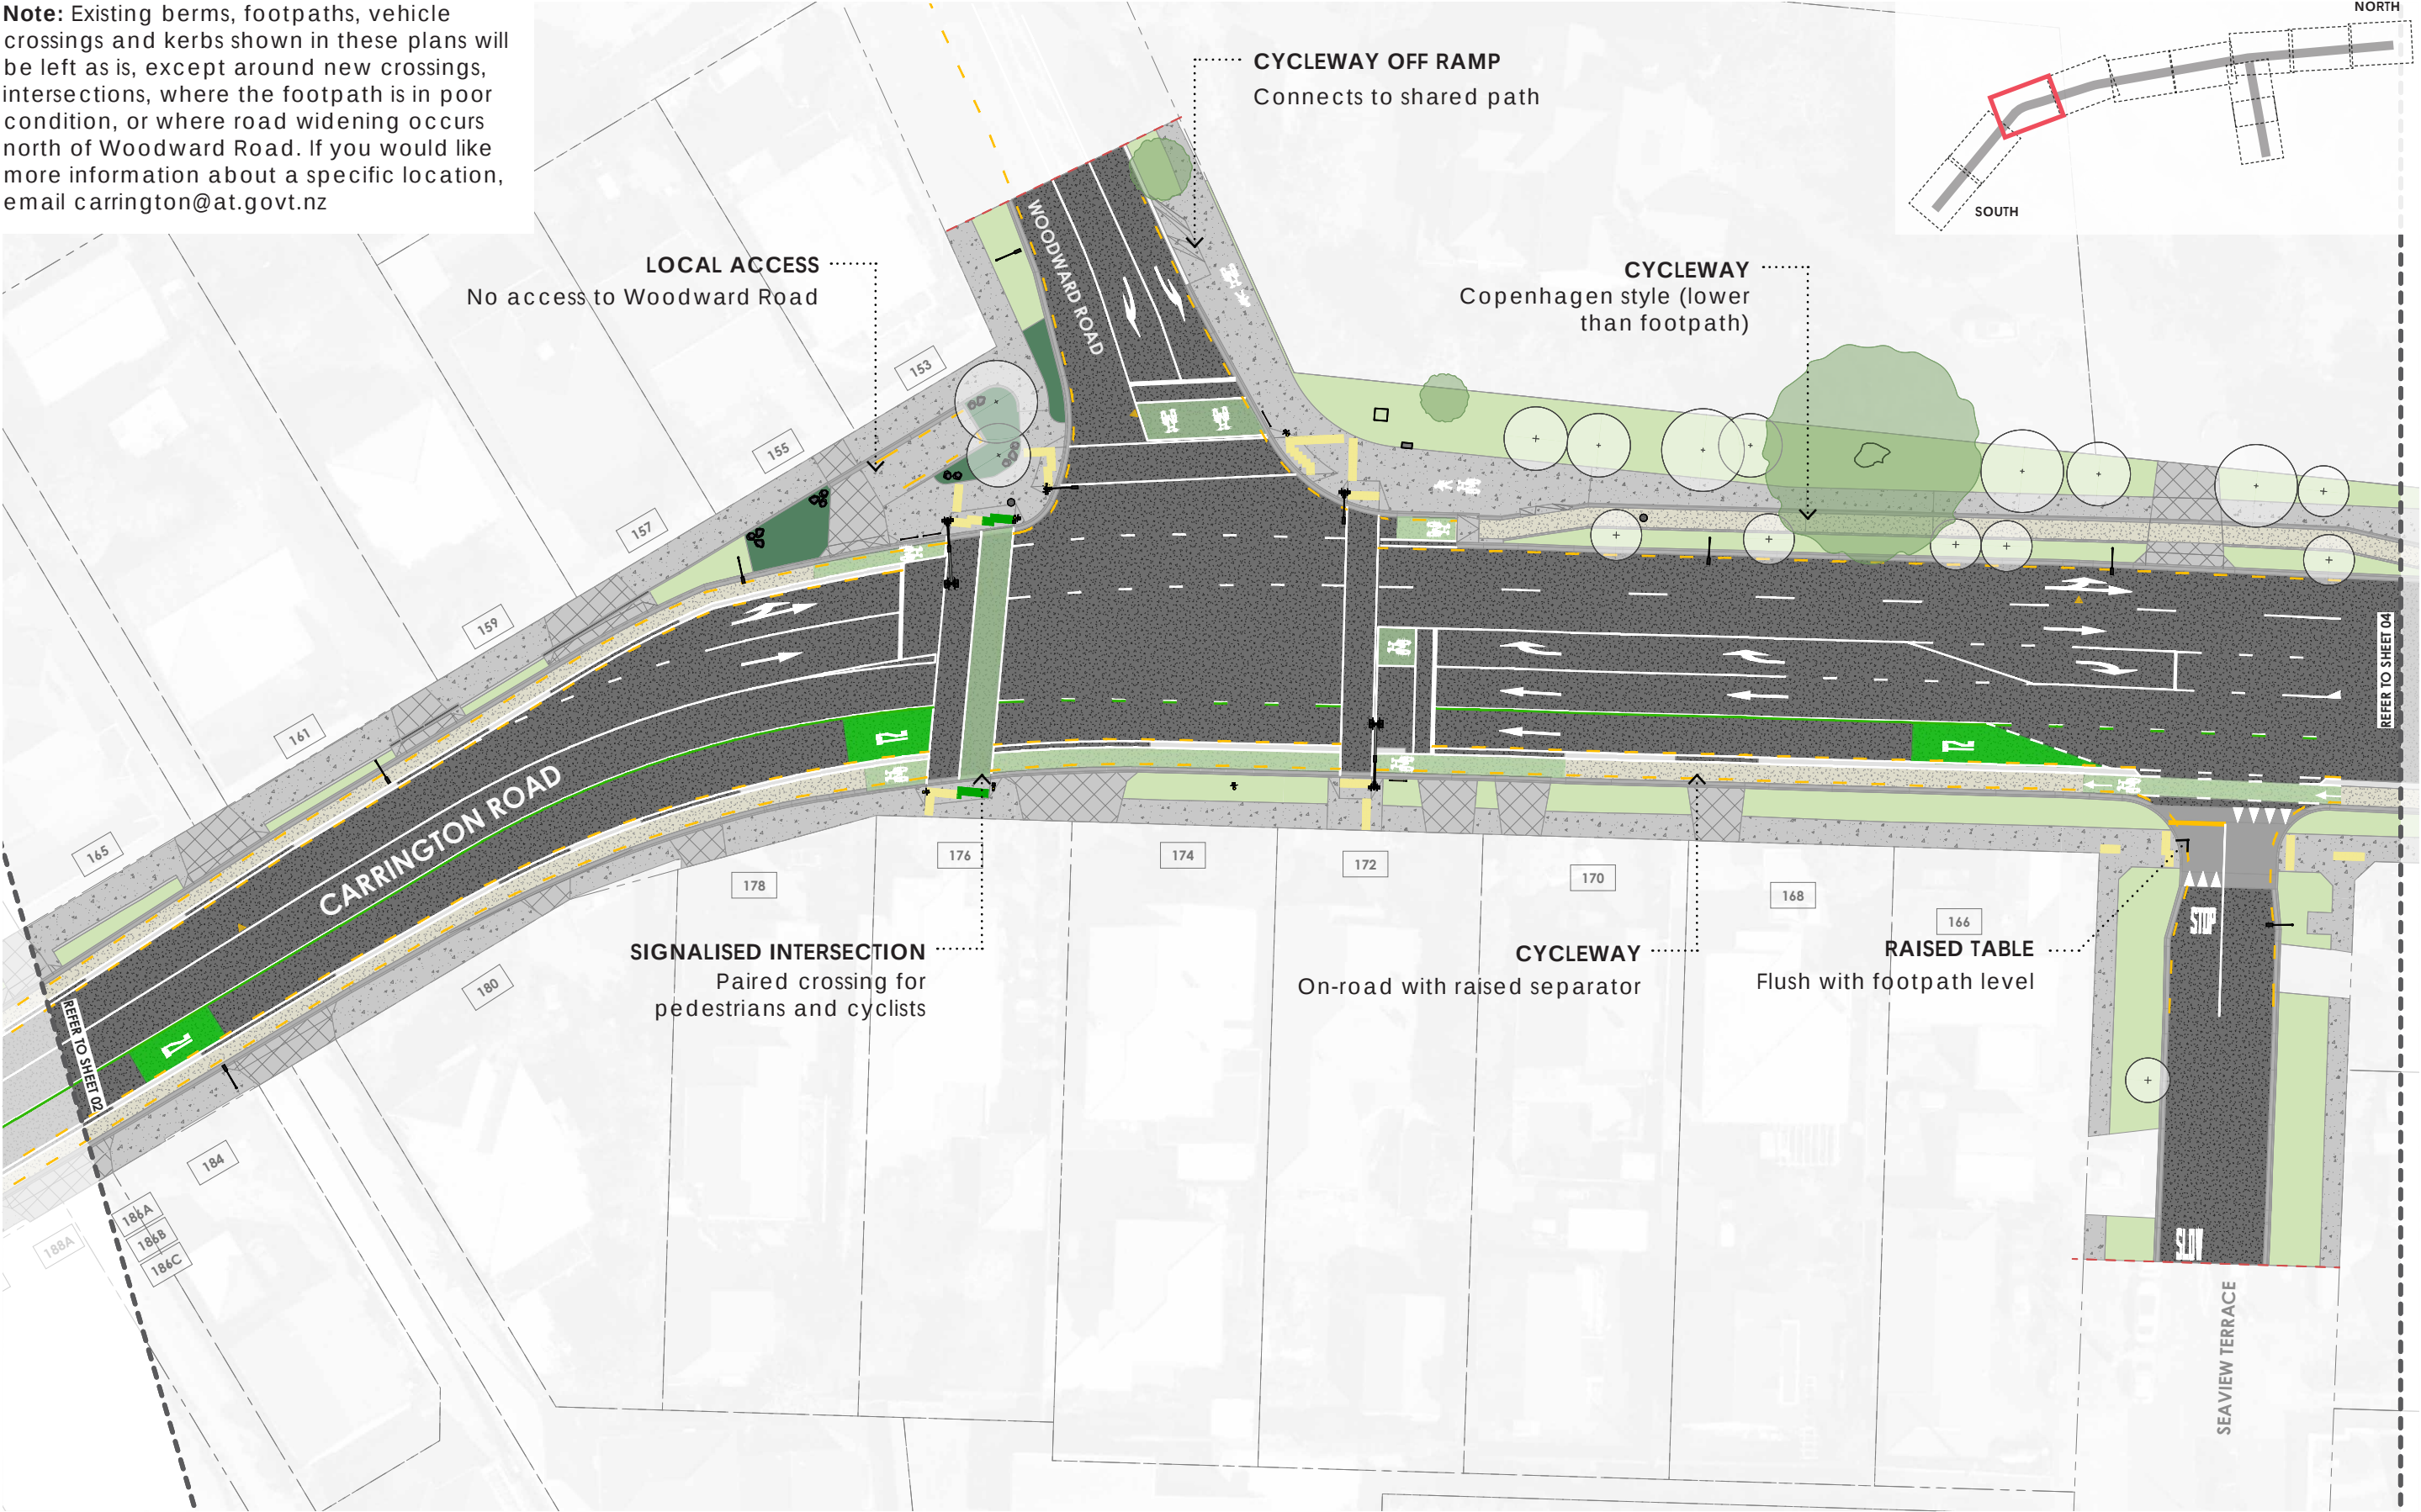

- We’re investigating the following improvements:
- Widening the overbridge to provide more space for walking and cycling.
 - Raising the cycleway on the western side of the overbridge to footpath level, to match the eastern side.
 - Widening vehicle lanes while retaining the current two southbound and one northbound lane arrangement.
 - Installing higher safety railings where the overbridge crosses the rail line.
 - Installing queue detection technology to improve the intersection’s efficiency.

Once this work is complete and a decision is made, we’ll share with the community what the upgraded overbridge will look like and how it will be built.
