Bridge to open in June
Preview of glass panel design

New pedestrian link bridge to open in June

We look forward to when the station and new bridge is ready and open for use. Our contractors have been working well and now with the bridge and concourse, new shelters and tar-sealed platform in place you can get a sense of how the station will look when finished.

On the bridge we need to install the pedestrian lift, put up the glass side panels and complete the concourse wall. The concourse cladding and glazing will incorporate artwork designed by MOKO IA Creative House. Below is a preview of the panel design. On the platform, the shelters need to be clad and fitted out, and passenger information displays, signage and additional AT HOP tag on and off machines are to go in. This work will be complete in June, which we acknowledge is later than we originally anticipated. Until then we ask everyone for their continued patience using the underpass.

Monitoring of noise and impact on neighbours, local businesses and passengers will continue.

CONCOURSE - All sides glass panels

What's Inside?

Upcoming work

Upcoming work:

Work will continue through Easter to take advantage of the trains not running.

- Concourse – scaffolding, canopy steel work, glazing, timber framing and preparation for cladding and shelter steelwork
- Walkway – roofing, ceiling work, drainage, concrete finishing, installing tactiles, fascia and anti-graffiti
- Platform – signs, pulling comms and power cables, balustrade, removal of temporary site access points and shelter fascia

Picture 1 – side of bridge, which is to be clad in glass. The pipe running alongside is for fire hydrant. Picture 2 – future link to plaza juts out from the concourse; the ‘wall’ feature is the location of the lift and underneath the bridge are the electrical cabinets. Picture 3 – new passenger shelters; fitting out and roof still to come. Picture 4- back of wall.
